Moscow, Ussr., Aug 16—By Chatwood Hall of ANP)—Socialism in action shows concretely that this form of society seems to be the only solution for the national question. was the declaration of Pean Blackwell, general assistant in the 135th Street (Harlem) branch of the New York City public library, when interviewed recently at the new Moscow hotel.

Miss Blackwell is making her first trip to the free Socialist society for an extended tour which will cover most of European Soviet Russia. She left New York on the Berengaria on July 3. During her stay in Europe she will visit the Paris Exposition and the popular Soviet pavilion there which is attracting the attention of millions.

"I am especially interested in the national minority question in Soviet Russia, particularly as it applies to Jews and Armenians," said Miss Blackwell. "For that reason I am visiting Erivan, capital of Soviet Armenia, where I have friends, and on my way out I shall spend some time in the Soviet Ukrain, former scene of bloody pogroms against the Jews under Tsarism."

In no city in America has she seen such healthy and well-fed people as in Soviet cities, remarked Miss Blackwell. The Soviet people are obviously better fed than the masses in other countries.

All-prevailing Soviet democracy first drew Miss Blackwell's attention during the passage from London to Leningrad on a Soviet steamer. The comraderie and absence of any class difference existing between crew and officers and the friendliness of the entire crew with the passengers was quite a contrast to the stiffness and sharp distinctions noted on the British 'Berengaria."

Being a member of an oppressed race and now witnessing and enjoying full democracy, and noting the absolute absence of any form of national oppression or manifestation of fascism, it was only natural that Miss Blackwell's attention turn to the heroic struggle of the Spanish people for democracy, in which struggle the Spanish masses have found full solidarity among the liberty-loving Soviet peoples.

"It is obviously of the utmost importance for humanity," said Miss Blackwell, "to stop the advance of fascism. This is especially important for the Negro people. The forces of all progressive and advanced humanity should be concentrated against the fascist menace in a spirit of internationalism and not dispersed along narrow and futile nationalistic and chauvinistic lines.

"For the Negro people it is important that in the struggle against fascism they do not allow themselves to be misled into such confusion as befell the Moors at the beginning of the struggle in Spain and thus be trapped and betrayed on the wrong side."

Miss Blackwell received her B. A. degree at Barnard college and her M. A. degree from Columbia university. She expects to reach New York on her return trip on Sept. 1.

# ASKS IS NEW DEAL LIQUIDATING NEGRO AS GOV'T EMPLOYE

## Writer Points to Losses Of Good Jobs Since Last Election

Washington, D. C., Aug. 19—(By Rienzi B. Lemus for A. N. P.)—In the light of more or less recent events here, a pert query is: is reduction in the number of colored persons in official and non-labor posts of the Washington Federal setups merely incidental to "liquidation" of the New Deal, or does it signify New Deal "liquidation" of Negroes?

Rejoicing over elevation of Mr. Hastie from a solicitor's post in the Interior department to the Virgin Islands' bench back in April has given way to anxiety over failure of another Negro lawyer to get the place vacated at Interior by Judge Hastie.

Of course curtailment of promiscuous spending of New Deal puppy days affects all, race regardless. But when Negro heads of departments or sections are so disposed as to actually eliminate salaries and office staffs suspicion, naturally, is aroused. There is the case of Lawrence A. Oxley, for example. Mr. Oxley has been Chief, Negro division, Department of Labor since 1933; additionally, he is attached to the department's bureau of labor statistics, on whose payroll he is carried.

# R. H. BOYD PHOTO-PRINT

Every Baptist Church, School or Religious Auxiliary Should Hang One on Their Walls and Have It at Home.

LARGE-SIZE ENGRAVING OF THE BUILDER OF THE NATIONAL BAPTIST PUBLISHING BOARD'S PLANT WILL BE SENT UPON RECEIPT OF TWENTY-FIVE CENTS IN POSTAGE—NO CHARGE FOR THE PICTURE.

Because of the large demand from the religious forces of the nation for pictures of the late R. H. Boyd, the Secretary of the National Baptist Publishing Board, who is the son of the founder, has had the lithographers to print a large quantity of these. The exact size of the photo-print is 11 inches by 14 inches. It is a splendid reproduction of this giant of Baptist leaders. The name is under his picture, and it is a side view.

The picture will be sent securely wrapped in a tube to prevent it from being crushed. When it arrives at its destination it can be framed. The Secretary of the Publishing Board declares that he is having these ready to be mailed out, so that during the month of March, 1938 every School that wishes to hold Boyd Memorial Exercises will have a large-size picture of the late Dr. Boyd on hand, and they can point him out to the present generation. They can show this picture to the thousands of boys and girls who never saw him. They can point him out to the tiny tots, who in a little while will be grown-ups.

The National Baptist Publishing Board, which was founded by this Baptist stalwart, is but one of the institutions that was built, established and headed by him during his life time.

Send all letters to

**HENRY ALLEN BOYD, Secretary**

523-2nd Avenue, North Nashville, Tenn.

Oxley "Promotion"

As of July 15, Mr. Oxley's "promotion" to field worker of the Federal Unemployment Service became effective. If his entire time is to be devoted to unemployment no successor has been named to take as over chief of Negro division. On the other hand, the absurdity of a chief also being a field worker is striking. What has actually happened may be taken for granted as follows: owing to the constant budget troubles of the Secretary of Labor and President Roosevelt's frown on too much travelling expenses in all departments Oxley was "promoted" to field worker of unemployment service in order to cover his travelling expenses as Negro division chief, since he did all of his own investigating anyway. There is no increase in his office staff; he will be lucky to retain the mere handful he now has, it is believed.

Kinckle Jones Resignation

But it was over in the huge Commerce department that the apparent raw stuff was got away with. In 1928 J. A. (Billboard) Jackson was given just a job in Commerce. By 1932 he had created and established the small business section of the department's bureau of foreign and domestic commerce—a real institution of service. But Mr. Jackson was Republican, Hoover man; so he had to go when Roosevelt came in. Unable to find a person to take over and go on with "Billboard's" creature, the colored Democratic leaders selected a very competent man—in his field though a Republican, Mr. Eugene Kinckle Jones of New York, executive secretary of the National Urban League. Mr. Jones got along as best he could until last April, when some colored Democrat got the ear of the White House, thus made both the positions of Secretary of Commerce Roper and Mr. Jones untenable. For a year or more Mr. Jones had been giving only two days a week to the government at full salary, owning to the demands on him by the Urban League; several deserving and competent colored Democrats were each willing to give his whole time for the Jones' salary. Mr. Jones had to go, but none of the deserving got the place. The Director of the Census Bureau came to the rescue of the Secretary of Commerce—and the budget.,

No Replacements

Census is a bureau of the Commerce department, and the director advised the Secretary to put a Negro career man in Jones' place. The man is Charles E. Hall, Specialist on Negro Statistics, who has been in Census since 1900, or a few years before the Commerce department was created. Mr. Hall therefore succeeded Mr. Jones on July 1—and how! Out with Jones went his salary. His office space has been returned to white personnel of some other section; his colored (non-civil service) office force gone. Hall's salary has only been nominally increased, he is using his same office and has the same staff; so that the net gain from the shifts is altogether Uncle Sam's. Negroes have a section chief where there were two chiefs; one office staff in lieu of two staffs; one fair salary in place of a good salary and a salary not so good. Looks as though the New Deal is liquidating Negroes.

## Seek To Make Life On Farm Delightful

Tuskegee, Ala., Aug. 19—(A. N. P.)—Closing the first week of a special three weeks summer course for Negro extension agents, which under the direction of J. R. Otis, head of the School of Agriculture, Tuskegee Institute, Director P. O. Davis, of the Alabama Extension Service, Auburn; and Dr. F. D. Patterson, told the more than 108 agents assembled here from 8 Southern states, that they are engaged in one of the most important fields of human endeavor and that their presence at the recently established summer course was a gratifying sign of human progress.

"Alabama is moving onward," said Director Davis, "and this is because of the consecrated and devoted service that men and women engaged in the various uplifting endeavors, such as the kind of service to which you are giving your time and effort that is bringing about these satisfactory results. You are engaged in a form of education.

Dr. Patterson paid warm tribute to the various agricultural services, state and national, which are endeavoring to make the necessary adjustments so that those engaged in agriculture may enjoy a larger and a more useful living.

White and Colored Teach Together

Director Otis invited attention to the fact that the week just closed was devoted to the study of extension methods, farm economics, agricultural engineering, poultry raising, gardening and special rural problems, and that those contributing to the program during the week were: J. A. Evans, Athens, Georgia; E. A. Miller and J. C. Lipscomb, of the U. S. Department of Agriculture, Washington; T. N. Roberts, Manager of the Resettlement Administration Project, Tuskegee, Alabama; W. W. Hayes, division of horticulture, Tuskegee Institute; Rebecca Davis, division of rural education, Tuskegee Institute; Mr. J. B. Ivy, State Extension Poultry Specialist, Auburn, and Mr. Jones, division of Poultry, Alabama Polytechnic Institute, also of Auburn.

Profanity often indicates weakness of character.

## Foreign Explorers Seek Ethiopian Oil

New York City, Aug. 19—(A. N. P.)—Leo Y. Cherok, young American promoter whose million-dollar claim to mineral concession rights in the Walaga section of Ethiopia is being ignored by Italy, last week charged that Germany is concentrating troops in the area. Mobilization of the troops, according to the American, is part of the deep-rooted plan on the part of Italy to restore to Germany the colonial possessions lost under the Versailes Treaty.

Cherok obtained his concession, amounting to more than 15,000 square miles, in 1935, his option being based on a million-dollar payment to the government of Emperor Haile Selassie, whereby Cherok received oil. mineral and other prospecting and concession rights in Walaga province. Italy, he says, was to have officially recognized his claim several months ago, withheld this recognition because the United States Department did not recognize the Italian conquest of Ethiopia. Massing of troops in the area by Germany has still further complicated the matter, made of it an international issue.

## Cotton Production For Year To Be 15,000,000 Bales

Washington, D. C., Aug. 19—(A. N. P.)—According to an estimate last week by the agriculture department this year's cotton production will be 15,593,000 bales 3,914,118 more bales than were grown in 1936. The ten-year average production—1927-36, was 13,200,857. Nearly 33,500,000 acres are under cultivation this year as compared with slightly more than 30,000,000 acres for last

On Aug. 1, conditions indicated above average yields per acre in all states and larger yields than last year in all major states except South Carolina, Mississippi, New Mexico, Arizona and California, where yields last year were unusually high.

## 3,000 Attend Big Emancipation Day Program In Iowa

Des Moines, Ia., Aug 19 (ANP)—More than 3,000 persons turned out for the first annual celebration of Emancipation Day, held at Iowa's largest amusement park, Riverview, at Des Moines, Wednesday. The celebration, sponsored by the El Producto club, brought in many visitors from throughout the state and from Missouri, Nebraska, Illinois, Kansas and Minnesota. It is the first time that Negroes were ever able to obtain Riverview park.

Speakers on the program included the mayor of Des Moines, Joseph Allen, the Rev. George W. Robinson, pastor of Corinthian Baptist church, Attorney W. Lawrence Oliver, and Miss Irene Glass, a student of Iowa State college of Ames, who read the Proclamation of Emancipation. Attorney M. J. Cary presided over the program.

## TEXAS SANITARIUM BOON TO MANY OF STATE'S AFFLICTED

Kerrville, Texas, Aug. 19 (ANP)—The Kerrville Sanitarium, first all-colored tuberculosis sanitarium in Texas, established early this year, has admitted more than 115 patients since its opening, according to Dr. W E. Shallowhorne, resident physician. Under the superintendency of Dr. H. W. Swazye, this institution is doing much to alleviate suffering and control the ravages of the great white plague among Negroes.

Dr. Shallowhorne and his associates were appointed after a spirited campaign for an all-colored sanitarium, staffed and manned by colored physicians and nurses. The state legislature appropriated money to secure the first unit and since has given another $85,000 for the building of another unit which will be completed in 1938.

## Former Slave Of Sam Houston Gets Ovation In Texas

Houston, Texas, Aug 19 (ANP)—A simple, eloquent plea for peace and harmony among nations was sounded by Jeff Hamilton, 97-year-old former slave and personal bodyguard to General Sam Houston, Father of Texas Freedom. His plea was made Sunday at the colorful ceremonies dedicating a 1400 pound marble slab making the site of the general's home at Cedar Poin tnear here.

Attorney General of Texas, William McCraw delivered the principal address to the more than 300 persons who attended.

But it was the former slave who stole the show from famed orators who spoke. Called on without warning by master of ceremonies George W. Wilson, the scholarly appearing old man, walked slowly and with considerably dignity to the microphone.

Perfect quiet reigned as he spoke. "I adore the name of Sam Houston," he said. "It has been 74 years since I was on this soil. It's a pleasure to be back on the old stamping grounds. I want to say to you, let peace and harmony prevail among all nations. That's my religion."

Prolonged and vociferous applause cheered him to his seat. Brought to Cedar Point from his home in Belton, Mr. Hamilton is tall, straight as an arrow, hair touched with gray, neatly dressed in a white coat and dark trousers with a tie of contrasting color. Having been what is called today a valet to the general, he was taught the value of cleanliness and neatness and these habits have persisted to this day. He is considered something of a dandy in his home town.

In speaking of old times with his master, Mr. Hamilton likes to tell of the time when they were both young and played games together. When alone he called his little master by his first name and was frequently reprimanded by the mistress. But his friend and master wanted him to call him by his first name and not by "master."

Mr. Hamilton was given a front row seat by the San Jacinto Association. He was surrounded on all sides by whites and was the center of attraction after the ceremonies. Considerable time was spent with the sole remaining son of Sam Houston, Colonel Andrew Jackson Houston.

## DOCTORS VOTE FOR FIGHT ON SYPHILIS URGE SCHOOL TESTS

St. Louis, Aug. 26—(ANP)—Wasserman tests for all pre-school children in order to expose latent cases of syphilis, and birth control for symphillitic and mentally deficient women were asked in resolutions adopted by the National Medical Association in its annual meeting held here last week.

Dean Numa P. Adams of the Howard University Medical School announced the opening of a department for instruction of physicians in treatment of syphilis, under sponsorship of the U. S. Public Health Service.

Members also protested against the practice in many Southern states of refusing to permit Negro physicians to treat Negroes on relief. Speaking over radio station KSD, Dr. Roscoe Giles of Chicago, president, blasted this practice as "reducing patients to the level of experimental guinea pigs, such as exists in European centers under state medicine and which gives the patient little freedom of decision as to what will be done with his own body."

# NOTED EDITOR OF KANSAS PAPER RATES POET DAVIS' WORK AN EPIC

Chicago, Aug. 19—(A. N. P.)—"Frank Marshall Davis is singing the songs which some day will rise in the land and become a great American epic,' wrote William Allen White, famous white author and editor of the Emporia (Kan.) Gazette, last week commenting on "I Am The American Negro," recently published volume of verse written by Davis.

The article, which also stated "his new book is one of those volumes which adds distinction to the year's output of American verse," has been reprinted in various other dailies in Kansas, birthplace of the poet, because of sectional pride of the literary achievements of a native son.

According to the Black Cat Press, Chicago, publishers of the volume, white critics without exception have heaped praise upon the collection. "Books" of the New York Herald Tribune has stated, "Mr. Davis pulls no punches. His walloping, colloquial lines, slangy and muscular, are a strong note in contrast to the more conventional work of Negro poets like Countee Cullen. Mr. Davis has passion, appeal and integrity."

William Rose Benet, noted critic of the Saturday Review of Literature, said: "I regard Mr. Davis as the most promising Negro poet of recent years.' According to Nelson Antrim Crawford, editor of the Capper Publications, "He has a gift of selecting the characterizing detail, and he combines music and painting in his work." Says the Brooklyn Teacher, "Set in verses of strength and bitter beauty, Davis has hammered husks of loveliness out of the pain of his people." Other white critics have spoken in similar vein.

Davis, who in May received the only Julius Rosenwald fellowship given in several years for poetry, has started work on a satirical novel he hopes to have ready for publication in 1938. He is also the author of "Black Man's Verse," published in 1935.

## Union Delegate Sits In Council At Texas Meeting

Beaumont, Texas, August 5—(By John H. Thompson for ANP)—History was made here in Texas recently when for the first time a colored union labor delegate met with white delegates of the International Theatre and Stage Employes Union of Texas.

The only colored delegate among nearly a hundred whites, Lee Lewis, business agent for Local 279, a colored union of Houston, affiliated with the A. F. of L., was accepted freely and openly at this state convention.

Scheduled to be held at a local white hotel, the coming of Lewis caused the hotel management to demur at his presence. White delegates told the management that if Lewis could not enter the premises, then they would take their meeting somewhere else. Lewis was admitted to the hotel convention room and later was seated at the banquet table with the whites.

Lewis is a member of the executive committee of the Houston local, composed of whites mostly. He is the man directly responsible for the strong fight put up by colored people of Houston to force employment of colored motion picture operators in exclusive Negro houses. Through his efforts twelve men are regularly employed at union rates.

# PASTOR DIES AFTER ATTENDING FUNERAL OF CHURCH MEMBER

Salisbury, N. C., Aug. 12—(ANP) Rev. James J. Nicholson, one of the leading ministers of the A. M. E. Zion church and the father of Mrs. Saludia M. Young, Greenville, S. C., correspondent for ANP, passed away Saturday at his Salisbury home, a heart victim, shortly after he had attended the funeral of one of his church members. He was pastoring a circuit near Salisbury and Spencer.

Rev. Nicholson was one of the early gradnates of Tuskegee Institute, being a member of the class of 1895 and during his student days was a member of the Tuskegee Quartet, traveling extensively with that unit. Last rites were held Tuesday in the chapel of Livingstone College, the funeral eulogy being delivered by Bishop L. W. Kyles of Winston-Salem. The widow, Inia Clausell Nicholson, six children, and a number of other relatives survive.

# EMMETT J. SCOTT DELIVERS ADDRESS ON B. T. WASHINGTON

## Tells, Hampton Audience Of Famed Educator's Worth to Nation

Hampton, Va., (CNS)—At one of the closing sessions of the Hampton Institute Summer School, Dr. Emmet J. Scott of Washington, D. C., spoke upon invitation of Mr. William A. Aery, Director of the Summer School.

Dr. Scott spoke on "The Contribution of Booker T. Washington to American Education." He visited Hampton also for the purpose of speaking betore the 69 Jeanes Fund Teachers from Texas, Louisiana, Arkansas, Mississippi, Virginia, North Carolina, South Carolina and other Southern States, who had been taking intensive courses at Hampton this Summer under the supervision of Dr. Arthur D. Wright, President of the recently incorporated Southern Education Foundation, being the merger of the John F. Slater, the Anna T. Jeanes and the George Peabody Foundations. Dr. Scott is the Secretary of the new Board of Directors.

After speaking at a closed session of the Jeans Fund Teachers, Dr. Scott spoke in Agden Hall to the 600 Summer School Teachers of Hampton, He paid tribute to the principles of Hampton Institute, including General Samuel C. Armstrong, Dr. H. B. Frissell, Dr. James E. Gregg, Dr. George P. Phenix, and the present President, Dr. Arthur Howe, all of whom gave fixity to the Hampton program of providing, in the words of Dr. Francis G. Peabody, "not education for learning only, but for the enrichment and consecration and fulfillment of life.

He also referred to the Beloved Band of the distinguished trustees of Hampton, who were associated with them in their work, including Dr. George Foster Peabody, New York Philanthropist; Dr. Francis Peabody to whom reference has already been made, and Mr. Robert C. Agden, whose princely generosity was mainly responsible through his pilgrimages to the South each year for the educational renaissance of 40 years ago, and which were mainly responsible for that slogan, which swept many, if not most, of the States of the South: "Every child is entitled to educational privileges and opportunities without regard to race, creed, or color."

Dr. Scott also mentioned others whose consecrated labors made possible the mighty power for good Hampton has weilded for 70 years and more, and referred to this administrative service with Hampton's two most famous graduates—Booker T. Washington and Dr. Robert R. Moton with whom he served at Tuskegee Institute.

Of Booker T. Washington he said "I can only testify as I have in many places, and upon numerous occasions of the "cooperative unity" he always sought to maintain with Hampton. from which he received so much, and to which, in return he sought to repay in heaping measure, running over.

He sought to delineate some of Booker T. Washington's chief characteristics as a man, as a teacher, as a great trusted leader of a race; of the faith and confidence reposed in him by the mightiest, the lowliest, and the very elect of the world, and of how he met the responsibilities of leadership.

"Speaking here," he said, "where Booker Washington received his education, and a double portion of General Armstrong's spirit of adventure and educational evangelism, I can only repeat one or two observations I have had occasion to make on other occasions:

"Hampton should be, and justly is, proud of the career fashioned here under the tri-colored banner of Head, Heart and Hand education. I am glad that his fame in the long, long run will rest upon his pragmatic philosophy of purposeful education.

"Of him, it can be said, he clearly saw fundamentals. Seeing his way, he could not be deflected into bypaths either by criticism, or unreasonable reviling. He continued to hold, and to proclaim that the members of his race, each individual thereof, must seek to acquire basic character, those qualities and fundamental virtues which contribute to make men and women useful members of society through practical, purposeful work.

# PLAGIARISM IS CHARGED AGAINST GEO. E. HAYNES

## Tuskegee Says His Paper Was Used by New Yorker

New York City, Aug 19, (ANP)—Dr. Monroe N. Work, director of the Department of Records and Research at Tuskegee Institute and editor of the Negro Year Book caused a decided stir this week in church and educational circles throughout the country when he accused Dr. George E. Haynes, famed churchman and executive secretary, Federal Council of Churches of Christ in America, of plagiarism. Dr. Work declared Dr. Haynes appropriated a paper prepared by him and was having it published in a nationally known weekly under his Dr. Haynes') signature.

The series of articles "written" by Dr. Haynes and complained of by Dr. Work have been published under the titled "Dr. Haynes Dissects Heart of Racial Problem in America." From his office at Tuskegee Institute, Dr. Work this week wrote Dr. Haynes in New York City, in part, as follows:

"When you were here in May, I loaned you a copy of my address on "Problems of Adjustment of Race and Class in the South," which had been presented at the Southern Sociological Society meeting at Birmingham, Ala., April 3. I informed you that this address was to be published in the Journal of Social Forces at the University of North Carolina, the Organ of the Society. You said that you would not make any use of this address until it has been published.

"I find that in the series of articles appearing under your name you are using the concepts, the ideas, and in some cases the language itself as presented in my Birmingham address, thus gaining the impression that they are your own language, concepts and ideas. I consider this a very unethical procedure and kindly request that further publication of these articles be discontinued."

## Hen Autographs Eggs

Memphis, Aug. 12—(ANP) A hen in her flock is "autographing' eggs, Mrs. Sarah Alexander, of 657 Linden, said yesterday. What resembles letters and words have appeared on all eggs laid by the hen recently. The "writing" is not legible.

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**
**Theological Kernels**
*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## Colored Farmer Eats Watermelon, Does Not Like It

New Bern, N. C., Aug. 19 (ANP) Harry Hicks, farmer in the Hopewell community near hear, celebrated his 42nd birthday Tuesday by taking the first bite of watermelon he ever had in his life. He didn't like it. But it made good copy for daily papers of this section, whose editor considered a Negro who had never eaten watermelon before and doesn't enjoy it as a real novelty.

Hicks agreed to taste the melon after much persuasion. But first he watched three companions do away with their slices in order to learn how to eat it. He took two bites—and gave it away with the explanation that he "just didn't like the looks or the taste." He also does not eat chitterlings.

The farmer admitted that all of his relatives ate it and he raised a crop of melons yearly on his farm. According to a survey of this section conducted by both white and colored, Hicks is reputedly the only Negro around who does not care for the juicy product.

## Dallas Business Leaders Seeking New Industries

Dallas, Texas, Aug. 5—(ANP) A recent survey, conducted by the Dallas Negro Chamber of Commerce, reveals the need for industrial development among Dallas Negroes. Acting on this information, the Negro Chamber sent out letters to Negro manufacturers and industrial developers, urging them to locate their plants or branches here. The letters point out that the city of Dallas is situated in the center of the Negroes' largest trade area and is the hub of the Southwest. More 2,000,000 are served by this trade area of which Dallas is the center.

Much interest is being shown in the industrial development of Dallas by local financiers and promoters. A movement is on foot for the establishment of a cooperative department store. Another group in Dallas is planning the organization of a shirt and overall factory. The stimulus for this latter movement comes from a group of business men who recently made a tour through the W. P. A. sewing room, which employs around 900 Negro women who manufacture shirts and work clothes for relief clients. Negroes are beginning to realize that government aid will soon be withdrawn and they should begin to think of providing employment for their own group.

The Dallas Negro Chamber of Commerce is active in this movement and encourages all interested persons and concerns to correspond with its office at 814 1-2 Good St.

## Bar Association Urges Passage Of Anti-Lynch Bill

Philadelphia, Pa., August 6.—Telegrams urging passage of the Wagner-Van Nuys anti-lynching bill were sent from the convention of the National Bar Association here yesterday to Senators Robert F. Wagner, Fred Van Nuys and Majority Leader Alben W. Barkley. The telegrams urged passage of the anti-lynching bill by the Senate prior to adjournment.

Thurgood Marshall, secretary of the bar association, received telegrams from both Senators Van Nuys and Wagner stating that every effort was being made to bring the bill up for consideration at the present session and that the only reason it had not been considered last week was because it was attached as an amendment to another bill and the sponsors believed the anti-lynching bill is important enough to warrant passage on its merits. Senator Van Nuys told the bar association. "In my opinion, we shall be successful in bringing the bill to a vote during the present session."

Good is based upon the law of God and therefore is sustained by the principle of truth.

## Eastern Camp Is Mecca For Vacationists

Gay Head, Mass., Aug 19 (ANP)—One of the most picturesque camp sites in the country, is Camp Acquinah, located here, and being directed by Miss Mae Etta Hubert, a senior at Fisk university, and the daughter of James H. Hubert, executive director of the New York Urban League. The camp is well equipped to meet the needs of those who pass their vacation there. It has a large main house which has modern conveniences, such as hot and cold water, and shower baths. There are also four huts, and a tent as a part of the Camp equipment. Features of the camp program consist of long hikes, bathing, and nature study which consist of studying the historic background of New England.

The camp staff consists of Miss Rose Sherman, Charles Rochester, Latricia Martin and Harold Taylor, counselors; Benjamin Hubert, general manager and Mrs. J. H. Hubert, receptionist.

## Draws Sketch Of Prosecutor In Court; It Helps

Chicago, Aug 19 (ANP)—Glover Sudor, 19, owes a short prison sentence for larceny to his ability to sketch the prosecutor.

Sudor pleaded guilty Wednesday before Chief Justice Michael L. McKinley of criminal court to stealing suspenders, shoes and other clothes from a Southside home and was sentenced to 10 months in jail. Elated at receiving the minimum term, he rapidly drew a sketch of Assistant State's Attorney Frank Donoghue.

Donoghue glanced at the drawing, snorted, handed it to Judge McKinley and proposed that the sentence be changed to life. "On the contrary," replied the judge, "I think it's a good likeness, and I will reduce the sentence to nine months."

## National Technical Association Plans Meeting at Howard

Washington, Aug 19, (ANP)—The National Technical Association, incorporated in 1926, and composed of 300 colored architects, civil, electrical, mechanical, chemical and metallurgical engineers, physicsts, chemists and allied professions, will hold its annual convention Sept. 3-5, at Howard university. Dr. Mordecai W. Johnson, president of Howard will address the delegates September 3, at an open meeting to be held at Methropolitan A. M. E. church.

Officers of the National Technical Association are Cornelius L. Henderson, sturctural engineer, Detroit, president; Paul E. Johnson, electrical manufacturer, Chicago, executive vice president; James C. Evans, director of technical education, West Virginia State college, secretary; Julius M. Gardner, construction engineer, Washington D. C., treasurer; William G. Holly, Chemist, New York City, eastern vice president; James A. Dunn, architect, Dayton, Ohio, central vice president; Curtis I. Gordon, mechanical engineer, St. Louis, western vice president.

## WILLIAM PICKENS RATED ONE OF OUR "BIGGEST LIARS"

### Wins Membership in Big Society for Whoper About the Heat

Burlington, Wis., Aug. 5—(ANP)—Pres. O. C. Hulett, of the Burling Liar's Club, Inc., "Originators and Promoters of the National Liars' Contest," has mailed to William Pickens of New York, director of the branches for the N. A. A. C. P., a letter informing him that he is a full-fledged member of the international organization, and presenting him with a membership card.

The Liars' Club was organized in Burlington some years ago when a wide-awake reporter heard Burling City officials spinning yarns and wrote it up as a "contest" in lying. Some quick-witted person took the cue, organized the Club and since that its membership has spread all over the earth. To qualify for membership, one must tell some outstanding and humorous lie—lying for pleasure and entertainment, not for malice. Pickens spun a yarn about the effects of the July hot weather in New York, and was immediately taken into the Club. The Club reserves the right to publish or broadcast the contributions of its own members.

President Hulett's letter to Dean Pickens said in part: "Enclosed you will find your membership card in 12 Globe BFH 8-4
the Burlington Liars' Club. Men and women in every walk of life, thousands of them, are carrying similar cards. They live in every corner of the globe, for your club is an international organization, with members on every continent.

"Please allow me to congratulate you on being a member of one of the few organizations in this old world which doesn't give a hang about the 'social position' or bank balance of its members; the finest collection of 'good fellows' in or out of Captivity—the Burlington Liars' Club.

## Ethiopia Open Only To Rich

Rome, Aug. 5 (ANP)—Despite claims of Mussolini that Ethiopia was needed to take care of Italy's surplus population, it was revealed last week by newspapers here that those areas of Abyssinia under Fascist control will be the happy hunting ground only of Italian financiers.

Extracts from the reports of an agricultural mission sent to Ethiopia in February show that the only areas in the country suitable for farming are already fairly densely populated by natives. Areas where the population is thin are unsuitable fo ragriculture, and hope is already abandoned of any big mineral finds.

The report also emphasized that title to this land by the present occupants is not established by law and therefore there is opportunity for men with heavy financial backing to exploit them. Since Ethiopian labor can be obtained cheapily, there is no opportunity for the exportation of Italian workers, the report adds.

## CHATTING

(By Arden H. Duane for A. N. P.)

### DEEP FRYING

Croquettes are the most popular of French fried foods because they are wonderful for left-overs. Croquettes can be made in simple cylinders or molded with special little gadgets into fancy shapes.

Many cooks are afraid to try making croquettes but there are a few simple rules that even those experienced must follow to a "T."

Be sure that each croquette is coated properly. The surface should be covered completely with dry crumbs before it is dipped into a beaten egg; and then rolled again in crumbs until covered again. (Fine crumbs will stick better than coarse ones. If coating does not cling snugly to the food it may drop off.) Lower croquettes gradually into a deep kettle with deep hot fat which covers the croquette entirely. Drain on any kind of absorbsent paper and keep warm until ready for use.

Remember: don't make them too large because they will burst during frying. Don't make them too moist because steam will rapidly form within the tightly sealed surfaces and cause the whole croquette to spatter all over the place.

If you make croquettes early in the day it will save time and they are one hundred percent better when allowed to chill several hours.

Why not try your luck with these recipes.

**Cottage Cheese and Potato Croquettes**____Two cups cottage cheese, drained, two cups mashed potatoes, two eggs, salt and pepper to taste, fat for deep frying, one cup dry bread crumbs, one egg, well beaten.

Combine cottage cheese, mashed potatoes, eggs and seasonings. Form into carrot-shaped croquettes. Roll in dry crumbs, then in beaten egg and again in bread crumbs. Fry until golden brown in fat heated to 375 degrees F. Serve with hot tomato puree and bundles of green beans or asparagus stalks. Garnish the croquettes with parsley and the vegetable with pimiento strips.

**Sweet Potato Croquettes**_____ Six medium-sized sweet potatoes, three tablespoons butter, three tablespoons sherry wine or flavoring, salt and pepper, one egg well beaten, one cup dry bread crumbs, six marshmallows, fat for deep frying.

Pare and cook potatoes until tender, mash or rice and add wine, butter, salt and pepper. When slightly cooled, shape into croquettes. Roll in crumbs, dip in beaten egg, then roll again in crumbs. Fry in deep fat until golden brown at 375 degrees F. Just before serving, top each croquette with a small or half marshmallow and place under a broiler flame until browned lightly. Serve with crisp brown bacon curls.

**Meat Croquettes**___(Beef, lambs, veal, mutton, chicken, pork or ham.)

Eight tablespoons butter, eight tablespoons flour, salt and pepper, two cups milk, two teaspoons minced parsley, four cups minced cooked meat or poultry, one teaspoon lemon juice, one teaspoon minced onion, finely sifted dry bread crumbs, one egg, one tablespoon water, fat for deep frying.

Melt butter in top of double boiler. Remove from heat, add flour, salt and pepper, stir until well-blended. Add the milk, place over boiling water and cook, stirring constantly, until thick and done____ about ten minutes. Combine the parsley, meat, lemon juice and onion with this white sauce, mix well. Add more pepper and salt if needed. Chill well. Then shape into cylinders about one inch thick and three inches long. Coat on both sides by rolling in crumbs, dipping in egg beaten with water. Then roll again in crumbs. If possible chill again before frying. Fry a few minutes at a time in fat heated to 375 degrees F.

**Lima Bean Croquettes**_____ Two cups cooked, dry lima beans, one tablespoon tomato catsup, one fourth teaspoon powdered sage, one cup fine dry bread crumbs, one half cup canned milk, one half teaspoon salt, one eighth teaspoon pepper, one egg, slightly beaten.

Rub lima beans through a coarse strainer. Add crumbs, milk, salt and pepper, sage and egg. Shape into small cylinders, roll in crumbs, dip in one egg beaten with two tablespoons cold water and again roll in crumbs. Fry in deep hot fat until brown. Drain on soft paper and serve.

There are all kinds of delicious croquettes on the leaflet. And all extremely easy to make. They are Carrot croquettes, spinach croquettes, hominy croquettes, salmon croquettes, nut croquettes and rice and tomato croquettes. Why not send for these recipes. Send a loose three cent stamp to Arden H. Duane, Associated Negro Press, 3507 South Parkway, Chicago, Illinois.

## YOUTHFUL "REDS" GIVE ENDORSEMENT TO SENATOR BLACK

Richmond, Va., Aug 26 (ANP)—Despite Sen. Hugo Black's widely known affiliation with the Ku Klux Klan its support of his election to the senate in 1926 as well as his reputed membership in it, plus his intention to filibuster against the Wagner-Van Nuys anti-lynching bill had it come up for vote at this session of congress, the Southern Negro Youth congress sent a telegram last week to Washington asking the Alabaman's confirmation as a justice of the U. S. Supreme court.

The message signed by William F. Richardson, chairman of the congress, declared his organization represents 250,000 "young colored Americans" who supported President Roosevelt's appointment of Black to the supreme court "in the light of Sen. Black's record in interest of progress and equality."

It was sent to the judiciary committee of the U. S. senate which at that time had not brought Black's name to the senate proper for action.

## Barber College To Be Opened In Cleveland, Ohio

Cleveland, Aug. 19, (ANP)—A group of local citizens, headed by I. L. Johnson, with the approval of the Ohio State Board of Barbers, has organized the National Barber College for Negroes which is scheduled to open during September.

The college is the outgrowth of the realization that the professional Negro barber have been losing ground for a number of years and that he now faces extinction unless the young men and women makes ome effort to carry on this profession that has decidedly been theirs over a period of years.

The dire necessity for a barber school for Negroes, where they would learn to cut colored folk's hair, was evidenced here this week when a number of barber shop operators searched the city without apparent success for competent Negro barbers to take care of the visitors who will attend the 38th Grand Lodge Convention of Elks. Due to the fact that older barbers are passing from the scene of action, there is a noticeable shortage in the profession.

In a few cities above the Mason-Dixon line, Negro students have been admitted to some of the white schools. They learned to service white patrons. After graduation they found themselves stumped. There are no white shop operators who will employ them.

The National Barber College for Negroes will be the first of its kind in these United States, according to the Ohio board. Already a large class is forming. The course will include all phases of barber science—Bacteriology, Anatomy of the Upper Body, History of the Hair and Skin and Scientific Manipulation of the Muscles of the Head and Face.

## HONOR STUDENTS OF ATLANTA GIVEN TOUR TO NORTHERN CITIES

### Louisville, Nashville and Chattanooga on List to Be Visited

Chicago, Aug. 26—(ANP)—The sixth annual educational tour given for the honor students in the senior department of the Booker T. Washington Junior-Senior High school of Atlanta, Ga., reached Chicago last Thursday on another lap of the journey which has taken the group to most of the key cities of the North and into Canada.

The honor students of the Booker T. Washington High are taken on this free educational tour, with their parents, each year to give them a broader view of life in metropolitan cities of the North as it affects the life of Negroes. Dr. C. L. Harper, principal of the school, is in charge of the party, which left Atlanta August 12, will return August 27, after a 15-day trip. Motion pictures are being made of the expedition for reference and for class room work this Fall.

The party left Chicago August 24, after visiting the Home Office of the Associated Negro Press, Chicago Defender, the Field Museum, Art Institute, Provident Hospital, the city's park system and attending the Chicago Tribune's Chicagoland Music Festival at Soldiers Field. Before returning to Atlanta, they will visit Indianapolis, Louisville, Mammoth Cave, Nashville, and Chattanooga, Tenn.

## 14,371,000 BALES COTTON FIGURE

### Secretary of New Orleans Exchange Gives Estimate

Secretary Henry Plauche of the New Orleans Cotton Exchange today placed the commercial crop for the year ending July 31, at 14,371,000 bales, comparing with 13,321,000 last year.

World's consumption of American cotton totaled 14,326,000 bales, including 1,073,000 linters, comparing with 13,359,000 last year, including 954,000 linters.

Consumption in the South was 6,967,000 bales, including linters, the annual report said, against 5,587,000 bales last year.

The total carryover of American cotton, Mr. Plauche placed at 6,108,000 bales, including 368,000 linters, comparing with 6,995,000 bales last year including 265,000 linters.

In the United States, the report said, the carryover was 4,330,000 bales, including 368,000 linters, compared with 5,276,000 bales last year, including 263,000 linters.

Of the carryover of 3,968,000 bales of lint cotton in the United States at the close of July this year, Secretary Plauche said 1,665,000 bales are held by governmental agencies against 3,216,000 bales last year.

Exports this year, including shipments to Canada, amounted to 5,771,000 bales, against 6,257,000 bales last year and 5,038,000 two years ago.

## HARRY L. BROWN'S RABUN FARM GROWS RECORD CROP OF POTATOES

Mountain City, Ga., Aug. 6.—Hugh White, of the Mountain City Packing Company, is exhibiting potatoes that Will Carpenter grew on one and a half acres of land—nine hundred bushels on the one and a half acres. These potatoes were grown on lands belonging to Harry L. Brown, assistant secretary of agriculture. They are of the Bliss variety and were grown for seed potatoes, but many of them grew too large for the seedsmen and will be sold as eating potatoes.

There is a good demand from south Florida and Cuba for seed potatoes grown here and several farmers in Rabun and Towns Counties are trying to meet the demands. Mr. Carpenter used a ton of high grade fertilizer made especially for these potatoes.

J. F. Cathey gathered from a half acre 275 bushels of the same variety, but, like Mr. Carpenter's there were many of them too large for seed potatoes and will have to be sold for eating.

A few years ago truckers of this county tried to grow seed potatoes but the seed they bought proved unsuitable and the prospect failed. This time they bought the original seed from South Dakota and have found the potatoes grown are far superior to those grown in the eastern part of the United States.

Very few farmers have been able to grow as much as 600 bushels of potatoes on an acre of land. In Maine, it is said, where they make a specialty of potato growing, there is a "600 Club", and a farmer must grow 600 bushels of potatoes on an acre before he can become a member. This has rarely been done in the south before, and Mr. Carpenter has set a pace for the truck growers hereabouts, many of whom will be trying to get into the 600 Club next year.

A representative from a seedsman in Miami was here recently and stated that he can use all the No. 1 seed potatoes this section can grow.

Mr. Carpenter will ship a car of seed from his one and one-half acres, and Mr. Cathey likely will have a car to ship. These potatoes bring a fancy price on the Miami and Cuban markets.

## PRIZE TENANT FARMER

### (From the New York Times)

We are indebted to The Arkansas Gazette for an introduction to Mr. John E. Shannon of Craighead county in the northeastern part of that state. He is not only a tenant farmer, and glad of it, but last year he was declared the champion tenant farmer of Arkansas, Mississippi and Tennessee. There were some 4,000 other competitors.

He made the farm yield all the food for the family. He also made it yield money enough to pay for the education in college now or in the future of his six children. His recipe was simple. Make your farm feed you. Depend on your cotton crop for money, but don't spend all of that money on your larder.

Failure to grow a full garden and a big potato patch has put more farmers on relief rolls than all other causes combined.

For years and years southern newspapers have asked southern farmers not to put all their hopes in one crop. Mr. Shannon and his rivals in intelligent production and management are showing how good that advice was. They are proving that a tenant farmer of the right sort is to be envied, not pitied.

## TO THE MODERN FARMER THE DAILY DIGEST SAYS

A complete power farming outfit, designed for the first time to meet fully the needs of the small farm, toward which the industry looks for the bulk of future volume, is tentatively scheduled to be brought out next year, possibly in time for the spring buying season, says a report from the Chicago Bureau of the Wall Street Journal (July 8). Aimed to sell in the $1,000 class, the combination is expected to include a baby tractor, plow, planter, cultivator and small harvester, thus completing the cycle for basic agricultural machinery needs on most farms of 100 acres or less. .

## LOAN PLAN SPEEDED IN EFFORT TO CURB SAGGING COTTON PRICES

### Southern Legislators Band Together to Demand U. S. Funds Aid Farmers

Washington, Aug. 9—Congressional pressure for a temporary loan structure to relieve the threat of sagging cotton prices was accelerated tonight when the agriculture department forecast a 1937 crop of 15,593,000 bales—a six-year high.

As cotton futures on the New York markets broke as much as $2.30 a bale on the basis of the government predictions, blocs of legislators from Southern states banded under the leadership of Chairman Ellison D. Smith of the Senate agriculture committee, to demand federal loans to stabilize prices and keep the excess crop off the market.

### Boll Weevil Damage

The only immediate prospect of allaying fear of enormous excesses was boll weevil damage. This was cited by Smith who said that "an extraordinary amount of rainfall over the cotton area has increased the possibility of insect damage, so no one knows, as yet, what will be the effect of the critical month of August."

Crux of the demand for immediate cotton loans is President Roosevelt's insistence that Congress pledge itself to enact general crop control legislation before he will consent to loans. The chief executive insists that a program be devised and enacted at the beginning of the next session.

Sentiment appeared to be growing tonight that he would win. The nation's thousands of cotton farmers admittedly were facing a new crisis.

There has been talk of a special congressional session in October to consider farm relief but the administration has reiterated that this will not be necessary if congressional leaders will agree to put through a program next January.

### 11 Per Cent Increase

Today's crop report revealed an increase of 11 per cent in acreage over last year and prospects of the highest yield per acre ever recorded by the agriculture department. The forecast was for the fourth largest crop in U. S. history, being exceeded in 1925, 1926 and 1931. The all-time record was 1926 when 17,978,000 bales were grown.

Upon hearing the crop report the Senate agriculture committee voted unanimously to press for floor action on a resolution calling for interim hearings on general farm legislation. Earlier the group had voted to support an amendment specifying that the committee report such legislation to Congress a week after the next session starts.

If similar action is obtained in the house the administration would in effect, be placed "on the spot" with regard to emergency loans.

Sen. James P. Pope, D., Ida., who sometimes speaks for the White House, said that the crop report "bears out the view that it is necessary to have comprehensive control legislation at the earliest possible date."

## COBB TENDERS RESIGNATION AS AAA SOUTHERN DIRECTOR

Cully A. Cobb today tendered his resignation as Director of the Southern Division, Agricultural Adjustment Administration. Mr. Cobb has indicated that he wished to return to private business around September 1.

In May, 1933, Mr. Cobb left his position as editor and vice-president of the Progressive Farmer and Southern Ruralist magazine to assume administrative direction of the AAA cotton plow-up campaign, which was launched immediately after the passage of the Agricultural Adjustment Act.

As chief of the AAA Cotton Section and director of its Cotton Division, Mr. Cobb supervised the agricultural adjustment programs for cotton during 1934 and 1935. Following the AAA reorganization in the spring of 1936, under the Soil Conservation and Domestic Allotment Act, Mr. Cobb was appointed Director of the Southern Division. In this position, he has directed the southern agricultural conservation programs of 1936 and 1937.

In the absence of Secretary Wallace and Administrator Tolley, no action has been taken on acceptance of Mr. Cobb's resignation, according to J. B. Hutson, Acting Administrator.

## NEW FARM TENANT ACT

### A. L. Holsey, Field Officer

Orangeburg, S. C.—Because of the important place which management-experience will occupy in placing loans under the new Farm Tenant Act just passed by Congress, Harry E. Daniels, Negro State Extension Leader for South Carolina is selecting a number of Negro farms in the State to be used for management-demonstration purposes.

Under the provisions of the Farm Tenant Bill, Congress has provided $10,000,000 for the first year, $25,000,000 for the second and $50,000,000 for the third year to assist tenants and share-croppers to become landowners. A major requisite for qualification for the loans is demonstrated ability to operate a farm on sound business principles.

"It is to meet this situation," said Mr. Daniels, "that we are arranging these demonstration farms. We also hope that they will be of service to wide-awake graduates in agriculture who wish to take advantage of this government program and become farm owners."

The details of the set-up for the management-demonstration farms are being worked out by Mr. Daniels with the assistance of specialists at the A. & M. College here and at Clemson College.

## PICKING A WINNER

### With Watermelons, It's Bigness That Counts. Knowing Types, Seasons, And How To Spot A Ripe One Helps, Too, In Getting Your Money's Worth of This Important Summer Diversion

About this time of year farmers traditionally load their shotguns with rock salt, stand ready to let fly at young marauders. For watermelons are in their prime, and thoughts of luscious pink watermelon slices lure small boys to raid the nearest watermelon patch. Most consumers will get their melons in more orthodox manner at the market. There they will thump and thumb melons of various colors, shapes and sizes—the Watsons, Thurmond Grays, Wondermelons. These are good shippers, coming long distances by rail to compete with local products such as Cuban Queen, frequently grown for nearby marketing. Cuban Queen is a round, medium-sized fruit with light-green mottled rind.

Top-price seller all over the country is the Tom Watson, a large cylindrical watermelon with deep-green, faintly veined skin. Flesh is red, firm, and somewhat coarse in texture. Popular though they were, the original Watson strains were open to complaint on account of a hard white streak that sometimes ran through the flesh. This fault, however, has been bred out in such newcomers to the family as Gilbert's Cut-Red Watson, a big glossy melon that is fine eating from start to finish.

Thurmond Gray wins honors as another melon success—quite different in appearance from the Watsons. Its rind is a light grayish green in color and is thin but tough. The delectable dark-red flesh is stringless, fine grained, and tender. Because of its firmness, the melon stands long train trips well. Like the Watson, the Thurmond Gray runs around 30 or 40 pounds.

Leading commercial watermelons of the round type is the Stone Mountain or Dixie Belle, its names suggesting the hearty reception accorded it in the South. The Dixie Belle matures to an ideal size and produces prolifically. The green fruit rind covers a tender melting flesh of showy bright scarlet hue.

Growers focus interest on a new watermelon strain that has been developed to resist the watermelon's worst enemy—watermelon wilt disease. Already one of these melons, Pride of Muscatine, has been boosted for commercial watermelon growing. It has dark-green, thick rind and crisp, tender, red flesh. Pride of Muscatine has the long cylindrical body that has outstripped in popularity the oval shape generally preferred a few seasons ago.

Just when consumers begin to think that watermelon season is over, a late comer makes its debut at the grocer's—a small round melon grown in Colorado and California and sold under a number of noms de guerre—Winter Queen, Winter King, Alaska, Klondike. Quality is only medium, but the melon keeps well, and on that account is a decided addition to the melon family.

We are apt to think of watermelons as a native plant. Certainly we associate borsch or beets, rather than watermelons, with Russia, but it was the Russians emigrating from the Volga River section who introduced their prized watermelon strains—including this round-melon type—in the Rocky Ford district of Colorado.

Watermelons grow over a wide range of territory, but though they reach as far north as Michigan and Minnesota, over 90 percent of the volume shipped comes from below the 37th parallel. That gives the southern part of the United States an unbeatable lead in production, with Georgia stealing the show with its annual crop of 12 million melons. Eastern Texas, the Imperial Valley and central California, Florida, South and North Carolina, Virginia, and Missouri record large volume watermelon production, with 14 other States also heard from.

Florida and the Imperial Valley commence the watermelon season in May, with Texas hot on their heels. Their shipments are heaviest in June when Georgia starts shipping. As warm weather creeps northward, watermelon season keeps pace with it. July is the peak month for watermelon production, but northernmost States may see the last of the melon shipments in October. With the eastern States out of the way, California and Colorado then hold the field alone, continuing to send melons to market until Christmas.

Total acreage in all States in 1936 stood at 256,600. Watermelon growers produced 63,300,000 melons, although this number included many left unharvested because of unfavorable market conditions. Farm value came to approximately $8,000,000—highest since 1930.

Making sure of good watermelons in the market basket isn't a matter of snap judgment. Professional graders from long experience can choose melons by eye alone. Consumers need extra aids. Some consumers rely on the old-fashioned test for ripeness—thumping the melon and listening for the dull, hollow sound that is supposed to indicate the right state of maturity. This test is not dependable, however, since the mature melon may be "dead ripe" or stale. Then the flesh would more than likely be relative dry and mealy. Safety lies in having the melon plugged so that consumers can see and taste for themselves.

Sweetness and delicacy of flavor are the things to look for in melons.

These are best when the fruit is fully mature, irrespective of shape of the melon or color of the seed. Ripe melons of good quality are usually firm, symmetrical, and of a good color—varying according to variety from gray to dark green. The fruit should have a bloom over the surface that gives the rind a velvety appearance. For full ripeness, the lower side of the melon where it rested upon the ground should be yellowish white. Melons that measure up to these requirements will more than likely have crisp, juicy flesh.

With watermelons bigness counts. Choose a big melon because it will usually be more symmetrical and have more heart that is free from seed.

Avoid melons that have worm injury showing itself in healed-over punctures. Grooves often extend from these perforations into the flesh. Watch out for decay too. Oftenest this appears at the stem end as discoloration and softening. Many growers paint the freshly cut stems with a bluish paste of starch and copper sulphate to prevent the development of the stem-end rot. Decay puts in an appearance at the blossom end as a flattened, leathery spot about the size of a silver dollar. Should dark, watery spots appear on the rind, don't discard the fruit as long as this type of decay hasn't penetrated the surface.

Some watermelons have a hard white streak running lengthwise through the flesh. Such melons aren't the ones to take home for dinner, but how to tell these melons is a question that hasn't been solved except by actually cutting through the melon.

The United States Department of Agriculture has defined quality standards for watermelons as for many other fruits and vegetables. However, these grades, U. S. No. 1, U. S. No. 2, and Unclassified, with their quality, size, and shape requirements, are of more use to the trade than to the consumer, since no mark appears on the melons.

Consumers are right in thinking of watermelon as an ideal hot-weather food—short on calories and long on thirst-quenching properties. Watermelon is over 90 percent water—a water pleasingly flavored with natural sugar. Watermelons rate only fair for each of the Vitamins, A, B, C, G. They score only poor to fair when it comes to minerals. But there is this cheering note—vitamin values are based on weight. An ounce of watermelon may not give consumers as much vitamin content as an ounce of strawberries, but no consumer stops with an ounce of watermelon. He finishes off a plate-size slab to ask for more.

Just because watermelons are easy to eat doesnt' mean that they are easy to market. Growers and shippers can tell a tale of marketing risks and misfortunes that would make consumers wonder why they have melons at all.

Overproduction is the factor that has knocked marketing into a cocked hat, sent prices to farmers on the toboggan to ruinously low levels. Too often the market news service in large cities gives the report about watermelons, "On track 100. unloads 30"—showing that markets are glutted, since watermelon carloads are piling up at railroad terminals three times as fast as they are being sold.

Always to be reckoned with in marketing watermelons is the matter of the weather. Hot weather jacks up watermelon demand. But it may not be until well along in July that a heat wave will make consumers take off their coats, mop their brows, and order a refreshing slice of crisp watermelon. The rest of the time melons may go begging for buyers.

Another complicating factor in the marketing picture is consumer income. When consumer budgets are big they include so-called luxury foods, watermelons among them. At such times consumers are willing to pay good prices and farmers are content. But let a depression flatten pocketbooks and consumers strike melons off the market list.

Figures point up these problems. When "prosperity" was hitting on all cylinders in 1929, farmers produced 80 million melons, received $170 per thousand. Encouraged, farmers expanded production—disastrously, as it turned out; for the depression year of 1930 brought a sharp drop in consumer incomes, reflected in low prices of $116 to farmers. As a result, 5,500,000 melons were left unharvested. 1931 and 1932 were bad years, too. Although acreage had been reduced in 1932, prices received by growers were averaging only $80 per thousand—lowest price on record. As a drastic measure farmers cut acreage 20 percent. Since then business has recovered to a certain extent, and with it watermelon fortunes. Acreage is again expanding, although, as in 1935, farmers are apt to be unduly optimistic, increasing acreage too rapidly for their own good, with consequent glutting of markets, and thousands of melons left in the fields to rot. Because acreage was reduced about 6 percent in 1936, prices snapped back to $128 per thousand melons.

When there is danger that markets may be glutted, the marketing agreements sponsored by the Agricultural Adjustment Administration help out—their aim is to strengthen prices by regulating interstate shipments of various products. In the case of watermelons, such an agreement has been in force for 3 years in Florida, South Carolina, North Carolina, and Georgia. These four States dominate markets east of the Mississippi during their season from May to September.

The marketing agreement now in effect provides for periodic regulation by grade or size to keep inferior melons off the market, and to halt shipments for periods not to exceed 48 hours, holding back melons from markets that are oversupplied. Twice during the summer in 1936 shipments were restricted. So successful was the agreement in that year that it was given credit for being an important factor in raising the average price received by growers in those States to a level 92 percent higher than that in the previous season.

Around July 4, watermelon shipments usually need to be suspended—and have been in certain regions in the last two seasons. At that time growers become overoptimistic in anticipating holiday trade, and send to market more carloads of watermelons than can be disposed of. Consequently prices drop sharply. Watermelon history repeated itself this year. On June 26, market quotations gave price averages as $219 a car. By June 29, these had sunk to $100 per car. To right matters, the Secretary of Agriculture authorized the holding back of shipments. That is, shipments of watermelons from Florida, Georgia, South Carolina, and North Carolina were stopped for 48 hours.

Though profits on watermelons are low, watermelons are a cheap crop to produce. Watermelon culture demands well-drained, warm soil, capable of being worked early in the spring. Growers plant from February in Florida to May in the North. To avoid possibility of loss from frost, a second seeding often follows shortly after the first. During the growing period, farmers must cultivate the fields, fight insect enemies such as the melon aphid, striped beetle, and cutworms; must spray against such death-dealers as wilt, root knot, anthracnose, and stem-end rot.

At harvesting times melons are cut ripe. Care and speed are essential in hauling the melons from the field and placing them in boxcars. Cars should be loaded, closed, and billed out the same day that the melons leave the vine.

Watermelon growers don't get off light with the troubles common to most farmers. They carry one peculiar burden, since melon acreage must keep constantly on the march. They must find new fields every year or else plant watermelons in long-period rotation. The same land can seldom be planted to watermelons 2 years in succession because of the susceptibility of watermelon to wilt—a disease which stays in the soil for years after a crop has been harvested.

The nomadic melon may be able to settle down now that experiments conducted in Iowa have resulted in the development of wilt-resistant melons. At Muscatine, Iowa, one of the sections leading in the late melon-growing market, these new types, especially the variety known as Pride of Muscatine, have already met with huge success. It may be that within the next few years, these new strains will prove to be the godsend that watermelon growers in the wilt-infested area have been looking for.

## FACTS ABOUT SUGAR

From, Detroit, Mich., comes a bundle of consumer questions about sugar: "What are the different stages of processing raw sugar into white?" "Why **white** sugar at all? Is it a **dead** food?" "Brown sugar costs more than white, yet it has less processing. Why so high?"

First, to the question of manufacture. There are five operations involved in transforming sugarcane into raw sugar. In operation No. 1 the juice is extracted from the cane by means of crushers. Second, this juice is purified by adding lime and heating; third, it is evaporated until it becomes sirup; fourth, this sirup is brought to a point where crystals form; fifth, these crystals are separated by centrifugal force from the mother liquid that is molasses.

Most of the resulting raw sugar goes to the refinery to be converted into white sugar. A small amount is packaged and sold to consumers as one type of brown sugar. Health food shops often display this kind. Raw sugar is about 97 percent pure sugar, or sucrose to give it another name. The rest consists of moisture, mineral salts, and nonsugar substances that were derived from the cane juice.

Refining removes even more of the molasses, the coloring matter, and whatever other nonsugar impurities are present. Hence this process whitens the sugar. Briefly, this is what happens at the refinery: The sugar crystals are washed and dissolved. Then sodium carbonate is added as neutralizer, if the raw sugar is acid. Next comes filtering with the help of an insoluble filter aid. Bone charcoal then plays its part in absorbing color and nonsugar impurities. Result—the amber sugar sirup changes to a clear water-white liquor. Boiling this liquor brings about the crystallization of pure white sugar—a product that runs about 99.9 percent sucrose.

Now consider the brown sugar usually found in commerce. Contrary to opinion, this brown sugar is a product of the **refinery.** After three or four boilings, the water-white liquor becomes colored again, no longer yields white crystal. Further crystallizations give yellow to dark-brown sugars. These brown sugars consumers generally buy for their Christmas baking, or whenever they want the characteristic brown-sugar flavor. This sugar has a lower sucrose content, a higher mineral and nonsugar content than the raw product. Mineral and nonsugar contents of the two types of sugars are different, however. For some of the material found in raw sugar was lost in the refining process; some was left in concentrated form.

Principal value of sugar in the diet lies in its sucrose, best measured in terms of calories. White sugar has the most calories. Therefore, as an energy food, it scores highest. In fact, white sugar contains twice as many calories per pound as does beefsteak. White sugar cannot possibly be considered a dead food, if by that is meant a food lacking in nourishment. Remember that it is richer in carbohydrates than its brown brothers.

Prize for popularity goes to white sugar on another count. White sugar adds pure sweetness to other products without changing the original flavor; brown sugar always adds a foreign taste. Try a teaspoonful of brown sugar in your coffee and then a teaspoonful of white and you will see what this means. White sugar has other points in its favor. It has excellent keeping qualities and a strong appeal to the eye. It gives consumers what they want—a pure product that **looks** pure.

Price a wholesale lot of brown sugar and you will find it less expensive than the same amount of white. Retail packages of brown sugar run higher than the white, however. This is because brown sugar is not sold in as great a quantity. Yet for the small amount that leaves the 'grocers extra services in the matter of packaging and handling are required. Brown sugar may spoil, too. The consumer must pay the piper, or at least the grocer, for all these charges incidental to distribution.

## MORE ABOUT MINERALS

**There's only a penny's weight of iron in the average body, but it plays a major part in making bodies good working and playing machines.**

Important work which minerals do for us in building good red blood, firm bones, muscles, and teeth, and in regulating and coordinating all our complicated body processes, is way out of proportion to the minute amounts we require.

Scientists do not know as yet the exact quantity of every mineral existent in the normal human body. They do know that the minerals—calcium, phosphorous, iron, potassium, sulphur, sodium, chlorine, magnesium, idoine, manganese, and copper—are essential to us, and that we depend upon food for our supply of these minerals.

Out of this long list star three—calcium, phosphorous, and iron. If your diet provides food which gives you your quota of these three, it is more than likely that it will also have required amounts of the other necessary minerals. For the importance of calcium in the diet, and foods rich in calcium, see "Bone Builder No. 1," **Consumers' Guide,** October 19, 1936; for phosphorous, "Bone Builder No. 2," **Consumers' Guide,** November 2, 1936.

Green-colored vegetables, fruit, some meats, whole grains, and milk are the reliable sources for most minerals. Milk is a four-star source for both calcium and phosphorous. If a child has a deficit of these two elements, more milk per day is the best prescription. Milk is often called a "foundation food" as it provides some of every food element which we need. However, its supply of some elements is more generous than others. Though iron is present in milk, it is not present in sufficient amounts for us to rely on it for all the iron we need for blood building.

Experimental studies of rats fed on a milk diet have shown that they developed normally for from 4 to 6 weeks and then stopped growing. Some died; some developed anemia—a condition in which the blood is lacking in red corpuscles. When foods with a higher content of iron and containing some copper were given them, the sick rates rapidly improved. The function of copper in building blood is not competely understood, but copper seems to aid the body in the utilization of iron. The tiny bit of copper we need, however, does not need to concern us seriously, for it is present in most green vegetables, fruits, cereals, and meats, and often it is added to our food through modern methods of processing food. Copper is present in milk when it is pasteurized by being passed over heated copper rollers.

The iron we get in food is first absorbed from the intestines. Before it does any work for us, however, it must be combined with other substances to form a compound called hemoglobin. This change takes place chiefly in the bone marrow. Hemoglobin is an intrinsic part of each one of the trillions of red blood corpuscles which carry oxygen to the innermost cells of every organ and tissue and carry away the waste product, carbon dioxide. But iron is not only present in the red corpuscles. It is an essential part of every living cell in our body and helps to carry on the vital functions of the cell. The amount of iron a normal person has in his body equals the weight of a penny, or less than one-tenth of an ounce. Nevertheless, the importance of the work it does for us cannot be overemphasized.

At birth, nature gives us a running start on iron. The percentage of iron in an infant's body is three times greater than that of an adult. His reserve supply tides the baby over the first few months when he is on a liquid diet. Then if he is to grow into an energetic child, it is necessary to add food containing iron to his diet.

Growing children and adults cannot store iron in their bodies to use during an emergency as they do the fuel food, fat. We draw upon our iron supply every day. Therefore, to maintain our iron equilibrium we should eat some foods rich in iron every day. Scientific studies have shown that for individuals the iron requirement varies from 6 to 16

## LOUISIANA FARMERS

(Continued from Page 1)

ment, what will govern the selection of farmers, and how to make application for the same.

Negro leaders are elated over the fact that federal and state officials are recognizing the necessity of seeing that Negroes, who make the largest percentage of farm laborers, understand what the government is trying to do for them and have pledged their support to the publicity movement of the New Deal's agricultural program.

## FARM HOME

(Continued from page 1)

States shall be followed, and the corporation shall be entitled to proceed in accordance with the provisions of an Act of Congress approved February 26, 1931 (46 Stat. 1421).

Preference shall be given applicants who are married or who have dependent families, farm tenants, sharecroppers, farm laborers, or those who recently were farmers; but the corporation shall not approve any application for the benefits of this Act if it finds that the income of the applicant derived from farm property owned by him is sufficient to support his family and to pay the expenses of operating such property and the fixed charges on his indebtedness in connection with such property. The county committee established under section 22 shall receive applications of persons desiring to acquire farms in the country under the provisions of this Art. Examine and appraise farms in the country for the acquisition of which an application is made. The committee shall file with the corporation its recommendation as to the character, ability, and experience of the applicant, his likelihood of carrying out undertakings which would be required of him under this act, and the suitability for acquisition by the applicant of the farm with respect to which this application is made. The committee shall also recommend to the corporation the amount which the committee finds is the reasonable value of the farm. Each recommendation made by the committee shall indicate whether or not any member of the committee has any property interest, direct or indirect, in the farm with respect to which such recommendation is made.

The corporation may provide for such amortization periods for the repayment of indebtedness owed to it and may postpone the date when the initial installment shall be due, as it may deem advisable, but in no event shall the amortization period exceed sixty years. The rate of interest to be charged by the corporation upon indebtedness owed to it shall be 3 per cent per annum.

All contracts of sale executed by the corporation, sell, lease, mortgage, taken by it shall contain a provision that if a voluntary lien is created by the debtor of any of the property covered by such contract or mortgage, or if any involuntary lien is established on any such property, the corporation may declare all unpaid installments or principal and interest (accrued or to accrue) to be immediately due and payable.

No purchasers of property from the Corporation, shall so long as the purchase price is not paid in full, without the written consent of the corporation, sell, lease, mortgage, assign, or convey any such property included in a contract of sale by the corporation, sell, lease, mortgage to the corporation. If any sale, lease, transfer, assignment, mortgage, or conveyance of such property is made without complying with the foregoing requirements, of any property is abandoned. the corporation may declare all unpaid installments of principal and interest (accrued or to accrue) to be immediately due and payable.

If the purchaser under a contract, mortgage or deed of trust, made under this title dies, the law of the State or Territory in which the farm is situated shall govern in determining the person who shall exercise the rights and be subject to the liabilities under the contract, mortgage, or deed of trust, and such person shall be entitled to exercise the same rights as the purchaser.

## BIGGER CROP

(Continued from Page 1)

had expected while the yield per acre of 223.3 pounds was the highest in the history of cotton growing.

## MORE ABOUT MINERALS

(Continued from Page 15)

milligrams a day and that the desirable allowance for both the adult and growing child is 15 milligrams. or 5 ten-thousandths of an ounce per day.

Iron is present in many foods. Whole-grain cereals are a source of iron and one that gives us many energy-building calories as well. When food money is limited and one must select foods carefully to get double value for each penny spent, whole bran and oatmeal offer an economical source for part of one's daily quota of iron. Liver, kidney, brains, and the head of meat animals top the list as iron sources. The lean muscles of beef, veal, lamb, pork, and the dark meat of poultry are very good. Green leaves of vegetables, which add vitamins to the diet, too, are a rich source. Egg yolks, oysters, and shrimps contain iron. However, the amount of iron in each of these foods is relatively so small that we would have to eat more than a normal portion of any one of them to get our necessary quota at one meal. For instance, to get your 5 ten-thousandths of an ounce of iron from spinach alone, you would have to eat 2½ cups of it; of egg yolks, about a dozen; of baked beans or lean beef, more than a pound. When we eat canned fruits and vegetables we are apt to increase our intake of iron. Experiments have shown that these products absorb some iron from the can. Pureed prunes canned in glass had an iron content of 0.0011 percent. A similar product in a tin container had from 0.0031 to 0.0052 percent. It is best not to depend on iron absorbed by canned foods as a source. The secret of getting enough iron day by day is to eat many different foods containing it.

## FOODS RICH IN IRON

### ANIMAL FOODS

**Egg Yolks**
**Meats**
- liver
- Kidney
- brain
- heart
- veal
- also lean muscle of beef
- pork
- lamb
- and dark meat of poultry

**Fish**
- oysters
- shrimp

### VEGETABLE FOODS

**Green Leaves**
- turnip
- beet tops
- chard
- dandelion
- mustard greens
- watercress
- spinach
- kale
- New Zealand spinach
- broccoli leaves

**Dried Fruits**
- apricots
- peaches
- currants
- dates
- figs
- prunes
- raisins

**Whole Grain Flours of Cereals**
- wheat
- barley
- rye
- oats

**Sirups**
- molasses
- sorghum
- cane sirups

**Legumes, Either Fresh or Dried Seeds**
- limas
- lentils
- common or kidney beans
- cowpeas
- soybeans
- common peas

**Nuts, Unbalanched**
- almonds
- hazelnuts
- walnuts
- pecans
- hickory nuts

## THE DAILY DIGEST SAYS:

### One-Third More Farm Sales This Fiscal Year Than Last

The sale of farms by the 12 Federal land banks in the first half of 1937 aggregated $20,937,000 compared with $15,881,000 for the first half of 1936, according to figures released by the Farm Credit Administration.

Farmers bought 6,757 farms and 1,114 part farms from the land banks in the first six months of this year, compared with 5,496 and 894, respectively, in the like period of 1936.

In the New Orleans district, including Louisiana, Mississippi, and Alabama, 2,413 farms were sold for $4,639,000, compared with $3,306,000 the first half of last year.

The second largest number of properties was sold to farmers in the Pacific Northwest who bought from the Federal land bank of Spokane 885 farms for $2,365,000.

### Cotton Picker Patented

A cotton picker designed to pick up the ripe white bolls and leave the others alone has been patented, the patent office said yesterday, by Charles H. White, of Moline, Illinois. The invention makes use of a photo-electric cell, or electric eye, to tell what's ripe and what's green.

### Farm Truck Agreement

Removal of state barriers to the free movement of farm produce assumed southwide proportions recently, says a Jackson, Mississippi, report in the Memphis Commercial Appeal. State Auditor Carl N. Craig revealed that Georgia has joined the reciprocal agreement already entered into by Mississippi, Alabama, Arkansas and Tennessee. Under the agreement, farmers moving their products across state lines are not subjected to collection of privilege taxes on their vehicles. The agreement applies only to farmer owned and operated trucks.

### Cold Storage Farm Plants

Some $300,000 worth of cold storage plants have been erected recently in Mississippi by the State Extension Service in cooperation with the WPA. The original plan was for the erection of such plants in 65 counties. These plants, built of brick and concrete, have a combined meat curing capacity of 4,700,000 pounds. They are also equipped for dry storage of grain, syrup, potatoes, vegetables and eggs. They are fitted with air-tight rooms for the treatment of diseases of tuber crops, for destroying insect pests, recleaning and sacking seeds, canning and preserving fruits and vegetables. (Ice and Refrigeration, August.)

### Early Premium Wheat

"Right in the middle of the 'rust belt' this year Early Premium wheat on several farms is running from 20 to 35 bushels an acre and weighing from 60 to 64 pounds to the bushel," says George F. Jordan in Missouri Ruralist (July 24). "It has been due to the variety—Early Premium, developed recently by the field crops department of the Missouri College of Agriculture. Two of the farms on which this wheat has made a remarkable showing are those of George Wilkerson, Pettis County, and C. H. E. Walther, Cooper County. An outstanding yield of 35 bushels an acre was harvested by Mr. Walther this year, when the usual varieties of Fultz, Fulcaster and Michigan Wonder were making low yields of from 10 to 15 bushels an acre. Many of these low yields were of wheat that graded no higher than No. 3, and many even less. While Mr. Walther's wheat was running from 60 to 64 pounds to the bushel the common varieties were testing from 46 to 48 pounds. Mr. Wilkerson's field of Early Premium had not been threshed on July 9, but those who had seen the field estimated a yield of not less than 20 bushels. The weight was judged to run from 58 to 60 pounds, since it was cut a bit early to get ahead of army worms that were moving out of the Wilkerson barley. This was the outstanding field of wheat in the community---"

### Philadelphia Lawyer Develops "Soft" Business

A Philadelphia lawyer, who took up gentleman-farming in Berks County, has transferred the farm from his list of liabilities to his inventory of assets by marketing the feathers from his poultry, reports the Bureau of Markets, Pennsylvania Department of Agriculture, at Harrisburg.

Taking a tip from the big meat packers who process practically everything, he took an inventory of the waste by-products of his farm and investigated their money-making possibilities. He found that the United States annually imports several millions of dollars in feathers and that he could profitably market the feathers from his farm.

He is now offering to market the feathers of the poultry of his Berks County neighbors and plans to expand his feather business into other counties, the Pennsylvania Bureau of Markets announces.

### Returns From Strawberry Plot Are "Good Example of the $1,000-Per-Acre Type"

The strawberry plot of George D. Esdohr, Coon Rapids (Iowa) farmer, "Is a good example of the $1,000-per-acre type," thinks C. V. Holsinger, Iowa extension horticulturist.

This year Esdohr sold $875.50 from a three-quarter acre plot comprised mainly of Dunlaps and a few Everbearings. He sold 4,312 quarts of berries, had plenty of fresh fruit for the family, and has 100 quarts of berries canned for the winter.

Figuring Esdohr's home consumption (including canned berries) at nearly $25, he grossed $900 from his plot. He would have grossed more than $1,100 from a full acre.

### Dextrose for Fruits and Vegetables

Workers of the Massachusetts and Oregon Experiment Stations are authors of "Dextrose in the Manufacture of Fruit and Vegetable Products" in Industrial and Engineering Chemistry (August). They comment on the fact that "since dextrose has been available for industrial purposes, it is surprising that so few investigations have been published relative to its use in the food preservation industries." A summary of the article says: "The physical and chemical properties of refined dextrose are discussed in relation to its suitability in manufactured fruit and vegetable products. Dextrose, as now obtainable on the market, is comparable to sucrose in purity and may be used advantageously in many canned foods, fruit products and pickles. Because of lower solubility, final dextrose must be used unless the amounts are small as in canned vegetables and tomato juice-----The addition of 1 to 2 percent dextrose to brined cucumbers, peppers, cauliflowers, onions, and green tomatoes greatly improves the resulting products by increasing their lactic acid content, preventing spoilage and enhancing the keeping quality."

## SCRAP IRON BOOM.

During June the United States exported 520.297 tons of scrap iron, valued at $10,493,433, bringing the total for the year to 2.172,660 tons, valued at $43,026,925, or 200,000 tons more than for the full year of 1936, Department of Commerce figures show. In 1913 the United States exported only 97,429 tons of scrap. The World War brought the total up to 150,560 tons in 1917, or approximately one week's supply at the current rate. June exports of iron and steel products, excluding scrap, were 306,237 tons, valued at $17,900,048, or 195 per cent in quantity and 137 per cent in value of the total for June, 1936.

## CRAWFORD FARMERS REPORT CHOLERA

Roberta, Ga., Aug. 7—Farmers in Crawford county are reporting cholera among their hogs.

W. M. Moncrief, one of the county's most successful hog raisers lost 39 head.

Horticultural experts of the Golden Gate International Exposition at San Francisco have been watching their plants and from these predict 1938-39 styles for women will be in long flowing lines with longer skirts.

# THE MODERN FARMER

Vol X. NASHVILLE, TENN., SEPTEMBER 15, 1937 No. 8.

# $130,000,000 For a Cotton Price Adjustment

## SENATE JOINT RESOLUTION OUTLINING THE FUNDAMENTALS

Pursuant to Senate Joint Resolution 207 outlining the fundamental principles of permanent farm legislation, which resolution stated in part that it is the sense of Congress that a permanent farm program should be enacted as soon as possible after Congress reconvenes, Secretary Henry A. Wallace today announced the cotton price adjustment payment plan, which will be made in connection with loans by Commodity Credit Corporation.

Congress authorized the Secretary of Agriculture to use not to exceed $130,000,000 for a cotton price adjustment payment program with respect to the 1937 crop similar to the program of 1935. Upon proof of compliance with a 1938 agricultural program to be formulated under legislation to be enacted pursuant to Senate Joint Resolution 207, cotton producers who sell cotton from the 1937 crop prior to July 1, 1938, will be paid the difference between 12c a pound and the average price of 7/8-inch middling cotton on the ten spot markets on the day of sale, but not to exceed 3c a pound. As in 1935, payment will be made on 65 percent of a grower's base production.

If the payments with respect to 65 percent of the 1937 base cotton production do not approximate the $130,000,000 apropriated, payments will be made with reference to a larger proportion of the base production. The amount of the individual payments will depend upon the level of cotton prices at the time the producer sells his cotton.

Since adjustment payments will be related to the price of cotton on the date of sale, producers must sell before July 1, 1938, cotton with reference to which payments are to be made, and should retain original sales receipts on all cotton sold from the 1937 crop pending the announcement of detailed instructions and regulations.

## Mapping The Route To Plenty - Says Representative of Governments

## Grapes on the Fruit Calendar

## PAYMENTS TO TENANTS ARE INCREASED IN 1938

Washington, D. C., Sept. 30—Under the provisions of the 1938 Soil Conservation Program, just announced by Secretary Henry A. Wallace, tenants and sharecroppers will receive a larger share of government payment checks than in previous years. Many tenants and sharecroppers are Negroes.

"The new program," Secretary Wallace said, "represents a progressive development from the previous programs formulated under the Soil Conservation and Domestic Allotment Act. It follows the broad outlines already established and sets up definite objectives for 1938. These include an increase in soil-conserving crops and soil-building practices to further the primary aim of soil improvement. Goals for soil-depleting crops were fixed as a conservation measure and to assure an ample and balanced supply of food, feed and fiber crops."

To attain these objectives, a goal of from 29,000,000 to 31,000,000 acres have been set up for cotton and for tobacco from 1,577,800 to 1,653,000 acres. If the planters do not exceed these goals enough cotton and tobacco should be produced to sell at prices fair to both the farmer and the consumer. The goals set up for wheat and corn will likewise produce ample food and feed.

Concerning the division of payments between the landlord and tenant, the 1938 Program says:

"In all regions payments will be livided between landlord and ten-

(CONTINUED ON PAGE 16)

## September and October The Months to Fill Market Baskets

Long before geographers hit on the name of America for the New World, Leif the Lucky had christened it Wineland. He named it in honor of the native grapes discovered by his men as they explored the New England coastline. Had these Vikings pressed farther inland, they would have been even more struck with the aptness of their choice, for wild grapes grew from coast to coast.

With the cultivation of these native sorts and the growing of Old World wine grapes in California, grape growing strode into the ranks of big business. Repeal of the Volstead Act gave grape growing a boost, until it took fourth place among fruits in point of farm value. This year promises the largest grape crop since 1928, its tonnage touching the 2,500,000 mark. Over four-fifths of this harvest will come from a single State—California.

Part of this bumper grape harvest will go to wine vats. Part will be packaged as raisins or bottled as grape juice. At this particular season, however, grapes concern consumers mainly as a table delicacy—for they are coming plump and sweet to markets all over the country. Not only does their flavor appeal to flagging appetites, but grapes are nutritious. They contain 7 to 20 percent sugar, some Vitamin B, and a fair supply of iron.

Main types of table grapes are the European or **Vitis vinifera** grape varities grown chiefly in California, and the American **euvits** of Eastern States. A third type, the Muscadine, grows widely in the South Atlantic and Gulf States, but doesn't play an important part in shipping. Look for this sort, well represented by the Suppernong, in local Southern markets.

**Vitis vinifera** varities have a higher sugar content than the American varieties. Because of this sweetness they make fine wine and raisins—in fact, no eastern grapes go into the raisin industry. Seeds separate readily from the pulp, though there is no getting skin and pulp apart. Running through a color range of red, white, and black, the more popular western table grapes are the Flame Tokay, Hamburg, Cornichon, Malaga, and Sultanina.

"Red, Father of Red"—that in translation is the Algerian name for the Flame Tokay—and admirably suited it is. Originating in Algeria, the Flame Tokay is one of the most extensively grown shipping grapes in California, though about equal quantities of Tokays, Thompsons, and Emperors are shipped from the

(Continued on Page 16)

## DETAILS OF NINE CENT COTTON LOAN ON 1937 CROP

The Commodity Credit Corporation announced today that it will lend to producers of the 1937 crop 9c per pound on cotton classin 7-8 inch middling cotton, or better; 8c per pound on cotton class in 13-16 inch staple and middling or better in grade; 7¾c per pound on cotton classing 7-8 inch as to staple but under middling as to grade. No loan will be made on 7-8 inch cotton or better in staple which is of a grade not deliverable on contract under the regulations of the New York and New Orleans cotton exchanges and no loan will be made on 13-16 inch cotton under middling grade.

The loans will bear interest at the rate of 4 per cent and mature on July 31, 1938. To be eligible for loans cotton must be stored in warehouses approved by the Commodity Credit Corporation. The loans will be available as soon as the necessary arrangements can be completed, but not later than September 15.

A condition of each loan is that the producer-borrower agrees to participate in and comply with the 1938 adjustment program.

With a view to having ample funds with which to make such loans, Commodity Credit Corporation has arranged to borrow $150,000,000 from the Reconstruction Finance Corporation.

### MACON DAILY TELEGRAPH

Little Rock, Ark..—This season's first bale of cotton was brought here last Saturday by Farmer Ellsey Shannon, colored of Barlow, in Western Copiah county, the cotton of medium long staple and weighing 510 pounds. Farmer Shannon was also first to market his cotton last year, says he'll be through picking by October 1.

## WORKERS AND EMPLOYERS TURN TO THE SPOTLIGHT

A Scientist tossed down a book he was reading the other day about the River Nile. Crammed full of important facts, this book represented the results of immense research about one of the great arteries of industry and trade. But to the scientist the book had a major flaw. The author had started his tale with the river's source, tracing its course from little headwaters down to the great wide mouth where the commerce of the world paused and passed. "The life of a river," said the scientist, "starts with its mouth. When a great story of the Nile is written, it will start there."

Where this story should start is harder to tell. It might begin with sleek-coated pink-eyed rats, for they are an essential part of its plot. It might start with the great experts in nutrition, without whose sharp eyes, keen minds, and patient research the story could not be told. Other scientists, inventors, technicians, who have sharpened our tools and refined our knowledge of how to produce, have their part in the story. Another beginning might take us back 18 years to the first of a series of great international conclaves. A paradox might start the piece—the paradox that depression made grim, of millions of hungry people looking on mountainous supplies of food which they could not reach, and of producers and machinery, ready to supply the things human want, left idle and unemployed.

Stories should have their heroes, and no better start could be made on this one than to begin with its central character. He is a worker, any worker—a puddler in the steel

(Continue on Page 14)

## Ginning Unpicked Cotton

I. H. Ray, Sr., at Milan says he is highly satisfied with a bale of unpicked cotton from W. H. Walker's cotton gin at Milan. The bolls with the cotton still in them were pulled from the stalk and put into the cotton sacks, and then were passed to the gin. There the burrs were separated from the seed cotton, and the lint was pulled from the seed. Mr. Ray says he has been growing and ginning cotton 40 years, and never before heard of or saw a process like this. The operators of the Marchman gin at Fort Valley were asked what they thought of the story. They are running a complete modern ginnery, just erected. They showed the Circle man a bale they were turning out by the same process. The fingers and the saws separated the burrs from the cotton, and blew them out into a trash pile. They are fit for nothing except to make top soil more porous, and farmers who discuss this plan of gathering cotton are not yet inclined to adopt it. They believe a picker can gather a half bale of the cotton in the bolls each day and this might make the cost of cotton picking a little less, but they are inclined to move very cautiously.

### NEW FRUIT CONTAINERS

Striving toward marketing of peaches in a more mature stage of ripeness, many growers this year are trying out new packages. Latest

## Agricultural Adjustment Administration

**Tuskegee Institute, Alabama**

Gibsland, La..—"The fascination of working with rural people," said Miss Vallye C. Jordan, Home Demonstration Agent here, "is in the constant resourcefulness which one encounters among the farm people."

Miss Jordan was describing the annual 4-H Club Achievement Day in Bienville Parish, which is conducted as part of her program. Teams of 4-H Club boys and girls from several communities conducted the following competition demonstrations: jelly-making, pruning tomatoes, planning a garden, saving garden seed, canning non-acid foods, making a cutting bed, feeding the sick, unusual uses of soap.

First prize went to the 4-H Club team from Wilson Community for a demonstration on new uses for soap; second prize to the Mt. Lebanon team for "Feeding the Sick," and the third prize to Midway for "Constructing a cutting bed."

The first prize winners introduced new uses for soap for window

(Continued on Page 4)

## LINEN CONSUMERS ARE LUCKY

**Aristocrat among fabrics, linen comes high because cultivation of flax and weaving of cloth make exacting requirements. Tips to consumers with big enough budgets tell how to spot quality and insure long life to linens**

Colonial dames valued a fine linen damask cloth, a snowy linen kerchief for their neck, a dress of homespun linen, not only for its use and beauty, but for the many tedious hours of labor that went into making it. Often the flax had been grown in their own fields. Every member of the family had helped to harvest it, thresh it, to ret it and scutch it, so that the long fibers which part so reluctantly from the flax straw might be used for the mistress of the household for her long winter spinning chore. After the spinning of the fiber into stout yarns, there was still the weaving into cloth. Small wonder dresses and shirts were turned and returned in those days. Materials from Europe were expensive, boats were few and far between. Clothes to wear, as well as food to eat, had to be produced at home.

Today the spinning wheel to twist a fine linen yarn adds a bit of color to the early American living room or gathers dust in the attic. Fields of flax on New England and Southern farms have given way to fields of grain and cotton. Our utility cloths—dungarees and overalls—are made of machine-made cotton materials.

Machinery absorbing many hours of hand labor has made cotton the king of our fiber crops. Since the invention of the cotton gin in 1793 flax-fiber production in this country has been steadily losing ground. The many processes involved in readying flax fiber for spinning into yarn are still largely done by hand. Only 250 to 450 tons of the 4,000 to 8,000 tons of flax fiber used annually by United States flax-spinning mills are produced in this country. The rest we import from Belgium, Russia, and the Baltic countries where workers are highly skilled in the culture of flax, and where the cost of their labor is cheap. Flax fiber is used not only for making fabrics but for the manufacturing of papers. The United States uses annually 6,600 tons of flax fiber in the form of cigarette paper alone. About three-fourths of this paper is made in Europe. For the past few years American cigarette-paper companies have been fostering flax-fiber growers in this country.

Only a small percentage of the average 2¾ million acres yearly sown with flax in the United States is cultivated for flax fiber for yarns. Most of it is raised for seed, which is a valuable product in the manufacturing of oil for varnish and paints. A portion of the flax fiber we do raise is used for upholstery tow—stuffing for furniture, automobile, and Pullman seats.

Flax will grow well in many different climates, but the cultivation of flax for sturdy even fiber for fine yarn makes more exacting requirements. In its growing period it demands its moisture in the gentle form of heavy dews and abundant fogs rather than days of steady rain. As it ripens it wants warm, dry days. The time flax fiber is harvested is very important. If the plant is pulled from the ground too early, the fiber will be too fine and weak; if too late it will be brittle and of little use except for upholstery tow. Only the stem of the plant from the ground to the first branches has useful fiber for the making of yarns.

Regions around the Great Lakes, Puget Sound, Wash., and the Willamette Valley, Oreg, offer ideal conditions for the growing of flax for fiber. The amount of flax grown in these districts depends on the presence of a scutching mill nearby. A farmer seldom considers raising flax for its fiber unless he has a contract with a mill which promises to buy his crop.

At one time Michigan farmers because of the presence of 18 scutching mills in the State and in western Ontario, raised a great deal of flax for fiber. Today most of these mills have closed down.

Most flourishing flax-fiber center in the United States at present is in Oregon and one county in Washington State. There both the AAA and the WPA are lending a hand to help build up domestic fiber flax production. AAA's help to farmers takes the form of a subsidy. With funds made available to the Secretary of Agriculture from tariff receipts, under section 32 of the Agricultural Adjustment Act, a bonus of about $5 a ton was paid last year to pioneers in fiber-flax raising. This year the bonus will run around $7.50 for each of some 5,000 tons.

Encouraging farmers to grow flax for fiber purposes would be an idle gesture if there were not adequate facilities for preparing the fiber for spinning. To insure these, AAA inspects and approves scutching plants where this process is done. Seven such plants in Oregon have been approved; five of them are cooperatively owned by the farmers themselves. Three of these have been established with WPA help. Now Oregon and Washington farmers, operating their own scutching mills, will be able to sell their own fiber to commercial flax-spinning mills.

"Human skill" is a phrase which must constantly be used in speaking of the culture of flax. Clumsy handling of the flax straw in any one of the many stages it goes through before it is ready for the spinning machine may result in fiber of poor spinning quality. Heaviest demands on human hands come after the flax is pulled out of the ground. If the fiber is of the quality that may be used for fine yarns it is threshed. If it is of poorer quality and is to be used for upholstery tow, the threshing process is omitted and done later by the machine making the tow. Long flax fibers are used in spinning "line" yarns for the best linens; "tow" yarns used in coarser weaves, are made from the short fibers. Great care must be taken in the threshing process so that the straw is not broken and yet all the seeds are removed. After threshing, the straw is retted—or rotted. Either it is spread on the ground and exposed to the weather for from 1 to 3 weeks or it is placed in huge water tanks until the gums in the plant which bind the fibers to the wood dissolve and the tiny tissues surrounding the fiber disintegrate. Breaking and scutching are the last two stages to which flax straw is submitted before the fiber is finally released from the straw.

From the scutching mill the flax fiber is ready to be taken to the flax-spinning mill. There are about 17 flax-spinning mills in the United States. Three of them , located on the Pacific Coast, use almost all the fiber that is produced in Oregon.

Flax fiber is hackled or cleaned when it reaches the spinning mill. The last slivers of shives are removed from the fiber, and the fiber is combed free of tangles, and then passed through drawing frames to be straightened and combed some more. Then at last it is ready for the spinning machine which twists it into yarn for cloth or thread. The finest yarns are wet-spun—passing through hot water before they are twisted. The sturdiness of linen yarns mkaes them the base for the most delicate laces and for materials to be given hard wear, such as the covering for airplane wings and fire hose. Today machines guarded by watchful eyes do most of our spinning for us. But yarns for the finest laces and for deluxe linens are still spun by hand. American machine-spun yarns are used mostly in the making of toweling, twines, and thread.

The spinning of fine linen yarns and the weaving of fine linen is still a technique dependent on skilled hands rather than the mechanical perfection of the machine. In certain sections of Ireland, Scotland, northern France, and Belgium, men and women have been working with flax for years. Their deft fingers "have a way" with yarns unexcelled by machines. It is from these countries that we import our finest linens.

The art of turning flax fiber into cloth has been practiced for at least 8,000 years, but it was not until the power loom and the flying shuttle began to be commonly used in the cotton industry that machinery for manufacturing linen was invented. Machines for spinning and weaving linen are similar to those for cotton, but they cost about four times as much. Flax fiber is not as flexible as cotton and is inclined to break, thus necessitating expensive addition to stop the machine automatically every time a thread is broken. The inelasticity of flax fiber makes it more difficult to weave into cloth than cotton and also to weave into cloth of various patterns. The principal linen weaves are the plain weave used for clothing and embroidery linens, twill weave for heavy fabrics, and satin weave for damask table linen.

When linen is finally loomed it goes through at least three finishing processes —bleaching, beetling, and calendering. Today most linens are bleached by chemicals, though the best quality linens are still grass-bleached. In the beetling process the dampened cloth is passed between wooden rollers and beaten with hammers until the threads have a uniform thickness and luster. The calendering process presses the cloth, giving it a smooth surface and extra glaze.

A fine linen thread runs through the history of mankind. Egyptian nobles wore skirts of sheerest linen, the Greeks and Romans valued linen as a rare and costly material. Today fine linen is still an aristocrat among fabrics, haughtily lending its name to many commodities made of cotton. Most of the sheets, many of the towels, napkins, and tablecloths which we call household linens are made of pure cotton or of union yarns which are a combination of cotton and linen.

Though linen combines satsifactorily with cotton for many purposes. linen has qualities peculiar to it alone. It is because of these qualities that it has held its own against its cotton competitor. Though linen wrinkles easily, it is a favorite hot-weather material for clothing. It is known as a cool fabric because it absorbs moisture readily and water evaporates from it quickly. Linen is considered a material **par excellence** for tablecloths and towels. It does not lint as cotton does. It does not soil as quickly. It is more absorbent. Linen stands up well under constant use. Careful laundering increases its brilliancy and glossy, leathery texture. First signs of wear are usually in places that have been created. In ironing, linen should not be creased in the same place each time.

Today, because so many cottons are chemically treated to look like linen, it is sometimes difficult to tell whether a material is pure linen until it has been laundered several times. Such a test is of little help to the consumer when she is buying a tablecloth. Because water goes through linen rapidly and is slow to penetrate cotton, a wet fiingertip was used by shoppers of old to test their linen. Today this test is not very reliable. Some cottons are so treated that they absorb water as quickly as linen. The oil test is still fairly accurate if the fabric is all linen and is being compared with an all-cotton material. A drop of glycerine on linen will leave a translucent spot; on cotton the stain will be opaque. Knowledge of the difference between a cotton thread and a linen one is perhaps the best way to distinguish between the two materials. Linen threads are tenacious. If broken, they stay somewhat erect and the fibers cling together. A cotton thread goes limp and its ends spread out in all directions. When cotton threads are lighted they blaze up quickly and burn readily. Linen smolders slowly away.

Durability and serviceability of linen varies with the quality of the material. Federal specifications for table linen, used as the guide when the Government buys linen, are based on the kind of fiber used, the percentage of dressing, amount of bleaching, the weave, size of hem, the minimum thread count, weight, and tensile strength of the fabric.

A heavy linen gives the best service. Weight of linen, however, should be due to weight of the flax fiber and not to dressing. Bleaching weakens linen. Though a snowy-white tablecloth which has been full-bleached is elegant, for hard wear hotels and institutions prefer half-bleached or three-quarter-bleached cloths. Laundering carries forward the bleaching process.

Firmness of weave is an indication of durability of linen damask. Damask of top quality has as many as 450 threads per square inch. Hotels which give their linens hard wear usually buy damask with a thread count from 160 to 270. Balance of weave is also important. Filling threads usually year out before wrap threads. A damask may have a good thread count, but if the weave is unbalanced it will not be so desirable. As information of this type is not given on retail labels, the consumer must still depend on her own eyes. By holding linen against a strong light one can get some idea of firmness and balance of the weave.

Damask linen is called single or double depending on the technique used in weaving the design. The design is made by carrying the wrap thread over several filling threads. In single damask the wrap thread floats over four filling threads and binds the fifth thread, while in double damask the wrap floats over seven filling threads and binds the eighth. Because more yarns are generally used in the filling in double damask, it is usually considered to give the best wear. Here again firmness of the entire weave is important. Double damask designs used to be reserved for fabrics of the finest weave, but today there is a tendency to use them on loosely woven materials. When the double technique is used on a loose weave, the floating threads tend to catch and break.

# MUCH ADO OVER LODGE BOOKS IN CLEVELAND, OHIO

### One Brother Williams Speaks up to Clear His Name of Scandal

**Cleveland,** Sept. 30—(ANP) Angry members of the Spirit of Ohio Lodge of Elks No. 52 have made it known in no uncertain terms that all is not well within the usually benevolent lodge, following charges and counter-charges of mismanagement, shortages, and impending ousters of important officials.

According to the disgruntled members, the once financially powerful local lodge is on the verge of "something" over lodge finance. Threats to oust Exalted Ruler William D. Williams are reported to be gaining momentum with the passing of days, but have been delayed pending action of a special investigation committee allegedly headed by Clarence Shaw, former exalted ruler, who guided the destiny of the Spirit of Ohio during the 1926 grand lodge convention.

Further fuel was lent the conflagration when District Deputy W. W. Williams, because of similarity of his name with that of the presiding exalted ruler, found himself the object of charges from his friends and brothers. Deputy Williams, it was learned, hastened to correct the error and assured his friends in the order throughout the state that he "is in no way connected with the business affairs of the State of Ohio lodge nor with the funcitioning of any of the grand lodge committees."

Following the recent grand lodge convention here, an audit of the lodge books is alleged to have disclosed that the treasury of the lodge was entirely depleted and the lodge was several thousands of dollars in debt. The persistent efforts of creditors to collect is said to have been the reason for the probe, and subsequent charges of alleged malfeasance against lodge officials.

## 47 Graduates In First Aid Given Certificates Here

C. W. Butts, chairman of the First Aid Unit of the Nashville Red Cross and Prof. W. C. Dodson, superintendent of Davidson County Schools presented certificate to 47 young people who had taken the first aid course at exeracises held Thursday at Haynes County High School. Members of Truck Company No. 2, under Capt. George Farrell trained the class in first aid. Other members of the company are Lieut. L. E. Potts, E. M. Turner and N. H. Williams.

## Colored Bondsman For White "Bond Jumper" Relieved

Washington, Sept. 30 (ANP)—John M. Brooks, Cincinnati Negro; is $2,500 richer today due to a bill sponsored by Rep. Herbert S. Bigelow, Cincinnati. In 1921 Brooks put up a bond of $2,500 for a white man indicted for a federal offense. The man disappeared for a number of years, finally returning to find the case had been dismissed. The bond had been declared forfeited. The Bigelow bill was to reimburse him.

SAN JUAN, Puerto Rico.—Puerto Rico' first cooperative sugar enterprise, financed by the government, showed a profit of $232 000 on the first crop harvested, according to a recently released report. A total of 32,000 tons of sugar produced sold for $2.102. 538. at prices ranging from $3.47 to $3.05 per hundred pounds.

# JAMES TILLMAN, 107, NATIVE OF HOPKINSVILLE, IS SPRY OHIOAN

## Centenarian Once Lived in Chattanooga and Says Only Illness was Cold He Caught 15 Years Ago

**Cleveland,** Sept. 30—(By Clarence L. Simmons for ANP) "Be seated, gentlemen, what can I do for you?" asked James Tillman, 107, as he seated himself for just another interview out of "about a thousand" in the last few months. It is hard to say that the ex-Union Soldier is the oldest person in this state or in Cleveland, but 107 years on this green earth is a long time, and it should be enough to give him the title of Champion centenarian of Cleveland.

Mr. Tillman was born a slave in Hopkinsville, Ky., March 18, 1830, during the time Andrew Jackson was beginning the era of his personal politics. He resides with three of twelve children, David, 73; Walter, 46, the youngest son; and his daughter, Mrs. Emma Haley, 54, in an 8-room frame house that is well-kept and a comfortable place for the spry old gentleman.

Mr. Tillman doesn't wear glasses, and likes good perfectoes. He gets around by the aid of a cane, but he explains that is because of a dislocated knee-cap he received in the ranks of the Union army during the Civil war. The only time he ever felt below normal was about 15 years ago when he moved to Cleveland from Chattanooga, Tenn., to join his children. He contracted a slight cold because of the changed climate.

The centenarian delights in recalling the days of his early life, especially those days when he was placed in his mistress' boarding house to cook. After several years in the war, he was employed as a cook on a steamboat plying the old Tennessee river. Even today, the grand old gentleman has a good taste for good food, and says, "I like to eat anything I'm acquainted with, but I don't eat much at a time any more."

After about 2 years in the Union army, Mr. Tillman did "just about everything in the way of work' until he retired some 30 years ago. One of his last jobs, he said, was "laying out and building the baseball diamond in Andrew's Field," home grounds of the Chattanooga team in the Southern association. He says that he has never seen the Cleveland Indians play, but likes to listen to the radio ball game broadcasts. Radio programs are his greatest entertainment now. He is a member of Elizabeth Baptist church, but has not been taken to services recently. The pastor, the Rev. E. C. Hall, and members of the congregation visit him regularly. His wife, Jennie, died 20 years ago, but he "is happy to be with the children." Two great grand sons, B. F. and Earl, and his great-great grand son, Earl, Jr., live at his home. He thinks he will be able to attend the 75th anniversary celebration of the Battle of Gettysburg next year.

---

ST. LOUIS, Mo.,—The lure of "easy money" apparently proved too much for Marie Halliday, assistant parole officer of the Court of Criminal Correction, who, last Monday pleaded guilty of forgery when arraigned before U S. Commissioner John A. Burle. She confessed obtaining $98 by indorsing money orders sent by paroled offenders to their families through the parole office. She was released on $2,500 bond, to await grand jury action. Police call her a second offender, say she was given a year sentence in 1924, for check forgery, under the alias, Marie White.

---

LITTLE ROCK, Ark.—Leroy Herron, tire and battery company employee, was fatally burned last Saturday, when the establishment was swept by fire. He suffered major burns about the face and body when a container of liquid tire retreading cement, caught fire exploded. He died the next day.

## Dr. J. R. Hawkins Mails 2,500 Checks To Aged Ministers

Washington, D. C.—(Special)—Dr. John R. Hawkins, Financial Secretary of the A. M. E. Church, Washington, D. C., is mailing checks to 2,500 superannuated ministers and widows of the denomination. More than $12,000 will be disbursed.

Dr. Hawkins expresses the hope that $24,000 can be paid these pensioners during the next quarter This, he says, will be contingent upon increases in reports to the department.

More than a half million dollars have been paid the beneficiaries of the department for the past 17 years.

A testimonial to Dr. Hawkins was recently tendered in honor of his fifty years of services as a general officer of his Church.

# JAS. CAGNEY, OTHER SCREEN STARS FLAY SCOTTSBORO FARCE

## Players and Writers Send Wire to Pres. Roosevelt; Want Youths Set Free

**Hollywood**—(P. F. S.)—President Roosevelt, Gov. Graves of Alabama and the United States Supreme Court last week were in receipt of a telegram signed by outstanding stars and writers of Hollywood, who had gone on record protesting the continued imprisonment of the five Scottsboro boys still under confinement.

The telegram read as follows:

"The release of four Scottsboro defendants for lack of evidence is final proof of the innocence of all. Together with other progressive Americans, we pledge ourselves to continue the struggle until all these victims of prejudice and hatred are freed. Your assistance in achieving this objective is requested."

Signing the telegram were many illustrious stars and writers. The stars included Robert Montgomery. Frederic March, James Cagney, Edward Arnold and Chester Morris, all of whom are active members of the Screen Actors Guild. Writers signing included Rupert Hughes and Dorothy Parker.

## Tuskegee Institute Honors Mrs. Bethune

Tuskegee Institute, Ala., Sept. (ANP)—After she had delivered the commencement address to summer school graduates, Dr. Mary McLoed Bethune was awarded the master of science honorary degree by Dr. F. D. Patterson, president of Tuskegee.

### HOUSEHOLD HINTS

A dash of salt improves the flavor of chocolate, carmel and white icing.

To add color and flavor to summer beverages, freeze fruit juices in a mechanical refrigerator, then add the frozen cubes to the beverage just before it is served.

Stairway railings can be cleaned with a cloth or small dish mop on which is sprinkled a little furniture polish.

## Executive Board of Lambda Sorors Has Meeting In N. Y.

Washington, Sept. 9—(ANP)—Pledged to support Negroes in business and to urge young women to plan careers other than that of school teacher, the national executive committee of the Iota Phi Lambda Sorority met here last Saturday and Sunday at the Y. W. C. A. An aggressive educational program was also launched and the sorors were urged to support the Negro press. Cleveland, Ohio's Epsilon Chapter will be hostess to the national convention, to be held in that city during August, 1938.

National Executive committee members attending the two-day meeting were: Mrs. Lola M. Parker, Chicago, president; Mrs. Anna J. Hughes, Louisville, vice president; Mrs. Dorothy S. Jones, New York, secretary; Mrs. S. A. Lewis, Atlanta, corresponding secretary; Miss M. E. Harvey, Washington, D. C., journalist; Mrs. Mayme L. Copeland, Hopkinsville, dean of pledgees; Miss Theodosia B. Skinner, Cleveland, Ohio, Northern directress; Mrs. F. K. W. Norman, New York, Eastern directress; Miss Tuchsia B. Miller, Chicago, Western directress and Mrs. O. P. Williams, Atlanta, Southern directress

---

CRISTOBAL Canal Zone.—Joseph Osavia, a native of the West Indies, last week had a yen for returning to his home in Jamaica but, being penniless and unable to buy a ticket, tried to solve his difficulty by selling a "deck" of a narcotic to a police sergeant, William Beaver—hoping thus to be deported. Later, in Magistrate's Court, Osavia said he bought the drug from a narcotic peddler in Colon, for 25 cents, went directly to the Cristobal police station to sell it, expecting to be convicted and subsequently deported. He was bound over for trial before U. S. District Judge Charles Harwood.

---

COLUMBIA, S. C.—Centenarian Maum Susie Black, 106 years old former slave of the late Joe Smyly and the oldest citizen of Colleton County, interviewed last week by the county supervisor in connection with her request for old age assistance, said she wanted: Cinamon rolls, Irish potatoes, butter, a can of Prince Albert tobacco, som matches "I can strike anywhere" Age and rheumatism have bent the matriarch nearly double she is almost blind and deaf, but still hobbles about with a cane tells interested neighbors of the stirring events of the Civil War and Reconstruction period.

# CIVIL LIBERTY ORGANIZATIONS UNITE IN EFFORT TO REMOVE BRUTAL POLICE OFFICERS FROM MIAMI, FLA. FORCE

## Unearth Case of Cold Blooded Murder of Catholic Youth in Flimsy Charge and "Whitewash" of Cops by Higher-ups

New York, September .—Governor Fred P. Cone has been asked by the National Association for the Advancement of Colored People and the American Civil Liberties Union to institute a special investigation into the shooting and killing of Stafford Dames, Jr., on July 27 by three Miami policemen.

The N. A. A. C. P. also has asked the Mayor of Miami to direct a reopening of the case and full prosecution of the officers involved.

Testimony brought out at the coroner's inquest indicated plainly that young Dames was killed in cold blood on the thin excuse that he was attempting to enter a Catholic church where he had been altar boy for six years.

Witnesses at the inquest, all Negroes, testified that young Dames had spent the evening visiting friends, had stopped at a confectionery store and bought peanuts. The proprietor of the confectionery store testified that "within a few minues" after the purchase of the peanuts, he heard shots. Another witness testified that he was sitting on his porch when young Dames walked from the confectionery store and that a police car drew up to the curb and the police started shooting at young Dames without saying anything. The witness declared the Dames boy started running toward his mother's house, but the hail of bullets from the police guns cut him down practically at his mother's front porch. A colored woman testified that she saw Patrolman B. Simpson, one of the officers involved in the killing, plant a gun on Dames after the boy fell to the sidewalk. All three policemen, including a sergeant, fired at young Dames.

A neighbor of the Dames' household told the coroner's inquest that one of the policemen answered a question from Mrs. Dames by saying: "I don't know if this is your son, but if he is, come out and see the son of a ------ die."

The physicians testified at the inquest that young Dames had been shot in the back. The assertion that he was trying to rob the church by climbing in a window is regarded as pure invention by the policemen since Dames had access to the church and did not have to climb in a window. The only rebuttal to this testimony by the parade of witnesses was the denial of the three officers, and yet the coroner's jury brought in a verdict exonerating them, declaring that they had killed young Dames "in the performance of duty."

The dead boy's father, Stafford Dames, Sr., has engaged counsel to take further action to clear his dead son's name and possibly to secure damages from the officers. Miami colored citizens and the N. A. A. C. P. and the A. C. L. U., however, are cooperating with the father and will seek prosecution and conviction of the policemen. Mr. Dames is manager of the Miami office of the Afro-American Life Insurance Company and the Dames family is regarded as one of the best in Miami.

Miami is known as one of the worst "curfew" towns for Negroes in the South. Negroes are supposed to be off the streets of the "white" section of the city by a certain hour each night unless they have a pass showing that they work in the neighborhood. They are subject to be stopped, searched and even beaten up by policemen if they are caught walking along the streets after dark. However, this killing occurred in the Negro residential section and while colored people are supposedly free to be on the streets of their own section late at night, they are still subject to any kind of treatment by the Miami police.

---

MONTGOMERY, Ala.,—Sheriff Paterson said last Monday that 19-year-old Willie Whitfield, living near Troy, had confessed the murder of Fred Hines, 59, Montgomery storekeeper. Patterson exonerated James Hardeman, 31, also colored who had been held in the slaying. Police are seeking the grocer's strong box, used for the cash receipts and missing since the crime

RALEIGH, N. C.,—Prize story of the week in this state's tobacco region: A frisky, spirited black horse, drawing a buggy, became excited, ran away with the beautiful white woman driver. She was later rescued, unhurt but frightened. That night an incensed mob, bent on revenge, shot the horse and lynched the buggy, thus scored another victory for "white supremacy".

3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

Industrial College, Ga., Sept. 27—Negro farmers for years have been in dire need of an organization functioning unselfishly for the economic advancement of Negro farmers and for the attainments of the fundamental factors for the development of good homes and well-rounded rural life. Because of this condition affecting the life of millions of Negro farmers and ruralists—causing serious economic, social and educational disadvantages to the entire colored race in this country with an apparent effect upon the Nation, James P. Davis, judiciously planned and promoted the formation of the National Federation of Colored Farmers, Inc.

During the year of 1922, The National Federation of Colored Farmers, Incorporated, was organized by James P. Davis, Chicago; the late Gilchrist Stewart, New York City; Leon Harris, Molin, Ill.; C. R. Richardson, Richmond, Indiana; Miss Sadie B. Wilson, Nashville, Tenn. In 1930 this much needed organization was incorporated on a non-profit basis, with principle office in Chicago. The movement now has a membership in twenty-one states. The Objective and progress of this organization have gained nation-wide interest and support. Among the many prominent colored religious, civic, business and agricultural leaders who are contributing to the efforts for the uplift of Negro farmers are Dr. J. C. Austin, pastor Pilgrim Temple, Chicago; Dr. Henry Allen Boyd, secretary National Baptist Publishing Board, Nashville, Tenn.; J. A. (Billboard) Jackson, of the Standard Oil Company, New York City; P. H. Stone, State Agent for Negro Extension Workers, Industrial College, Ga. These factors in the life of Negro farmers will speak at the annual convention of The Federation of Colored Farmers, Inc., October 28, 29, 30, at the Georgia State Teachers and Agricultural Training School, Forsyth, Monroe County, Georgia.

From present indications farmers from more than the twenty-one states heretofore represented at previous conventions, will be in attendance.

William Jones, Pulaski County farmer who specializes in raising chickens has found a way of getting rid of mites by placing in his chicken house a banana stalk. He has also found that a banana stalk serves as a good riddance of fleas.

L. F. Blaser of Benton, Ark., believes he has the answer to low cost housing. He demonstrated a model to engineers and told them a one-room, 10 x 18 foot house constructed in the same manner could be built for less than $10.00.

Mr. Blaser uses "toesacks" for covering the house frame then applies three coats inside and out of a composition which he has developed using concrete, lime, aluminum, and other material. The result is a concrete-appearing house which Blaser estimates will last two years in any kind of weather.

The composition which he has perfected is applied with paint brush. The model he exhibited withstood heavy hail and wind in the tornado at Benton several months ago without being dented, he said. He has a brooder house 10 x 18 feet at Benton constructed of the material. Patents have been applied for and Blaser is attempting to organize a company to promote his composition.

## THE DAILY DIGEST SAYS CONTROL OF PEA WEEVIL

"Rotenone dust appears to have given this summer a large-scale and convincing demonstration of its effectiveness in pea weevil control," says the Washington Farmer (Aug. 19). "Dr. Claude Wakeland, University of Idaho entomologist, who recently visited the large cannery pea-producing area of eastern Washington and Oregon to study the results of rotenone dusting, says: 'Virtually no weevilly peas are coming into the canneries and both canners and growers are happy over the results.' This is the third year that rotenone dust has been used in pea weevil control. It is the first season of such large-scale activities. The idea of employing this chemical came from Dr. T. L. Brindley, of the U. S. Bureau of Entomology and Plant Quarantine, stationed at the University of Idaho. For many years the federal bureau, in cooperation with the Idaho, Washington and Oregon experiment stations, has been searching for a solution to the northwest's serious weevil problem. The first year rotenone was tried out on experiment plots. Results were so promising it was given a more extended field test last year. When the record of the 1936 dusting operations was reported to the canners, they immediately laid plans for the big dusting activities this year."

## TIPS FOR PEACH FANCIERS

### A Bumper Crop is Piling Baskets Full and pushing Prices Down on This Vitamin-starred Fruit

Scent of peach pie running over in ovens and pungence of peach preserves bubbling in pots float over the land as housewives get busy with the 1937 peach crop. Thousands of bushels of peaches will go to the commercial canneries this year; more thousands will reach the drying trays. The yield bending low the boughs of the Nation's peach trees is the heaviest since 1931.

Peaches, it seems, after a bad case of doldrums are staging a comeback. The 1937 crop will probably touch 57,700,000 bushels—a gain of 15 percent over 1936 figures. Almost all the important peach States point with pride to 1937 prospects—New York, New Jersey, Pennsylvania, North Carolina, Virginia, Michigan, Illinois, Tennessee, and Arkansas. Although California's gains have been slight, she still stands head and shoulders above her nearest competitor with a 22,000,000-bushel crop of clingstones and freestones. Her neighbors, Utah and Washington, are among the few States that admit heavy losses. Hardest hit in crop prospects is Georgia, long the acknowledged peach queen of the East. Her production slashed in half, she has temporority yielded her crown to Pennsylvania.

That this year's crop does not exceed the peak production of 1931 is not surprising, for peach trees in the United States declined from 79,000,000 in 1930 to 67,000,000 bearing trees 5 years later. Not only market conditions but weather militated against peach production in those years. Above the Mason-Dixon line frost brought bud-killing and tree injury in its train. However, growers soon set about the business of planting new trees, spurred on by the relatively high prices that peaches were bringing at market. Besides, peach growers have come to take misfortune in their stride, for theirs is often a speculative business. The peach is perishable and the tree is beset by diseases and pests such as the "yellows" and San Jose scale. It is not long-lived nor is it hardy. Overproduction with resultant low prices for producers is another hazard that has turned growers' hair gray. California is making an effort to rout the low price enemy by enforcing a marketing agreement which limits shipment of the commonest-grown freestone peach—the Elberta—to U. S. No. 1 grade of a certain size.

The peach owes its origin to China, its name to Persia—one of the stopovers in its globetrotting career. In fact, the peach lingered there so long it became known to the ancient world as the Persian apple. The Chinese invested the peach with the glamour of superstition. To us a peach is a peach—good in its own luscious right, but bearing no omen of good or ill fortune.

Definite fruit characteristics differentiate the races and varieties of peaches. Peaches may be smooth-skinned or covered with a heavy down. They may have white flesh or yellow, flesh closely clinging to the stone or falling free from the pit. In shape they can be round, or with a pronounced beak at one end. Again they can be as irregularly formed as the odd saucer-shaped members of the Peento peach family.

Both yellow and white peaches come as clingstones or freestones. Clingstones play their important part in commercial canning though some are sliced and home-pickled. Perference in peaches for fresh dessert use, drying, and home cooking points to the freestones. On the basis of geography, too, peaches can be divided. Most western peaches find their way to the cannery or the drying rack; eastern varieties are served as dessert fruit.

Just as there are style trends in clothes, there are fashions in fruit varieties. Right now the yellow-flesh peaches are most popular. Young hopefuls of the peach field are the varieties that have resulted from breeding work that has gone on for some 25 years. New features are improved flavor, juice content, texture, and the ability to attain a full, natural ripeness on the tree and yet withstand the strain of shipping long distances. Of these college-bred varieties, Halehaven and Golden Jubilee are making their mark at roadside stands and local markets in certain sections. The alliterative trio, Vedette, Valiant, and Veteran, originating at Vineland, Onatrio, hold promise of success also.

No young upstart has been able to steal the show from Elberta, a standard variety of freestone. The fruit matures in season to a size 2¾ inches long by 2½ inches wide. Its skin changes on maturity from greenish yellow to orange yellow, often mottled with red. Skin is thick, tough, and downy. Flesh is yellow, stained with red near the pit and is juicy though stringy, firm, and sweet. In quality Elberta falls short of Crawford and Champion peaches and it is too tart to suit some taste, yet because it handlers well commercially, holds its own as the most widely grown variety in the United States.

Should choice turn to a white-fleshed peach, Champion is without a peer when well-grown, but the fruits though attractive run small and are apt to be off color. This soft-fleshed variety has been an easy prey to brown rot and is no longer grown commercially.

Only three-way fruit—that is, good for canning, drying, and shipping—is Muir, boon to experienced peach men during the depression This variety seems equally at home on Eastern ground. Though unprepossessing in appearance, given a chance to prove its worth for culinary purposes, it more than lives up to expectations.

Not every consumer is able to buy tree-ripened peaches, but by a little care, one can and should buy ripe peaches. Because peaches are extremely perishable, they are often picked slightly immature so that they will stand shipping better. Sometimes they are picked so immature that they cannot ripen satisfactorily, will shrivel, and generally lack the tender, tasty flesh or ripe fruit. Ripeness is indicated by firmness and by the extent to which the green on the under side of the peach has turned to a whitish-yellow color.

For home purposes, whether for canning or eating fresh, choose peaches of the yellow-fleshed mid-season and late varieties such as Elberta, Salway, J. H. Hale, and Smock. Among other good canning varieties are Golden Jubilee and Vedette.

Peaches of fine quality should be firm, free from blemishes, and of fresh appearance. Ground color should be whitish or yellowish sometimes combined with red blush. A red cheek alone is not a true sign of maturity, however, since color mottlings vary with variety.

Overmature peaches, recognized by softness to the touch, bruise easily, are fit only for immediate consumption. Even if the outer skin of a bruise is not discolored, the bruised flesh is too soft and discolored for use.

Watch for unevenness in shape and small surface punctures exuding a gummy substance. These are telltale clues of worm injury. Brown circular spots are warnings of decay ahead, too.

The United States has set up standard quality grades that are in general use among shippers. These define the requirements of the various grades, and specify the tolerances of defective peaches which may be allowed in each grade. The size of the peaches is stated separately from the grade. Thus peaches of any size—2 inches or 2½ inches—may be rated as U. S. Fancy, U. S. Extra No. 1, U. S. No. 1, U. S. No. 2.

Although such descriptions are of indirect benefit to consumers, their general use is more important to the trade in providing a common language for shippers and distant buyer.

Grades for canned clingstone peaches consist of U. S. Grade A (Fancy), U. S. Grade B (Choice), U. S. Grade C (Standard). The same grades apply to special packs for hospitals in which no sugar goes into the can. Other grades below U. S. standard requirements hardly concern the homemaker.

Cooks don't have to go to a lot of trouble to turn out a delicious dessert made of peaches. There is nothing much simpler to prepare and much more delectable to eat than a dish of peaches and cream. It's healthful, too, for yellow peaches are an excellent source of Vitamin A, fair source of B, good supply of C. And remember, if dessert has to stand awhile, lemon juice squeezed over the peaches will prevent them from turning a dusty brown.

## THE DAILY DIGEST SAYS

### Ask Your County Agent

"County agents and home demonstration agents have grown powerful in influence because they carry honest, unbiased and accurate information to the people they serve," says an editorial in Southern Agriculturist (August). "And along with profitable information, they carry hope and inspiration to the farm. These workers have grown strong because they teach rural people to help themselves through the use of better methods and cooperative effort. They help farm people to see farther, think more clearly and act in the light of facts which they help to gather and interpret. The farmer who looked askance at extension workers 20 years ago, now seldom undertakes any major matter affecting his home or his farming without consulting these trained advisers and leaders. They have become a potent influence in rural life that will compare favorably with the inventor, the teacher and the press. The extension agent is now widely recognized as one who knows what to do about local farm problems."

## MILK PARADE

**From Doorsteps of City Milk Plants to Doorsteps of City Consumers, We Explore—in this Second of our Series on Milk for Millions—the Tangled Web of Prices and Costs of this Champion Food***

*First of the series appeared in our August 9, 1937, issue.

Time may march on, but milk flows down in a modern milk plant. Some plants may not harness gravity to move milk, may even process the milk completely on one floor, but by gravity or pressure pump, the steps that milk must go through before it is fit to drink are the same by modern health regulations. From the glass-lined, white-enameled storage tanks the milk flows through either a filter or a clarifier, which serves to remove from the milk all foreign substances which may have escaped detection until that time. The clarifier is a round drumlike tank inside of which the milk is whirled at high speed until it is clean.

Cleaned, the milk then tumbles through stainless pipes to the next process, preheating, where it is heated to a temperature of 120 degrees, preparatory to pasteurization.

Pasteurized milk is simply milk heated until harmful bacteria in it are killed. Today there are three methods of pasteurization: The flash process, in which the milk is brought up to a temperature of 160 degrees for 15 to 30 seconds; bottle pasterization, by which the milk is heated in the bottles; and the third method, the one which is in use in most cities, in which every particle of milk is heated to a temperature of 142 degrees and kept at that temperature for 30 minutes. The Standard Milk Ordinance of the United States Public Health Service recommends that the thermometem read 143½ degrees for the 30 minutes to insure complete pasteurization.

Historically famous microbe hunter, Louis Pasteur, nineteenth century French scientist, discovered the process known as pasteurization while he was trying to save the French wine industry from the ravages of uncontrolled fermentation. Fermentation was caused by bacteria, he discovered, and heat killed bacteria. By heating wine the baeteria could be killed, the fermentation controlled.

Epidemics in the nineteenth century led to the pasteurization of milk. First pasteurizers were ridiculed; many dealers advertised uncooked milk to minimize advantages of the pasteurized kind. But slowly, surely, the gospel of pasteurization spread until now all large cities require the pasteurization of most commercial milk. Chief exception is certified milk which is not pasteurized.

Bacteria are as hard to generalize about as people. Not all of them are bad. The bad bacteria, the pathogenic kind, the evil harbingers of tuberculosis, undulant fever, septic sore throat, diphtheria, typhoid, and other diseases—all of these die at relatively low temperatures. In addition, however, there are good bacteria in milk, the laetic-acid bacteria. They help digestion and at the same time are the rank-and-file soldiers in the white hosts that fight disease bacteria in the body. Then, too, there are the "peptonizers", another group of bacteria that help to digest food. These good bacteria fortunately have a greater resistanee to heat than the disease-inducing bacteria. But if the milk is heated too much during pasteurization they, too, are killed, and some of the nutritive value of the milk is lost. Therefore milk must be heated not too hot, nor too cold.

Milk for pasteurization in typical milk plants is introduced into a great tile drum inside of which are contained a number of rotating cylinders. Inside these cylinders the milk is heated, while the cylinders themselves move slowly around inside the drum. The round trip takes exactly 30 minutes.

To insure proper pasteurization many health departments require that the pasteurization equipment be fitted with devices which record the amount of milk that passes through them, the temperature to which the milk was submitted, and the length of time the milk remained in the pasteurization process. These records, kept by automatic pens on rolls of paper, are inspected by public health authorities.

**Hot milk must be cooled.** In a modern plant, this is done by a most ingenious trick, called the regenerative cooler-heater system. Cold milk passing into the pasteurization tanks is tricked into cooling the hot milk coming out of the tanks. By means of double tubes, one inside the other, the cold milk on its way to being pasteurized is heated by the hot milk coming out.

At the bottom of the milk cascade are the filling and bottling machines. The filling machine is a cylindrical device with a crown of stainless-steel tubes. Milk bottles move single file in a circle around the base of this machine on a moving belt. Automatically each tube settles down over a milk bottle, and then by a vacuum process floods milk into the bottle until it is filled. From there the milk bottles single-file along their moving belt to a similar capping machine, which fastens caps over the bottles. The belt moves on, carrying the milk to refrigerators where it is crated preparatory to final delivery to consumers.

Sanitary milk would be a grim joke, however, in dirty bottles. Strategic point in any milk plant, then, is the bottle-cleaning machine. Like all other processes this is automatic. The continuous automatic bottle washer looks like a giant tile-and-glass war tank without the caterpillar tread. At one end of it, bottles are fed into a slotted frame. Then the frame turns over, the bottles are immersed in a caustic soluton, carried through it and reamed out with rotating spindle brushes, and doused in a chlorine solution. Finally washed and sterile, they are ejected onto a moving belt which carries them under the filling machines, in a long, simple file. Inspectors along the way examine the milk bottles for defects, and the automatic filling machine sensitively examines the bottle rims for chips or cracks. If it discovers a chip or crack, with an uncanny canniness it refuses to fill the defective bottle; thus notifies the attendant, who removes it.

Final safeguard in an ideal milk plant is the nightly housecleaning. Each night after the milk is all bottled for the next day, the equipment is dismantled by experts, washed, sterilied, and reassembled. Perhaps sterilized, and reassembled. Perhaps a milk plant is the only modern industrial establishment which is completely dismantled and sterilized every working day.

Neapolitan milk men drive their cows through the city streets, deliver milk to their waiting customers directly from the cow's udder into a pitcher. For highly prized customers who use goat milk in Naples the milk man leads his goat by a rope straight to the consumer's kitchen. In Holland and Belgium milk is delivered from dog carts. The Mongolian on the inner plateaus of Asia rides his milk supply, dismounts from his mare, and milks her into whatever container Mongolians have. The streets of Turkey are crowded with goats whose masters deliver milk directly from the goat to the consumer for a copper coin.

Cows, goats, mares, none of these milk animals clutter up the streets of American cities waiting for consumers, but if cows, goats, and mares don't certainly milk men with their familiar rubber-tired wagons or trucks do. A study of the milk-distributing companies in Milwaukee made by Milwaukee's Common Council in cooperation with the CWA, the FERA, and the Department of Agriculture, revealed that on one day, March 16, 1934, the milk trucks of 17 companies paraded up and down one city block to serve the customers in that block. In two block 15 milk wagons marched and countermarched to deliver milk. One thousand and twenty city blocks in Milwaukee were studied on March 16, 1934. In every block except one, at least two companies made deliveries. In 800 of the 1,020 blocks, five companies went in and out during the day to deliver milk. Six companies delivered milk in 146 different blocks, and in 147 other blocks seven companies competed with each other. In two houses nine companies made deliveries.

Competition in milk distribution results in a musical comedy parade of milk men up and down the streets of American cities. But besides, it contributes to higher prices of milk. No. 1 charge on the portion of the milk dollar the distributor receives is the cost of delivery. Studies of the Federal Trade Commission in Baltimore, Boston, Cincinnati, and St. Louis reveal that in 4 years, 1930, 1933, 1934, and 1935, the cost of delivery alone took from 21 to 28 cents of the consumer's milk dollar. Processing the milk in 11 distribution plants took only 10 cents of the consumer's milk dollar in these years.

Statistics about the milk business are as much disputed as politics. No one has ever emerged from a study of the milk business with unchallenged figures. The reason for this is not simply that some people are bullheaded and can't be made to believe anything. Part of the reason may be that one company uses one method of figuring costs, another company another method, with the result that statistics from different companies are hardly ever comparable. Government investigators studying milk companies may use still another method, decide that some costs recognied by the company are not true costs at all.

At the basis of the confusion is the faet that the distributing company's primary concern is the sale of fluid milk and cream, but along with milk they sell butter, cheese, eggs chocolate milk, and malted-milk preparations. Some milk companies even sell bread and others a processed form of orange inice. Several investigated by the Federal Trade Commission sold honey. A yet unsolved problem of milk is how to charge to these various commodities the cost of selling them.

The Federal Trade Commission in a report on the distribution and sale of milk and milk products in Boston, Baltimore, Cincinnati, and St. Louis has said: "Data were collected from seven milk distributors. Each of these seven milk distributors divided his total delivery and selling expense each month among the various varieties of commodity handled. Among the seven distributors four different methods of making this distribution were used. Not all four methods of making this division could possibly be right so that at least three of the methods were incorrect—and it is believed that all four methods were incorrect in some phase or other."

Delivery costs for the seven distributors in the four cities studied by the Federal Trade Commission indicate clearly, however, where a good part of the consumer's milk dollar goes. It goes into the costs of the daily milk carnival, the parade of the rubber-tired milk wagons. Costs ranged, in October 1935, from a low of 2.74 cents a quart for all grades of milk to a high of 5.23 cents a quart. Cream delivery costs per quart ranged from a low of 6.70 cents to a high of 11.52 cents.

**Consumers are not** entrely free of responsibility for the size of milk delivery costs, however. They demand doorstep delivery. If for some reason a consumer does not get milk one morning and calls the milk company to dispatch to her immediately a pint or a quart of milk by special delivery, she runs up the cost. Such services are expensive, and for calling this tune consumers must pay a stiff price to the piper. But when consumers do not demand fancy delivery services they should not be required to pay for them. In many cities consumers who buy their milk at stores, and deliver it themselves, are still taxed for the cost of a delivery service they do not get.

Delivery through retail stores may save 1 cent a quart, possibly more, in handling expenses compared with delivery to the home. Substantially greater savings for consumers might be made by another method of delivery which has been tried out in New York City. To meet the demands of that city's depressed population for milk at lower cost officials set up a system whereby delivery is made direct to consumers from a dealer's wholesale truck within a 2-hour period each morning. Sales are for cash, and bottles must be returned or a deposit forfeited. Actual expense incurred in this method of distribution has not been reported, but it is perhaps significant that dealers were eager for the chance to deliver and sell this milk at 8 cents a quart when the regular retail delivery price was 13 cents and the store price 12 cents. Significant also is the demonstration in New York City that a cost saving of 3 or 4 cents a quart to consumers will stimulate an abundant willingness of consumers to purchase milk by this inconvenient method. At one time 90,000 qquarts per day were being sold in this way from 150 milk depots.

Cities whose health officers accept some responsibility for getting more milk consumed by needy families, as well as for keeping milk clean, could readily determine for their own localities what saving in handling expense is available to consumers by this method of distribution. New York City's experiment has been carried out with some assistance of public funds. But an analysis of its operation indicates no reason why it cannot proceed on a self-supporting basis.

But this is a story of a competitive milk system, the story of many competing milk companies. What, the Milwaukee Common Council asked, would be the cost of milk distributed noncompetitively by the city? How much would it cost to buy milk from farmers and sell it through one city-owned company? And how, it wanted to know, would the cost of such a system compare with present competitive costs. What are the wastes of competition and what are the savings of public distribution?

To answer these questions, four large public agencies, the Civil Works Administration, the Federal Emergency Relief Administration, the city of Milwaukee, and the United States Department of Agriculture studied milk in Milwaukee for more than 2 years, peering into every nook and cranny of the Milwaukee milk system, computed, estimated, drew plans.

Plans for a publicly owned milk system (in which the Department of Agriculture had no hand incidentally, for it only participated in the study of milk as it is distributed in Milwaukee today) indicate that a publicly owned system of milk distribution in Milwaukee could sell milk to the consumer for 2 cents per quart less than the present price and could pay the farmers 21 cents more a hundredweight for their milk.

Consumer conscious, the investigators began their study of Milwaukee milk by studying Milwaukee milk consumers. All Milwaukee families, they discovered, used butter, nine-tenths of them used fluid milk two-thirds of them used cheese, and only one-fourth of the families studied used cream.

Average Milwaukee family used 1 1-3 quarts of milk a day, a quart of buttermilk once a month, a pint of light cream once every 16 days, a pint of heavy cream once every 2 months, a quart of ice cream once a month, a pound of cottage cheese every 20 days, a pound of hand-spread cheese every 15 days, and a pound of butter every 3 days.

Milk consumption varied according to the economic level of the families studied. Cream consumption was limited almost exclusively to families of middle and high incomes. In a low income district of Milwaukee, the per capita daily consumption of milk was only one-half pint, the average for the city was slightly over seven-tenths of a pint. In one section of Milwaukee the average persons used a pint of cream only once in 3 years, in a high income section of Milwaukee the average person used a pint of cream about once every 25 days. Milk consumption, too, varied in families according to the number of children and the nationality of the family. Negroes, for instance, used comparatively little milk, though this may perhaps be due to the fact that the average income of the Negro familes studied was considerably lower than the income of the white families studied.

Milwaukee consumers buy their milk chiefly from distributors' wagons; four-fifths of the 8,800 families studied got all their milk from distributors' wagons. Families using least milk bought their milk in stores. Families using most milk bought milk both from distributors' wagons and from stores. On the other hand practically all butter

## MILK PARADE

(Continued from Page 6)

was sold through retail stores. Retail stores handled approximately one-sixth of the fluid milk sold and one-fifth of the fluid cream. Most stores studied, incidentally, reported a sharp decrease in the amount of fluild milk sold in 1934 as compared with 1931 and a sharp increase in the sale of canned milk. Public institutions accounted for one-eighth of Milwaukee's fluid milk, two-fifths of its canned milk.

Price, a primary concern of consumers, also received the attention of the Milwaukee investigators. Previous studies in New York indicate that a 1-cent increase or decrease in the price of a quart of milk makes very little difference in the consumption of milk but a 2-cent increase or decrease in the price of milk has an immediate effect on consumption. Thirty per cent of Milwaukee consumers stated that they would use more milk if the price of milk were reduced 2 cents a quart. Among the families with low income, milk consumption, they said, would increase 14.5 percent if the price of milk were dropped 2 cents a quart. Families with intermediate incomes would increase milk consumption 11.1 percent and families with the highest incomes would increase consumption 6.2 percent. Butter consumption would increase 15.8 percent if the price of butter were reduced 4 cents a pound.

Milwaukee milk dollars in 1933 paid 53 cents to the farmers, 46 cents to the distributors. In 1934 the farmer's share of the milk dollar was 46.8 cents. Beginning in 1923 when the farmer received 58.1 cents of the milk dollar, down to 1934, when he received 46.8 cents of the consumer's milk dollar, the farmer's share consistently decreased. During this same period the retail price of milk declined from 10:5 cents to 9.4 cents and the distributor's gross margin increased from 4.4 cents to 5 cents.

Distributors' shares in the consumer's milk dollar are not all profit, however. In 1933 for instance, the distributor paid 14.8 cents out of each dollar for processing the milk, of which 6 cents was wages. He paid 26.7 cents for delivering the milk, of which 19.5 cents was wages. It cost the distributors 2.42 cents to sell the milk, of which 1 cent was paid out in wages. Administrative expenses cost the distributor 3.28 cents. Altogether his expenses, as shown by his accounting method, totaled 47.2 cents. Since he received only 46 cents of the consumer's dollar, however, in that year he incurred a loss if his system of figuring was correct. In other words, the consumer received $1.01 in milk and milk services for each dollar he spent.

Consumers have often heard of the economies that can be gained from the operation of a large-scale plant, but large-scale operation does not necessarily mean economies; sometimes bad management can cancel the gains that result from large-scale operation. The Milwaukee investigators discovered that in April 1934 medium-sized milk plants were more efficient than large milk plants. Men working in medium-sied milk plants handled 984 quarts of milk per man day. In large plants this average was 830 quarts per man day, in small plants 484 quarts. Average output per man daily for the entire city of Milwaukee was 845 quarts of milk per day per man.

Boston auditors, at the request of the Massachusetts Milk Control Board, took apart the accounts of the Boston dairies to discover significant facts bearing on large versus small operations. They found 80 percent of Boston's milk supply in 1935 was furnished by 7 percent of Boston's milk dealers. The remaining 20 percent was supplied by 93 percent of the city's milk dealers. Thus a few big dealers were supplying most of the milk, and a great many small dealers supplying a small part of the city's milk.

Comparing costs of big and little dealers, the auditors found the big ones had the jump on their smaller competitors as far as processing costs were concerned. This part of their operations was four-tenths of a cent a quart less. But against this economy was a much higher cost for the retail delivery operation. Here the little dealers were shown to be doing a much less expensive job, with average delivery costs 1.1 cents a quart under such costs of the big distrubtors. Total city operations on this home-delivered mlik in the case of the big dealers were two-thirds of a cent a quart greater than in the case of the small dealers. Processing and delivery of cream to Boston homes was found to cost one-half cent less per half-pint bottle when done by the smaller dealers. Wholesale deliveries of both milk and cream were performed at less cost by large dealers than by small ones and they enjoyed the lion's share of this class of business.

Another measure of efficiency is the used capacity of a plant. By this standard, Milwaukee competitive milk distribution does not show up very well. Twenty-two plants in Milwaukee could have pasteurized 71 percent more milk than they actually pasteurized in April 1934 They could have filled 122 percent more bottles than were actually filled and washed 91 percent more bottles than they actullay washed. This may be due to the fact that milk sales in individual companies vary much more than the milk sales of all companies. Money, time, and labor is expended by milk companies in an attempt to capture milk markets from each other. Because of the greater variation in sales, plant capacities must be higher than necessary to take care of sales variations. Milk plants therefore operate much below capacity during shifts in the milk market in milk sales from one company to another.

Milk plant investments in Milwaukee increased from 1928 to 1934, while milk sales volume declined. For every quart of milk sold in 1928 there was 5.4 cents invested in milk equipment. By 1934 each quart of milk sold had represented an investment of in plant of 6.6 cents. Altogether 20 of the 25 plants operating in Milwaukee handling 97 percent of the Milwaukee milk supply had net fixed assets of $3,300,000. In plant equipment this represented a bottle-filling capacity of 90,000 quarts an hour, a bottle-washing capacity of 78,000 quarts an hour, and a pasteurizing capacity of 70,000 quarts an hour. The total worth of these 20 companies was 7 million dollars. In addition, they used about 2½ million dollars of borrowed capital.

Thus the cooperative investigators if Milwaukee milk distribution blocked in the picture of milk in Milwaukee: A wasteful delivery system, a relatively inefficient utilization of eqquipment, a consistent need for milk by the people of Milwaukee, and at the same time a milk economy that was not particularly profitable to the businessmen who distributed the milk.

Alongside this picture was placed a perspective for a public milk-distributing system. They pointed out, however, that a publicly owned plant is not the only alternative to the present wasteful competitive system. For instance, the investigators suggested that milk prices and milk efficiency in Milwaukee might be benefited by zoning sales territories among distributors to reduce duplication. It has been suggested that Milwaukee might regulate milk companies just as many public utilities are regulated. It might begin to correct the mistakes of competition by permitting milk distributors to process milk but by distributing the processed milk through a publicly owned distributing system. Another suggestion would grant a closely supervised monopoly of milk distribution in Milwaukee to one distributor just as streetcar companies are given franchises.

Exploring the possibilities of a publicly owned milk-distributing system, however, the investigators estimated that such a system would need one large city plant and five country station so situated that no producer would be more than 2 hours from the station to which he was supposed to deliver milk. The country stations would assemble the milk for delivery, transship it to the central distributing plant in the city from which it would be distributed. The contemplated milk distributing system in Milwaukee would have a pasteurizing capacity of 100,000 pounds of milk an hour sufficient to take care of the need of Milwaukee consumers until 1950. Three cream separators would give this public plant a cream-producing capacity of 11,000 pounds of cream an hour. There would also be equipment for the manufacturing of Vitamin D milk, chocolate milk buttermilk, and additional machinery capable of manufacturing 25,000 pounds of butter in 18 hours.

Ice cream machinery in the public plant would have a capacity of 1,400 gallons an hour. Other equipment would enable the public distribution system to transform surplus milk into cottage cheese and powdered skim milk. The 16 air-conditioned buildings contemplated by the public plant would cover 24½ acres. The plant would handle about 1½ million pounds of milk daily and would deliver milk to consumers 12 to 24 hours fresher than the milk they now receive. Altogether the plant would employ 1,300 persons, of whom about 50 percent would be engaged in the delivery of milk to the consumer.

Such a plant would cost 5 million dollars. An additional 5 million dollars would be necessary to reimburse present distributors for their plant equipment. The daily operating cost of the public plant would be about $11,500, of which about half, or $5,700, would be the daily wage bill.

Estimated savings under this arrangement would result in a 2-cents-a-quart savings to consumers and allow an additional 0.301 cent per quart for milk producers. At the same time, even with these savings, the public milk system would be able to pay for itself in 19 years.

Savings would come from economies in the processing and delivery of milk. In the public milk plant processing milk would cost 0.83 cent per quart. In the most efficient plants studied by the Milwaukee investigators this cost was 1.01 cents.

# SHARECROPPERS TO SHARE IN FEDERAL MONEY NEXT YEAR

## Discrimination Against "Little Fellow" To Be Stopped In 1938

Washington, D. C., Sept. (ANP)—Colored tenants and sharecroppers throughout the South learn that under the provisions of the 1938 Soil Conservation Program just announced by Secretary Henry A. Wallace that they, along with the thousands of white farm tenants and sharecroppers, will receive a larger share of government payment checks than in previous years.

Three Negro field workers are employed by the Southern Division of the Agricultural Adjustment Administration. They will work with Negro Land Grant College presidents, with Negro Extension workers and the other agencies which touch Negro rural life, in helping explain the big program to colored farmers. The colored Field Officers, all specialists in their chosen work, are James P. Davis, Little Rock, Ark.; Albon L. Holsey, Tuskegee Institute, Ala. and Mrs. R. R. Moton, Washington D. C.

Speaking of the new setup, Secretary Wallace said: "The new program represents a progressive development from the previous programs formulated under the Soil Conservation and Domestic Allotment Act. It follows the broad outlines already established and sets up definite objectives for 1938 These include an increase in soil-conserving crops and soil-building practices to further the primary aim of soil improvement. Goals for soil-depleting crops were fixed as a conservation measure and to assure an ample and balanced supply of food feed and fibre crops."

To attain these objectives, a goal of from 29 million to 31 million acres have been set up for cotton. and for tobacco from 1.577,800 to 1,653,000 acres. If the planters do not exceed these goals enough cotton and tobacco should be produced to sell at prices fair to both the farmer and the consumer. The goals set up for wheat and corn will likewise produce ample food and feed.

Concerning the division of payments between the landlord and tenant, the 1938 Program says: "In all regions, payments will be divided between landlord and tenant in the proportion that they share in the principal crop, or all crops and practices on the farm."

Heretofore the division between landlords and sharecroppers was approximately on a basis of 75 percent to the landlord and 25 percent to the tenant. In the Program the division will be more nearly on a fifty-fifty basis. Where the tenant supplies his own workstock, equipment, etc. and follows the practices, he will receive a larger share based upon his participation.

In the 1938 Program, all tenants and sharecroppers who receive payments under the new program will automatically become members of the County Agricultural Conservation Association. This association selects the County Committee which helps to administer the program in the counties. The new program makes clear the opportunity which they now have to join and take an active part.

## Tuskegee Choir To Broadcast Songs Over NBC Oct. 10

Tuskegee, Ala., Sept. 30—(ANP)—With the haunting strains of "Deep River....My Home is Over Jordan" swelling from 100 voices of the famed Tuskegee Institute Choir, a major Negro radio program will make its bow to the nation on Sunday, October 10, at 1:30 P. M. Eastern Standard Time in the first of a series of weekly concerts via station WAPI, Birmingham and the red network of the National Broadcasting company

To William L. Dawson, director of the Tuskegee Institute School of Music and nationally prominent conductor and composer, has been assigned the important role of producing the new program which may bring about a nationwide recrudescence in the spiritual's popularity. Gov. Bibb Graves of Alabama will join with Dr. Frederick Douglas Patterson, president of Tuskegee, in the ceremonies introducing the choir and its conductor to the national radio audience. The opening program will shortly be announced.

## Colored Salesman Blazes New Trail With Ohio Firm

Youngstown, Sept. 30—(By Simeon S. Booker, Jr., for ANP) Since Nathaniel Lee started selling electrical appliances for a white concern here, he has sold over a thousand dollars worth of equipment. Being one of the pioneers in Negro salesmanship, Lee has established quite a trade among Negroes in this valley.

The method in which he landed the job demonstrates his ability in crackerjack salesmanship. The company, being in an all-Negro exhibition, wished to have a Negro explain the details of the equipment and attempt to sell it. A commission was to be given for any appliances sold.

Lee refused the job, but went down to the company's offices, and talked with the managers. When he came out, he was a part-time salesman for the concern.

In the ensuing months, Lee did so well that the company hired him on a full time basis, and then to strengthen the staff, they employed another Negro, a woman.

This is the first time that a local colored person has been employed by an electric concern on a sales force. Lee, a holder of a teacher's license, but unable to secure that type of work here, has blazed the trail for local sepia job-seekers. Since his appointment, other companies have followed suit and employed Negro salesmen.

## Citizens Organize To Aid Domestics

Chicago, Sept. 30—(ANP)—The newly-organized Citizens Committee of the Domestic Workers Association held a dinner meeting Thursday at Poro Tea Room for the purpose of electing permanent officers.

Neva Ryan, president of the with a short address on the need for continued organization among household employes. Attorney C. W. Burton, of the National Negro Congress, spoke briefly on the three important functions of a Citizens Committee, pointing out the need for understanding the problems affecting domestic workers, arousing a favorable public opinion, and devising means of financing the drive among this underpaid group. Agnes Nestor, president of Illinois Women's Union League, spoke of the part the league has played in securing better conditions by helpassociation, opened the meeting ing workers to help themselves.

# R. H. BOYD PHOTO-PRINT

Every Baptist Church, School or Religious Auxiliary Should Hang One on Their Walls and Have It at Home.

**LARGE-SIZE ENGRAVING OF THE BUILDER OF THE NATIONAL BAPTIST PUBLISHING BOARD'S PLANT WILL BE SENT UPON RECEIPT OF TWENTY-FIVE CENTS IN POSTAGE—NO CHARGE FOR THE PICTURE.**

**Because of the large demand from the religious forces of the nation for pictures of the late R. H. Boyd, the Secretary of the National Baptist Publishing Board, who is the son of the founder, has had the lithographers to print a large quantity of these. The exact size of the photo-print is 11 inches by 14 inches. It is a splendid reproduction of this giant of Baptist leaders. The name is under his picture, and it is a side view.**

**The picture will be sent securely wrapped in a tube to prevent it from being crushed. When it arrives at its destination it can be framed. The Secretary of the Publishing Board declares that he is having these ready to be mailed out, so that during the month of March, 1938 every School that wishes to hold Boyd Memorial Exercises will have a large-size picture of the late Dr. Boyd on hand, and they can point him out to the present generation. They can show this picture to the thousands of boys and girls who never saw him. They can point him out to the tiny tots, who in a little while will be grown-ups.**

**The National Baptist Publishing Board, which was founded by this Baptist stalwart, is but one of the institutions that was built, estalished and headed by him during his life time.**

**Send all letters to**

**HENRY ALLEN BOYD, Secretary**

**523-2nd Avenue, North Nashville, Tenn.**

## MILK FOR MILLIONS

Twenty-four and a half million cows go out to pasture in America. They munch grass, chew their cuds, and in their contented bovine way they quietly set about the manufacture of milk.

No one involved in the problem of milk except the cow is contented. Consumers complain that they do not get enough milk at low enough prices. Producers say that that may be so, but from their end it seems that they frequently produce too much milk and more often get too little for producing it. Distributors caught between the farmers and the consumers say yes and no, and most of the time say nothing at all.

Here today and gone tomorrow might just as well have been said about milk, for milk is the most short-lived of commodities. The milk we drink is hardly ever more than 48 hours old. The life span of a glass of milk is short indeed, and it is this fact that makes the milk industry unlike any other industry. Denying the necessity of such haste, however, some point to a recent shipment of milk from Portland, Oreg., to Manila, a 26-day journey. Reported consumers from Manila, "The milk was fine."

But the supposed perishability of milk has geared the source of supply close to the point of consumption. Our vegetables may come from California or Florida; our wheat may come from almost anywhere in the world; our coffee, our cocoa, and our spices come from the ends of the earth, but our milk comes from our community backyard, the milkshed, whether it must come from there or not. In Baltimore, a city ordinance requires that it come from a distance no greater than 50 miles. All except one percent of Milwaukee's milk comes from within 40 miles. Seventy percent of all the milk shipped into St. Louis comes from within a radius of 50 miles.

Milk in its natural state, if it is to be handled at all, must be handled at once. Cows observe no holidays, are as yet unaffected by the demand for a 5-day week. To receive the cows' output, dairy farmers must work every day; trucks and trains must move continuously with their cargoes of milk; fluid-milk plants, creameries, evaporators, cheese factories, every milk-processing plant must be geared for quick action.

Rivers of milk, like the rivers that run through America, would cause no problem if they flowed smoothly, but like other rivers, the milk river has its flood problem and it drought problem. One-half of the Nation's milk is produced during one-third of the year. In the spring when most cows freshen, when pastures are green, production of milk doubles and sometimes trebles in a few weeks. A torrent of milk flows into milk-processing plants. In the fall and winter the stream of milk runs low. Unlike grains and other commodities, milk cannot be stored for long in its natural state. The use of milk must be adjusted to meet these seasonal changes in supply.

Flood control of milk is effected by the diversion of milk into byproducts during the flood tide, by lessened manufacture of milk products during the ebb tide. Flood milk—milk in excess of the demand for fluid—is generally called "surplus" milk. Paradoxically the supply of "surplus" milk exceeds the amount of milk that goes into fluid uses. In 1934, of every 100 pounds of milk produced, 41 pounds were used in fluid form; 44 pounds were spread on bread or used in cooking as butter; 6 pounds were eaten as cheese grated on spaghetti or sliced in sandwiches; 3 pounds were spooned into consumers' mouths in the form of ice cream; 4 pounds were poured out of cans in the form of evaporated or condensed milk; the remainder went into that almost forgotten animal, the calf, or was used in the form of miscellaneous milk products, such as malted milk, powdered milk, and so on.

Dairying is one of the oldest of professions. The keeping of animals for milk extends back into history beyond the knowledge even of archeologists. Yet today the production of milk is not so different but that some prehistoric herdsman could not soon feel at home on a modern dairy farm. Chief changes have come about through the effort to make cows more productive and the milk less perishable and more healthful.

Streamlining cows for milk production is not so simple as streamlining trains for speed. But some idea of how successfully the latest model cow has been streamlined may be gathered from the fact that though nature originally provided the cow with only enough milk to take care of a calf, today many cows provide enough milk to take care of 10 calves. Highly bred dairy cows are such perfect milk-producing machines that practically all the food they can consume and digest is used to make milk. As a consequence such cows are spare, angular animals with little unnecessary flesh on them. The nutrients necessary for flesh-making go into milk-making. Special breeds of cows, too, produce milk with either high or low butterfat content. Holstein Friesians, for instance, produce large quantities of milk that is not rich in butterfat. Guernseys and Jerseys, on the other hand, while they do not produce so much milk, produce milk that contains as much as 5 or 6 percent butterfat. The average American cow in 1935 produced 4,169 pounds of milk a year. For 1924 this average was 3,784 pounds of milk.

Drink milk for health, the slogan runs, but milk has not always been the most healthful drink available. Before the days of milk inspection a study of 240 epidemics in Massachusetts revealed that 19.2 percent, or 46 epidemics, were due to milk infection. Typhoid fever, diphtheria, scarlet fever, septic sore throat, tuberculosis—all of these dread diseases at one time were the hazards incurred in a glass of uninspected milk.

Scientifically safe milk had to wait upon the development of scientific knowledge. First milk laws, not surprisingly, were concerned with the adulteration of milk rather than with impure milk. First milk regulation on record was passed in Glasgow, Scotland, in 1809. This law prohibited the dilution of milk with water. First English law was passed in 1860, also prohibiting the watering of milk.

Earliest attempts at milk control in the United States occurred in Massachusetts. In 1856 a State law was passed prohibiting the adulteration of milk. In 1859 a Boston milk inspector was appointed. In the same year a law was passed making illegal the use of distillery slops for dairy feed. Until 1900 most milk inspection laws were devoted solely to the detection of watered, skimmed, and adulterated milk.

Montclair, N. J., in 1900 initiated the bacterial examination of milk. The inspection of milk as we know it today, on the farm, on the way to the city, and finally in the processing plant in the city, did not become general until about 1910.

Dairy inspection received its impetus from the efforts of two doctors in Montclair, N. J., in 1889. These men made a study of sanitary milk production, and then having satisfied themselves that milk could be produced under conditions that were perfectly healthful, they looked for a farmer who would agree to produce milk under their supervision in accordance wiht their instructions. This milk was called "certified milk" The name "certified milk" was registered with the United States Patent Office and the right to use the name was granted only to dairies which followed certified milk practices. Today medical milk commissions in some States and State Departments of Health in other States supervise the production of certified milk. Certified milk is now the highest quality raw milk that is obtainable. The most important effect of this work, however, was the establishment of the fact that it is not impossible to have hygienic dairies, and from this original demonstration by two New Jersey doctors our present complex system of dairy inspection has grown up. Apart from its historical interest, however, certified raw milk is relatively unimportant on the market. Most consumers find it too expensive, and use, instead, pasteurized milk. But where pasteurized milk is unavailable smart consumers take no chances with milk; they boil it before they use it.

Public demand for pure milk has resulted in many milk laws. Safe milk is good health insurance. Milk ordinance objectives should be simple, should seek only to obtain good clean milk for the consumer. To achieve this, milk ordinances should require sanitary dairy practices and define practicable standards of purity. They should set up minimum butterfat requirements, and minimum solids-not-fat requirements for all milk, irrespective of grade. Grade standards of a milk ordinance should be standards of purity, not richness. They should prescribe proper conditions of production, of transportation, of pasteurization, and of delivery.

Ideally, inspection under adequate ordinances should start with the cow. Dairy inspectors who score dairies by means of a model score card prepared by the United States Department of Agriculture, first examine cows to see if they are clean and in good health, find out if they have been tested for tuberculosis, determine whether or not their food and water are clean and wholesome. In stable inspection, they examine the drainage, look for possible sources of contamination, see to it that the cows are provided with enough light and air, that the walls floors, and roofs of the stables are well constructed. The cows' bedding is inspected, and extra credit is given for heating systems.

Under perfect conditions inspectors demand that milking utensils be washed frequently and kept spotless. give extra credit for milk coolers. Clothes and health of the attendants should be noted. Other safeguards are washing the cow before milking, removal of manure from the stables, and the use of tested cooling and transportation practices.

Many communities are still unprotected by any milk ordinance or inspection. Many are still handicapped by poorly drawn ordinances, inadequately staffed inspection offices. When consumers are aspathetic farmers resistant, or city health authorities not careful enough, safe milk standards slip. The United States Public Health Service reports every year from 30 to 50 outbreaks of milk-borne disease. These are always the result of inadequate milk sanitation. There is no sound rea-

son why practically all of them may not be prevented.

Milk ordinances can make problems as well as solve them, when they go beyond their primary function of assuring a sufficient supply of safe milk. Then they act as tariff walls barring out shipments of safe milk which might relieve consumers from high prices or shortage in supply. This, it seems, they may do in two ways: By permitting the local market to consume as fluid milk only milk produced in the nearby milkshed, and again by limiting the number of farms within the milkshed which local authorities will inspect and certify for shipment of milk to their city.

"When health authorities find a sufficient volume of local inspected cream to meet the local needs, without consideration as to its cost, no inspection or permits are given for admission of the more distant product.'' A committee of the International Association of Dairy and Milk Inspectors was discussing the effect of health regulations on the economics of milk when it made this statement in its report to the association in 1933. "Many health officials in the East," it said, "have been somewhat embarrassed during the present economic condition in having to restrict interstate shipment of milk and cream by using health regulations in what everyone knows is an unlawful and unjust procedure."

The Depnty State Health Commissioners of New York told the convention some of the conclusions arived at by a committee of his State which had studied the safe-milk requirements of different cities. Several of his comments reveal the intimate tie between health regulation and market control. "I might say here that the committee did not attempt to classify certain requirements which have acquired considerable vogue of late, such as those limiting the local production areas and requiring pasteurization to be done within the municipal limits. The intent of these is so obvious that we thought it better to maintain, for the time, a 'hands off attitude." He told how conflicting interests of large and small distributing agencies may give rise to conflicting local ordinances which interfere with the free flow of milk. Health officers, he says, usually defend these regulations designed to limit the field to local industry, with the argument that they can maintain close supervision only over local sources with the funds at their disposal. "At times," the Commissioners said, "there have been intimations that health officers had had little to say about the enactment of these regulations or ordinances and that they had been instigated by the local producers and dealers."

"It is evident," warns the first committee quoted above, "that more laws and barriers will be made to restrict the free flow of interstate commerce unless some effort is made in á broad way to standardize the methods of inspection." A question to consumers is posed by this committee: "Since Federal control of shipments of meat has proven satisfactory for more than a score of years, it is not feasible to consider milk and cream under a somewhat similar plan?"

No direct recommendations come from the Federal Trade Commission on whether or not the present system of local sanitary control should be stripped of its power to control supply (and therefore price) of milk. The commission recommends more, not less, local control of supply, but by farmers through inter-marketing-area agencies representing local co-operative _____ with a view to more effectively controlling the transfer of milk and cream from one producing area to another _____" But the Commission also favors the standardization of sanitary regulations by proposing that a Federal authority should be directed "_____to prepare and recommend for adoption by the several States, uniform laws relating to ___ sanitary regulations, inspection rules, and other matters"—a program which, if put into effect, might go far to strip local sanitary control of its power to influence the price consumers pay for fluid milk and cream.

Such a standard milk ordinance which embodies all necessary health requirements has been drafted by the United States Public Health Service and is in operation in 676 cities. Each year the provisions of this ordinance are checked with State health authorities, the dairy industry, and experts in the Department of Agriculture, to conform with the latest scientific findings in the field of milk control and the best administrative practices. We described this ordinance in the Consumers' Guide of February 22, 1937.

Our grandmothers perhaps remember Mr. Jones who owned several cows and a farm on the outskirts of town. Grandmother left a jar with 4 pennies in it at her gate every morning and Mr. Jones came along during the morning with a horse and wagon and a can of milk He took the 4 pennies from the jar and then filled it up to overflowing with milk from the can. Later on grandmother remembers that Mr Jones sold his nearby farm and moved farther out into the country. Then her milkman, Mr. Brown came around each day with a horse and wagon loaded down with many cans of milk. Grandmother went down to the gate with a pitcher and Mr. Brown filled the pitcher up for her. The difference between him and Mr. Jones was that Mr. Brown did not own the cows from which his supply of milk came. He bought the milk from Mr. Jones.

Mr. Jones' successor was the ancestor of the modern milk distributor. Mr. Jones himself has been pushed far out into the country, the town has become a city, and the city is sharply and abruptly different from the country. To bridge the gap between farm and city is too large a job for a horse and wagon. Just as the simple candle has given way to dynamos, transmission systems, and electric lights, so the homely can of milk and the neighborly Mr. Jones have given way before modern dairy farms, elaborate transportation systems, scientific bottling plants, complex distributing systems and intricate economic relationships.

There are 605,000 Mr. Joneses operating dairy farms today. Besides there are 4,000,000 other farms that keep cows for milk. There are approximately four cows to each farm in America today, some with more, others with fewer cows. On full-time dairy farms there are approximately 12 cows each. The milk industry has grown from a neighborly service to the largest farm industry, with a cash return to farmers in 1936 of 1 billion 300 million dollars.

Three fluid milk economies exist side by side in America today. The first, the simplest, is the economy in which the farmer and his family and his livestock consume all the milk produced on their own farm. The second, which our grandmothers remember, and which still exists in small towns and on the far outskirts of large cities, is one in which the farmer sells the milk produced on his farm directly to other consumers. The third, the most important for most consumers, is the one which finds its final expression in the bottle of milk and the bottle of cream on city doorsteps in the morning.

Most farmers do their milking by hand, taking from 6 to 8 minutes for each cow. On a few farms, however, milking machines are used which mechanically perform the pulsating motions of the hands. Four rubber-lined cups are placed over the four teats of the cow and the machine draws the milk through a tube into a container. Cows are milked at least twice a day, usually night and morning, and yield from 4 to 6 quarts at each milking.

Milk is drawn directly from the cow into pails, then usually strained into large cans with capacities of from 10 to 40 quarts. Under good conditions there cans are taken to hte milkhouse which is some distance from the dairy barn to avoid the danger of infection from dirt and dust. There, if the farmer is a careful one, the milk is cooled, sometimes by immersion in ice-cold water, sometimes by refrigerating systems, and sometimes simply by running water. At a regular time during the day the cans of milk leave the farm. Deterioration starts doing its damage when careless farmers let milk cans stand unprotected from the heat while awaiting collection.

Getting the milk from the farm to the city is the farmer's responsibility. Whatever the cost it comes out of his pay check. This is true when the milk is shipped directly into the city, as is about 50 percent of the milk going into St. Louis and all of the milk going into the cities of Connecticut, or when it is first discovered to a country milk station and then reshipped to the city, as is the case half the time in St. Louis and most of the time in Philadelphia and New York.

Transportation of milk, like the entire business of milk, has become a complicated, specialized business by itself with its own points of friction, its own technical problems, and its own special achievements. Milk is picked up from a roadside platform in front of the farm. From there it is hauled directly into the city pasteurizing plants or to a country receiving station. It may go by truck or train, part or all of the way. Trucking may be by the farmer himself, by his cooperative, by a farmer who serves all the farmers in his neighborhood, by an independent trucking company, or by a subsidiary of the milk distributor.

Today all forms of milk transportation give the front seat to the motor truck. Buffalo, Cleveland, St. Louis, St. Paul-Minneapolis, Columbus, Dayton, Kansas City, Louisville, Richmond and San Diego receive all their milk by motor truck; many other cities receive almost all their milk by truck. Only two important cities still depend chiefly on trains: Boston, which receives 90 percent of its milk by train, and New York, which receives 63 percent by train. Some time in the future, some experts predict, trucks may give way to trains again as the chief vehicle for milk transport as more milk ordinances become standardized and milksheds are widened to include milk from any protected area. It is possible to deliver fresh milk by refrigerator cars from farm 1,000 miles away from a city.

Often hauling charges are a fruitful source of friction between farmer and distributor. Unfortunately rates do not always follow established rate-making principles. A study of milk in Milwankee shows that the average cost of hauling 100 pounds of milk was 18.6 cents in September 1934, 23 cents in 1930. This study did not indicate the basis for the determination of rates, but a study by the University of Illinois of the St. Louis milkshed states that hauling

(CONTINUED ON PAGE 12)

## Pastor's Guide
### By Boyd

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## Pulpit Bibles
### At Low Cost

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## Baptismal Garments For $30.50

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## The Best Book For The Ministers
## Theological Kernels
*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## MILK FOR MILLIONS

(Continued from Page 10)

rates there seem to have no relation to distance, to the state of the roads, or to any one of the other factors that might reasonably be expected to determine rates. Hauling charges per hundredweight for 12 miles on 15 different routes varied from 13 to 30 cents for no apparent reason. Farmers naturally resent the apparent inequity of the charges made against them for hauling milk.

Federal Trade Commission experts during a study of milk in 1935 and 1936 authorized by Congress discovered instances of dealers taking a profit on services performed for producers. In Baltimore, Cincinnati, Boston and Philadelphia hauling charges levied on farmers by distributors exceeded the cost of hauling. Distributors' profit at the expense of farmers on this operation ranged up to one-fourth of a cent a quart in these cities. In Philadelphia distributors charged farmers for hauling some milk which was not hauled at all. In Boston and Baltimore the amounts charged to farmers for putting milk through the dealers 5 country stations exceeded the cost of the operation. These practices, the Commission said, are unfair and should be discontinued.

Milwaukee's Common Council with the cooperation of the CWA, the FERA and AAA experts studied almost every aspect of the milk problem of Milwaukee from 1934 to 1936. Two objectives of the study were, first to examine the leakages and inefficiencies of a competitive milk economy; and, second, to consider the establishment of a public milk department for the distribution of all milk in Milwaukee.

Counting up all the factors in the hauling situation, the Milwaukee investigation discovered that 143 haulers in the Milwaukee milkshed stopped at 2,597 farms to collect milk. Wastes showed up startlingly. To get to the 2,597 farms they served it was necessary for these 143 haulers to pass 2,852 dairy farms. Hauling in this case, and Milwaukee is not exceptional, becomes something like playing leapfrog, with a hauler collecting from one farm then skipping a farm, while right behind him another hauler follows, collecting from the farms that have been skipped, skipping the farms that have been served. One trucker passed up 55 farms to make collections at 9 farms. Trucks devoted to milk hauling were used only to 60 per cent of their capacity.

People who don't keep their appointment on time are a nuisance, but when trucks and drivers must stand around and wait for attention at a milk plant, not only is it a nuisance, it is a waste of money and resources. To haul their milk daily into Milwaukee trucks had to spend a total of 937.2 working hours. Of this time they had to stand around and wait 195 hours. For every 5 hours the haulers worked, they had to loaf more than 1 hour.

## Battery Company Employe Fatally Burned

**Little Rock,** Sept.—(ANP)—Leroy Herron, U. S. Battery and Tire Service company employe, was fatally burned in a fire which swept the plant last Saturday. He died the next morning at City Hospital. Herron suffered terrible burns on the face and body when a container of liquid tire retreading cement exploded.

## The DIGEST

**BY FLOYD CALVIN**

### Black's Homecoming

The homecoming of Mr. Justice Black on September 29, will be an important event in the life of the nation. What will the man who is a member of the highest tribunal of justice in the land say to charges that he took a double oatht—one to a hooded secret order with a record of terrorism unparalleled in a free country, and the other to the whole people of the United States to be fair and impartial in decisions rendered.

The pairs to which the Justice has gone to avoid newsmen abroad would indicate that he is not yet certain of his course of action. The fact that the justice dashed aboard a small mail liner and will land in Norfolk also argues that he wants to steer clear of metropolitan contacts as much as possible.

We have not lost faith in the President, but we have lost faith in Mr. Black. We think the President was deceived, but we want Mr. Black to explain, and after explaining, to quit the post to which it is clear he ought never to have aspired.

### Colleges Advertise

It is pleasant to note, this year, the increase in advertising done by our colleges. This means that higher education is becoming more popular, and that it is profitable for the college administrators to actively promote it.

It is encouraging to note that the major part of tis advertising is being done with the newspapers. This means our newspapers are now the accepted channels of communication with the intelligentsia by our college executives. For a long time it was argued that our better informed people did not read the colored newspapers. This argument is no longer valid. We have proo that people of college level now accept the Negro press as a matter of course.

Now perhaps we can get some more of our business institutions to loosen up on advertising appropriations in the colored newspapers. They see the colleges doing it. They can no longer claim, with any degree of confidence, that their ads. won't be read by persons in the upper income brackets. We believe that if more of our social institutions, such as the Y. M. C. A., and the Y. W. C. A., would set aside a certain amount of money to be spent regularly for advertising, they would experience a more healthy growth in the community in which they operate.

### New Books

A number of new books have come from the press recently: "These Low Grounds," a novel by W. E. Turpin, from Harper's: "The Etiquette of Race Relations in the South," by B. W. Doyle, from the University of Chicago Press; "Negro Builders and Heroes," by Prof. Benjamin Brawley, from the University of North Carolina Press: "Their Eyes Were Watching God." by Zora Neale Hurston, from Pippincott of Philadelphia; and "Introduction to African Civilization," by Dr. Willis N. Huggins and John G. Jackson, from hte Avon Press, New York.

Mr. Turpin's book is most pretentious, being a novel of four generations of Negroes, and a departure from the "exotic" type of fiction on this group.

The book on race relations is one in which the sociologists will be interested, the "new Negro" caring little for the deductions of white writers on such a subject.

Prof. Brawley's book is significant in that he brings our heroes down to date, including Joe Louis and Jesse Owens, and that he widens the scope of this type of work and includes business men and women, like John Merrick, founder of the North Carolina Mutual Life Insurance Company, and Mrs. Maggie L. Walker, banker of Richmond, Va.

Miss Hurston's new novel carries on her own inimitable depiction of Negro life in the lower strata. Her caricatures, however, seem mad especially to please certain whites who, deep in their hearts, love the Negro stedotype.

Dr. Huggins' book on African history is full of inspirational material, and should be read for its information. Too many of us really don't know what is behind yesterday. We accept false propaganda from whites, and even from the uninformed of our own group, because we don't know any better. The information in the Huggins book is calculated to make our youth proud of their own.

### Dining East and West

The founding of the magazine "Service" at Tuskegee Institute has focussed attention on the art of preparing and serving meals for the public. In our own group, there is room for study and comparison, and improvement, in this field. On a recent trip to Chicago and points South, we had an opportunity to take note. Dining frequently in Gray Shop No. 2 on Seventh Avenue in Harlem, where genial John D Thomas does all in his power to provide a good meal in a cheerful environment, and where money is constantly being invested in modern improvements, and time is spent in schooling employes on how to handle the public, our standards of comparison were rather high. But on dining in Morris' Perfect Shop on East 47th Street in Chicago, we found similar methods in vogue. As Mr. Thomas came up from Orlando Fla., and made good in Harlem, Mr. Morris came up from a small town in Oklahoma and in a few years established the most elaborate dining salon on Chicago's South Side. Nowhere else on the trip did restaurants come near these two places in the combined elements of food and its preparation, service, and the environment in which the food is served.

If the restaurant business is to make progress in our group, more proprietors must take a broad view of the customer's welfare, and cater not only to his palate, but to his desire to have the utmost in courtesy and attention from those serving him. Not a few customers are lost because service is below the standards of the chef.

## Woman's World

**(By Arden H. Duane for A. N. P.)**

### Style Chats

Have you seen the "don't-dress-for dinner-hats?" You'll love them! They are extremely large with dramatic off-the-face brims and absolutely no trimming. Many are suede, black with a color contrast in turquoise or gold facing.

Wool is being used for winter evening gowns. Doesn't that sound warm to you? A white wool jersey is striking. Black broad cloth evening suits are new, too.

While wearing your tweeds this fall a feather corsage, a soft blend or cork flowers or a pair of acorn chips, one on each lapel. Velvet tiger lilies, one pink or other red will do wonders to brighten up the neckline of your black street dress. And with your black net evening gown, a red garanium corselet matched by geranium cnrclets wound through the hair.

Something in the hair is still fashionable. A bird's crest, lotus flowers or autumn leaves. Black sequins cleverly put will turn a sparkling trick, too.

Slide fasteners are almost essential these days. They appear at the sides of daytime dresses, dinner frocks, at necklines, up the center back of evening dresses and up the center front of coats.

Black and gold touchings. Simple black dresses are relieved by gold jewelry. With your gold clips, a gold motif on the belt wear gold-colored suede gloves. Or you may prefer hats, gloves or scarfs in violet-tinged blouse, or a violet colored velvet turban and gloves, or a girdled sash in tomato red, a tomato red fabric belt, two red roses, one light one and one dark pinned to the fnr pieve. A dash of color will accentuate any black dress that you have for this fall.

Hats are still agog! They are wide-brimmed types springing off the face or small high jutting toques. Felt and velvet is smart and whether it is a large hat or a small hat veils are still adding mystery and charm.

The costume jewelry for fall is attractive and very new. The bowknot pins are multicolored affairs designed especially for black frocks. Some are Victorian in topaz. The pendant necklaces are in gold with carved onyx. Bugs worn in pairs or trios, chasing each other on a hat or dress are combine with topaz, amethyst and emerald-colored stones. Silver mesh bracelets set with zircons or bracelets of deeptoned silver metals with a hammered look.

## "God and the Negro" Being Mailed

**New Publicaiton From the National Baptist Publishing Board's Plant Attracting Much Attention**

Orders began coming in to the National Baptist Publishing Board's plant this week for "GOD AND THE NEGRO" This is a new book whose appearance was announced some months ago. The book is written by Rev. Alonzo P. B. Holly of Miami, Fla., the son of an Episcopal Bishop, and who himself is a graduate in medicine, graduate in theology, and has many other degrees

One of the first books to be purchased by a person in this city was taken by the Rev. S. H. Simpson, pastor of Greater St. John Baptist church. Close on the heels of this was an order from the secretary of the Home Mission Board of the Southern Baptist Convention (white) of Atlanta, Ga. This order was placed by Mr. Noble Y. Ball, who is in attendance this week at the National Convention session in Birmingham, where he spoke on Wednesday. Another order was from the Sunday School Board of the Southern Baptist Convention (white) of this city. The publication was sent to the book editor, Dr. Hill.

The Miami people placed their order for five hundred copies. A telegram from Dr. Holly early in the week urged the secretary to make the shipment at once. Following this was an order from Rev. F. F. Young, D. D., of Indianapolis, Ind., pastor of the First Baptist church of North Indianapolis. Scores of others were coming in. The Publishing Board shipped a consignment down to the convention in Birmingham, where they are being exhibited, and where the author, Rev. Dr. Holly, is to speak before the convention on his own book.

Another book that came from the press was the National Baptist Hymnal, revised, enlarged, and improved, with many new attractive features to help in praise services.

## Colored Motorist Beats 117 Cops Finding Murderer

New Rochelle, N. Y., Sept. (ANP)—Last Sunday, while 117 police for 7 hours searched in vain on the Hutchinson River Parkway for Joseph Dunn, 40, a murder suspect, Rocco Bambace, a White Plains merchant, joined the hunt, and while driving along the parkway suddenly saw the fugitive's head protruding above a thicket. He notified police who closed in, soon had Dunn on the way to New Rochelle police station.

After hs captur,e Dunn, his legs termling with fright, said he had been in the same spot all afternoon, and that several times the officers passed just a few feet from him. Dunn, a pants presser, was booked on a charge of murder, then turned over to the police of White Plains. Six other Negroes are being held as material witnesses. Police say the men were playing cards at a White Plains club and that a quarrel arose during which Dunn killed Frank Graham, then fled. The alarm was spread, which resulted in his capture.

THE REVISED

**HYMNAL**

JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

## MAPPING THE ROUTE

(Continued from Page 1)

mills in Youngstown, a coolie in Shanghai, a miner in Spain, a shoemaker in Czechoslovakia, an impoverished colored sharecropper in our own South. He is you. He is us.

Among us, happily, there are differences galore. Differences in the way we talk, in how we live, in what makes us laugh, in what we love. On the other side of the picture there are the things that are common to every one of us, and no one more important than this: We have to work to live.

Now the basis of good living means being free to enjoy certain kinds of things. To you living in an air-cooled house may be one of your ideas of a good life. To the Alaskan canner it might be a joke. Filet mignon may be your idea of good food: to the Chinese coolie it may taste worse than castor oil. The Czech shoemaker may like to wear ribbons around his waist; you, a belt. You like green peppers; we don't. Try your hand at listing the things you want for even modest, living, and you will see how involved the list becomes. To do that for every worker everywhere would be a herculean task. One ingredient of well-being, however, would appear in every list: all of us want healthy bodies.

This is where the pink-eyed rats and the keen-eyed scientists come in. In hundreds of laboratories over the world these and other animals have been helping scientists to learn what makes for good nutrition and how good nutrition can build sound bodies. Generations of these animals have come and gone, and each one that has been studied by the scientists has made it possible for humans to be a little wiser about a major problem of their lives, to know what food can do to contribute to their health and well-being.

Most of us know by now that no food nor any set of foods in the world has a monopoly on the ingredients that build healthy bodies. A good diet for health does not have to include filet mignon. String beans in themselves are not important; it's what the food scientists call "nutrients" in food that, in the right amount and the right variety, make for a health-building diet.

Enough research has been done on these nutrients to give us fairly definite recipes, using an infinite variety of foods to fit each palate but balancing in the quantity and kind of nutrients bodies need, which will result in a healthy diet for the Chinese coolie, the Czech shoemaker, the sharecropper, you, and us.

Science is fighting through in its laboratories this troublesome, difficult problem of defining just one of the things workers want for the good life. It is drawing up standards that will be as true for those who live in Minneapolis as for those who live in Madagascar. They are not final and ultimate standards, because all the time research is refining and improving our knowledge of nutrition. But they are workable rules of health, ready to be put to use.

Knowing what is good for us and getting it are, bitterly enough, two different things. Science defines the first. It does more. It shows us how to produce the things that we want. Just as nutritionists have made great progress in the past two decades, experts in the technique of producing foods have gone shooting ahead, immensely increasing our capacity to get the kinds and amounts of foods we need.

There science leaves off, and economics takes on. So far economics has made a messy job of seeing that we get what we need. If we ever had any doubts about that, depression should have cured us. One of the reasons why, science suggests, is that we go after getting what we want hind-end to. Because we buy the things we want with money, getting more money becomes to most of us the thing most worth fighting for. But we can't eat money; we can't wear it; we can't live in it. And while a dollar this year may buy all the potatoes we want, next year we may have to spend $1.20 for this same amount of potatoes.

Building toward a day when all workers will get the kind of nourishment their bodies need is a kind of bridge-building job. On the one side we pile up the facts about the foods we want produced, how many, what kind, when they should come to us. On the other, we must know how to produce these foods. Between these, a two-way traffic span must be built. Building such a bridge for goods other than food is a more difficult job because we have not worked out yet any scientific body of facts on which to base human needs for such goods. But with foods it is possible to do a fairly competent job of stacking up the two towers of facts between which the span is to hang.

Now, figures of speech such as this don't make copy. They are old stuff. There is news, thrilling and important, in this world-wide search for the answer to the tangled problem of how to get nourishment and enough of it to millions of workers. This news comes from Geneva, Switzerland.

Eighteen years ago the representatives of many of the nations of the world gathered together to talk about the difficulties of their working people. The workers back home were tired of war. They wanted peace. Out of the talk grew a plan for an International Labor Conference to which representatives of governments, employers, and workers would be invited each year. An International Labor Office, staffed with experts, would be permanently set up and serve the needs of the conference. A charter was drawn.

"Whereas," read the preamble of this charter, creating in 1919 the International Labor Conference, "conditions of labor exist involving such injustice, hardship, and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperiled; and an improvement of those conditions is urgently required....."

And "Whereas also the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions of their own countries".....we will attempt together to make recommendations to our various countries on how conditions of labor can be improved.

Year by year, since the creation of this International Labor Conference and the International Labor Office, the problem of building the foundations of peace by bringing about "humane conditions of labor" throughout the world has been talked about by the representatives of many nations, our own included, at the little city of Geneva, Switzerland. Resolutions have been adopted; "draft conventions" they are called. In 16 years, there have been 49; 44 nations have approved some of the principles in these conventions and made them rules for the protection of the workers of their countries. Most of the rules proposed have to do with limiting hours of work, providing insurance and protections of various kinds on the job, setting minimum wages limiting child labor.

Depression gave a new twist to the thinking of these delegates. We have been talking, they said in effect, about the need of abolishing poverty, for raising the standard of workers' living. We have been trying to give a lift toward both by proposing to member nations legislation which will standardize conditions of and rewards for work and raise those standards to higher levels. But a living wage in Sumatra may be a starvation wage in St. Louis. What is a tolerable workday in Calcutta may be intolerable in Calgary. What is security for workers in Korea may be insecurity in Kalamazoo. What is a fair price in New Guinea may be a sweated price in New York.

Instead of tackling the problem solely from the point of view of income of workers and all the variables that involves, these conferees proposed, in substance, to look at it also from the point of view of workers as consumers of goods. "Start with what we know about adequate nutrition", they suggested. "From there, let us draw up a picture of the diets on which workers are now attempting to live and work. Against this, let's measure agriculture's capacity to produce the foods workers need. Such pictures as these will give us a chart of our problems, clear-cut, definite measurable, interms everybody can understand. In itself such a chart will not solve the problem of a decent living, but we will know better what to work toward. And in working toward that goal we may at the same time help to open the route to recovery for agriculture which, like labor, has suffered severely in depression years."

Thus was born one of the most important international research jobs ever undertaken. Years of patient digging into the records must come before any adequate results are at hand. But the first preliminary report is out. The International Labor Office has published a 250-page book, called "Workers' Nutrition and Social Policy", chock full of fascinating and provocative records.

No picture, this, of the malnutrition among **all** the people of every country surveyed. Only the diet problems of "those people who obtain their incomes primarily from the labor of their hands and brains and not from property" are examined. Even among this group, there are large omissions—diets of the unemployed and of agricultural workers for instance. Because existing data require it, the study extends chiefly to industrial workers and their families in European countries and the United States. This selection of countries was not arbitrary but due to the fact that research on workers' diets affording a basis of comparison was there to be built on.

Even within this group of workers and of countries, gaps in knowledge showed up. More must be learned of the effect on health of work conditions in mines, factories, and shops, before the picture of diet requirements is complete. Nutrition studies are needed to tell more about the influence of climate, race, and environment on food habits. Shortage of facts, too, appear in the records of actual foods consumed by workers in different occupations and by members of workers' families.

Despite such limitations, despite the fact that the data relate on the whole to the better-paid section of industrial workers, the researchers conclude that the facts they have brought together are representative of an important mass of workers and that "there would seem to be sufficient reason to accept some of the startling statements made within recent months by people in various countries of the wide extent and the serious character of the nutrition problem among the working population. And if the problem is serious with regard to workers at work, how much more serious must it be for large groups of unemployed workers."

Conclusion No. 1 that stands out sharp against the background of figures and statistics is that "large numbers of workers not only in impoverished or depressed areas but even in the most advanced industrial countries are inadequately nourished," and that this "condition is not just a depression phenomenon; it is found among many employed workers in times of normal business activity."

Conclusion No. 2, equally sharp to these explorers into international food problems, is that the "main ground for inadequate nutrition is not so much the ineffective use of existing incomes as the insufficiency of the incomes themselves, however wisely spent."

American experts in the Bureau of Home Economics of the United States Department of Agriculture, focusing their attention on the diets of workers' families in various regions of this country, would modify somewhat this Conclusion No. 2. (See **Consumers' Guide,** June 14, 1937.) While they, too, found that the quality, as well as the quantity, of the diet tends to improve as workers' incomes grew, they also found that some workers achieve a good diet on little money, while others miss it with more money. Knowing and applying food nutrition rules, along with better incomes, they conclude, is an equally important route to well-being. American records show that below a certain food-money level no worker gets a safe diet, however carefully he may plan his expenditures; above a certain level practically all workers get a safe diet. Between these lower and upper levels are the great mass of workers, some of whom achieve good diets and some of whom fail to do so. Quite evidently in this group there is large need for educational helps in the wise selection of foods.

Variations in food consumption according to family income within the countries bear out the conclusion that more money means not just more food but better nutrition. Bread and cereals are among the cheapest ways to get calaories. In Germany, Czechoslovakia, Belgium, and Sweden, the report shows, the amount of these high-calorie foods decreases as income grows. In Poland the amount increases with income at first, then drops off. Meats and fish are a relatively expensive way to get calories. All countries studied show that the amount which workers' families buy grows as income grows. Amounts of fats other than butter are relatively high at lower-income levels and lower at higher-income levels.

## CHERRY RIPE

**Cherry pie prospects are good if consumers keep up with the record crop fore casters predict for this year**

Early in July the President of the United States received a present of a pie. It was a huge pie, plump with juicy cherries, and was brought by airplane as an edible invitation to a cherry festival about to be held in the heart of the largest sour cherry producing section in the world—the Grand Traverse Region of Michigan. With this start, the jubilee got away to its exhibition, contests, miles of parades.

As far as production goes, cherry growers have reason to stage a celebration this year. Production barometers indicate fair weather, with the 1937 crop of sweet and sour cherries in the 12 commercially important States topping the previous 1932 record. Estimates set the crop at about 144,600 tons ae compared with 115,000 in 1936 and an average of 116,700 during the 5 years from 1928 to 1932. A fine sour-cherry harvest takes the credit for these gains, since the sweet-cherry varieties suffered heavy losses from rains during their pollination period.

Real reason for rejoicing comes when cherry growers receive high prices for a large crop. Production, after all, doesn't mean money in the bank for farmers if there is no demand for the thing produced. Last year consumers wanted cherries and were willing and able to pay well for them. Farmers, therefore, received the good price of $76.73 per ton; farm value cleared the $8,000,000 mark. We don't know yet whether or not cherry growers will have tough sledding this year in disposing of the larger crop.

Cherries have never seriously competed with the apple and orange for a first place in commercial importance. First place in sprightly flavor they yield to no other cultivated fruit. Cherries are valuable too, as sources of vitamins A and C. Neglect the latter vitamin and you increase your chances of having poor teeth and high dentist bills.

Two species, natives of Europe and southwestern Asia, give us almost all our cherries—the sour, sweet, and Duke varities. **Prunus cerasus** is ancestor of our light and dark sour cherries. From **Prunus avium** developed our sweets. Duke cherries are probably hybirds, standing halfway between the sweet and sour groups. Other cherry species are grown, though not for their fruit. The Mahaleb provides hardy stock upon which to bud cultivated varieties. To the bird cherry we owe hanks for the pleasant reddish wood of our early American tables and corner cupboards. Several Japanese species are cultivated as ornaments. The riotous blossoms of these Kwanzan and Yoshino trees are responsible for drawing crowds of tourists to our National Capital in the springtime.

Though thousands like to feast their eyes upon a foaming sea of white and pink cherry blossoms, many more thousands prefer to feast directly upon cherry fruit. Hence the popularity of our Richmond, Bing, Lambert, Royal Ann, and Montmorency varieties. Growers' lists have been blue-penciled until they include only a few standard cherry varieties. Consequently cherry growers can plant an orchard with some assurance that the harvest

will meet market demands. Consumers profit by this practice, since they are then pretty sure of getting cherries of uniform taste and size.

Among sour cherries, the Richmond deserves attention because of its early ripening and its hardiness. Except for these claims to fame, the Richmond would long ago have been cut out of the running by the Montmorency—a medium-sized red cherry in great demand with canners.

All sour-cherry varieties are used primarily for pies, sauces, and preserves. For luscious cherries to be eaten fresh, consumers look to the sweet cherry. Sweet cherries fall into two classes—the Hearts and the Bigarreaus. Hearts have tender flesh and a characteristic heart shape. Bigarreaus, with their spheres of firm flesh, pack better than the Hearts, though they can't hold a candle to Hearts where flavor is concerned.

Black Tartarian is a heart cherry widely grown for home consumption because it thrives under a wider range of soil and climatic conditions than most other sweet cherries. The fruit is rather small and dark-purplish black.

On the basis of quality of fruit produced, Windsor steps up for a word of praise. This Bigarreau-type black cherry is the best selling midseason variety grown in the East. The fruit is very dark red, turning black upon maturity. While not as fine in dessert quality as the Black Tartarian, it is a popular market sort and ships well.

Napoleon, or Royal Ann as it is known west of the Rockies, is the one white-fleshed sweet cherry of commercial importance. No midseason variety seems able to fill its place in spit of its handicaps in producing fruit that is inclined to crack before reaching maturity. Consumers who sit down to a dessert of canned cherries at the table more than likely will be eating these big, yellowish cherries, blushed with varying shades of red. For the Royal Ann is the one sweet cherry that comes into its own as a canned product or processed maraschino cherry. Although the flesh is firm enough to warrant shipping as a fresh fruit, the Royal Ann stays right at home because consumers prefer the large, glowing, dark varieties.

The Duke varieties—the May Duke, Late Duke, etc—find a ready sale at local markets, but they don't ship long distances well.

Consumers who find fresh cherries at market do well to remember that quality comes when cherries reach their full maturity on the tree. Unlike many other fruits, the cherry stops developing as far as color and flavor are concerned as soon as it is picked. To tell whether a cherry is tree-ripe, look for a bright, fresh appearance, clear color, and plumpness. Best quality cherries are juicy and have a well-developed flavor. Whatever their actual price, reject as costly immature cherries that are hard or shriveled. Don't put stale fruits in your market basket, either since these will be soft and shriveled.

Examine cherries closely for worm injury and decay. The latter often takes the form of small, brown, circular spots on the fruit. A stained and leaky box often shows that decay has softened the fruit. If cherries have been bruised or mechanically injured, molds develop readily at the point of injury. That is why cherries that are to be eaten fresh should be bought with their stems on.

As in the case of other fruits, the United States Department of Agriculture has set quality standards for fresh and canned cherries. Grades for the fresh fruit benefit the consumer only indirectly since no mark appears on the fruit. Grades for canned cherries frequently appear on the can label, and thus prove of considerable help. Canned red sour pitted cherries which are large, plump, and of fine color are classified as U. S. Grade A (Fancy); other grades are U. S. Grade C (Standard) and Substandard. Canned sweet cherries, both pitted and unpitted, run through a wide range of grades—U. S. Grade A (Fancy), Grade B (Choice), Grade C (Standard,) and the below-standard grades, D, E, and F, the latter known as "pie pack" cherries.

Canned sweet cherries are sometimes packed without sugar for hospital use. These may belong to the A, B, C, or D grades, but will bear on the container the additional statement "Unsweetened Cherries in Water" or "Water Pack Cherries."

Box the compass to find where cherry trees grow in the United States. More than 11,300,000 trees of bearing age dot the map, with every State contributing its quota. Michigan is champion cherry-growing State with more than 2,250,000 trees—double the number credited to its nearest competitor, New York. California boasts of at least one million trees, while various States grow about half that number. Florida trails the field with it 175 cherry trees. This is natural since cherry trees languish where summers are long and hot and winters too mild to induce the complete dormancy necessary for the required rest period. For that reason, rule out the South as cherry-growing country. Figures are somewhat deceptive when it comes to cherry trees, since they are based on commercial cherry growing; in some States trees are grown in small orchards and the fruit finds its way to local markets only.

Trace a line down the Rocky Mountains and roughly you divide the country into the sweet cherry producing region to the west and the sour cherry to the east. New York Michigan, Pennsylvania, Ohio, Colorado, Wisconsin, and Iowa are famous for their "pie" cherries. Some sweet cherries invade this territory, but generally the sweet cherries stay in the warmer, lighter soil and the more favorable climatic conditions of California, Oregon and Washington.

Most of our cherry crop goes to the cannery, with sour cherries far and away in the majority. Bakeries offer a huge outlet for canned sour cherries for pie making. Like as not even in cherry season cherry pie on the menu will be made of the canned product. Almost all sour cherries are pitted and canned in water with no sugar. Preference is growing, however, for cherries prepared in another way—pitted and packed in barrels which are then stored at a temperature of 10 to 15 degrees Fahrenheit. Bakers like these frozen cherries for their popular cherry pies. Sweet cherries when canned are put up in sirup with their pits

Redder than any artificial cherry on a woman's hat, is the imitation maraschino cherry used in icings, ice cream, and as garnishing. Maraschinos are manufactured almost exclusively from the sweet Royal Ann. Until the Tariff Act of 1930 began to shut out importations of cherries with its high duties, American manufacturers counted on Italy to supply most of the brined and sulphured cherries suitable for making imitation marashchino and glaceed cherry products. Since 1930 they have found their cherries at home, and yearly calls for more than 5,000,000 pounds of cherries for this thriving business.

Process of manufacturing our imitation maraschino cherries consists in placing the cherries in brine and bleaching them with sulphurous acid or sulphur dioxide fumes. Stemming and pitting come next. After a thorough washing, the cherries are put in sirups of increasing density. A brilliant artificial red dye is then applied, the product artificially flavored and packed in sirups. For the glace or candied cherries often found in fruit cake, cherries are saturated with sugar, then allowed to drain.

Consumers who ask for maraschino cherries at the grocer's will get just what they expect—the brilliant red globules that soda clerks balance inevitably on the top of a nut sundae. Consumers won't be getting true maraschino cherries, however, for that term applies only to marasca cherries preserved in a liquerur prepared from the same fruit. And the marasca cherry grows only in the Yogoslavian province of Dalmatia.

Labels upon our so-called maraschinos, bear some such phrase as "Imitation Maraschino Cherries." The Food and Drug Administration of the United States Department of Agriculture protected consumers against misrepresentation by a decision that only the true marasca cherry could bear the label "Maraschino Cherries." Royal Ann cherries flavored with maraschino alone may be called "Maraschino-flavored Cherries"; if packed in maraschino liqueur they may be branded "Cherries in Maraschino." Products flavored in imitation of maraschino must bear the word "Imitation."

WE WANT YOU

YOUR FAMILY, AND YOUR FRIENDS AND NEIGHBORS

TO ATTEND THE

EIGHTH ANNUAL CONVENTION OF THE

NATIONAL FEDERATION OF COLORED FARMERS, Inc.

Which Will Be Held At The

TEACHERS' TRAINING AND AGRICULTURAL COLLEGE

FORSYTH, GEORGIA, OCTOBER 28-30

Every Colored Farmer, Whether a Member or Not Should Attend This Convention—BECAUSE

The N. F. C. F. is the only national organization of colored farmers which has stood the test of the years. The objectives of the N. F.C. F. have been championed by every prominent and progressive farm and Race leader of the Nation. The N. F. C. F. has cooperated closely with the Federal and State Departments of Agriculture in all efforts made to improve the condition of all farmers. You should know of the many big things colored farmers are doing for their own welfare and for the progress of the Race.

Many great addresses by national and state leaders. Many fine prizes awarded for best farm and farm home products. Encouraging talks by farmers who have succeeded in spite of all difficulties.

Organization makes successful farmers. Be a Thinking, a Progressive, and an Organized farmer. You are cordially invited to come to the EIGHTH ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF COLORED FARMERS, INCORPORATED

# RACE RELATIONS COUNCIL IS HELD AT BLUE RIDGE, N. C.

## Adventists in N. C. City Where James Weldon Johnson Made Notable Addresses

Blue Ridge, N. C., Sept. — (ANP)—Under the direction of Dr. Weatherford, noted authority on race relations, the Seventh Day Adventist World Educational Council was held here with delegates from Adventist schools and colleges the country over in attendance. Both white and colored delegates were present from the Seventh Day Adventist organization which is interracial, among those of color being O. B. Edwards, head of the history department; Rev. C. E. Moseley, head of the theological department; Miss Julia Baugh, dean of women; and Rev. Owen A. Troy, business manager, all of the Oakwood Junior College at Huntsville, Ala.; Miss Anna Knight of Chattanooga, Tenn.; and Arna Bontemps, author, who is principal of Shiloh Academy at Chicago, Ill. The writing of Mr. Bontemps formed a basis for discussion on the part of a number of white English professors present, many of their schools using his books and poems in their courses.

This was the second racial group in attendance at Blue Ridge this year. Dr. James Weldon Johnson had been a speaker several weeks before the arrival of the Aventists. and his lectures were still a topic of discussion. Every courtesy was colored delegates by the officials, employes, and student of the Blue Ridge Association.

# HENRY ARMSTRONG PUTS DEAN AWAY IN ONE MINUTE

## White Boy No Match for Colorful Protege of Al Jolson

**Al Wardlow Victor in Pro Debut**

Youngstown, O., Sept. 30 (ANP) Henry Armstrong exploded a left hook that traveled less than 12 inches on the jaw of Bobby Dean, 133, of Washington, D. C., and stopped the white boy cold after a minute of fighting in the first round of a scheduled ten round bout here Tuesday night at Rayne-wood auditorium. The Brown Cobra followed the nervous boy around the ring, landing hard left and rights. The crouching, bobbing fighter thwarted almost every blow of Dean's none of which were dangerous.

Throughout the short span of the fight, Armstrong was truly and by a wide margin, the master. He constantly pounded Dean with both hands until the knock-out.

The kayo was so sudden and unexpected that most of the spectators were spellbound in their seats. A crashing right, the short left hook, and Dean hit the canvass.

Two thousand cheering fans jammed the auditorium to see the "Homicide Kik" in his first match here. They went away with the same picture of the fightingest man that they had had when they came.

A Wardlow inaugarated his professional campaign with a two round kayo over Smokey Frankie Williams of Akron. A terrific right hook landed on the jaw of Williams and he went down. When he came up he was still groggy so the match was called. Wardlow displayed championship caliber and all the white sports writers were pleased with his showing.

## GRAPES

(Continued from Page 1)

State. Clusters are large, bearing fruits that are firm, though not particularly juicy. Red skin is medium thick and medium tough. It covers a greenish-white pulp that has a rather insipid taste—somewhat like sweetened water. October is the month for Tokays.

Two months earlier the Sultanina comes to market, better known as the Thompson Seedless—the seedless-raisin grape of commerce. The clusters run as long as 16 inches, though 10 would be nearer the average size. The oblong, medium-sized berries are light yellowish green in color, finshed when fully ripe and having a frosty-white bloom. The flavor is sweet, pointed up with a delicious nippy acid tang.

Crowning piece in many bon voyage baskets is a magnificent bunch of Hamburg grapes, the berries glowing round and coal black against their green leaves. The skin is thick and fairly tough, but the flesh is tender with an interestingly rich, aromatic sweetness. The Hamburg ripens in late September, but you can count on Hamburgs the year round if you are willing to pay the price, for they are grown more extensively under glass than any other variety.

To turn to the American **euvitis** varities. These are derived mainly from native bunch species. Here again we have a color scheme of red, white, blue, and black. Unlike the western grapes, these eastern varieties have slippery globues of flesh that can be easily popped from their skins. Hence the name "slipskins." To some, these "slipskins" have an unpleasant musky or "foxy" odor—so-called because it resembles the odor of a fox. Many consumers, however, prefer eastern grapes because they are more refreshing, do not cloy the appetite as do their richer western relatives. Though there are few localities where some eastern grapes aren't grown, the largest supplies for table and juice purposes come from New York, Michigan, and Pennsylvania.

Native of Concord, Mass., the Concord grape—a variety of **euvitis**—is most widely grown of any on this continent. Its plantings reach to California. In the form of grape juice and jelly, to which much of it is converted, it can reach the most out-of-the-way hamlet. The berries are medium-sized with black skin dusted over with a blue bloom. The pale-green flesh, though sweet at the skin, is tart next to the seeds. Seeds cling tenaciously to the pulp, but pulp slips easily rom the outer skin.

Champion American table grape in eating quality is the Delaware, with its sprightly flavor and agreeable aroma. Its clusters bear light-red berries covered with a lilac bloom. The flesh is of a transparent light green, tender and juicy.

Whatever their origin, grapes for table use should have certain characteristics in common.

First, they should have a fresh appearance—that's almost axiomatic for any fruit. They should be mature as indicated by their plumpness and high color for the variety and should be firmly attached to the stems. For juice purposes maturity is number one point of importance, but it won't matter whether or not the berries "shatter" from the stems provided they are not dried or shriveled.

High color for a variety means well-developed sugar content and good flavor. Some American grapes remain green in color even when ripe, but generally the white or green grapes of Europe and American turn amber when at their best.

Frost injures grapes, leaves the fruit rather flat in flavor. Western grapes injured by frost will have a dull appearance, become sticky, and shatter from their stems too readily. If such frost-nipped berries are picked, the brush—that is the bundle of fibers extending from the cap stem into the berry—is discolored and short.

Eastern varieties of grapes touched by frost shrivel. Pulp becomes milky in appearance. When such a berry is pulled the cap stem, the brush often remains in the berry. However, you shouldn't be troubled with frost-bitten berries for another month or so.

Avoid decay in berries. This shows itself in mold and wet berries. Look over the berry container to see if it is leaky and stained—both indications of decay.

As in the case of other fruits, the United States Department of Agriculture has set up standards for eastern and western-type table grapes and juice grapes. Though these are of more direct benefit to the trade than to individual consumers, buyers can get a good idea what to look for in a grape by reading through the grades and definitions of terms as set forth in leaflets on U. S. Standards distributed free by the Bureau of Agricultural Economics, United States Department of Agriculture, Washington, D. C.

## COUNTING CALORIES

**Weigh in age, size, and muscular activity when you count up the calories your diet should provide**

Power to flick an eyelash, to play three sets of tennis, to push a pen, comes from the food we eat. Take a mouthful, and the digestive process begins and continues until the morsel, broken down into various substances, is transformed into energy to work, to play, and even to sleep.

Carbonydrates (sugar and starches), fats, and proteins are known as fuel foods. As they are oxidized or burned in our bodies, they give off heat and energy which enable our bodies to function. They are as essential to us as gasoline is to an automobile.

Most foods are a mixture of one or more of thes energy-yielding substances; of cellulose, or plant fiber, a form of carbohydrate which has little or no fuel value; and of minerals, water, and vitamins. The latter four are essential to us as body regulators and body builders but not as sources of energy..

Watery fruits and green and leafy vegetables which we must have in our diets for their mineral and vitamin content as a rule are the lowest in fuel values. There are only 103 calories in a pound of tomatoes and 285 in a pound of apples, while a pound of sugar has 1,814 calories, and a pound of butter, 3,488.

Consumers do not buy their foods by calories, but a mother when thinking in terms of preparing a "filling" or "substantial" meal for her family soon learns from experience that the carbohydrates and proteins in the meal have the greatest "staying qualities," though she may not think of them as fuel foods or in terms of calories.

The calories is a unit of measurement nutritionists use for determining the amount of energy in various foods. It is simply a standard for measuring heat, just as the inch is a measure for length and the pint for volume. Technically, one large calorie is equal to the amount of heat it takes to raise 1 philogram of water I degree centigrade. As the chemical processes are similar when food is burned either inside or outside of our bodies, nutritionists have been able to gage just how much energy is released by the burning process. For this purpose they use a special machine called the calorimeter which records the exact amount of heat released by the oxidation of any type of food.

Armed with these definite data on how much fuel value different foods contain, nutritionists have gone one step further and studied the problem of how much fuel we burn doing different types of work. For these tests they use a respiration calorimeter which is large enough for a human being to lice in during a testing period. Thanks to these two devices, today we have exact calculations based on hundreds of experiments which tell us the average number of calories a child and an adult need a day, depending on the type of life each one leads. These are supplemented by exact information on the energy yield of various foods.

Fat is the most concentrated of all energy foods. A man with a sedentary occupation who requires only 1,800 calories of fuel a day could get this whole amount by eating a little over a half of a pound of butter. But he would quickly regret it. Fat is the hardest of all foods to digest. It leaves the stomach more slowly than other foods and tends to retard digestion of other foods. For this reason, too, a great percentage of fried foods in the daily diet, especially in that of children, should be avoided. As a general rule, the amount of fat we eat should depend on the type of work we do. Farmers who do strenuous work can use more fat in their diet than a man who sits at a desk all day. The fat not immediately burned as fuel is stored in our bodies for an emergency. The length of time a man can go without food depends to a great extent on the amount of fat he has tucked away. This reserve fat also serves us in other ways. It acts as a protective pad for many of our organs and also as an insulator—protecting us from too great a loss of our body heat. Our chief sources of fat are butter and cream, other animal fats, and fats from nuts and seeds such as peanuts and cottenseed.

Sugar, as a form of concentrated energy, comes next to fat. In the form of glucose it is always present in our blood. When our blood has the required amount, sugar is stored in the liver in the form of glycogen. When this storehouse is full and we still eat sugar, our bodies transform it into fat and store it away. Besides getting sugar from the juice of the beet and from sugar cane, we get it in sweet fruits and vegetables, such as grapes, oranges, corn, peas, Sugar is more easily digested than any other food and is a quick source of energy. For this reason, hikers will carry with them a chocolate bar or raisins, high in sugar content, to tide them over until they have a meal. As a rule, though, the proper time to eat sugar is at the end of a meal, for, though it is a quick-burning fuel, it blunts the appetite for other foods we need. If eaten in excess, it will irritate the lining of the stomach.

Starch is the fuel food standby for most people. Because most starchy foods are cheap foods, the poor of the world rely on them as their chief source of energy. The nutrition problem for people with too low income is often one of a diet with too much starch and too little of the foods with vitamin and mineral content. We digest starch more slowly than we do sugar but faster than we do fat. Like fat, starch has a satisfactory staying quality. Many nutritionists say that one-third of our daily calorie portion should be in starchy foods. In the digestive process starch is first turned to sugar and then turned to fat.

"Holding first place" is the literal translation for the Greek work **proteios** from which we derive our word protein. This important substance which we find in milk, fish, eggs, cereals, nuts, peas and beans serves us in two ways. Like carbohydrates and fats it can be burned as fuel—but because of the nitrogen it contains it is not as economical a body fuel as starch, sugar, and fats. Before a protein can be used as fuel, it must be freed of its nitrogen. In a sense the nitrogen content of protein makes it a liability when we depend too heavily on it for our fuel supply. It is best not to laden a menu with calories derived from protein but for the majority of our fuel supply to depend on the carbohydrate foods. However, this very nitrogen which is of no use to us as a source of energy is invaluable in building our bodies. It is only through the protein foods that we get nitrogen which is essential to every living cell.

## PAYMENTS TO TENANTS ARE INCREASED IN 1938

(Continued from Page 1)

ant in the proportion that they share in the principal crop, or all crops and practices on the farm."

Heretofore the division between landlords and sharecropers was approximately on a bais of 75 percent to the landlord and 25 percent to the tenant. In the Program the division will be more nearly on a fifty-fifty basis. Where the tenant supplies his own workstock, equipment, etc., and follows the practices, he will receive a larger share based upon his participation.

In the 1938 Program, all tenants and sharecroppers who receive payments under the new program will automatically become members of the County Agricultural Conservation Association. This association selects the County Committee which helps to administer the program in the counties. The new program makes clear the opportunity which they now have to join and take an active part.

Three Negro field workers are employed by the Southern Division of the Agricultural Adjustment Administration. They will work with Negro Land Grant College Presidents, with Negro Extension workers and with other agencies which touch Negro rural life, in helping explain the Program.

## KILLING ANOPHELES POISON

One of the big problems faced by E. B. Weatherly when he went down to Kinsley to establish his big stock farm was malaria. He knew the reputation of the place for the anopheles mosquito. He believes, however, that he has won the fight, because the government investigators last year reported that he didn't have any malaria infection on his place. The first year he moved there every person on the place suffered an attack. Correspondence with a government engineer in California led in an experiment with the various plants that belong to the sweet clover family. White and yellow melilotos were planted all around the houses, and it is said the mosquitoes suck the nectar from the blossoms, and the malaria poison is neutralized. The anopheles mosquito is said to be the only source of malaria. It injects the disease germ with a sting, but if it has previously partaken of the juice from any of the sweet clover blossoms, he cannot produce malaria.

## PEACH CONTAINERS

(Continued from Page 1)

of the new peach containers to be introduced is a ventilated bushel basket designed by fruit marketing specialists of the U. S. D. A. Open, crown-shaped cover and slotted sides allow the fruit to be precooled more effectively and quickly. Following a precedent set last year, some Georgia growers are shipping their peaches to northern markets in a box which closely resembles the New England apple crate. This box holds about 48 pounds, not quite a bushel. Receivers in terminal markets are enthusiastic about this container for peaches and report that the retail merchant likes the box as it gives a better appearance on display racks. (American Fruit Grower, August.)

## MARKETING ACTIVITIES ILLINOIS PIGS SWITCHED FROM CORN TO WHEAT

Completion of wheat harvest has seen pigs which had been getting a full feed of corn switched to wheat on many Illinois farms, it was reported this week by E. T. Robbins of the Illinois Extension Service. The new wheat crop, he said, is helping many farmers to continue to push their pigs along for sale. In most cases the wheat is coarsely ground and given dry, which is said to give as good results as mixing the ground wheat with water.

Concurrently, it was reported by M. L. Mosher, professor of farm management at Illinois College of Agriculture that "Illinois farmers who make a practice of marketing their spring pigs in the fall produce pork at lower costs than those who carry the pigs over until January 1." The annual report of farm bureau—farm management service on 466 farms of north central Illinois shows, he said, that spring pigs marketed in the fall of 1936 had 57 cents a 100 pounds less feed cost than pigs carried over to the first of the year.

## NEW YORK FORECAST "FACTORY-MADE EGGS

Producing eggs in empty factories and other buildings near large cities may by hte next "wrinkle" in the poultry world, it was suggested this week by L. M. Hurd of the Cornell Agricultural Extension Service. This development, he said, depends on progress with "laying batteries" in which hens are housed in individual cages one above the other, several stories high. Laying batteries are still in the experimental stage, though favorable results have been reported by New Jersey, Pennsylvania, and Ohio agricultural experiment stations, he declared.

Professor Hurd thinks the system "is adapted to localities in or near larger towns and cities where land valuations or zoning regulations make the usual plant impractical."

A pleasing personality is one of God's greatest gifts.

A good name is better than riches and honor.

# THE MODERN FARMER

Vol X. NASHVILLE, TENN., OCTOBER 15, 1937 No. 9.

# Nat'l Convention of Farmers Will Meet Oct. 28-30 in Forsyth, Ga.

## SESSIONS TO BE HELD IN STATE TEACHERS COLLEGE

### Prof. Wm. M. Hubbard, President, With Faculty, Student Body and Citizens as Hosts

Chicago, Oct. 21—(ANP)—Officials of the National Federation o Colored Farmers, Inc., announce that the eighth annual convention of the Federation will meet at the Teachers' Training and Agricultural College, Forsyth, Georgia, October 28-30. This is the first annual meeting of the organization scheduled to be held in the Southeast and will no doubt be attended by more farmers of the Race than any previous annual meeting.

The N. F. C. F. is the only national organization of Race farmers which has stood the test of the years. Since 1929, when the first Unit was organized at Howard, Miss., its growth has been substantial. It now has members enrolled from 21 states and local Units established and active in practically all the Southern states.

The objectives and efforts of the N. F. C. F. relative to the welfare of colored farmers have received the endorsement of agricultural leaders of both races throughout the nation and the commendation

## PEACH ORCHARD PAYS DIVIDEND ON COVER CROPS

V. O. Turner, who lives two miles north of Forrest City, received a gross income of $3,488.02 for his 1937 crop of peaches on a 30-acre orchard, according to J. M. Thomason, county agent in St. Francis county.

The orchard returned a net income of $2,246.50 or $74.88 per acre, Mr. Turner said. His total expenses included pruning, spraying, cultivation and harvesting the crop which included the labor, baskets and other miscellaneous items, amounted to $1,241.52.

This 12-year-old orchard has never been without a cover crop after the third year, the county agent said. Mr. Turner is now using vetch as his soil-builder, and he turns it under each spring. In the spring of 1937, 6,000 pounds of nitrate of soda was used around the trees.

Mr. Turner prunes his orchard during January and February, and then goes over it later to make sure that he has not left any excess or damaged wood. He dehorns only a part of the tree during the year, in order that the tree will be kept in production. Thus in a few years the dehorning process is completed, and during the entire time the growth of new wood has been stimulated, as well as the production of fruit of the proper size and quality.

Mr. Turner follows the spray calendar of the state extension service, as other growers in this region do, the county agent noted.

## WALLACE CROP PLAN CALLS FOR ACREAGE SLASH

### Seek Return of More Land to Grass

WASHINGTON, D. C., (Special.)—A plan designed to retire between 15 and 30 million acres of American farm land from cultivation during the 1937-38 crop year was announced today by Secretary of Agriculture Henry A. Wallace. Acreage planted to major crops would be held to a maximum of 209 million, compared with the 1928-37 average of 305 million. Wallace said the limit may be set as low as 275 million acres.

The program follows the general outline of farm adjustment plans promulgated since the Supreme court invalidation of the agricultural adjustment act.

**Must Comply for Benefits**

Only farmers who comply with the department's plan for limiting acreage in major crops will be eligible for federal benefit payments under the existing soil conservation act, he asserted.

H. H. Tolley, chief of the Agriculture Adjustment administration, said the plan also includes provision for special payments to farmers who shift cultivated lands to grass in certain great plains areas. Provision also has been made, he said, for payment of larger benefits to tenants and sharecroppers on southern cotton lands.

Under terms of the conservation plan, limitations for acreage will be assigned to states, counties and individual farmers, Each farmer will be given a "goal" which he will have to keep if he receives his benefit payments.

Major crops included in the plan are corn, cotton, tobacco, potatoes, rice, and peanuts. Other crops also may be included, it was intimated. Announcement of "goals" for states will be made within three weeks, officials said.

**Cite Need of More Laws**

Both Wallace and Tolley said Congress must enact new crop control legislation to insure effectiveness of the program.

"In the absence of other legislation, normal weather conditions over several seasons again will result in the accumulation of burdensome surpluses," Wallace commented.

Tolley said any large group of farmers under the present set-up could ruin the goal of the conservation program if it is decided it could make more money by planting all the acreage it pleased and spurning government payments.

Wallace pointed out that the 1938 program if made effective, will go beyond merely limiting production of the six major crops. Through the encouragement given to such soil building crops as grass and clover and curtailment of soil depleting crops, the productive capacity of the land in many sections will be increased he said.

—Chicago Tribune.

## 4-H NEGRO CLUB CAMP ONLY ONE IN UNITED STATES

### Columbia, S. C., Capital Is The Site

Seven miles east of Columbia, the state Capital of South Carolina, is located the only State 4-H club camp in the United States developed for Negro 4-H boys and girls.

For many years we had visions of such a camp but no finances with which to begin. In January 1935, we visited the director of women's projects of the Federal Emergency Relief Administration and laid our cause before her. She became interested and promised to furnish the labor if we obtained the site for the camp and materials for the build-

(CONTINUED ON PAGE 16)

## OCTOBER 28 TO 30 DATES CHOSEN

### Prof. M. W. Hubbard, President, Teachers and Faculty At Training and Agricultural College Will Serve as Hosts

Forsyth, Ga. (Special)—Farmers from every section of Georgia and representatives of the farm organizations from many states in the Union are expected to be here in attendance at the annual convention of the National Association of Colored Farmers called for October 28th to the 30th in this city. The place of meeting will be the State Teachers Training and Agricultural College of which Prof. M. W. Hubbard is the president. This president, with the student body, the faculty and the citizens of Forsythe, are making every preparation to entertain a large delegation. It is expected that there will be not only leading farmers of the nation in attendance, but some of the highest ranking officials in the agricultural department of the present administration in Washington.

It is known definitely that acting president, Leon Harris, who is also treasurer of the Association is leaving no stone unturned to attract outstanding visitors. Invitations have already been extended to such national characters as the Rev. J. C. Austin, D. D., of Chicago, James P. Davis, southern field representative of the agricultural department, Henry Allen Boyd of Nashville, publisher of the Modern Farmer, a newspaper issued for the past ten years in the interest of the nine hundred thousand farmers of the nation, Dr. Patterson, president of Tuskegee Institute, together with the presidents of the leading colleges in this state. It will be the first time that Georgia has had the pleasure of entertaining this National Federation of Colored Farmers since they were organized many years ago.

## FARMERS PAY TO BE RAISED DURING 1938

### Assurances From Nation's Capital Encouraging

WASHINGTON, D. C., Sept. 23—Under the provisions of the 1938 soil conservation program, just announced by Secretary Henry A. Wallace, tenants and sharecroppers will receive a larger share of government payment checks than in previous years. Many tenants and sharecroppers are Negroes.

"The new program," Secretary Wallace said, "represents a progressive development from the previous program formulated under the Soil Conservation and Domestic Allotment Act. It follows the broad outlines already established and sets up definite objectives for 1938. These include an increase in soil-conserving crops and soil-building practices to further the primary aim of soil improvement. Goals for soil-depleting crops were fixed as a conservation measure and to assure an ample and balanced supply of food and fiber crops."

To attain these objectives, a goal of from 29,000,000 to 31,000,000 acres have been set up for cotton and for tobacco from 1,577,800 to 1,653,000 acres. If the planters do not exceed these goals enough cotton and tobacco should be produced to sell at prices fair to both the farmer and the consumer. The goals set up for wheat and corn will likewise produce ample food and feed.

Concerning the division of payments between the landlord and tenant, the 1938 program says:

"In all regions payments will be divided between landlord and tenant in the proportion that they share in the principal crop, or all crops and practices on the farm."

Heretofore the division between landlords and sharecroppers was approximately on a basis of 75 percent to the landlord and 25 percent to the tenant. In the Program the division will be more nearly on a fifty-fifty basis. Where the tenant supplies his own workstock, equipment, etc., and follows the practices, he will receive a large share based upon his participation.

In the 1938 program, all tenants and sharecroppers who receive payments under the new program will automatically become members of the County Agricultural Conservation association. This association selects the county committee which helps to administer the program in the counties. The new program makes clear the opportunity which they now have to join and take an active part.

Three Negro field workers are employed by the Southern Division of the Agricultural Adjustment Association.

## FRESHINING IN THE FALL PAYS BEST

### Indicated by Comparison With Herd Freshening in Spring

Records kept on two herds of Jersey cattle indicate that fall freshening is more profitable than spring freshening, reports P. R. Corley, Benton county agent, who looked after the test.

"The two herds contain the same number of cows, are of almost identical breeding, are in the same community, and both were well fed," Mr. Corley pointed out.

"One herd has always been bred for spring freshening, while the other has been bred for fall freshening, as nearly as possible. Of course, dairymen know the difficulty of getting all the cows in a herd to freshen in the fall. Under the best management, some will freshen along in the winter."

Here are the month by month results for the two herds:

**Spring Freshening Herd**

| Month | Pounds Produced | Cash Receipts |
|---|---|---|
| August | 11,021 | $ 284.48 |
| September | 11,398 | 264.34 |
| October | 11,024 | 262.55 |

(CONTINUED ON PAGE 16)

## HOGGING OFF CORN AND PEAS FOUND PROFITABLE

John and Ofa Harrod, of Eagle Lake community have found that it pays to finish hogs on corn, reports J. A. Hemphill, Bradley county agent. He said:

"The Harrods had four acres of yellow corn, planted in early March in six-foot rows, with peas between the hills and a row of peas between the corn rows, and they decided to use his crop to finish five sows and 18 shoats they had on their farm.

"When the hogs were put into the corn and pea field, they averaged about 90 pounds each, totaling approximately 2,700 pounds. At the end of five weeks they had gained 1,058 pounds, making a gross weight of 4,128 pounds. In addition to the corn and peas the hogs harvested for themselves, they were fed 15 bushels of dry corn that was carried over from last year.

Mr. Harrod told the county agent that at the time the hogs were put into the field to fatten they were worth six cents per pound, and when they were sold the sows brought $8.25 per hundred pounds and the other hogs brought $9.50 per hundred pounds. The entire lot brought $360.17.

# A Call To The Negro Collegian

By Kelly Miller

There are two contrasting motives that impel human conduct; these may be called egotistic or altruistic, selfish or social, monetary or missionary. From the beginning of Negro colleges and universities to the end of the World War the missionary motive was the dominant force in the life of the Negro Collegian. The atmosphere was surcharged with the spell and power of the Northern missionaries," who, about that time, were ceasing from their labors which fell to others with less enthusiasm for humanity. Since then the drift has been steadily downward from the lofty peak of altruism to the lower level of job objective.

It is needless to blame the Negro for this change of sentiment, for it is the outgrowth of the spirit of the industrial age in which we live. The dollar is made the common divisor of value, in terms of which we measure all commodities, whether of material or immaterial character. We appraise the standing and prestige of the teacher, the doctor, the lawyer and even the preacher, in terms of this monetary unit. The first question that springs to the lips is not, "What I can put into my work?" but, "What can I get out of it?"

Occupations may well be divided into two classes—business and trade, and the professions. Business and trade are entered upon primarily for the returns measured in terms of coin and of the realm, service being but an incidental concomitant. On the other hand, the professions involve pursuits in which service makes the first call, and compensation is of secondary consideration. Herein, lies the primary distinction between industrial or vocational training and the higher or liberal education. Every liberally educated man expects to give the world more than he gets from it. His reward does not consist in material compensation, but in values of higher appraisement and appreciation. Every man or woman who is endowed with the true professional spirit yearns for a field where his service is most needed. The teacher longs to go where there is the most ignorance; the doctor, where there is the most disease; the minister, where sinfulness abounds. He takes little or no heed of his compensation, leaving that to take care of itself. It is very difficult to enforce this distinction in this age of vulgar material display. Goldsmith says, "Honor sinks where commerce long prevails.'

The college-bred Negro is the son or grandson of slaves. He is not ready for the higher professions which, in any well-regulated society, is recruited by the most favorable elements who are above the necessity of making a living. Thus, in England, France, or Germany, only the leisurely or middle class go to the college, or the university with the view of recruiting the professions of higher calling which they seek as a career, rather than as a living. But the Negro race, at best, hovers around the borderline of poverty. We must take first thought of what we shall eat, what we shall drink, or wherewithall we shall be clothed, because of the general poverty of the race.

The Negro was catapulted into the professions of higher calling because the whites were not willing to make the social sacrifices incidental to professional service among them The white teacher disdains to instruct Negro pupils; the white physicians do not fancy Negro patients; and the white minister of the gospel is too proud to minister to the spiritual and social needs of a Negro congregation. This supercillious attitude throws this high type of service back upon the Negro before he is prepared for it. What the white man disdains becomes the Negro's opportunity. So the Negro physician, lawyer, teacher, and preacher are too apt to be motivated by their compensation, rather than by detached service. Grotesque imperfections and numerous misfits are to be expected of any group which suddenly spring up without the orderly process of evolution. "Barbaric pearl and gold" will be more fascinating than the pearls and rubies of wisdom in service which are beyond money and beyond price.

What can be done to turn the minds of the college graduates of the present away from the deceptible allurements of making money to the genuine function of the educated man and woman, which is, to make men? I fully appreciate the impotence of sermonic appeal upon the metallic heart of youth in this material age, and yet, I feel very much like the apostle Paul when his zeal for his propaganda compelled him to say, 'Woe be to me if I preach not.' The sower may expect much of his seed to fall on the stony ground, but some, perchance, may find lodgement on fertile soil.

The Negro graduate will shortly be compelled by circumstances to minimize the money-making feature of his function. The few places with high salary furnished by the Federal government, the State, and private philanthropy, are all filled. None die, and few resign. As the Negro collegian probably will not crowd into the industrial world and develop money-making opportunities for himself and others, he will be compelled to put up with lower and lower compensation for his professional services. Our schools and colleges are putting out more graduates than the State salaries and philanthropic payroll can provide for. The two thousand or more college and university graduates which our schools and colleges are turning out each year must either choose the high professional work of low pay, or fall back in the ranks of hand workers.

The liberally educated Negro man or woman today is confronted by the greatest opportunity, and, at the same time, the greatest responsibility which ever develved upon human sholders. There lies before him undeveloped human resources of unrivaled proportion. Twelve million people have wrapped up in their physical, intellectual, social, moral, and spiritual needs, all of the possibilities of human nature. So vast is the task which await the college-bred Negro of the present day and hour! But he must develop a comprehensive understanding and intellectual grasp of the vastless of the problem which awaits him, for if he does not grapple with this problem, who will? Carlyle says, "That one man should die ignorant who had capacity for knowledge is a tragedy, though it should happen twenty times a minute.' Behold the millions of human beings who have capacity for knowledge, culture, and virtue, living and dying in ignorance, degradation, and moral squalor. But the greatest tragedy of it all is to witness the elite of the race contending themselves with the creature comforts of a little job while the great task which lies before them remains untouched. The challenge of the gae is to the educated college-bred Negro youth. Will they rise up to it, or slothfully sink beneath the weight of so heavy a load. When the race's life is in danger there is no time to think about self.

## THE DAILY DIGEST SAYS

### Sea Island Cotton

Florida and Georgia farmers planted 20,000 acres in Sea Island cotton this year, but the Bureau of Plant Industry is still unwilling to say whether production of the long-staple variety is due for a sustained revival, says an Associated Press report. "It will take two or three years yet to find out whether they will be able to make a go of it," said C. B. Doyle, who returned recently after an inspection of the Sea Island area. Florida, he said, is giving the Sea Island variety the best chance it has had for a comeback since the boll weevil killed out the strain in the early 1920's. The state has made a "systematic approach," he said, citing a law enacted by the 1937 legislature permitting counties by referendum to restrict cotton production to Sea Island. Mixing it with upland varieties, Doyle said, is one of the greatest dangers. The state agriculture department, he said, is taking every precaution against permitting a recurrence of the boll weevil, using a program of education for the growers. The Works Progress Administration spent $25,000 for weevil poison which was distributed among the producers.

### North Dakota Beekeeper Has $20,000 Business

A North Dakota big business beekeeper who expects to gross $20,000 this year, "despite a poor honey producing season," was publicized this week by the North Dakota Extension Service. This beekeeper has 2,300 colonies. His production is expected to total 300,000 pounds of honey—enough to fill 7 1-2 railroad cars. Practically all of the output is packaged in 60 pound cans for shipment to eastern dealers who repackage it in smaller containers for the retail trade. The Service says that one of the beekeeper's management methods "is to take enough bees south every fall to restock his colonies in the north the following spring." The bees are transported by truck or trailer in special wire screen cages.

### Many Food Marketing Inovations Reported

New ways to process, package and market foods are being reported with unusual regularity by the food trade journals. Some recent developments include the packaging of Maine potatoes, the manufacture of a breakfast food made almost entirely of oranges, the canning of "crow meat," the patenting of slot machines which dispense hot frankfurters, the manufacture of "prune beer," a breakfast food made from apples, and the use of a machine which "shaves the fuzz off peaches."

### False Packs of Cotton

George Wolf, author of "False Pack Hits U. S. Cotton" in American Cotton Grower (October) says: "-----The Bureau of Agricultural Economics, hearing that the appearance of false packed bales was tending to undermine the confidence of spinners in the integrity of producers, ginners and other handlers of American cotton, sent Fred Taylor of the bureau's foreign staff to Europe to investigate. Besides cotton of a lower grade sandwiched in between more desirable fiber, he found that many extraneous objects found their way into bales either by accident or design. His gallery of exhibits include, trash, sand, rags, a felt hat, an iron bar, pieces of gin machinery, a scale of weight and a large rock. In one bale nearly 200 pounds of sand was found. In others oil stains and other defects rendered the cotton unfit for spinning. One of the principal difficulties in the way of putting to an end the careless and fraudulent practices which are doing so much to hurt American cotton in foreign markets is the impossibility of tracing false packed or carelessly ginned and packed bales back to their source-----' Stating that the B. A. E. has developed a tag "which will be used experimentally by a limited number of gins this season," he says: "This device consists of a tag head stamped from sheet steel, coated with cadmium, attached to an 11-gauge galvanized steel ancoring wire 28 inches in length."

### Chemical Farming

"From time to time reports are heard in Oklahoma of the progress made in the new art of 'chemical farming,'" says the Daily Oklahoma editorially (Oct. 1). "Developed in California, the process seems to have skipped over the dry dust-bowl region where it could be expected to do the most good and now bobs up in New York as an experimental plaything called 'tray agriculture.' On a small farm just 50 miles out of New York City, the Boyce Thompson Institute for plant research is raising tomatoes with nothing for soil but water, wood shavings and excelsior and sulphuric acid, nitric acid, phosphoric acid, potasium hydroxide, ammonium hydroxide, calcium oxide, magnesium oxide and a 'tonic' composed of manganese, boron, copper, zinc and iron. Dr. Gould Harrold, conducting the experiments under supervision of Dr. John M. Arthur, biochemist, surveyed his heavy crop of luscious tomatoes recently, and expressed the belief that 'tray agriculture' may be developed as a solution to dust bowl agricultural problems----'

### Egg Laying Record

World's egg-laying records were beaten in the seventh Main contest of fifty-one weeks which ended day before yesterday, says an Augusta report by the Associated Press. H. M. Tucker of the State Department of Agriculture announced htat the former record for a pen of California Barred Plymouth Rock of 2,848 eggs, scoring 2,889 points, was beaten by a pen from Wrentham, Mass., with 2,963 eggs and 3,010 points.

### Bread Prices Increase

Government economists protested against the increased bread prices yesterday, declaring the boots had added $50,000,000 a year to the public's food bill, according to the Associated Press. D. E. Montgomery, consumers counsel of the AAA, contended that the increase had been made "in spite of relatively low wholesale prices of bread ingredients." He said that a survey of retail bread prices in fifty-one cities showed the pound loaf was half a cent higher on August 17 than a year ago and was at the highest level in seven years.

### Cotton Ginning

Government reports showed yesterday this year's large cotton crop was being picked and ginned at a near record pace. The Census Bureau announced 4,266,617 running bales had been ginned prior to September 16. This is the largest total for the date, with one exception, in the thirteen years records have been compiled. (AP.)

### Rhubarb Leaves Not for Food

"Because rhubarb sauce and rhubarb pie are frequent articles in the American diet, the use of the leaf blades for greens has frequently been suggested," says the Journal of the American Medical Association (September 18). "J. H. Beattic (Bureau of Plant Industry) states that numerous cases of more or less serious illness and some fatalities have been reported in Europe and North America from the use of rhubarb leaves. The rhubarb leaf blades were eaten boiled in the belief that they were substitutes for the common greens. A fatal case of poisoning following the suggestion of rhubarb leaves was reported in the Journal, August 23, 1919, which additional correspondence appeared in the issues of September 20 and October 11, 1919. Beattie states that 'owing to the high content of oxalic acid and its soluble salts found in rhubarb leaves it is recommended that they be left entirely alone and not used under any circumstances as food. In the stalks, however, the oxalic acid is present in smaller amount and largely in insoluble form, and for this reason is harmless."

### Rammed Earth Houses

Rammed earth houses built nearly twelve months ago by the Resettlement Administraiton in an attempt to develop a low-cost dwelling in rural areas show little or no signs of deterioration, says a Birmingham report by the Associated Press. Seven of the 75 houses in the Gardendale project, 13 miles from Birmingham, are or rammed earth. Six of the experimental houses are occupied. The dirt for the dwellings was scooped up on the project and tamped into walls about 17 inches thick. All are one story and contain a combination living and dining room, kitchen bath and three bedrooms. The roofs are flat, built up with gravel, felt and tar on a sheating basis. French doors, reaching from the floor almost to the ceiling, admit light into each room.

### Illinois Finds Soybeans A Profitable Farm Crop

Since 1932, soybeans have been one of the most profitable crops in Illinois, with costs of production low enough and yield high enough so that the cost of each unit of the crop has placed it in an advantageous position for commercial and feeding uses, it was announced this week by the Illinois College of Agriculture.

With a good yield of 28 1-2 bushels of beans an acre, it was stated that the modern-day cost is 52 cents a bushel compared with a cost of $1.16 in 1930. The acre cost then was $24.39 on an average yield of 20 1-2 bushels. The total acre cost in the more recent figures is $14.98 on the 28 1-2 bushel yield. This total cost of $14.98 is made up of $5.12 for the expense of growing, $1.89 for harvesting, $1.18 for taxes and $6.79 for interest on land valued at $136 an acre.

Seed is the biggest item in the growing cost, with $1.89 going for this purpose. Tractor use is next, then man labor, general farm expense, machinery, horse labor, fertilizer, miscellaneous, and truck use. The harvesting cost is made up of 29 cents for man labor, 25 cents for combining, 22 cents for tractor use, 10 cents for horse labor, and 3 cents for truck use.

### Fuzzless Peach

Peaches with smooth, waxy skins like plums, quite free from the fuzz which many persons find objectionable, can now be grown, as a result of a quarter of a century of patient breeding work by Dr. Fred W. Fofmann, research horticulturist of the Virginia Experiment Station. In 1912 he found, among the seedling progeny of the Greenboro peach, one tree bearing fruit with plumlike skin. He named it the plum-peach. He crossed the plum-peach with Elberta and then crossed the hybird offspring with the J. H. Hale peach, believed to be a seedling variety of Elberta. Further breeding produced the peach Dr. Hofmann was looking for; waxy skinned, fuzzless, good-sized, round and evenly shaped. The flesh is yellowish around the pit, stone free and small, flavor and texture superior. The skin color is reddish orange yellow, with a wash of attractive dark carmine. (Science News Letter, September 18.)

### Artificial Cotton Driers

An article, "Keys to Good Ginning," by George Wolf, in American Cotton Grower (September) says in part: "Many ginners have installed artificial driers which, if cotton is only green or damp and not actually wet, will place it in proper condition at a cost very small in comparison with the increased value that comes from better grades. The

drier has proven itself and is being manufactured by several concerns. Over 600 have been installed and will be in use this season. This present-day machinery is very effective and will correct many of the ill effects of improper harvesting, but is not a completely effective substitute for common sense methods and is likely to defeat the very purpose for which it was installed by encouraging the farmers to carelessness in the belief that all their mistakes will be corrected at the gin. All in all, the problem of ginning seems to boil down to one requiring co-operation on the part of ginner and farmer."

**Mississippi Troubled by Marketing of Wet Cotton**

Commissioner J. H. Holton of the Mississippi Department of Agriculture issued a warning to growers not to market wet cotton. He said that "wet cotton now finding its way to markets in Mississippi and over much of the Southeast is occasioning serious losses to farmers, ginners, oil mills and cotton buyers. When wet cotton is forced through the gins, the resultant lint is badly gin-cut and sells at a distressing price discount. Wet seed will not keep satisfactorily on account of heating and decomposition, and since oil mills cannot process them as fast as received and since the yield from such seed is below normal, there is another discount in the already low price of cotton seed. At least one oil mill has closed."

The Commissioner pointed out that the difference between the selling price of wet cotton and dry cotton naturally varies with the amount of damage, but from $10 to $15 per bale loss on lint and cottonseed is by no means unusual." Instructions were issued detailing ways to dry the cotton before it is ginned.

**Michigan Egg Grading**

"John B. Strange, commissioner of the Michigan State Department of Agriculture, recently announced the signing of a contract with the U. S. Department of Agriculture for the establishment in Michigan of federal grades for eggs," says the Michigan Farmer editorially (September 11). "At the same time he cancelled the departmental rule providing for the sale of eggs by the pound adopted over a year and a half ago. Four grades have been established, Michigan Fancy and Michigan Grade A, B and C. Federal grades should be especially advantageous on the 15 percent of Michigan's 80 million dozen eggs laid annually that are shipped to Boston, New York Philadelphia and Chicago each year but they should also prove profitable on the remainder of the crop used in the state."

**Damming Attachment**

"A deep furrow seeding and summer fallowing machine with a basin damming attachment now is on the market to meet the popular demand for a machine practical for any ordinary tillage, seeding, summer fallow or narrow row crop work," says Kansas Farmer (September 11). "An 8-foot machine may be equipped with three 16-inch heavy duty duckfoot sweeps on the front boot pipe; four 9-inch standard lister bottoms on the rear boot pipe and a 4-row damming attachment on the rear. Thus the 16-inch duckfoots may be set to run at a dept of from 2 to 4 inches, the bottoms may be set from 4 to 6 inches and also may be equipped with a subsoiler to cut deeper into the bottom of the furrow. Dams may be placed at practically any desired distance from 5 to 20 inches by changing the sprockets. Land prepared in this way as soon as harvest is over is worked in one operation—lister furrows formed and dams put in."

## Ethiopian General Visits Cape Town

Cape Town, So. Africa., Oct. 14—(ANP)—A recent distinguished visitor to Cape Town, who attracted considerable attention whenever he appeared in public was General Ras Sultan, famed as one of Ethiopia's most fearless warriors, who held the rank of General under Emperor Haile Selassie.

General Sultan is a battle-scarred veteran bears machine-gun bullet wounds on his arms and legs and was caught in the first gas attack made by the Italians against the defenseless natives. Members of the General's party revealed that Emperor Selassie has twice refused Signor Mussolini's invitation to return to Ethiopia, to be installed there as a puppet Emperor. They also said the natives are in constant revolt and waging such a relentless guerilla wartare that no Italian life is safe Their statements bear out recent telegraphic advices from Ethiopia, telling of a massacre of Italian troops and civilians at Makale and fierce fighting in other districts.

The General's attendants said that the railway journey from Addis Ababa to Djibuti is perilous, that Italians everywhere are forced to live behind barbed wire fencing as a safety measure. Many Italian colonists, they said have revolted and others have fled to Kenya, Khartoum and British Somaliland In the face of Emperor Selassie's refusal to return, Il Duce now realizes that his only hope for effective colonization of Ethiopia lies in active cooperation and help from Great Britain. And British aid, of course, is being withheld because of Il Duce's participation with Gen. Franco's insurgent Spanish forces.

## Talladega Abolishes Admission To Athletic Contests

Talladega, Ala., Oct. 14 (ANP)—In order to renounce "commercialism in athletics," Talladega college is inaugurating a policy of no admission charges to this year's foot ball games and other sporting contests, it was announced Monday by President Gallagher.

Commenting upon this departure from custom, the president stated, "This step is a definite renunciation of all commercialism in athletics. For many years the college has followed the consistent policy of refusing to give athletic scholarships or to offer any kind of special inducement solely to attract athletes and build up winning teams. The elemination of gate receipts marks the logical culmination of this policy

It is understood that the only other institution in the country following a similar policy is John Hopkins university, white, of Maryland.

## YOUR MONEY'S WORTH IN SHOES

**Shoe Values Come to Those Who Know Materials and Workmanship That Make for Wear**

When fashion decrees that skins of sharks, allegators, snakes or kangaroos will be the smart new footwear for the coming season, fishermen sharpen their harpoons, hunters polish their guns, make their traps, and travel ocean, jungle and desert to bring in the coveted skins. But most of the shoes worn by men, women and children in the United States are made from the hides and skins of domestic animals. In 1935 the value of the products of the boot and shoe industry other than those made of rubber was $643,872,000. To make these millions of dollars worth of shoes as well as other leather commodities, American tanners import hides and skins from many countries besides buying those available through American packers and farmers.

Cattle, calves, goats and sheep are raised primarily for food. Their hides and skins are largely a by-product of the meat industry. Through the packer takes into consideration the value of the hide and skin in the price he pays to the farmer for his livestock, there is no direct and consistent relationship between the amount of money the farmer gets for his animals and the amount the packer gets for the hides and skins which he sells to the tanner. Likewise there is no close correlation between the price of leather and the price of shoes. The cost of manufacturing and general economic condtions dictate the price consumers pay for shoes.

Money that goes for shoes cuts a disturbingly large hole in many family budgets. Even if the style of the shoe appeals and "it fits like a glove," there are many questions which consumers with a slim purse would like to have answered. Will the particular shoes he has selected give him good wear? Will they hold their shape? Will the leather be free from cracks and tears?

Experts cannot judge the wearing quality of shoes by a glance. They often find it necessary to break a shoe down, to cut a sample of leather from each of its parts, and to study the shoe's construction. The National Bureau of Standards, in response to an appeal from the General Federation of Women's Clubs to assist in establishing standards for women's leather shoes, is at present carrying on an experiment to test the durability of shoes of different construction. Resnlts of their study are not yet published.

Few shoes have informative labels to tell the consumer what kind of service he may expect from them. Yet shoes designed for the same type of service vary greatly in price. The cost of a pair of shoes depends largely on the quality of leather and the technique used in making them. High-priced shoes usually have more hand work and stay longer on the last acquiring their shape. Cheap shoes are made with every possible economy in time, labor and materials. The wearing value of medium-priced shoes is the most difficult to judge, as there is more variation in the quality of materials used and in the workmanship. Test by experience is, to date the only guide consumers have, but knowledge of the types of leathers and of the construction methods used in making shoes can help one in cutting the risks of unwise selection.

If you are interested in the life of your shoes, take care of their soles and heels. They do the brunt of the shoes' work and are the quickest to wear out. Leather soles are made from heavy cattle hides which have been either vegetable or chrome-tanned. The portion of the hide from which the soles have been cut and the method of tanning influence the wearing quality of the leather. Soles cut from the "bend" of the hide—the section which originally covered the animal from shoulder to tail and from the backbone to the upper edge of the belly—are the stanchest and wear about twice as long as those cut from the belly, and one and one-half times as long as those from the shoulder. Leather from the bend is closed-fibered and firm, while that from the belly is flabby and soft.

Process of tanning used on the hide also affects the life of a sole. Vegetable-tanned leather is used for most soles. Natural color of vegetable-tanned leather ranges from shades of tan to reddish brown. Most leather used in the upper part of the shoes and some used for soles is chrome-tanned. (For description of tanning process, see **Consumers' Guide,** Sept. 6, 1937.) Longest wearing soles are those made from unwaxed chrome leather which is light bluish in color. But though unwaxed chrome leather rates high for durability, it absorbs moisture so readily that it is practical for only very dry climates or indoor use as in gymnasiums. However, chrome leather, when filled with greases to make it more waterproof, still wears longer than vegetable-tanned leather. Brand-new waxed chrome soles are often stiff at first, but after they are worn a few times the stiffness disappears.

Rubber and composite materials are being used more and more for heels of shoes. Wood is connon material used for high-heeled dancing slippers and other lightweight footwear as it is not as heavy as leather. But as it is not as resilent as leather or as springy as rubber, a leather or rubber lift is often put on a wooden heel. If you wish to preserve the life of your shoes, take care of their heels. Run-down heels quickly twist a shoe out of shape.

Consumers usually have more of "an eye" for uppers than for soles of shoes, yet the naked eye can seldom spot wearing quality here either. Trade names often give little indication of the type of leather used in the shoe. Grain, nature color of the finish of the leather are often described in the trade name, while the original source of the leather, the name of the animal from which it came, is lacking or the name of another animal borrowed. "Elk" is a trade name used for side leather made from cattle hides which have been tanned and finished in a certain way, while true elk skin is sold under the trade name of buckskin. Patent leather shoes may mean shoes made from side leather, horse, colt, goat, kid or calf.

Side leather—so called from the practice of splitting hides into halves or sides before tanning—is widely used in shoes of every type from the hiking boot to the dancing pump. Its relatively low cost and durability as well as the ease with which it takes many finishes makes it a standby material. Side leather is usually split into two or more layers for shoe uppers. The first layer-called the grain split, is the hair side of the hide. It gives better wear than flesh splits, made from the under side of the hide. Fine lines and hair soles on grain leather make a design similar to that on the back of the human hand. This design is lacking on flesh splits, unless

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per yer, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## AGRICULTURAL ADJUSTMENT ADMINISTRATION

Tuskegee Institute, Ala., Oct. 12, 1937—A. L. Holsey, Field Officer To Negro Farm and Home Agents, and other agricultural leaders: Greetings:

You remember a few weeks ago that Congress made appropriation for a price adjustment payment of not more than 3 cents and through the Commodity Credit Corporation, loans up to 9 cents were made available on cotton, provided that farmers would cooperate in any program under legislation which may be passed at the next session of Congress. By joint resolution, Congress committed itself to pass such farm legislation.

Between no wand the opening of the next session of the Congress, farmers are invited to meet in groups to discuss their problems and to make suggestions as to the kind of legislation needed. The Senate Agriculutral Committee will hold hearings at certain selected places and in addition will consider recommendations from other groups or individuals who may not be able to attend the hearings.

Early in October a conference on Southern agriculture was held in Memphis, Tenn. Secretary Wallace delivered the principal address in which he set forth a long range program for improving the conditions of cotton farmer, large and small.

The two major difficulties facing the Cotton States are:

1. The need for a larger income. (In a brief discussion of this subject, Dr. I. W. Duggan, Acting Director, Southern Division, Agricultural Adjustment Administration, told members of the Negro Business League of Memphis that while cotton farmers represent a third of the nation's farm population they receive about a tenth of the nation's farm income.)

2. The rapid increase in cotton production by foreign countries which decreases the market for American cotton.

(In his Memphis address Secretary Wallace said: "This year's production of foreign cotton will probably be 8 or 9 million bales larger than foreign production five years ago.")

The next Congress has agreed to pass legsilation which will help to adjust our cotton production to meet these two problems.

Some Methods Now Being Considered

1. Processing Tax. The processing tax which was devised by Congress to bring the farmers income up to the level of commodity prices was declared unconstitutional by the United States Supreme Court only because it was beyond the power of the Federal Government to sue the proceeds of the tax to pay farmers for adjusting their acreage and production. The court has not denounced the processing tax as such. Concerning this decision, Secretary Wallace said: "The processing tax, which made the old (Triple A) program self-financing was gone and **** farmers had to take their chance on persuading Congress each year to dip into the Treasury."

Continuing, the Secretary said: "The price adjustment payment authorized by Congress on the year's crop, as I have already shown, will help to serve this purpose, but the South would find it difficult to get large subsidies from the general Treasury year after year because of the necessity of approaching a balanced budget and the similar demands from other regions that would be certain to raise. * * * But unless the Cotton Belt is to resign itself to a scanty income from cotton as its permanent fate, some continuing source of revenue to provide funds for price adjustment payments to farmers—presumably only to farmers cooperating in the Conservation Program—seems to be necessary. Much of some people may dislike to face this fact, it cannot be dodged. Perhaps the processing tax offers a way out."

2. Tariffs. The secretary calls attention to that school of thought which advocates lower tariffs and unrestricted production of cotton as a solution. "With the world organized as it is," said Mr. Wallace, "a quick solution of the cotton producers' difficulties through tariff reform is not within the realm of practical possibility. * * * The chances are that continued big production in the United States, along with big production in other countries, would push prices down toward the 5 cent level of 1932, or even lower. * * * That would mean a return of all the suffering and privation which the farmers of the South endured in the darkest days of the depression.

3. Price Maintenance. Still another school of thought advocates a drastic reduction in production down to domestic needs in order to assure the farmer a parity price. Mr. Wallace's comment on this philosophy says in part: "With world conditions what they are, American cotton producers apparently could receive parity price—16.7 cents a pound—in the market for their cotton only if they are willing to say goodbye to their export outlets and go on a domestic basis. At such a price, competition from rayon and other fabrics would probably increase to a point which would make it impossible to pass into domestic consumption more than seven million bales. At average yields that amount could be produced on about eighteen million acres." (Thirty-four million acres were planted to cotton this year.)

Since only half of the land and labor used this year would be required to produce seven million bales, Mr. Wallace asks two pertinent questions:

"Would this land and labor be used for the growing of other commercial crops to compete with other farmers elsewhere in the country?" —or—"What would become of the excess labor suddenly turned loose? Could jobs and livelihood be suddenly found in industry for several hundred thousand of these workers no longer needed to grow cotton?"

The Need for Thoughtful Study

The three methods presented are typical of the methods which will be advanced before and during the next session of Congress. It is important, therefore, that Negro farmers and agricultural workers keep in close touch with the situation.

During the next few weeks, the newspapers will be filled with discussions, pro and con of the various methods proposed. They should be very closely and carefully read.

Small discussion groups are proposed to study this problem in all its phases, and if out of such discussion, suggestions arise which may be sent to your Congressman or Senator or to the Senate Agricultural Committee, feel free to do so.

If public meetings in your community are called, be sure to attend and thus keep informed of the attitude of other farmers in your section.

We shall be glad to send you a complete copy of Secretary Wallace's address upon request.

Yours very truly,

James P. Davis, 916 Gaines St., Little Rock, Ark., (Mrs.) Jennie B. Moton, Capahosic, Virginia. Albon L. Holsey, Tuskegee Institute, Ala. Field Officers, Agricultural Adjustment Administration.

P. S.—Since preparing this letter, new cotton estimates indicate a seventeen and a half million bale crop—the second largest in the history of our country—which immediately depressed the price and further increased the seriousness of the farm situation.

## OSCAR R. LE BEAU PROMOTED

Washington, D. C.—Oscar R. LeBeau, former Associate Professor of Agricultural Education at Hampton Institute, Virginia, was recently appointed Research Agent for the American Vocational Association. His headquarters will be located with the other A. V. A. offices at Washington, D. C. He was awarded the degree of Doctor of Philosophy by Cornell university in 1936.

The American Vocational Association has grown until it includes more than 7,000 agricultural, industrial and home economics teachers from all sections of the country. Dr. LeBeau is the first full time Research Agent to be employed by the organization. He will have the responsibility of organizing, supervising and interpreting vocational studies sponsored by the A. V. A. Research Committee.

The Committee hopes to conduct a strong program of research dealing with the fundamental facts, services and activities underlying the guidance, training and placement of persons for gainful employment. The immediate undertaking of such a project has been made possible through a grant from the Carnegie Foundation and a special allotment from the A. V. A. budget.

The initial research plans are fully described in the September issue of the A. V. A. Journal and News Bulletin.

## FEW PEACHES BUT HIS ORCHARD YIELDED CROP

The yield of saleable peaches from a six-acre orchard owned by Leroy J. Adams, Bradley county, amounted to 400 bushels, though very few other farmers in the county produced peaches for sale this year because of two late spring freezes, said J. A. Hemphill, county agent.

Mr. Adams believes his crop was due to turning under a crop of vetch in his orchard in the spring of 1936 and cultivated the orchard well throughout the year, the county agent related. The spray schedule and pruning practices recommended by the state extension service were followed closely.

## THINK SOYS IN CORN DOUBLE VALUE OF CROP

Soy beans planted in corn are considered equal in value to the corn crop by farmers in the eastern section of Clay county, where 95 per cent of the corn in 1937 was interplanted with some legume, reports George F. Metzler, county agent.

"Since the introduction of the AAA program, Clay county as a whole is planting 92 per cent of its corn with a legume," Mr. Metzler said.

"Most farmers follow the practice of seeding soy beans in the drill at the same time the corn is planted. However, many plant one row of corn and one row of beans or peas. Farmers in the western part of the county use about as many cowpeas interplanted as soy beans.

"The legumes have proved their value for soil building and as pasture for cattle, hogs and work stock."

## CASH OUTLAY FOR HIS BARN WAS ONLY $37

A barn 27 feet square with 12-foot walls was built by E. V. Campbell, near Lacy, for $37.25, according to C. A. Vines, Drew county agent.

The barn will provide space for six head of work stock and cattle in stalls and leave about 1,890 feet of crib space, it is figured.

Except for roof, nails and cement for foundation blocks, the barn was built entirely of lumber which was sawed on the farm and left over after building a house. Lumber for the house and barn together cost $6 for the sawing. It was sawed with a portable mill. The timber was thinned out of Mr. Campbell's woodlot.

The roof cost $25, cement for the block $2.25, and the nails about $10, making a total of $37.25, the county agent said.

## TENANT FAMILY WITH PLAN GETTING AHEAD

A farm unit demonstration, which includes a plan of work for the entire farm, carried on by Mr. and Mrs. A. W. Martin, of the Hopewell community, Hempstead county, in cooperation with the state college of agriculture, is making good progress according to Miss Melva Bullington, home demonstration agent.

"Mr. Martin, who is a tenant, made arrangements with his landlord to build a house of pine poles for his family in return for a five-year lease on the place." Miss Bullington related. "The plan for the house worked out so well that the landlord made a new advancement to the Martins in the way of house furnishings.

"Kitchen cabinets have been built at a cost of $50, a four-piece living-room suite was bought for $102.50, and a living-room rug and kitchen rug were provided for $21.80 more.

"Further improvements include the addition of four cows to the dairy herd. This is to be a five-year demonstration, the major goal of which is to install a water system with running hot and cold water and complete plumbing in the bathroom.'

The peaches were sold to trusts at $1.00 per bushel orchard run. The trucker furnished the containers and packed the peaches.

## STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912, State of Tennessee, County of Davidson:

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the ownership, Management, etc., of the said publication for the date sworn above caption requested in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. Ferguson, N. P.

Sworn before me this 28th day of September, 1937.

My Commission expires April 4th, 1939.

# COMPANY UNION OF PULLMAN EMPLOYES GOT PAY INCREASE

## Group Protests Boast of Brotherhood for Putting Deal Over

Chicago, Sept. 23—(ANP)—There is sharp disagreement between members of the Pullman Porters and Maids Protective Association, so-called the Company Union, and the Brotherhood of Sleeping Car Porters (A. F. of L. affiliate), as to whom should get credit for the recent pay increase granted porters and maids by the Pullman company.

The Brotherhood, represented by National President A. Philip Randolph and Chicago Branch President Milton Webster, claim credit for the pay increase and the 240-hour month working agreement, declaring their victory the climax of ten years strife with the Pullman company to better the conditions of colored employes.

Now comes J. S. Morris, chairman of the Chicago Eastern Local, and chairman of the Appeal Adjustment Committee of the Pullman Porters and Maid Protective Association, who says the Brotherhood is sailing under false colors, did not force the upping of wages and that the wage increase offer was made voluntarily by officials of the Pullman company.

Captioning his statement as "My Stand," Chairman Morris declares:

"Since the signing of the agreement by The Pullman Company and the Brotherhood of Sleeping Car Porters, I have been asked by many what my attitude is now in regards to The Pullman Porters and Maids Protective Association and the Brotherhood of Sleeping Car Porters. It is this! I never intend to join nor take part in any Labor Organization other than The Pullman Porters and Maids Protective Association.

I learned a few days ago that I would be forever barred from becoming a member of the Brotherhood of Sleeping Car Porters. Let me remind who ever made the remark that I barred myself thirteen years ago, when they asked me to join and I refused.

"Now what has the Brotherhood of Sleeping Car Porters done in the new agreement? They haven't done anything. They have taken credit for the increase in salary given by The Pullman Company to the Porters, but that increase in salary was promised to the Porter by The Pullman Company as stated in a bulletin dated May 28, 1937 and the Company simply complied with their promise after the railroads had agreed to increase the salaries of their employes five cents per hour. I wonder how they are going to like the 240 hours per month working time?

"I am a member of The Pullman Porters and Maids Protective Association and not ashamed of it. For the information and benefit of all Porters and Maids: you don't have to belong to the Protective Association or the Brotherhood to hold your job; the law states that. Do you believe the law or a Porter?

"Think for yourself, read for yourself, and don't be like dumb cattle. Confucius once said, 'there are two classes of people who don't change their minds, the dumbest of the dumb, and the wisest of the wise.' To which class do you belong?

## Syphilis To Be Important Topic At N. M. A. Convention

St. Louis, Mo., Aug. 12—(ANP) At the 43rd annual session of the National Medical Association convening in St. Louis Aug. 15 to 20, Dr. O. C. Wenger, Surgeon, United States Public Health Service, will open a symposium on the control of syphilis. Dr. Wenger, because of his intimate knowledge of the problems confronting our group and because of his long connection with the United States Public Health Service, is eminently qualified to speak with authority on this subject.

The entire afternoon session on Aug. 17 will be devoted to a discussion of the subject of syphilis. Dr. John W. Lawlah, Medical Director of Provident Hospital, will discuss clinical facilities; Dr. Ralph Scull of Provident Hospital and Rush Medical College, will discuss serology; Dr. D. Joseph Crindon, Professor of Dermatology at St. Louis University School of Medicine, will discuss the clinical aspects; Dr. H. Reginald Smith, Provident Hospital, will discuss the eye aspects; while Dr. Prince Barker of the United States Veterans' Faculty No. 91 at Tuskegee, will discuss the nervous manifestations.

At the conclusion of the symposium, the American Medical Association will present its talking picture on syphilis. This picture will illustrate in detail the treatment of all the phases of syphilis as seen by various outstanding members of the medical profession. This symposium is a part of a drive on the part of the National Medical Association to assist Surgeon General Parran in helping to eradicate syphilis.

## SCIENCE ADDS HUGE SUMS TO FARM INCOME

### Constantly Improving Crops and Breeds of Livestock

Scouring the world for new plants useful to American farmers, and working constantly to produce better varieties of field and garden plants and to improve livestock the scientists of the U. S. department of Agriculture have added vast sums to the country's farm income.

Some of the results of this effort, which goes forward year after year, with little said about it by the scientists themselves, are summed up in the Digest. Here are a few of the achievements cited:

"China, Japan, India, searched by plant detectives, are supplying American cucumber growers with solutions to the problems of heavy losses from bacterial wilt, from mosaic disease, from downy mildew. These new strains are, by inbreeding, forced into more perfect immunity to microbes, and now are being crossed with good American varieties.

**Odorious Onion Has Troubles**

More than a billion pounds of onions go into American mouths annually — meaning $17,000,000 to growers. And for all the onion's odoriferious potency, it is troubled by many a germ attack: pink-root, smut, mildew, smudge, neck rot, yellow dwarf, by thrips, and by premature seeding. Now the Nebuka from Nippon is on the scene, with disease-resistant and insect-resistant characteristics that are being bred into the commercial American species.

Having taken the string out of the string bean, our agricultural G-men track down the secrets of the bean's major afflictions, such as rust, a fungous attack. Already beans are released from tribute to nature's tiniest criminals, and attention is directed toward snappier types.

Yellow, or fusarium wilt, threatened to terminate the cabbage's 4,000-year-old history. But this history may well continue additional unguessable millenniums; the risk of wilt is no longer a pitfall for cabbage's forward march.

Unfamiliar importations are fascinating. The tartness of the goumi from Asia is tasty in sherbets. The Chinese bush berry, also called Manchu cherry, wins attention by its attractive tang and pleasant range of flavor and texture; promises commercial value. In some, also, formerly unknown apricots from Manchuria and Siberia, probably to widen the range of cultivation of this fruit, growth chiefly on the Pacific coast and susceptible to spring frosts.

**Better Goats and Dogs**

Milch goats, "pocket editions of the cow," have engaged federal workers since 1909. The length of the lactation period has been increased 135 per cent, and the average annual milk yield, 335 per cent.

The Puli dog, Hungarian shepherd, is being crossed with various other breeds to produce higher intelligence and practical psychological aptitudes, of advantage to the farmer and to the geneticist, too. Production of higher intellect in animals has a definite bearing on the public's pocketbook.

The turkey and the chicken have not been successfully hybridized. All such attempted hybrids perished before hatching. Yet the Department of Agriculture is still trying. If, however, failure is reported here, other side lines are turning out well.

Fur animals are among the farmer's promising part-time enterprises. In 1936 the total value of silver fox pelts alone exceeded $8,000,000. The Bureau of Biological Survey, in the Department of Agriculture, is determining the inheritance of degrees of silvering, and the inheritance consequent upon cross-mating red foxes, the standard silver fox, the Alaska silver fox, and the cross fox (hybrid of silver and red). Already there is a chart to forecast the results of any given combination.

## HANDY STORAGE CELLAR MADE IN SIDE OF HILL

A practical demonstration of what can be made from a hillside by planning, patience, and sparetime work is illustrated by the 12-by-14-foot storage cellar on the farm of Mr. and Mrs. Frank Kilgore, four miles west of Mountain View, Stone county, said Miss Mary Britzman, home demonstration agent.

"This cellar was constructed by the Kilgore family without any cash outlay except for door hinges and lock." Miss Britzman related. "The space was excavated in the side of the hill and lined with stone found on the farm.

"Native clay was used for mortar and large logs split in halves were used for the ceiling. Scrap lumber was used for the door. The completed cellar affords ample storage space for the vegetables and canned products which the family uses.

## Falls Seven Stories

St. Petersburg, Fla., Oct. 14—(ANP)—"I'd better not land on my head," though Milton O'Neal Monday when he slipped and fell from the roof of a seven-story hotel.

Instead of becoming terror-stricken, he figured out way to land safely, so he twisted his body and landed of his right hip in a grass plot, denting the ground and receiving a broken leg and bruises. He did not lose consciousness.

"I knew if I landed on my head I'd be killed, so I decided to make other arrangements," declared O'Neal from a hospital cot after the mishap. He is expected to recover.

## TEXAS FARM NOTES

### Food Preservation
### Falls County

This month the home food supply demonstrators devoted their time, to the preservation of miscellaneous products: soup, mince-meat, peanut butter and relishes. In addition to the above named activity, two club women, Mrs. Beverly McGruder and Mrs. Annie Brawley of Spring Hill Club, took active part in the preparation of fruit jnices to make up an exhibit for demonstration purposes. First, we made a study of fruit juices as to value in the diet, then the general preparation such as pickling, assorting and washing was emphasized in detail. Both hot and cold processes were used to extract the juices, so that a comparison of the color and flavor could be made. The packing was taken up step by step; reheating, bottling, corking, pasteurizing, sealing, capping, labeling, and storing. At the close of this study the women who made up the group of demonstrators had 72 cans and jars of tomato juice; 41 bottles of blackberry juice; 56 bottles dewberry juice; 10 bottles pineapple juice; 19 bottles plum juice; 16 bottles peach juice; and 129 containers grape juice.

Mrs. Roberta L. Lee, Home Demonstration Agent.

**Harness**

**Caldwell County:** Method demonstrations were given to Negro farmers on harness making, which was witnessed by sixty-two persons, twelve of whom participated in same. Demonstrations were also given on making blind bridles, cow halters, calf halters, mule halters and lines. Caldwell County won fourth place in harness making.

**Home Tanning and Leather Making Club to be Organized in Harris County**

Three communities plan to organize a Home Tanning and Leather Making Club. This is a result of the interest that has been manifested at demonstrations of harness making. A complete set of harness was cut and made from two cow hides that were tanned by the agent.

**Anderson County:** The Pea for Market Campaign that started in the spring was carried out by 548 farmers. 500 farmers of Anderson County, under the supervision of F. J. Robinson, County Agent, pointed two acres each of blackeyed peas. 548 farmers have sold part of their crop for $16,340.00. Farmers are applying part of the money from her pea crop to their cotton in order that it may be a cash crop. Special mention is made of Mr. E. D. Malone, Tennessee Colony, Texas, who sold $125.00 worth of peas.

**Red River County:** T. T. Clement County Agent, displayed in a down town window, a set of harness that was made from the hide of a cow grown in Red River County. A county picnic, for the purpose of organizing a County Agricultural Association will be given in September under the direction of County Agent, T. T. Clement. Free barbecue will be served. The speakers will be: Judge M. L. Wren, County Judge; Prof. L. M. Becton, Principal, Cheatum High School, Clarksville, Texas; County Agent C. M. Knight, District Agent H. S. Estelle, Mr. E. A. Dawson, Chairman, Agricultural Association and a Federal and State speaker.

**Rusk County:** A demonstration in harness making was given by County Agent H. L. Brown. He is giving a large amount of his time to the making of harness. Thirty-nine interested persons visited and took part in the demonstrations. The harness will be exhibited at the county fair in September. The demonstration has created much excitement and inquiries were made as to how and when same can be put into operation in the county as a permanent activity.

# TUSKEGEE-'FORCE FOOTBALL GAME IN CHICAGO DROPPED

## New Promoters of Affair Flop on Handling Build-up

Chicago, Oct 14 (ANP)—Chicago's annual 'grid "classic" between the Tuskegee and Wilberforce football teams, scheduled to be held Saturday Oct. 16, at Soldiers' field was called off Friday after a conference between I. S. Lane of the Ohio school and Capt. R. S. Darnaby of Tuskegee.

Blame for cancelling the game, which ordinarily draws many visitors from neighboring cities and states, is placed on unsuccessful promotional attempts. In previous years, the two schools had handled all promotional work, with varying degrees of success, but this year Edwin B. Jourdain, Evanston alderman and former newspaperman, arranged with Dr. Ormonde Walker, new president of Wilberforce, to handle the event. Although Tuskegee is understood to have objected strenuously, Dr. Walker won out.

However, no publicity appeared in either the daily or weekly press. When reservations came in at the Grand hotel for game accommodation, Manager William P. Harrison attempted to contact Jourdain and so did Tuskegee. Messages went unanswered. Finally Capt. Darnaby came to Chicago Thursday, held the conference, and after both schools decided a week was too short a time for them to take the promotion in hand and insure a sizeable crowd, the event was postponed.

Although much publicity attended last year's grid clash, comparatively little promotional work attended the 1935 game. Since neither school has been able to realize much from the affair financially, it has often been suggested that this work be placed in the hands of capable outside individuals.

## Athletic Star To Be First Liberal Arts Graduate

YOUNGSTOWN, Ohio, Oct. 14, (ANP)—Jimmie Smith graduates from Youngstown College this coming June, he will be the first Negro student to ever have done so in the liberal arts course. The school is comparatively young but enrolls 1,500 annually.

Smith has played one year on the basketball team and easily established many court records. The Washington and Jefferson College team honored him by naming him as the best defensive player the team had met during the past season.

During his stay at the college, the popular scholar has received no grade lower than a "B". Besides supporting a family, he found time to hold the office of president in the "Youngstown College Club," a group of colored students.

At one time, Smith was the physical director of the West Federal "Y." He expects to enter Pitt in the fall to earn his master's degree.

At the college, there is another Negro senior, Tommie Rohinson, a court star for the past three years.

## Kathryn Perry At Famous Kit Kat

New York ,Oct. 14 (ANP) — Kathryn Perry, musical comedy singing star, goes into her fourth week at the famous Kit Kat club next Sunday night, having had her option taken up by Jule Podell, owner of the swanky East Side niteric.

Her present contract at the Kit Kat expires some time in November and Joe Glaser, personal representative of the song stylist, is making preparations for Miss Perry to be featured in a new unit with Louis Armstrong, which is to he produced

## COLOR OF EGG YOLKS DEPENDS MUCH ON FEED

When the New Yorker sits down to his breakfast eggs, he wants them to have light-colored yolks. So eggs with light-colored yolks are favored in the big New York markets, and usually command the best price there.

Some of the other Eastern markets have the same preference for eggs with light-colored yolks. On the other hand, there is a demand for eggs with dark-colored yolks, too. Bakers, who represent a big market, want that kind.

Citing those difference in market wants, S. A. Moore, extension poultryman, says the color of egg yolks depends on feed and the management of the flock.

Hens ranging on grass usually lay eggs with darker colored yolks, the specialist pointed out. Yellow corn has a similar effect.

"Poultrymen who supply eggs to bakeries sometimes find the yolks getting too light colored in the fall or winter, when the hens are not on range," said Mr. Moore. "Fellow corn and alfalfa meal will help to correct this condition.

"Cottonseed meal darkens the yolks in an objectionable way and may give the whites an undersirable pinkish color.

"Hens confined and fed a ration containing about 40 per cent yellow corn and four per cent alfalfa leaf meal, will produce eggs with fairly light colored yolks, or without the meal, they may be fed up to 60 per cent yellow corn.

When hens are on summer range, yolks may be lightened by keeping the hens up part of the time and feeding white corn. The yolks will tell a poultryman when he has about the right balance between white corn and green range.

"Hens on too limited range and white corn may not get enough vitamin A to keep them laying well. This may be supplied, without darkening the yolk, by adding one-half per cent of high grade cod-liver oil to the ration."

## BROILERS BEST IF CROSS BRED

### FINE CHICKS FROM WYANDOTTES AND REDS EXCEL PURE BREEDS

Poultrymen who are just a little gray around the temples will remember when they were warned not to mix breeds of chickens, because the result would be scrubby, inferior stock.

Hit-and-miss mixing and breeding from mixed stock, is still frowned on as a losing practice, but certain cross-breeding methods are now accepted as producing birds of meat uses that gain faster and on less feed than pure-breds do.

Tests at the state college agriculture, by W. R. Horlacher, head of the animal husbandry department, indicate that a cross of white Wyandotte rooster with Rhode Island Red hens yields chicks for broilers that have marked advantages.

**Ahead on All Counts.**

"These cross-breeds grew more rapidly, and reached market weight younger than pure bred chicks from either of the two breeds". Mr. Horlacher reports, "The cross-breeds were as large at 10 weeks of age as pure White Wyanottes were at 11 weeks, or pure Rhode Island Reds at 12, weeks."

The average weight of the crossbreds at 12 weeks exceeded the average weight of the White Wyandottes by about one-half pound, and that of the Rhode Island Reds by nearly three-quarters of a pound. Likewise the crossbreds made better use of feed. They required only 88 per cent as much feed to produce a given amount of grain as did the White Wyandottes, and 85 per cent as much as the Rhode Island Reds.

**Produce No "Barebacks."**

Fertility was equal to that of the parents and the percentage of eggs hatching was above that of the parents. There were no "barebacks" in the crossbreds when they reached market weight. This is one of the serious disadvantages of the White Wyandottes for broiler production. The color of the crossbreds was white with a scattering of black feathers.

Several other crosses were tried but none gave as good results as the White Wyandotte rooster—Rhode Island Red hen cross. In some cases the crossbreds were inferior to one or both pure breeds. Hence, indiscriminate crossing is to be avoided."

The fact that the crossbreds are superior broiler does not imply that they will also be superior breeders, Mr. Horlacher pointed out. They should all be marketed each year to take advantage of the hybrid vigor which results from the crossing of those two pure breeds, he advised.

## Through Hollywood

(By Harry Levette for A. N. P.)

Hollywood, Oct. 14 —Say what is this? Broadway or Hollywood? For here is the old town by the blue Pacific filling up with all the big shots of the East until as Otis Rene says Broadway has come to the Coast. Otis, you know, is one of the famous Rene Bros. Otis and Leon composers of the internationally famous "Sleepy Time Down South" and the newer "Sleepy Time in Hawaii," besides many other hits. Discussing further the western trend of theatrical and musical talent, he said, "For the past 14 years Leon and I have hoped for an opportunity to locate in New York where our musical compositions would have a chance to reach the proper eyes that would bring them to the attention of the public. We never got to go, but now we will not need to. It seems that every one who is any one—stars, producers, band leaders and artists in general—are locating on the coast.

**Jimmy Luncefords'** celebrated band was eagerly awaited at the Sante Fe station last Monday morning by a large crowd of friends and admirers. As a gala event in coast night club circles, the great musical organization was booked to open at Sebastian's Cotton Club last Thursday, thus making the return of all-colored bands and floor shows after more than six months featuring of all-white talent.

**Louis Armstrong,** well loved trumpet king, arrived also Monday. Chilton and Thomas, clever globe trotting man and wife dance team, are also here, as are also a number of lesser lights from the great White Way, and Harlem's Great Brown Way as Clarence Muse calls it. Of course so far as the other race is concerned Hollywood is full of the greatest stage and screen stars, actors and musicians, even to the newspaper columnists as Walter Winchell seems reluctant to return to his beloved New York. And of course each studio has from two to forty well known writers grinding out their stories.

**Bill Robinson,** genial race-proud "King of all tap dancers" must have started the annual western trek, as other celebs have been coming by every train and plane since he arrived two Fridays ago. Beginning the first day at his home studio, Twentieth Century-Fox, which has him under the largest contract given in 1937 to a colored actor and surpassing many of the whites, Bill has been busy every day on the new picture "Rebecca of Sunny Brook Farm." It is predicted to be the best of his pictures made with the famous child star, Shirley Temple, all of which has been tops in box-office results. Bill used to be very sensitive at the propensity some of the local folk have to calling him Uncle Tom, but of late he has failed to let it irk him, satisfied with the esteem in which New Yorkers both black and white hold him. The fact that folks in other cities have even started naming theaters after him is also a bit of colsolation, especially since he has so far been unable to find any one of his detractors capable of employing him at even a fraction of the money paid him by the studio to play what they know will sell to the white public which after all they have to please or stop making pictures. "Little Bo." as he affectionately calls Mrs. Robinson, and who is incidentally his severest critic, says that if the Negroes would pool their money they could build at least one large studio and then make the kind of pictures they want and Bill would be just as willing to work for them with a little brown Shirley Temple.

**Joe Louis,** world's heavyweight champion, here for a softball game at Wrigley Field, has been stealing the spotlight at the Dunbar hotel where crowds are accustomed to gather to watch and greet the celebs. Henry Armstrong is here too making what seems to be Luminary Week in theatrical, radio and fistic worlds. The champ is also being contacted toward making his first picture while here on a short rest and is due to take a screen test next week.

**Joe Stevenson's** floor show for the re-opening of the Cotton Club was put through their pace all last week at the old Savoy at 5th and Central. They were ready with some classy numbers and spectacles by the time the band was due, one of the most elaborate and tuneful being a coronation scene with Jimmy Lunceford as the king to the melody of his tune, "Swingin' for the King." Joe has completed his cast of principals with the classy team Earl and Francis, formerly known as the Carioca Dancers, who left the Paradise Club to take the engagement.

**The Paradise Club** has as its current show one of the finest ever staged by that ace producer Lew Crawford. It is in reality two shows for the first at 11:30 and the second at 2:00 a. m., are entirely different. The principals are Jesse Pryor, show; Flink Moore, popular comedian; Sue Hoye, ever in demand as a blues singer; Sam Montgomery, recently of Flennoy Miller's road dancer; Tony Anthony, one of the west's best entertainers; Garbo, a dancer and Earl and Francis completing their last week before going into the Cotton Club.

## THE HOG SITUATION

Slaughter supplies of hogs during the coming fall and winter marketing season, October 1937 through April, 1938, are expected by the Bureau of Agricultural Economics to be somewhat smaller than those of a year earlier. With prospects for a somewhat smaller tonnage of hogs for market and for the maintenance of a fairly high level of consumer demand for meat, hog prices this fall and winter probably will average at least as high as a year earlier. In the fall and winter of 1936-37 the average price of hogs at Chicago was about $9.90.

Most of the reduction from last year in the supplies for the fall and winter season probably will occur in the first 3 months (October-December). Although supplies in this period will be considerably smaller than a year earlier, they will be seasonally larger than the small supplies of the past 3 months (July-September, 1937). It is probable that hog prices will experience about the usual seasonal decline during the coming fall and early winter.

It now appears fairly certain that the 1937 corn crop will be much larger than that of 1936 and about the same at the 1928-32 average. With lower corn prices and relatively high level of hog prices in prospect, the hog-corn price ratio in 1937-38 will be very favorable for hog feeding and hog production. It is expected that weights of hogs marketed in 1937-38 will be considerably heavier than in 1936-37. The larger supplies of corn and the favorable relationship between hog prices and corn prices also are expected to result in a materially larger spring pig crop in 1938 than in 1937.

Following the marked advance in hog prices from Mid-June to early August, prices declined sharply in the last half of August and early September. This decline in prices was brought about largely by a considerable increase in hog marketings in the last half of August, a large out-of-storage movement of hog products during the months, and relatively high temperatures over most of the country which temporarily weakened the demand for pork. About mid-September, hog prices again advanced sharply, recovering a large part of the loss of the 3 preceding weeks.

## SAYS TOMATOES WILL BEAT HIS COTTON RETURN

Three and one-third acres of tomatoes made more money for C. C. Barton, Parkdale, than he estimates he will make on 14 acres of cotton, said R. A. Cody, Ashley county agent.

The tomatoes brought $791, Mr. Barton's records show.

Before the plants were set in the field, the land was given 800 pounds of 6-12-6 fertilizer to the acre, and 75 pounds of nitrate to the acre was used as a side dressing.

An irrigation of the crop once in May, from a bayou, added $200 to the returns, Mr. Barton figures. The total cost of production was $190, including labor, seed, fertilizer, and marketing.

"Mr. Barton is a tenant farmer, paying cash rent, and has never had any trouble renting farms," the county agents related. "He does not depend on one crop as most tenants do. He is considered one of the best farmers of the community.

"Due to the fact that Mr. Barton is the only farmer growing tomatoes at Parkdale, he has to market his crop at Fountain Hill or Monticello, and he lost part of his crop because the tomatoes did not mature as early as the hill crop and the buyers had left the market points. He estimated he lost $200 for lack of a market."

## PEACH BORERS NOW IN TREES

### MAY BE GASSED WITH P. D. B., EXTENSION EXPERT ADVISES

Early last month the peach orchards were visited by unwelcome and costly guests, advises P. T. Ecton, extension horticulturist. These guests were small, steel-blue moths, resembling wasps, which laid eggs that have by now hatched into the well-known and pestiferous peach tree borers, he explained.

The borers may be found in the trunks of the trees at the surface of the ground, or just a little below it, and may be located by the gum around the base of the tree," the specialist said.

"Borers are about an inch long, yellowish white, and have a dark, reddish head."

In Nature's plan, which so often conflicts with man's, the purpose of the borers is to become moths to lay more eggs to prounce more borers and so on, year after year. But the peach grower can break up that project, to the great benefit of his trees, by using a drug known as paradichlorabenzene, and commonly called P. D. B., probably for the sound reason that so few people can remember paradichlorobenzene, or pronounce it if they could.

**Fumes Poison Pests**

Mr. Eston told how to use P. D. B., as follows:

"By the last week in September and the first week in October all of the eggs have hatched and the young borers have not penetrated deeply. P. D. B., can be secured at most supply houses and should be in the finely granulated form, and pure.

"A small area must be scraped at the base of each tree and the P. D. B., applied in a band about two inches wide and at least one inch away from the bark. One ounce is required for trees five years and older or three-fourths of an ounce for younger trees. This band of the chemical is covered with several inches of dirt and then firmed.

"The fumes of the P. D. B., spread downward through the soil and kill the borers. On those trees where borers are working above the surface, the soil should be mounded around the base of the tree before the chemical is applied.

"In case of a very cool or rainy fall, the mounds around the younger trees should be opened to prevent injury in about six weeks. While bores attack apple trees P. D. B., must not be used because of injury."

Governor Berry returned from Louisville with a suit made from Arkansas cotton, which was spun, wove and manufactured on the Exposition grounds. The cloth is a very handsome twilled goods, black with short diagonal stripes of white, and the coat is made up after the approved sack pattern. The lining, which is of black, is silk flowers on either side.

## Virginians Form Norfolk Club In New York City

New York City, Oct. 14—(ANP) Virginians residing here are rallying their forces to support the Norfolk League Club, an organization recently formed to take care of their civic, social, and welfare needs. Thomas H. Banks, president and founder, in addressing the meeting, admonished the members "to take a greater interest in the political, social, and civic affairs of the community and at all times strive to set the standard for good citizenship—in order to reflect credit on the club and the race generally."

A collation was served in the newly renovated restaurant of "Chicken-Banks". Officers of the club are: Thomas H. Banks, president; Arthur Cuffee, vice president; Carter S. Bowling, secretary; and James H. Stokes, assistant secretary.

# R. H. Boyd Photo Print

**EVERY BAPTIST CHURCH, SCHOOL OR RELIGIOUS AUXILIARY SHOULD HANG ONE ON THEIR WALLS AND HAVE IT AT HOME**

**Large-size Engraving of the Builder of the National Baptist Publishing Board's Plant will be sent upon Receipt of Twenty-five cents in Postage. No Charge for the Picture.**

Dr. R. H. Boyd

Because of the large demand from the religious forces of the nation for pictures of the late R. H. Boyd, the Secretary of the National Baptist Publishing Board, who is the son of the founder, has had the lithographers to print a large quantity of these. The exact size of the photo-print is 11 inches by 14 inches. It is a splendid reproduction of this giant of Baptist leaders. The name is under his picture, and it is a side view.

The picture will be sent securely wrapped in a tube to prevent it from being crushed. When it arrives at its destination it can be framed. The Secretary of the Publishing Board declares that he is having these ready to be mailed out, so that during the month of March, 1938 every School that wishes to hold Boyd Memorial Exercises will have a large-size picture of the late Dr. Boyd on hand, and they can point him out to the present generation. They can show this picture to the thousands of boys and girls who never saw him. They can point him out to the tiny tots, who in a little while will be grown-ups..

The National Baptist Publishing Board, which was founded by this Baptist stalwart, is but one of the institutions that was built, established and headed by him during his life time.

**Send all letters to**

**HENRY ALLEN BOYD, Secretary**

**523 2nd Avenue, North, Nashville, Tenn.**

## LIKES MILK COOLING ROOM FOR HER PLANTS

A glassed-in milk coolingroom and well room, is also an ideal place for her flowers, Mrs. Mattie Stripling of the Harmony home demonstration club, told Miss Ruth McIlnay, Van Buren county home demonstration agent.

This room, which has just been added to the Stripling house, is not only fine for its main purposes, but it protect house plants from the hot glare of summer, Mrs. Stripling said, and she believes it will also be an excellent winter shelter for her flowers.

The room has a concrete floor, with a concrete cooling tank about 18 inches up from the floor, along one end, as the home demonstration agent described it. This arrangement of the tank, she pointed out, makes the room easy to clean. A drain pipe carries the water from the tank, when the milk has warmed it to shrubbery outside.

Milk and butter keep well in the tank. Miss McIlnay said, a liberal supply of fresh water being available from the well, which is in the room right next to the cooling tank.

Shelves along the south side of the room are loaded with ferns and flowers. They are handy to water here, Mrs. Stripling observed.

---

You might as well expect to run a powder mill in h—as an honest government with an overflowing treasury.

## HUGE SUMS SPENT BY AUTO TOURISTS

Estimates of the amount spent by tourists in the United States range as high as $5,000,000,000 for 1936, says the U. S. Bureau of Public Roads.

In Maine the value of the tourist trade is ranked second only to that state's entire agricultural output the Bureau continues.

California places the tourist trade next in importance to her great petroleum industry; in Michigan, the center of the automotive industry, it ranks second; in Wisconsin, its value as a producer of revenue is exceeded only by that of the dairy industry; and in Florida during the 1935-36 season, the tourist trade is estimated to have been many times the value of the entire citrus crop.

Estimates of the distribution of tourist expenditures may be judged by comparing the east and west coasts, the Bureau adds.

The New England council reported as representative of that section: Food, 21 per cent; lodging, 20 per cent; transportation, 20 per cent, retail stores 25 per cent, recreation and amusement, 8 per cent; and miscellaneous items, six per cent.

Californians, Ins., however reported Food, 36.9 per cent; lodging, 28.2 per cent; gas, oil, and car expenses, 10.1 per cent; local transportation, 5.3 per cent; clothing, 5.5 per cent; recreation, 3.7 per cent; souvenirs, 3 per cent; and camera supplies 2.6 per cent.

## All's Well Now At A. & T. College, Says Late Report

Raleigh, N. C., Oct. 14—(ANP)—Four Negroes, among them Carl A. Harris of Warrenton who arranged the conference, told Governor Hoey Monday that recent charges against Greensboro A. and T. College were of no consequence and affairs at the institution are now satisfactory.

Recently Holt McPherson, white, High Point newspaper editor, submitted a one-man report of his investigation of the college's conditions. The governor said he had carefully read the complete report and would refer it to the board of trustees, but added it might be some time before the trustees meet.

# Select Seed Corn While in the Field

## GOATS SUPPLY MEAT AND PAY CASH INCOME

An average monthly cash income of $10, and milk and meat for family use, is the record of Mrs. O. A. Spears, Rosie, has made with her herd of 42 goats, 14 of which are now giving milk, said Miss Dora Mae Anderson, Independence county home demonstration agent.

During May and June, the cash sales of cream amounted to $15 a month, but other months were not quite so profitable, Miss Anderson related.

From March till September the goats cost "nothing but their salt," Mrs. Spears told the home demonstration agent. They ate 25 pounds of salt a month, which cost 35 cents. The fall and winter feed for the goats is grown on the farm.

Seven years ago Mrs. Spears started with two pure bred goats, which she purchased for $35 and $5 each. One was a Saan and the other a Toganburg. From this beginning the present herd was built up. Next year Mrs. Spear will have 25 milk goats more than twice the number giving milk now.

Mrs. Spears has a separator and sells cream. Last year she sold $59.62 of cream from the goat milk and this year with more goats to milk her sales are much larger. She feels that the milk furnished her family pays for the feed the animals eat during the year, and that all she makes from the sale of cream and animals is profit.

The goats furnish fresh meat for the family table. Last year five goats were killed for fresh meat and this year three have been put to this use. Some of the goat meat is canned.

Mrs. Spear has just bought a $249 kerosene refrigerator, and plans to pay for it by selling cream. With the refrigerator, she can give her milk and cream better care and increase the returns, Miss Anderson observed.

## BROOMS MADE AT HOME PAY $392 YEARLY

**Turn Spare Time into Cash for Farmer in Green County**

Rainy days, evenings, and other spare time have been turned into cash by W. H. Williams, farmer, who lives three miles north of Paragould, by making brooms to sell, said John Stephens, Green county agent.

During the past 10 years, Mr. Williams has made an average of 125 dozen brooms a year in his spare time, the county agent related.

"The average cost of the brooms, including the wire for wrapping, and twine, has been 86 cents a dozen, and they have sold over the 10-year period for an average of $4 a dozen," Mr. Stephens said. "Thus Mr. Williams has got $3.14 a dozen for his labor in growing the broom corn and manufacturing the brooms.

**No Trouble Selling.**

"On that basis, this home enterprise has paid an average annual income of $392.50 above the cash outlay for materials."

Mr. Williams grows all the corn for his brooms, and he can make two dozen brooms a day, the country agent continued, adding:

"Finding a market for the brooms has never been a problem. Certain local retail merchants in Paragould depend entirely on Mr. Williams for their supply.

"The machinery used cost around $140, and the depreciation is small, since it has been in use for the past 10 years."

**Low-Yielding Diseased Plants May Be Cured This Way**

Seed corn should be selected in the field rather than from the crib. This gives an opportunity to study the parentage and to eliminate seed from low yielding diseased plants.

1. The plants from which seed ears are taken should be from areas with a regular stand rather than those with long skips on both sides of the plants selected.

2. The plants should be of medium height for the variety.

3. The stalks should be of medium size for the variety and the joints or intermodes neither excessively long or short.

4. The blades should be of good texture and show no signs of coarseness.

5. The plant should be free of disease such as smut, root rots and ear rots.

6. The plant should have a well developed root system as is shown by its anchorage to the ground.

7. The number of ears per stalk should be typical for the variety and they should be well formed. Prolific varieties should have two or more good ears per stalk.

8. The shanks of the ears should be of such length and strength that they will permit the ears to hang over with tips down without breaking.

9. The shucks should be of good texture, close fitting and extend well over the tips of the ears. This is protection against weevil, corn ear-worm injury and tends to keep out smut and ear rots.

10. When gathered the shank scar should be light in color and show no dark streaks.

11. The grains should be well filled out and held firmly on the cob. The hearts or germs should be clear and plump.

12. The corn should be gathered when mature, and stored for protection from weather or insect injury. In order to be able to eliminate the poor ears, two to three times more ears should be harvested than are needed for planting.

## Tragic Death Met By Youth

Chicago, Oct. 14—(ANP)—Cornelius Thompson, 19-year-old youth living in Marion, Ill., met a tragic death in Chicago last Wednesday when he fell beneath the wheels of a fast Wabash Railroad train as he fell from a freight train he was attempting to board at 64th and Wallace streets. The victim's body was severed as the wheels of the passenger train passed over it.

The gruesome tragedy was described by Thompson's companion, Manson Housely, 20, also living in Marion, who told police he and Thompson had been seeking employment in Chicago, that finding none they had decided to "bum" their way home.

He said that at the accident scene they both had seen the southbound freighter and had run across the tracks to board it just as the fast north-bound passenger train shoved into view. He believes Thompson lost his grip on the freight train, fell in the path of the oncoming "flyer". The body was taken to county morgue pending arrival of Thompson's relatives from Marion.

# LEADING COLORED LAWYER DESERTS REPUBLICAN FOLD

## Raymond P. Alexander Of Philadelphia Protests Action of Party Bosses

Philadelphia, Oct. 7 (ANP)—In a letter addressed Thursday to the president judge of Philadelphia courts, a leader in Pennsylvania Democratic ranks, Raymond Pace Alexander, noted lawyer and for many years a leader of the Republican Party, announced he had changed his party allegiance and in the future would support the principles and leadership of the Democrats.

This defection, the attorney announced, is caused by failure of the Republicans to give adequate recognition to its many Negro supporters, particularly in the matter of judgeships.

"The political party that has prospered in Philadelphia for a half century with the constant support of the large mass of Negro people within its borders, now numbering 250,000—with more than 120,000 registered voters, has failed us outrageously," he said.

"At a time when they could have shown their gratitude for 50 years of slavish fealty, they flatly insulted us by refusing to name a man of color for nomination to a position of trust and honor so long sought and deserved by our race. Their failure to do so spells the last word of a long chapter of indifference, disloyalty and utter deceit to the Negro people of this city and state. Their position must be accepted as a proclamation that they would rather lost without us than win with us."

Mr. Alexander promised to use all his energy and influence to help defeat the Republicans in the coming election.

### STOPS DAMAGE BY WEEVILS IN STORED GRAINS

**Treatment With Carbon Disulphide Advised by Specialist**

Farmers of the state are warned by H. H. Schwardt, department of entomology in the Arkansas college of Agriculture, of possible damage to corn and small grains by grain weevils unless certain precautions are taken.

Increased acreages of small grains have caused larger amounts to go into fall storage, Mr. Schwardt continued. The scarcity of machinery delayed threshing on many farms, so that small grains stood in the shock for weeks. a circumstance favorable to the weevils and grain moths.

To prevent injury, grain should be threshed and stored as soon as possible after cutting, and fumigated with carbon disulphide if weevils are present, Mr. Schwardt advised, adding:

"Carbon disulphate is a colorless liquid, which catches fire very easily, and for that reason must be handled with care. It evaporates readily, forming a gas heavier than air, and this gas settles down into stored grain and kills the weevils.

"When fumigating grain, carbon disulphide is used at the rate of eight pounds for each 1,000 feet of space, including the space occupied by the grain.

**Building Must Be Tight**

"The liquid should be put in flat containers, such as lard can lids, and placed on top of the grain. Not more than two pounds should be placed in one container.

"In preparing for fumigation, the crib building should be made as nearly airtight as possible. Knotholes, cracks, loose windows, openings between roof and plate, roof ventilators, and every other opening must be covered with wood or heavy paper. Several thicknesses of newspaper are fairly effective for this purpose.

"When all is ready, pour the liquid into the containers, close and cover the door, and allow the fumigation to continue for 36 hours.

"Since carbon sulphide catches fire so easily, it should be handled with the same care as gasoline. Fire or excessive heat must be avoided in buildings being fumigated. Care must be taken not to drop steel tools on surfaces which might make a spark, or to throw electric switches on or off near the liquid."

Fumigation should not be attempted when the temperature of the grain is under 65 degrees F., and best results are obtained when the temperature is above 70 degrees F. Mr. Schwardt said.

### COWS BRING AID TO HILL FARMERS

Calico Rock—"Calico Rock vicinity," said one of the state's agriculture leaders this week," is about the rockiest section I know of. But they sure do have the Jersey cows there, and in my opinion they're on the right track to better rural living."

The farmers of this section decided a few years ago that in order to attain satisfactory living conditions and accomplish the things they dreamed of, they would have to go in more for cows and less for cotton.

Another step was taken when a new cheese factory was opened at Calico Rock in the summer of 1936. The new plant had a humble beginning. It started with only six or seven hundred pounds of milk per day, but within eight months it had grown to capacity, which was 10,000 pounds per day. Now, all things being normal, there are enough producing cows in the Calico Rock section to furnish a still larger plant.

It is expected that even better results will be evident within another year or two, due to the fact that some purebred sires of the very highest quality have been brought into this locality. A high grade Guernsey bull was obtained from the Missouri Pacific Railroad Company, coming direct from the company's farms. Several heifer calves, daughters of this great bull, are now growing up.

## Roxborough Spikes Rumor That Joe Will Retire Next Year

San Francisco, Oct. 7—(CNA)—While rumors of a retirement from the ring in '38 continued to circulate in three eastern cities, Joe Louis, heavyweight champion of the world and idol of Negro America, on tour with the Brown Bombers' soft ball team, stated that he expects to see at least three or four years more of service in the ring.

This followed an earlier statement of Julian Black and John Roxborough, who have been managing the Brown Bomber's destinies since he turned "pro" in '34, that Joe had no intention of quitting the ring immediately.

"Since he licked Braddock, Joe's greatest ambition has been to retire an undefeated champion," Roxborough said, "and regardless of how people felt since he won the decision from Tommy Farr, Joe himself knows his fighting abilities. He is sure of fighting at least four years more. If he still holds the title, or has lost or regained it during that time, he'll satisfy that ambition by quitting at that time forever."

Joe is only 23 now and won't be 24 until next May 13. He won the heavyweight title at a much earlier age than most champions. He is still growing and developing which means that he has several good years left to defend his crown. He is suffering from no physical handicaps. If he should retire from the ring in '41, he would then be only 27 years old.

### HOUSE-GROWN PEACHES ON DWARF TREES ARE PROMISED FOR FUTURE

Maybe you can soon grow peaches in your parlor.

Dwarf peach trees have been developed at a nursery in Louisiana, Mo., which took over some of the work begun by the late Luther Burbank, plant wizard, it is reported. The dwarf peach trees were one of the things he had begun when death called him.

Results of this undertaking, which is not yet completed, are described in a news story as follows:

Scarcely 15 inches in height, the bushy tree can be grown in an ordinary pot a little larger than a good sized flower pot. The leaves are the same color and size as ordinary peach leaves but that they are much closer together.

H. L. Reed, one of the men who is carrying on the Burbank work, said the fruit of the dwarf trees would be comparable to the average-sized peach and of equal quality. Right now the fruit is about the size of a walnut.

Later, after the distinguishing features have become fixed, the dwarf peach tree is to be patented and exclusive rights to its propagation will be held by the company which developed it, just the same as mechanical inventions are patented. Mr. Burbank urged a law of that kind for years but it was not enacted until four years after his death in 1926.

### PLANS ON 1,000 QUARTS FOR FAMILY OF FIVE

Mrs. J. W. Thompson, of the Riverview home demonstration club, believes in a live-at-home program for her family of five reports Miss Mary White, assistant home demonstration agent in Conway county.

"This summer Mrs. Thompson has already canned 706 quarts of fruits and vegetables, and she has yet to can apples, pears, tomatoes, corn, peppers and lima beans," the demonstration agent said. "When later crops are added to shelves now laden with 201 quarts of peaches, 102 quarts of green beans, 93 quarts of blackberries and dewberries and many other canned foods, they will probably bring her total to 1,000 or more quarts.

"In her fall and winter garden Mrs. Thompson planted potatoes, turnips, lettuce, spinach and onions."

### SAYS FALL OATS OFTEN ARE PLANTED TOO LATE

Many growers in Arkansas plant winter oats too late and do not use sufficient seed for the best results H. R. Rosen and C. K. McClelland, of the state College of Agriculture, say. They recommend two bushels of seed per acre and that the planting should be done from October 1 to 10 in the cotton-growing area, and in late September in the hilly sections.

Oats planted much later than the dates named are likely to give a poor stand and to make such a reduced amount of growth that their value in preventing soil erosion, as well as for yields of hay or grain, is considerably curtailed, the specialists point out.

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**

**Theological Kernels**

*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

# FREEDOM OF ALL SCOTTSBORO BOYS URGED BY FEDERATION OF LABOR

## Convention Also Takes Stand for Independence of Ethiopia After Speech by Colored Delegate

Denver, Oct. 21—(CNA)— The annual convention of the American Federation of Labor, meeting in this city, went on record this week for freedom for "the remaining defendants in the Scottsboro case" and denounced the rape of Ethiopia by Fascist Italy.

It was the first time that a convention of the A. F. of L. took favorable action on a resolution in behalf of the Scottsboro boys, although it did this in a cautious way by urging "the public authorities to bring the case to a close." Observers interpreted the belated action as a result of pressure arising from the drive of the CIO to organize the unorganized, Negro and white, neglected for decades by the A. F. of L.

A. Philip Randolph, international president of the Brotherhood of Pullman Porters, earnestly urged the convention to "boycott Mussolini for his rape of Ethiopia," in a speech on his resolution for aid to the Ethiopian people.

"The winning of independence for Ethiopia is fundamental to world peace," Randolph emphasized, as he brought the question of Spain into a discussion from the floor for the first time in this convention. He charged that complacence of the nations of the world to the Ethiopian outrage had led the fascists "to attempt to destroy the Spanish democracy."

The Resolutions Committee and the convention sent the resolutions to the Executive Council, with the request that "it do all in its power to achieve the independence of the Ethiopian people."

# 3 SMALL CHILDREN TRAVEL TO GOTHAM TO SEEK MOTHER

## Youngsters Wait Many Hours Because Parent Read Time Table Wrong

**New York,** Oct. 21—(ANP)—A wait of many hours held no terrors for Tommy Strickland, 4 years old, and his two sisters, Winnie Mae, 2, and Carrie, 6, when they arrived at the Pennsylvania station at 6:58 a. m. Wednesday to find their mother, Mrs. Essie Strickland, was not there to greet them.

The three children, who traveled alone from Jacksonville, Fla., aboard the Havana Special, looked anxiously up and down the platform for their mother, who came here last June to find a job and then sent for them after getting employment as a maid. Tommy, whose bare feet flinched as they touched the cold concrete, took command and shielded his sisters from a lurching baggage truck as he peered into the faces of the crowd.

They were not there long before a representative of the Travelers' Aid society found them, for they were wearing tags from the Jacksonville branch of the organization saying they were en route to Mrs. Essie Strickland, 1212 Butler avenue, Far Rockaway, Queens.

Unperturbed, they ate breakfast and luncheon as guests of the society while officials hunted the mother. They finally located her at a new address, as she had moved from the old two months before. Mrs. Strickland said she was not at the train because she thought the train came in at 6 p. m. instead of around 6 a. m.

### PIG HARVESTED CROP ON FOUR ACRES, PAID $40

Grady Alexander, Delight, makes good profit from hogging off corn and peas said W. F. Spirey, Pike county agent.

On four acres of corn and peas which would have averaged 15 to 20 bushel of corn to the acre and a good crop of peas, Mr. Alexander used twelve head of hogs to good advantage in gathering and marketin the crop, the county agent related. These twelve head of little-bone Poland China averaged 170 pounds each when placed on the crop and within three weeks they were sold at an average weight of 200 pounds each. Thus there was an average gain of 30 pounds a head or a total gain of 360 pounds for the lot.

Since the hogs sold for 11.1 cents the gain they made was worth $40.

Mr. Alexander states the hogs represent his cotton crop and that for the last few years, his cash crop has not been as changeable as the cotton situation.

### DO NOT PULL FODDER

Farmers all about in Georgia now say that farmers all over the state have lost a great deal of money by pulling fodder.

"The moment the fodder is pulled the corn ceases to develop," said one farmer who was 'raised on fodder pulling,' and who was well advanced in years before he knew any better. "Any man who pulls fodder as we have always been pulling it in Georgia sacrifices ten per cent of the corn crop. Let the fodder stay on the stalk. We can raise so many kinds of forage, it is unnecessary to injure the corn by trying to save fodder. Peavine hay is a great deal better, and cost very little to grow, O-TouTan beans will make three or four tons of hay to the acre, and a ton of them is worth for feed about four tons of fodder. We have plenty of inexpensive forage and it really seems a crime to injure the corn field by pulling the leaves off the stalk."

—Macon Daily Telegraph.

## E. A. Watts Loses G. O. P. Race To N. Y. Lady Lawyer

**New York**—(C)—Mrs. Sara Pelham Speaks, who took the case to Supreme Court in the fight for the Republican nomination for Assembly in the 21st district, was declared winner after she was five votes ahead in the recount. Attorney E. A. Watts was the loser. Robert Pelham, director of the Capitol News Service of Washington, D. C., father of Mrs. Speaks, was with his daughter throughout the fight. Mrs. Speaks now faces Assemblyman William T. Andrews, Democratic incumbent at Albany from her district.

### TWICE AS MANY PIGS AND HEAVIER ONES BY KEEPING SOWS UP

Guy White, Hamburg, finds that it pays to keep hogs under fence even though he has access to free range, he told R. A. Cody, county agent in Ashley county.

Mr. White said that he can make more money per head of hogs on a few acres of good pasture properly handled than he can make by letting them run loose on the range, the county agent related. The sows will raise twice as many pigs and the pigs will weigh more, he has found.

"Mr. White has one sow that produced $50 worth of pigs in 1936, besides meat for home use,' said the county agent. "From the same sow in 1937 Mr. White got nine pigs, weighing about 70 pounds each, and eight that weigh about 25 pound each.

"The pigs will bring him over $100 when sold this fall."

# DERBIGNY APPOINTED REGIONAL OFFICER OF AMERICAN TEACHERS

**Durham.** N. C., Oct. 21—(ANP)—Announcement comes from the Office of the President of the American Teachers Association of the appointment of Dr. Irving A. Derbigny as Regional Vice President of the Association. Region number 2, to be presided over by Dr. Derbigny, is composed of the States of Alabama. Georgia and Florida. Mrs. Agnes Jones, former Regional Vice President of this area, welded it into one of the strongest regions in the country. Dr. Derbigny, who is beginning his third year as Administrative Dean of Tuskegee Institute, holds the Degree of Doctor of Philosophy from Columbia university. A graduate of Talladega college, he holds the Degree of Master of Arts from Cornell university. He is a member of Sigma Xi and Phi Lambda Upsilon Honorary Societies. A graduate of Talladega college, he has done graduate work in College Administration at Columbia University and at the University of Minnesota where he has spent the past three summers. The appointment of Dr. Derbigny to this position is most timely in view of the fact that the next Annual meeting of the American Teachers Association, which was formerly the National Association of Teachers in Colored Schools, will be held at Tuskegee Institute in June, 1938. Dr. Derbigny will have complete charge in Region number 2 in perfecting plans for the 1938 meeting of the Association.

## Episcopal Leader Asks Convention For Sum of $50,000.

**Cincinnati,** Oct. 21—(By H. J. N. Samuels-Belboder for ANP)—Dr. Robert L. Patton, director of the American Church Institute for Negroes of the Protestant Episcopal church, addressed a mass meeting last Wednesday night at Taft Auditorium, the meeting being held in connection with the General Convention of the Episcopal church which attracted upwards of 2,000 delegates from all sections of the country.

Dr. Patton told his audience that the program for Negroes of the Protestant Episcopal church is in jeopardy and that two of the largest institutions for Negroes, with 1,500 students face closing unless the General Convention provides an additional $50,000 annually to carry on the work among Negroes.

Under the auspices of the Protestant Episcopal church the Institute operates a chain of Normal and Industrial, a Theological Seminary and St. Augustine's College—nine in all—in the so-called Black Belt of the South. Dr. Patton pointed out that the wealth of the South is inadequate to meet the educational needs of the Negro and that the Episcopal church: "Through its American Institute for Negroes must not retreat in this divine ministry of education for Negro youth."

He continued: "The mission of the Institute is to aid millions of neglected middle-class and poverty-stricken Negroes___I am convinced that our church is rendering indispensable service to America and to the future of the Negro Race by maintaining the largest system of schools of this Institute type, of any religious type, of any religious body." He added that the church schools not only teach Negroes how to live but also how to make a living.

Commenting on the economic status of the Negro, Dr. Patton warned that skilled and semi-skilled Negro laborers "are at the mercy of trade unions, often barred from membership, and forced 'to scab' in order to work." The Negro population of 12,000.000 operates 22,000 business establishments, earns and buys annually $4,500.000 worth of goods, has $206,000.000 worth of church property, spends $43,000,000 each year on religious enterprises, and has 60 doctors of philosophy, 16 members of Phi Beta Kappa, and 97 persons listed in "Who's Who in America," Dr. Patton concluded.

Rt. Rev. James DeWolf Perry, Presiding Bishop, and Rt. Rev. Philip Cook, Bishop of Delaware and President of the General Council, were among the dignitaries who attended the meeting.

# THREE GROUPS READY TO FIGHT REVIVAL OF INTOLERANCE, SAYS

**Washington,** Oct. 21—(ANP)—A warning against revival of religious or racial intolerance in America was voiced by Former United States Attorney Leo A. Rover, white, principal orator at Columbus Day exercises held by the Knights of Columbus at the base of the explorer's statue.

"There is no place in America for any man or set of men who discriminate against any other man because of creed or race—as, praise God. some recent developments have so eloquently shown," Rover said.

"If there are those in this country who are attempting to revive a movement having for its object political and business discrimination against Jews, Negroes and Catholics, we give them fair warning that these three groups do not propose to tolerate such discrimination and, what is more, in our refusal to tolerate it we will be joined by countless numbers of our fellow Americans.

"If it be true, as has been said, that there has been unloosed a concerted campaign to rekindle the flames of religious and racial prejudice. it was not started by any one of these three classes of citizenry; for no matter how saddened they may feel concerning the event that gave rise to the current discussion, these same three classes of respected, honorable citizens, irrespective of party affiliation, proclaim with joy in their hearts the utmost absence of the faintest trace of religious or racial bigotry in either the character or career of President Roosevelt.

## E. St. Louisian Killed In Fist Fight At Lodge

ST. LOUIS, Oct. 14 (ANP)—Wheler Dean, 40 years old, residing on N. 14th Street, died Monday from a fractured neck suffered in a fight Sunday morning with Ted Simmons. The latter, arrested, admitted to police that he struck Dean with his fist, knocking him down the stairway of the lodge hall on Walnut Ave., where the fracas occurred. He declared, however, that Dean had first attacked him with a knife. His statement was disputed by a witness who told police that Dean had no knife and that Simmons strnuck him from behind.

THE REVISED
HYMNAL
JUST OFF THE PRESS
Responsive Reading
and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

## YOUR MONEY'S WORTH

Continued from Page 2)

it is artificially stamped on.

Often a grain pattern peculiar to the hide of one animal is embossed on that of another or on a flesh split, making it difficult to tell whether it is a true grain or not. Cattle hides, as well as other heavy hides, are sometimes split to the thickness of lighter-weight calfskin, embossed with the natural grain of calfskin and sold as calfskin. Genuine calfskin is seldom split.

Calfskin is considered a strong leather. Its flexibility makes it a desirable choice for general service. Calf leather, like side leather, is finished in a variety of ways. It may be treated with a smooth, boarded, embossed, or glazed finish. Dull calf leather is leather that has been heavily waxed on the flesh side. Buffed leather, which has less nap than suede, is finished on the grain side, part of the grain surface being taken off with an emery wheel.

Most of our suede footwear is made of calf finished on the flesh side, but suede shoes may be shoes made of many different leathers. Thus sheepskin takes a suede finish and at first glance may seem to look like calf suede. The best suede has a fine, silky nap, with no indication of greasiness. It has a rich, uniform color which does not rub off easily. One can rub a handkerchief lightly over the surface of good suede and only a faint color will show on the white cloth.

Coatings of special varnishes or enamels turn calf. side leather, and other leathers into shiny patent leather shoes. Patent finish is usually applied on the grain side. In patent leather of good quality, the grain will show through the varnishes. The attractive appearance of patent leather often makes it first choice for dress shoes. Feet shod in patent leather often get hot because of its airtight and watertight varnishes.

Leathers made from hides of different animale have distinct characteristics and vary in the durability and the type of service the consumer may expect from them. Cordovan leather, one of the most expensive materials used in men's shoes, is made from the rump of a horsehide. It is a scuff-resistant, long-wearing leather, but its close texture does not make it desirable for every foot. Many people need a more porous leather to allow their feet to breathe. Shoes made of kangaroo leather are usually costly shoes. It is the strongest leather known for its given weight and thickness and gives excellent service, as it does not readily scoff, chip, or crack. Shark leather is a recent addition to the materials used in shoe uppers. Though no leather can be called "scuff-proof," shark leather will stand much punishment before showing wear. A relatively expensive leather, it is seldow used for an entire upper, but for the toe caps, especially for children's shoes, it is an excellent choice. All leathers will scuff to some extent, some more easily than others. The finish given to a leather also influences its resistence to scuff. When toes and heels do peel or scar, attention should be paid to them. The loose strand of leather should be clipped off and the scar polished.

Genuine kid leather is not used for shoes. Kid shoes, often the first choice for street wear and for dancing, are really made from skins of goats. These skins finish well in many different colors, are soft, pliable. and porous—characteristics prized in a summer shoe. For winter street wear, kid usually gives way to other leathers which are warmer and more waterproof. Best grades of kid leather are expensive. Bargain sales in kid shoes usually mean shoes made of sheepskin. Sheepskin is soft like kid, but it is very stretchy, is inclined to lose its shape quickly, to scuff easily and to peel at the toes. Sheepskin comes into its own when used as the lining for shoes.

Leather, paper, and cloth ar used to line shoes. Leather, especially for the back half or quarter of the shoe lining, is more satisfactory, as it tends to keep the shape of the shoe and makes a smooth, comfortable inner surface. Insoles of close-texture flexible leather are more comfortable and help to keep the shape of the shoe better than those made out of fabricated material. If you are curious about your insoles you will have to lift a corner of the lining of the shoe in order to examine them.

Counters, or back stays of shoes, are easier to inspect. Stitched to the inside of the shoe at the back seam, they both reinforce the scam and help to retain the shape of the shoe. These stiffeners are made of many grades of leather and fibre. Though solid leather which has been beaten to conform to the last of the shoe is first choice for a counter, a fine-quality material such as those made from hemp or flax or fiberboard is preferable to one made out of cheap leather which has been stiffened with glue. On cheap shoes especially it is important that the counters have "stand-up" qualities.

Construction of a shoe depends to some extent on the service for which it is designed and the price for which it is to be sold. Consumers who are hard on shoes and are constantly taking them to the repair shop will do well to study the constructure of shoes when they buy them. Cost and ease with which new soles can be exchanged for old depend largely on how the soles were first attached to the uppers.

"Welted" and "McKay" are two of the most common types of construction. Over two-thirds of the men's shoes and many of the women's sport shoes are welted. It is easy to spot a welted shoe, as the welt, resting on the projecting part of the out-sole, usually extends a quarter of an inch or so beyond the line where it joins the upper. In building the shoc, one edge of the welt, which is merely a narrow strip of leather is first sewed to the upper and insole of the shoe and the other edge is then sewed to the outsole. The inside of the shoe is free from tacks and stitches. Welted shoes are easily repaired—especially if the narrow strip of leather making the welt is of good quality.

McKay-constructed shoes can be repaired but not so easily as welted shoes. The McKay technique is used for lighter-weight and for inexpensive shoes. Outsole, upper. and insole are stitched together, with the stitch going through to the inside of the shoe. The stitches are then covered with a sock lining.

Stitchdown technique is commonly used for children's shoes. Like the welted shoe, it has no stitches on the inside of the shoe. The edge of the upper part of the shoe is turned out and is stitched directly down to the outsole of the shoe.

Turned soles are found on dainty, costly footwear. Very flexible soles are used and are sewn either by hand or machine to the uppers, and then the shoe is turned right side out. It is difficult to repair turned shoes. New soles usually must be nailed or cemented on the shoes. Technique of cementing the upper and outsole together was formerly used only on cheap shoes, but the method is now being used on higher-grade shoes, especially for women's sandals and cut-out shoes. Modern cemented shoes, if correctly made, have a trimness and lightness of appearance. Nailing and pegging the uppers and soles together are methods used in many cheap grades of shoes and in men's work shoes.

The old saying, "as comfortable as an old shoe," does not necessarily hold true. Well-fitting shoes should be comfortable when new and should not require a long painful breaking-in process.

Shoes of the best quality leather and the finest workmanship quickly lose their shape and give poor service if they are not a good fit. In buying shoes, don't rely on the size marked on an old pair of shoes. Sizes of different makes of shoes are not uniform. Manufacturers are continually changing their lasts—the form over which the shoe is constructed. Insist that the shoe clerk measure your foot when you are both in a relaxed and standing postion.

It is more important for shoes to suit your foot rather than your vanity. Women especially are inclined to place style before comfort in buying shoes. In a survey taken of the footwear being worn by a thousand people at the Wisconsin State Fair in 1925, 40 percent of the men and only 14 percent of the women were wearing well-fitted shoes. Forty-five percent of the boys and 32 percent of the girls had been correctly fitted.

People gamble with health when they try to jam their feet into shoes which give no breathing space to their toes. The shape of the shoe should conform to the shape of the foot. To enable the 26 delicate bones of the foot to lie almost straight, the inner line of the shoe needs to follow the fairly straight line of the foot. The position of the ball of the foot, which distributes the weight and support to the body, should rest at the widest part of the sole, and the shoe should fit snugly under the arch.

Today the fluroscopic machine has an honored place in many shoe stores. By means of the X-ray the foot can be clearly seen inside the shoe. Testing the fit of children's shoes by fluoroscope is especially desirable. A young foot can so easily be compressed in a shoe that is too short or narrow without the child realizing it. Children's feet grow so rapidly that it is better to risk fitting them in shoes that are a little large rather than too short. But adults, whose feet are fully grown, should be careful to get shoes that are neither too small nor too large. Callouses and a "burning sensation" are often the result of wearing shoes that are too big.

Relation between well-fitted shoes and one's general well-being can hardly be overemphasized. Bad posture usually followed by physical disturbances is often traced to ill-fitting or incorrectly made shoes. There is no economy in wearing out a pair of uncomfortable shoes. Foot troubles which may take years to correct are often the result. Consumers suffering from foot ailments should consult a doctor before experimenting with corrective shoes. Thought it is claimed that some foot ills can be cured by orthopedic shoes, the main purpose of footwear is to protect the feet, not to cure foot troubles Wise consumers seriously question the truth of an advertisement which claims otherwise. Recently the Federal Trade Commission has prohibited the use of a doctor's name in advertising a shoe when no doctor is connected with the business. In many States there are laws making it illegal for anyone except licensed medical men and foot specialists to prescribe specific shoes as a cure for foot ailments.

Twenty years ago the consumer determined to wear correctly made shocs was compelled to sacrifice style for the sake of health. Today this is no longer a real problem. Manufactors and educational institutions have tackled this problem.

Since 1924 Antioch College, for one, has carried on an extensive piece of research, studying the relationship of health and body mechanics to various types of footwear. Many manufacturers are making shoes that are generally satisfactory from both physiological and aesthetic points of view.

One way of getting good value from money spent for footwear is to exercise judgment on when and where you wear your shoes. High-hecled, thin-soled. delicate leather pumps are not constructed for long tramps on country roads or city pavements.

Footwear requires some consideration, if it is to give long service. Perspiration is hard on leather. If possible, it is best to have at least two pairs of shoes for general wear so that yon can give one pair a rest.

Polishing or oiling leather tends to keep it soft and pliable and to make it more resistant to water. Wet leather stretches quickly out of shape. Keep damp shoes away from hot radiators, steam pipes, or stoves. Always allow wet leather to dry slowly.

Oil and greasc make ugly stains on leather and should be removed as quickly as possible. Gasoline and other ordinary grease solvents often spread the spot rather than remove it. Best method is to coat the stain with athick solution of rubber ni a solvent which evaporates quickly. The rubber makes a coating on the shoe which should be peeled off when almost dry. If necessary the operation should be repeated a couple of times. Some of the ready-prepared cements, if they are thick and dry very fast and contain nothing but rubber and poor solvent, are very satisfactory.

## Hold Banquet For Louisville Dean

Louisville, Oct. 14 (ANP)— A banquet sponsored by the Kentucky Commission on Interracial Co operation and attended by members of both races was held here Tuesday night at the Central Y. M. C. A. to welcome David A. Lane, Jr., as the new dean of Louisville Municipal college. Representatives of different organizations in the city spoke.

# 300 MEMBERS OF DIFFERENT RACES SIT AT DINNER

San Diego, Calif., Oct. 14—(By M. L. Brown for ANP) With more than 300 representatives of foreign countries and the world's races present. the 13th annual dinner of the San Diego Race Relations society was held last week in the U. S. Grant hotel. Speakers included consular representatives, county and city officials, and Dennis V. Allen, colored, founder of the society. Each in turn stressed the importance of "brotherly love, tolerance, and mutual helpfulness" between nations of the world. Letters from James Roosevelt and Postmaster General James A. Farley were also read.

Hugh E. MacBeth. consul for Liberia at Los Angeles and attorney for the Father Divine interests on the west coast, in one of the featured talks said:

"This society presages the dawn of a new day of racial cooperation on a basis of equal opportunity and equal responsibility. For the past 13 years the society under the leadership of President Allen has maintained in this country an increasing interracial good will and tolerance."

# WIN FIRST SKIRMISH IN CIVIL RIGHTS CASE AT ILLINOIS UNIV.

Champaign, Ill., Oct. 14 (ANP)—A major preliminary skirmish in the fight against race discrimination at the University of Illinois was won Friday when Judge John Armstrong ruled the Hanley-Lewis Confectionary on the campus would have to fact trial in a suit brought by four students for violation of the state civil rights law.

John Sullivan, Charles Collins, Otho Robinson and Richard Haskins Illinois students filed suit in March for damages after the confectionary allegedly refused to serve them because of their color. Representing the students are George B. Nesbitt and Edward B. Toles, Chicago attorneys.

# LEM FRANKLIN IN FINE TRIM, PUTS OVER KNOCKOUT

Chicago, Oct. 14 (ANP)—That murderous right hand, which last spring caused experts to call him the most powerful puncher ever to come up in Golden Gloves ranks. accounted for Lem Franklin's second knockout in six days when he kayoed Max Zona, white heavyweight, in two rounds before 4,625 spectators at the Chicago stadium Wednesday night.

Franklin was fighting on the card which saw Max Marek lose his state heavyweight championship to Harry Thomas. Lem, who weighed 202 to Zóna's 203, dropped his opponent for counts of four, nine, and two in the first round, then put over the finishing punch with a terric right to the jaw after 2:10 of the second round. The previous Friday night at White City he kayoed Lou Campbell in the first round.

As a professional, Franklin has had only three bouts. He lost his debut on a close decision to Paul Williams in six rounds when he was unable to solve his foe's turtle-like defense. Lem immediately waived a second pro appearance while developing his boxing for work in the money ranks, results of which were shown in his two recent starts.

Bowler: "I understand Senator Green wanted you to act as his private secretary."

Simmons: "He did, but I simply couldn't accept the position, because I would have to sign everything Green, per Simmons."

# The DIGEST
## BY FLOYD CALVIN

### LABOR TROUBLE

We note that the Black Dispatch, one of the more progressive papers of our group, has postponed its formal dedication of its new Goss straightline press from October 14 to the 28th, due to labor trouble. The trouble is that the white Pressmen's Union of Oklahoma City, Okla., where the paper is published, wanted Editor Roscoe Dungeen to hire a white crew of three men with a helper to man the press, and not use colored men, as had already been agreed. Editor Dungee announces that he had an understanding with the union that they would coach colored men to man the press, but when it came to a show down, the union refused. Editor Dungee then announced that the press would never be run, if he could not operate it with colored workmen.

We wish to commend Editor Dungee on this stand. The time is past when colored business men can be excused for bowing to prejudiced white unions and refusing to give their own people employment which they cannot get from whites. If it was a question of a union shop, and the union was fair to colored people, then the stand of the union would be justified. But when it is a question of a union shop, and the union is Lily White, we say resist the union to the utmost.

### N. Y. Commission

An important move on the civil rights front is the getting under way of the New York State Commission which is investigating conditions among colored people. The commission will hear testimony on discrimination in employment by public utilities and even the Civil Service and other public employment and will delve into the rumors of organized action among landlords, real estate firms and renting agencies, which is detrimental to the interest of our group.

The Commission has $30,000 to spend in this survey and will confine its activities to the main urban centers. Lester B. Granger, well known for his aggressiveness, is executive director of the Commission, and Hon. William T. Andrews, member of Assembly from Harlem's 21st District, is Vice Chairman and Hon. Robert W. Justice, member of Assembly from Harlem's 19th District, is a member of the Commission. Since Negroes are well represented on the Commission, both as guiding and reviewing officials, and as actual directors of the work, we may expect an honest and vital report, which it is announced will be used as a guide by the New York Legislature in matters affecting the group.

### Klansman Black

It is no longer Mr. Justice Black. It is Klansman Black!

"Justice" Black and "Klansman" Black are not harmonious terms; and since Mr. Black himself asserted over the radio, "I joined the Klan," there is no doubt about who he is.

Klansman Black has been loaded down with a Catholic secretary, a Jewish law clerk, and a colored messenger. No matter. All the waters of the Atlantic and the Pacific cannot wash away his oath to Ku Klux terrorism, take nafter he reached his majority. Had Mr. Black been charged with something for which he was not responsible, there might be some room for a charitable attitude toward him, but such is not the case.

Of course Mr. Black now says he is not in sympathy with the Klan. A great many people would drop the Ku Klux Klan, and many other ties and affiliations, if by so doing they might win greater approbation from their fellows, not to mention important salary increases.

It is now eight Supreme Court Justices, and one Klansman. We're sorry.

## PEARS APLENTY

**Largest Crop on Record is the Experts' Forecast for this Succulent Fruit, Now Rushing to Consumer Markets**

Bite into a pear and be glad that you are living in the twentieth century. It wasn't so long ago that this melting "butter-fleshed" fruit was unknown, although pears of assorted shapes, sizes, and flavor grew long before that. However, these earlier pear varieties were crisp-fleshed, the so-called crevers of the French. Not until the first half of the ninteenth century did the Belgians perform the experiments that were to transform this fruit into its present luscious form. Then the fad of pear breeding struck amateur Belgian horticulturalists with all the force with which the candid-camera craze has swept our United States.

Two classes of pears grow in this country—the European and the Asiatic. Most of our pear varieties, including the popular Bartlett, belong to the first class. Such hybrids as the Kieffer combine both types. Remote as the connection seems, all pears are members of the rose family.

Best known of any pear is the Bartlett, a large handsome fellow that has been appearing at market for the last 2 months. In 1817 when Enoch Bartlett, of Dorchester, Mass., acquired an estate having on it some fruit trees, he would have been as surprised as his neighbors to learn that the pears he sold under his name would prove a sensation in the fruit world. But such was the case. This pear is golden yellow, with a reddish blush on the sunny side and a stippling of russet dots over all. The white flesh is fine-grained, though inclined to be granular at the center. Juicy and sweet, the Bartlett when well-grown sets a standard for fresh shipping pears that is hard to beat. In canning too, it takes highest rank. On the Pacific coast he Bartlett is the first of the important commercial varieties to ripen, its picking season lasting from early July to late August. Two months in cold storage prolong its life as a fresh fruit until mid-October. The trees bear young and live long. Boon to the grower is their ability to adapt to a variety of soil and climatic conditions; despair of the grower is the Bartlett's susceptibility to blight—the black plague of the pear crop.

Consumers looking for the best in a desert fruit should turn their attention to the Beurre Bosc. There is no mistaking the destinctive shape and color of this fruit. A long tapering neck leads to a full, perfectly symmetrical body. The yellow background of the skin is overlaid with russet. Fall months find the Buerre Bosc at its best—juicy, richly piquaint, and fragrant.

Seckel alone surpasses the Beurre Bosc in eating qualities. This is the little, ruddy fruit so delicious in preserves, pies, or eaten fresh. Were the fruits larger, Seckel would play second to no other fruit where popularity is concerned. Seckel pears have a sooth dull skin of reddish brown. Not notable for attractive coloring, the Seckel has, however, a pleasant trim contour. The juicy flesh has a delicate perfume and a spicy flavor. Because much of the aromatic tang lies in the skin, Seckels should never be peeled before eating.

Several other pear varieties deserve honorable mention. Clapp Favorite is fine for local trade but cannot stand shipping—in this respect unlike the Bartlett which it closely resembles. Look for this variety during late summer. Beurre d'Anjou is best of the early winter pears with its large smooth fruit borne on a stubby stem. The yellowish-white flesh is firm, tender and of a heavy vinous flavor. For cooking and home canning the Kieffer deserves a good reputation, the product keeping its shape and color well. Proper ripening in storage will remove the astringent taste and coarse texture that have proven drawbacks when the fruit was eaten fresh. This pear ripens in late October and November to above medium size. Most widely distributed winter pears on the Pacific coast and one of the best for storage is Winter Nelis. Though harvested in September, this is the desert pear that consumers will depend upon from Christmas until late spring.

Consumers who pick out fresh pears for eating shouldn't try to judge the fruit by color unless they are familiar with the pear color palette. According to variety, some pears may be ripe when still green, though other varieties may be immature even though the fruits have reached a high yellow.

Best buys in pears are generally firm, but not hard, and free from blemish. Press your thumb against the base of the stem. If the pear yields to the pressure, the pear is ripe for immediate eating but too ripe for future use.

Some pear varieties suffer from "scald"—a transportation and storage disease caused by gases given off by the fruit. Severe scald cases leave the fruit skin badly discolored, flesh decayed. Another form of injury to watch out for is "limb rub," left by a tree limb rubbing against the fruit in the course of development. This appears as a roughening on the surface of the fruit and may cause hard woody spots in the flesh. As with all fruits, avoid wilted or shriveled pears.

The pear is normally picked when slightly immature and ripened in a cool dark place. Storage-ripened pears, moreover, have a finer texture than the tree-ripened fruit. However, with Bartlett's the custom seems t ohave been to pick them too immature. To determnie the exact time of picking maturity, growers in the Pacific States use a mechanical tester—a metal gadget that measpres in pounds the pressure required to force a smoothly rounded plunger into the fruit to a definite depth. Through experimentation, growers are finding the pressure readings required by the different pear varities.

By no means all pears reach the markets as fresh fruit. Estimates gave the annual per-capita consumption of commercially canned pears in 1934 as roughly a half pound—about one-fifth that of peaches, kingpin in the canned-fruit world. Canners put no premium upon pears of particularly fine flavor. What they are looking for is a fruit creamy in color tending to translucence, of tender flesh but with enough body so that there will be no distintegrating.

Quality grades for fresh pears, as for most fruits, have been set up by the United States Department of Agriculture. Though the use of these grades is optional, they are the basis of much of the trading in the wholesale market. Consumers benefit indirectly since, by means of grades, retailers can stock products of nearly uniform quality. Fresh pears fall under the classifications U. S. No. 1, U. S. No. 2, and U. S. Combination Grade.

Canned pears have their own quality grades, based on color, uniformity of size and symmetry, absence of defects, and character of fruit. Top quality under these U. S. Department of Agriculture stnadards is " U. S. Grade A (Fancy)"; second comes "U. S. Grade B (Choice)," followed by "U. S. Grade C (Standard)." Grades below that harly interest the consumer who is looking for pears for table use.

With pears plentiful, thoughts of homemakers may turn to home-canning ventures. For consumers who, having weighed the relative advantages of the homemade as against the commercially canned product and having counted costs of labor, equipment, etc., decide to try their own skill, here are a few hints that do not appear in every cookbook. To keep pears from turning dark while they are being prepared for canning, drop each piece of peeled fruit into a solution of water, vinegar and salt for a short time. Exact proportions read 2 tablespoons of each of salt and vinegar to each gallon of water. Remember this tip when it comes to canning apples, peaches and apricots, too.

Consumers planning to put to use

# WE WANT YOU

**YOUR FAMILY, AND YOUR FRIENDS AND NEIGHBORS**

**TO ATTEND THE**

EIGHTH ANNUAL CONVENTION OF THE

# NATIONAL FEDERATION OF COLORED FARMERS, Inc.

**Which Will Be Held At The**

**TEACHERS' TRAINING AND AGRICULTURAL COLLEGE**
**FORSYTH, GEORGIA, OCTOBER 28-30**

**Every Colored Farmer, Whether a Member or Not Should Attend This Convention—BECAUSE**

The N. F. C. F. is the only national organization of colored farmers which has stood the test of the years. The objectives of the N. F.C. F. have been championed by every prominent and progressive farm and Race leader of the Nation. The N. F. C. F. has cooperated closely with the Federal and State Departments of Agriculture in all efforts made to improve the condition of all farmers. You should know of the many big things colored farmers are doing for their own welfare and for the progress of the Race.

Many great addresses by national and state leaders. Many fine prizes awarded for best farm and farm home products. Encouraging talks by farmers who have succeeded in spite of all difficulties.

**Organization makes successful farmers. Be a Thinking, a Progressive, and an Organized farmer. You are cordially invited to come to the EIGHTH ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF COLORED FARMERS, INCORPORATED**

those hard Kieffer pears growing in the home orchard may be interested in this suggestion: Investigations at the Department of Agriculture have shown that Kieffers improve in quality for canning by standing 2 weeks in a cool place (60 to 65 degrees Fahrenheit). Storage improves flavor and texture.

Pears can be packed in tin cans as well as in glass jars. Plain tin cans of either No. 2 or No. 3 size will do. You can pack the pears raw. The 1397 crop is to be the largest on record, they say, reaching the 30,400,000 bushel mark, as compared with the 27,000,000 bushels produced in 1936 and the 24,300,000 for the 5-year period 1928-32. Two-thirds of this bumper harvest will come from the Pacific Coast States of Washington, Oregon, and California. California will run far in the lead, with her 10,000,000 bushels. Michigan, with over 1,000,000 bushels, will read the list of pear-growing States east of the Rockies, follower by New York. Altogether, 42 States are represented in production estimates.

As a means of preventing markets from being glutted and prices from dropping to low levels, for the last 3 years fruit handlers in California have included pears in their fresh-fruit marketing agreement adopted under the Agricultural Adjustment Act. By this agreement, there could be: (1) Limitation of the shipment of any grade or size of fruit; (2) limitation of total shipments by periods wihin the marketing season; and (3) regulation of daily shipments by control from various concentration points.

### 4-H NEGRO CLUB CAMP

(Continued from Page 1)

ings. We appealed to the Progressive Club, a club composed of Negro professional and business men of Columbia whose aid is to develop civic enterprises. They gladly consented to allow us the use of 15 acres of their club property for a period of 99 years. Our next problem was to raise sufficient money with which to purchase materials for our buildings. The home demonstration agents were called into conference and asked to assist. Within 3 months the home agents, through their club women and girls, sent in $500. We are now ready to begin. James E. Dickson, Negro Farm Agent, Richland County, became manager of the project. Too much praise cannot be given to Mr. Dickson for his untiring efforts. He became architect, foreman, supervisor, laborer, and chairman of the committee to raise additional funds. The Richland County delegation donated $550; the Columbia City Council, $200; and the Negro Farm Agents $500.

The camp consists of four 12 by 30 foot cabins for sleeping quarters, one dining hall 30 by 60 feet with pantry and kitchen attached, which may also be used for recreational purposes; and one barn house with 40 compartments and 4 sanitary toilets. The four cabins are equipped with double-decked window and beds which accomodate 82 campers. All buildings are screened throughout. A gasoline-powered plant provides lighting facilities. The water supply, which has been tested and approved by the State Board of Health, comes from a 60-foot pump and a spring. The Negro farm and home agents bought seven additional acres upon which to construct a lake. The lake which has a natural basin formation, is 1,450 by 300 feet in area and 11 feet at its deepest point.

The camp was furnished from many sources. The materials for 100 mattresses was given by the F. E. R. A. and the mattresses were made by the club women under the supervision of the home agents. The State Council of Farm Women gave kitchen utensils, silverware, and other necessary articles. The chinaware and refrigerator were obtained through the generosity of the Negro State College. The Columbia, City Council gave a piano and the Columbia Public Library gave 100 books. The 4-H club girls made 150 dish towels.

Our camp program tends to provide training to develop leadership, promote comradeship and give vision During the camping season of 1936, more than 800 campers and visitors enjoyed the facilities of this camp.

### SESSIONS TO BE HELD

(Continued from Page 1)

of Federal and State Departments of Agriculture. Members are encouraged to practice cooperative buying, production and marketing, to own the land they till and to improve living conditions in their homes and communities. The Federation has aided many tenant farmers to secure farms on reasonable terms. Last year the members of one Unit in Mississipi county, Missouri, purchased 38 farms. Only three members were farm owners the year previously.

Many prominent agricultural and Race leaders will deliver addresses at the convention. These include representatives of the U. S. Department of Agriculture, Hon. E. A. Miller, Assistant Director, Southern Region; James P. Davis, Head Field Officer, and former president of the Federation; Albon L. Holsey and others.

Representatives of State Departments of Agriculture scheduled to attend include: C. H. Waller, Texas leader; P. H. Sonte, Director Extension Work, Georgia; A. A. Turner, of Florida; Pro. T. J. Jordan, Louisiana; H. C. Ray, Arkansas; Prof. Harry E. Daniels, South Carolina and Prof. J. E. Taylor, Oklahoma.

Other speakers and visitors will include Dr. Henry Allen Boyd, Nashville; Dr. E. R. Carter, Atlanta; J. B. Blayton, Secretary of Chamber of Commerce, Atlanta; J. A. Jackson, Standard Oil Co., New York; Mrs. Jennie B. Moten, Pres. National Association Colored Women's Clubs; Dr. J. C. Austin, Chicago; R. J. Pierce, Yazoo City, Miss.; Bishop W. A. Fountain, Atlanta; Mrs. Minnie D. Singleton, Macon Daily Telegraph; A. Scott, editor Atlanta World; Bishop L. W. Kyles, farmer-prelate of North Carolina, and Dr. J. E. Walker, Memphis, Tennessee.

As is customary at all annual conventions of the Federation, valuable prizes will be awarded for best exhibits of farm and home products.

The N. F. C. F. was organized in 1922 and incorporated under the laws of Illinois in 1930. The national office is located in Chicago. Present officers are Leon R. Harris, Acting President-Secretary; Maj. R. A. Boyd, vice president; S. B. Wilson, treasurer; L. B. Boler, organizer, and C. R. Richardson, chairman of Board of Directors.

### FRESHENING IN FALL

(Continued from Page 1.)

| | | |
|---|---|---|
| November | 9,766 | 219.20 |
| December | 5,077 | 128.65 |
| January | 2,161 | 53.93 |
| February | 615 | 14.60 |
| March | 4,625 | 83.50 |
| April | 16,961 | 277.98 |
| May | 21.826 | 339.50 |
| June | 16,503 | 248.37 |
| July | 15,347 | 263.77 |
| Total | 128,324 | $2,440.87 |

**Fall Freshening Herd**

| Month | Produced Pounds | Receipts Cash |
|---|---|---|
| August | 10,834 | $ 248.61 |
| September | 10,138 | 242.13 |
| October | 10,933 | 267.79 |
| November | 9,280 | 220.79 |
| December | 6,885 | 170.98 |
| January | 6,781 | 158.48 |
| February | 6,489 | 140.13 |
| March | 8,337 | 171.34 |
| April | 17,623 | 323.84 |
| May | 20,796 | 338.12 |
| June | 14,973 | 262.72 |
| July | 13,279 | 248.34 |
| Total | 146,348 | $2,793.25 |

"It will be noted that the fall freshening herd stepped up in production during the next spring, almost as if freshening had occurred," the county agent commented. "This shows that dairy cows which are well along in their milking periods will increase production very materially when turned on lush spring pasture."

## HERE'S HOW TO KEEP PEACE IN THE FAMILY

Chicago, Oct. 21—(ANP) — A family decalogue-ten commandments for happiness in the home and submitted by Mr. and Mrs. James Hamilton who were united in marriage 18 years ago by the Rev. Clinton C. Cox, pastor of Drexel Park Presbyterian Church, has worked out so well it was deemed worthy of publication. Rev. Cox considered the Hamilton decalogue the prize-winning set of rules compiled in a recent contest conducted among members of his congregation. Here's the decalogue:

1. God first.
2. Join a church and worship regularly.
3. Have blessings at meals and family worship.
4. Be loyal to your friends always.
5. Don't air family differences to neighbors; tell God. He understands.
6. Educate yourself for your job. Be the best father or mother possible.
7. Let your family know you love them.
8. Don't be afraid to sacrifice; there is joy in so doing.
9. Talk over all business together; understand one another.
10. Be ready to forgive and always close the day friends.

## Footlight Flickers

(By Al Moses for A. N. P.)

NEW YORK, Oct—THE ROCK-Managers of the "better Negro artists," certainly turned out a swell truck job for advertising purposes an admiring rival of the .....CLAUD HOPKINS ORCHESTRA pointed out to us.

The color scheme of the "rolling musical stock" is silver and orchid.....a musical bar adorns the face of the truck with four lines of the famous theme song of the Hopkins troup appearing. In all, we are led to believe that no niftier heavier-than-pleasure craft exists.

NANSNOW, heavy-hipped songstress who has been appearing for the last weeks before local audiences, gives off the impression that not even Lilly Pons (Metropolitan Opra Company star.) can Nan during her short stay here reach a higher sounding note. has in answer to repeated requests rendered the diffieult number "SYLVIA" as few singers are capable. Here hgh notes touched a brand new ceiling for "Harlem" at least.....with only AVIS ANDREWS (one of the present stars of Virginia).....left to dispute such claims.

JIMMY BASKETTE....one of those funny "funny-men" (Pigmeat-Spider Bruce, et al)....who are stationed throughout most of the year at Schifman's Apollo theatre.....took in the prize-fights the other night, and if size has anything to do with increasing the illusion; Baskette instead of Fox should have been in there that nite against Sirutus (white) towering 6 feet 4 inch apeman.

BILL (Bojangles) ROBINSON, in addition to being the teacher of beauteous Shirley Temple.... should also qualify for the job of personal bodyguard. Little Shirley, who affectionately calls her teacher "Uncle Bill" (dear-dear-dear).....thinks that fancy tapping Willie is just about the grandest fella in shoe leather. Much publicity is secured by Roberson because of this constant association with the child genius and as movie enthusiasts watch the great improvement in her tap routines....the worlds' premier tap-dancer adds to a reputation known the world over.

## Italy Admits 58 Killed by Ethiopians

Rome, Italy, Oct. 21—(ANP)—For the first time since the receipt of recent news dispatches telling of the wholesale massacre of Italian troops and civilians in various sections of Ethiopia, official announcement was made last Thursday that 41 Italian officers and 17 soldiers have been killed in attacks by "Ethiopian handits." Heretofore government officials have denied reports of Ethiopian uprisings.

## TEN NEGRO FARMERS RAISE 50,000 POUNDS TOBACCO

Gainesville, Fla., (Special to Modern Farmer)—Ten farmers in Bland, Newberry, Archer, Alachua, and Nebo Communities in Alachua county marketed more than 50,000 pounds of flue-cured tobacco at an average price of 20c per pound to markets in Georgia and Florida during the past season. Recent figures released from the Census Bureau, Washington, D. C., show 854 Negro farm operators in Alachua County operating 40,020 acres, of this number 607 own their farms which include 26,997 acres valued at $458,855. Frank E. Pinder, Negro County Agent is considered one of the most experienced and able agricultural leaders in the south and largely through his instructions and direction colored farmers in this section are meeting with unusual success.

## SORORITY HEAD STUDIES EDUCATION IN SOUTHERN AREA

**Chicago,** Oct. 14—(ANP) Mrs. Margaret Davis Bowen, principal of Gilbert Academy of New Orleans, and Supreme Basileus of the Alpha Kappa Alpha Sorority, left Chicago this week on the remaining laps of a journey during which she is fulfilling a threefold purpose. She is studying the high schools systems in a number of important educational centers, making a survey of Alpha Kappa Alpha Chapters, and attending the annual conference of the Woman's Home Missionary Society of the Methodist Episcopal Church, the body which supports Gilbert Academy.

Starting at Jackson, Miss., where she participated in the closing of the famed health project which the sorority conducted in that state again this summer, Mrs. Bowen first visited St. Louis. There she inspected Sumner and Vashon High Schools and conferred with the local chapter. Here in Chicago she studied Marcy and Newberry Centers, two important social service and educational projects one Jewish and the other maintained by the M. E. Church.

Leaving Chicago, she visited St. Paul and Minneapolis where she spent some time in the school system and spoke to the local chapter. it being one of the few times a supreme basileus had visited that territory.

Van Couver and Victoria, B. C., were next, after which she went to Seattle. At the close of the conference, she is to go to California at the invitation of Ursula Adams, regional director, where she will spend some time since she is especially interested in the high school system of California. Visits to Beaumont, Galveston and Houston chapters will complete her itinerary. Mrs. Bowen was joined in Chicago by Mrs. Ruth Carter of Social Service, and Mrs. McDonald, Supt of Dormitories, both of Gilbert Academy. She expressed herself as feeling that the survey of AKA chapters was particularly timely because New Orleans is entertaining the Boule at Christmas time.

## DINING CAR HEADS MEET IN EFFORT TO HALT DEFICITS

Washington, D. C., Oct. 21—(ANP)—Meeting here last week in an effort to stem the $10,000,000 annual loss sustained annually by the dining car departments of the nation's railroads, 50 dining car superintendents discussed the matter with John T. Finnegan, who heads the Pennsylvania Railroad's dining car service.

It was brought out at the meeting that there are more than 900 dining cars operated daily, and that the superintendents watch the market prices of food as diligently as do housewives and that despite the high cost of meals on the cars the roads still lose millions every year. Officials said that for each person served, a dining car travels four miles. And it costs seven cents a mile to haul the car.

## Southern Accent Traced To British

**Birmingham,** Oct. 21—(ANP)—Negroes had nothing at all to do with the origin of development of that lazy, "Southern accent," according to James B. McMillan, English professor at the University of Alabama. The professor, who has been doing research work in linquistics, declares he has found the main influence behind the Southern drawl to have been derived from the speech of southern British provincials who settled in the Deep South.

"This also refutes," McMillan declares, "the myth that pure Elizabethan English of the 17th century is preserved to some extent in Southern dialects."

As part of his proof, the professor cited the works of Johnson Jones Hop-Hooper, middle 17th century writer, whose characters were uneducated whites that used the dialect of southern English counties.

## Welch School of Embalming Opens Fall Term

**Birmingham,** Ala., Oct. 21—(ANP)—A feature of the opening of the Fall term at the Welch School of Embalming and Mortuary Science, located here on the campus of Miles Memorial college will be a two-day special course of lectures and demonstrations, to be conducted as a post-graduate course for licensed embalmers and funeral directors.

The Welch School is the first Negro institution of its kind to be recognized by the Conference of the Examining Boards of the United States. Welch students are qualified to take any State Board examination in the country.

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN,. NOVEMBER 15, 1937 No. 10.

## Mr. James P. Davis' Address To Farmers

### SOUTHEASTERN REPRESENTATIVE REVIEWS RECORD

#### Commends National Federation of Colored Farmers on Its Achievements

By James P. Davis

In Richmond, Indiana during the fall of 1922 a conference was held in the home of Mr. Leon R. Harris with Col. C. R. Richardson, the late Gilchrist Stewart of New York and myself. As a result of this meeting, the National Federation of Colored Farmers was born. Later, I had several conferences with Dr. Henry Allen Boyd, our pioneer Baptist leader, and the Modern Farmer was also born.

During this period of time no one but the officers knew the many reverses they had to undergo in order that the Negro farmers of America might have a mouthpiece.

In 1930 the Federation was incorporated on a non-profit basis and through the loyalty of Dr. Boyd and the officers, the Federation has managed to wade through the depression period and is today stronger than at any other period of its career.

The Federation has members in 21 states. It has a selfish interest in the welfare of the colored farmer, and the value of this great organization is beyond power to estimate.

Work upon the soil is the first blessing nature bestowed upon mankind. From the beginning of our great nation down through the years, the men and women of Agriculture have played a vital part in our growth and development.

Upon the farmers of the past have we depended, and to the farmers of the present and future must we look for the vital necessities of life.

The economic stability of the nation is and always has been in the hands of the farmer. Success upon the farm has been assured through AAA and Soil Conservation Programs, and if we will only add to our love for the land the magic power of hard work we will easily solve all our problems.

The farm holds forth opportunities few activities can rival and all farmers regardless of race or color can now find the course in life by which they can live in freedom and plenty.

Our greatest statesman the late Henry Grady, said at Boston many years ago: "When every farmer in the south shall eat bread from his own fields and meat from his own pastures and shall sit amid teeming orchards and vineyards and dairies and barnyards pitching his own crop in his wisdom and growing them in independence, then shall be breaking the fullness of our day."

Headed by the world's greatest humanitarian, Franklin D. Roosevelt, who saved us from starvation and possibly one of the bloodiest revolutions in all history, and Henry A. Wallace, whose first effort after taking oath of office as Secretary of Agriculture was to get rid of the men with ox-cart ideas and who were afraid to leave the beaten paths, and placed in authori-

### RECORD BREAKING COTTON CROP

#### 1937 White Fleece Predicted at 17,978,000 Bales

Official forecast for America's largest cotton crop, 18,243 bales. This added to difficulties of government leaders to try to shape a new farm program for special session of Congress. If realized; the 1937 crop would be 265,000 bales more than previous largest crop of 17,978,000 bales in 1926. In 1930 cotton production exceeded 10,000,000 bales. Federal officials are silent about this new forecast. Prices dipped about 75 cents a bale on the New York Cotton Exchange then turned and recovered most of the loss. The rally was credited to trade buying. After the cotton estimate was revised upward about 1,500,000 bales last month, Secretary Wallace reduced by 2,000,000 acres the cotton goal under next year's soil conservation benefit program.

The crop board increased its estimate to 258.8 pounds an acre for the entire cotton belt. This topped all previous yields. The only comment by the board was to effect that the cotton was "open and subject to weather damage." Inclement weather would interfere with picking and result in considerable loss in the fields.

Estimated production by states:

| State | November | October |
|---|---|---|
| Virginia ..... | 40,000 | 40,000 |
| North Car..... | 720,000 | 695,000 |
| Georgia ..... | 1,470,000 | 1,430,000 |
| Florida ..... | 40,000 | 40,000 |
| Missouri ..... | 385,000 | 370,000 |
| Tennessee ..... | 630,000 | 580,000 |
| Alabama ..... | 1,520,000 | 1,425,000 |
| Mississippi ..... | 2,575,000 | 2,400,000 |
| Louisiana ..... | 1,080,000 | 1,000,000 |
| Texas ..... | 5,050,000 | 5,025,000 |
| Oklahoma ..... | 858,000 | 858,000 |
| Arkansas ..... | 1,830,000 | 1,750,000 |

### RESOLUTIONS OF CONVENTION

#### Farmers in Session Recently Pledged Support To Program

The National Federation of Colored Farmers in their Eighth Annual Convention held at the State Teachers and Agricultural College, Forsyth, Georgia, October 28 to 30, adopted the following resolutions:

WHEREAS, the increased production of cotton and other farm products in our country has created surpluses and,

WHEREAS, these surpluses tend to lower prices due to foreign competition, decreased foreign markets and other economic causes and,

WHEREAS, lowered prices imperil the security, happiness and prosperity of the farm population and,

WHEREAS, our National Government, through the interest and devotion of President Franklin Delano Roosevelt and the Honorable Secretary Henry A. Wallace, the Congress has been called to assemble on November 15 to enact such legislation as will alleviate the present critical emergency and,

WHEREAS, eight hundred and eighty-two thousand (882,000) Negro farmers are vitally concerned in this legislation and,

WHEREAS, the National Federation of Colored Farmers in its Eighth Annual Convention at Forsyth, Georgia, October 28, 29 and 30, pledges its support to President Roosevelt, Secretary Wallace and to the Congress in their joint efforts to devise and enact the necessary emergency legislation and,

BE IT RESOLVED, that this body assure Secretary Wallace that the new cotton goal of from 27 to 29 million acres is accepted as a measure necessary in this emergency and,

BE IT RESOLVED, that members of this organization will themselves support the 1938 Conservation Program and will encourage other farmers to do likewise and,

BE IT RESOLVED, that we express our appreciation to the Farm Security Administration recently enacted by Congress by which tenants and sharecroppers may become landowners and,

## Farmers of Nation Held Successful Meet

### AGRICULTURAL NEWS NOTES

#### Field Officer, Albon L. Holsey, Submits Information

By Albon W. Holsey

Field Officer

Approximately 5,210,000 checks have been mailed by the Agricultural Adjustment Administration to individual farmers for soil-building practices in 1936. In the nine Southern States which comprise the Southern Division of the AAA, 69,775,000 acres were covered in the worksheets and 10,915,000 acres were diverted from soil-depleting to soil-conserving crops. A large percentage of the farmers in these States are Negroes.

Farm income from marketings and Government will total $9,000,000,000 in 1937 according to figures recently released by the Bureau of Agricultural Economics. This compares with $7,865,000000 in 1936.

Early in October Sanford H. Lee, Negro Farm Agent with headquarters at Macon, Georgia, headed a delegation of Negro farmers which visited Tuskegee Institute and the Soil Conservation Demonstration project located at Dadeville, Tallapoosa County, Alabama.

M. E. Deane, Negro County Agent in Louisville, Mississippi, reported great success in organizing farmers in his county into a "Soil Building Association". Members who agreed to plant at least three acres of cover crop were eligible for membership. The Negro farmers in Winston County of which Louisville is the County Seat, have made a creditable showing in their

(Continued on Page 2)

### PROF. W. M. HUBBARD PRES. AND FACULTY WERE HOSTS

#### Notables From the Nations Capital and Many Other States in Attendance

By Robert M. Ratcliffe

Forsyth, Ga.—(SNS)—Three hundred or more tillers of the soil, representing nearly every farm section of America, were urged by national farm experts last week-end to work, think and act together if they expected to achieve more.

Attending the eighth annual convention of the National Federation of Colored Farmers, which convened here Thursday, Friday and Saturday on the attractive campus of State Teachers' and Agricultural College, the large delegation enjoyed one of the best farm sessions ever held by the organization.

On the strength of special invitations tendered by Governor E. D. Rivers and Prof. W. M. Hubbard, president of the host college, the next convention may again be held here. The Governor mailed a letter to the body asking the return of the conference next year, and President Hubbard made a stirring plea from the platform of the assembly room last Saturday asking that farmers return next year.

Other states bidding for the next convention were Arkansas, Louisiana and North Carolina. No change was made in the executive staff.

James P. Davis, founder and former president of the farm organization, is now head field official of the Southern Region of AAA with headquarters in Little Rock, Ark. He is still active in promoting the federation. Serving as acting president and secretary is Leon R. Harris. Major Y. A. Byrd is vice president; S. B. Wilson, treasurer and C. R. Richardson. chairman of board of directors.

(CONTINUED ON PAGE 3)

## Leon R. Harris Delivers Annual Address

### Program For National Federation of Colored Farmers Outlined for 1938—Recommendations Adopted

**EDITOR'S NOTE: Several hundred farmers from 17 states in the Union, and government and farm officials, attending the National Federation of Colored Farmers Friday, at the State Teachers' and Agricultural College, Forsyth, heard Leon S. Harris, Moline, Ill., acting president-secretary of the NFCF in a brilliant and informative message. In a very efficient manner, Prof. S. H. Lee, farm agent of Bibb, Monroe and Twiggs, presided over the sessions during the day Friday. Mr. Harris' annual address was commended by those present, as one of the outstanding messages of the day. Excerpts of his address follows:**

M. D. S.

The National Federation of Colored Farmers was founded on faith, hope and charity. This organization was founded by men who had faith in themselves and in their race. It was founded by men whose spirits were sustained by the hope and expectation that a needful work, well done, would be encouraged and supported. And these men, I know, had a sincere respect and love for those they desired to serve.

This organization has tried to be progressive, sane and practical. It has not attempted miracles. It has not attempted to change rock-bound customs and habits in a day. It has not preached radicalism or revolution. Its general objectives have been simple and easily understood. Quoting from a circular issued eight years ago: "This organization shall encourage and assist its members in co-operative buying, production and marketing—in the improvement of Negro farm communities—in the promotion of the general interest of all its members—in the making of farm business more profitable—in the study of and investigation of all agricultural problems—in the working together for the purpose of accomplishing what cannot be done individually." And, quoting again: "It is the hope of the founders of the National Federation of Colored Farmers, to make life on the farm more attractive and more profitable, and to build up in this nation a group of organized, influential and satisfied producers. I have stated our general objectives."

"Get" Organizations

I will admit frankly and truthfully, that from the very beginning the NFCF has been a G-E-T, a "get" organization. We have had, and we have now, enough "give" organizations. The colored farmer was giving all he could to his church, to his lodge, and, in some communities, even giving from his own pocket to lengthen the term of his community school. He was giving, in many instances, two prices to his merchant for the bare necessities of life. He was giving from 10 to 40 per cent interest to the man he was compelled to borrow money from. He was giving his labor and the labor of his wife and children, to produce six-cent cot-

(CONTINUED ON PAGE 2)

### RECORD BREAKING SWEET POTATO YIELD

E. W. Williams, colored farmer of Vaughn, Yazoo County, Mississippi, who specializes in raising sweet potatoes broke the record this year by producing 36 pounds of potatoes from one hill. In this hill there were six potatoes weighing from two to eight pounds each. In another hill there were three potatoes weighing four, six, and eight pounds each, making a total of 18 pounds. These two hills produced a total of 54 pounds.

Two years ago E. W. Williams won a radio that was donated to National Federation of Colored Farmers by Sears Roebuck, for the best display of vegetables. This year he won the prize of two Hamphire hogs donated to the Federation by Amos & Andy, for his prize sweet potatoes.

### ENGLAND GROWS SOY BEANS

After experimenting for 30 years, J. L. North, botanist, has succeeded in growing soy beans in England. By 1939 he predicts that approximately 1,000 acres will be under cultivation.

## ADDRESS DELIVERED AT CONVENTION OF NATIONAL FEDERATION OF COLORED FARMERS, FORSYTH, GEORGIA, OCTOBER 28, 1937

(Continued from Page 1)

ty Executives with big broad hearts who have given us an all inclusive program for American betterment so comprehensive that the farmer—a woe-smitten people, have been led out of the worst plight in all history of this great nation, and have given us a new day which has brought about the second emancipation of my people.

Today smoke is pluming the sky from factory chimneys. Heavily ladened freight trains are thundering down the nation's tracks, carrying goods to the markets of the world. New buildings are pushing their scaffoldings into the air. Confidence and optimism are at flood tide. Henry A. Wallace and his assistants have sown the seeds of prosperity through AAA. Care and cultivation will bring forth to the nation a rich and fruitful harvest.

Seventy years ago, fresh from the slave auction block with nothing but faith in God, Negroes have been able to purchase and own 182,000 farms located in every State in the Union. The total number of farms owned by our racial group has reached 181,016 valued at $334,451,390 comprising 11,198,893 acres.

This is a record of achievement which should make us proud that we are Negroes. If the policy of the white man who sold us these farms had been against Negro farm ownership these figures would be different. We own in Georgia 10,571 farms with 838,573 acres, valued at $11,485,134. We own in Alabama 15.709 farms with 1,053,710 acres, valued at $15,906,940. We own in Arkansas 11,343 farms with 669,746 acres, valued at $13,022,749. We own in Florida 6,792 farms with 266,064 acres, valued at $5,737,952. We own in Louisiana 10,839 farms with 543,827 acres, valued at $11,639,632. We own in Mississippi 21,288 farms with 1,592,580 acres, valued at $21,898,399. We own in Oklahoma 6,762 farms with 644,775 acres, valued at $13,070,586. We own in South Carolina, 18,394 farms with 795,077 acres, valued at $14,827,788. We own in Texas 20,800 farms with 1,378,141 acres, valued at $28,190,598. Total farms owned by Negroes in Southern Region, 122,498, valued at $135,750,000.

Without the AAA and Soil Conservation Program, America would never have reached the glorious heights of its present achievements. The twelve-month period ending September 1st, the Farm Credit Corporation wrote the words, "Paid in Full" on 25,133 farm mortgages. This was an increase of 60 percent over the preceding twelve months. Agriculturally speaking, under the leadership of our State Directors of Extension Work, both white and colored, assisted by their able agents and Home Demonstration Agents, have done a splendid work among our farmers. The Negro Colleges of this country have become vast institutions of learning and will compare favorably in courses of study, architecture, grandeur and equipment with some of the greatest educational institutions throughout the world, and they have been unusually active and generous in assisting this Administration in the promotion of the Soil Conservation Program.

You have measured up to your responsibility in the support of the AAA, and I urge your continuance which will enable you to fearlessly face all the responsibilities of citizenship. Remember, organization is our watchword and our salvation, provided we are not misled by rabid outside influences.

## RECORD-BREAKING COTTON CROPS

(Continued from Page 1)

| | | |
|---|---|---|
| New Mexico ... | 135,000 | 130,000 |
| Arizona ..... | 260,000 | 260,000 |
| California ..... | 680,000 | 675,000 |
| All others ..... | 19,000 | 20,000 |
| Lower California and Old Mexico | 53,000 | 57,000 |

(Lower California not included in California figures or United States total.)

The indicated yield, by state, this year and last year, and production last year are:

Virginia, 299 pounds per acre, against 298 and 3,000 last year; North Carolina, 320, against 298 and 597,000; South Carolina 27, against 279 and 816,000; Georgia 267 against 228 and 1,086,000; Florida 173, against 170 and 31,000; Missouri 377, against 360 and 308,000; Tennessee 320, against 236 and 1,145,000; Mississippi, 368 against 305 and 1,911,000; Louisiana, 334, against 260 and 761,000; Texas 191, against 121 and 2,933,000; Oklahoma 160 against 62 and 290,000; Arkansas 287, against 227 and 1,295,000; New Mexico 475, against 457 and 111,000; Arizona 463, against 438 and 191,000; California 530, against 574 and 442,000; all other states 310, against 313 and 16,000; Lower California, Old Mexico 181, against 210 and 61,000. (Lower California not included in California figures, nor in United States totals).

The census bureau's report on cotton of this year's growth ginned prior to November 1, by states, with comparative figures for last year, follows:

Alabama 1,344,271 and 1,052,114, Arizona 95,128 and 78,551, Arkansas 1,262,158 and 1,061,613, California 273,346 and 202,203, Florida 34,044 and 27,079, Georgia 1,250,108 and 926,062, Louisiana 918,640 and 713,674, Mississippi 1,905,067 and 1,703,634, Missouri 209,868 and 251,825, New Mexico 62,422 and 63,670, North Carolina 508,435 and 347,900, Oklahoma 480,471 and 224,545, South Carolina 770,471 and 557,861, Tennessee 355,059 and 340,989, Texas 3,664,927 and 2,302,429, Virginia 18,562 and 18,012 all other states 11,118 and 10,269.

## RESOLUTIONS OF CONVENTION

(Continued from Page 1)

BE IT RESOLVED, that we respectfully petition the Administration of the Farm Security Administration to give to members of our race such administrative recognition as may be possible in carrying out its provisions, and

BE IT RESOLVED, that the officials of the organization convey our thanks to Mr. J. A. Evans, Assistant Extension Director of Georgia, Mr. E. A. Miller, Assistant Director, Southern Division, Agricultural Adjustment Administration and representatives of the Marketing Service of the Agricultural Department of the State of Georgia for their presence and addresses during the convention, and.

BE IT RESOLVED, that the officials of this organization convey our thanks to the Governors of the several states who sent official delegates to the convention, and

BE IT RESOLVED, that we express our appreciation to Miss Minnie D. Singleton of the Macon Telegraph and to Mr. C. A. Scott and other officials of the Atlanta World for their presence and assistance in publicizing the proceedings of the convention, and

BE IT RESOLVED, that we express our thanks to the large number of firms who contributed prizes for the exhibits, and

BE IT RESOLVED, that we express our thanks to Mr. J. A. Jackson of the Standard Oil Company for his addresses of inspiration and encouragement, and

BE IT RESOLVED, that we express our thanks to the Negro State Extension Leaders for their cooperation and assistance in encouraging Farm and Home Agents and farmers to attend this convention, and

BE IT RESOLVED, that this body express appreciation to President W. M. Hubbard and to the efficient members of his staff for their courtesy and hospitality in acting as host to the convention. and

BE IT FURTHER RESOLVED. that copies of these Resolutions be sent to the President of the United States, to the Secretary of Agriculture, to the Administrator of the Agricultural Adjustment Administration, to the President of the Senate, to the Speaker of the House of Representatives, to the Administrator of the Farm Security Administration and to the Press.

Respectfully submitted,
Committee on Resolutions.

## AGRICULTURAL NEWS NOTES

(Continued from Page 1)

participation with the Government's Soil-Building Program.

In contests recently held in Georgia of Negro 4-H Club boys and girls, Sumter County scored high honors. Mattie Sue Pace and Ruby Ladd were declared Georgia's healthiest Negro girls. In the final health examinations, Miss Pace scored 96.6 and Miss Ladd 95.2 Bobbie Story from Sumter County was awarded the State Achievement Medal.

Under the leadership of Miss Mabel R. Clopton, Negro Home Demonstration Agent, Noxubee County, Mississippi, great interest in quilt-making has been revived among the Negro farm women of her county. Recently twenty-three handmade quilts were displayed and sold at fancy prices.

Frank E. Pinder, Negro County Agent, Alachua County, Florida, recently arranged a demonstration in constructing trench silos. Mr. Pinder was assisted by specialists from the University of Florida and a large number of Negro farmers from the county attended.

Miss Susie H. Greene, a recent graduate of Tennessee State College, has been appointed Home Demonstration Agent for Emanuel County, Georgia. Miss Greene was formerly a Jeanes Supervisor in Ben Hill County, Georgia.

E. B. Holloway, Negro County Agent of Bullock County, Alabama, reports that Will McGowan of Mascott Community, harvested 190 bushels of corn from three acres of land which previously had been planted in Austrian winter peas. This averaged 20 bushels per acre more than previous harvests.

Negro farmers of Lincoln Parish recently met in the Normal School at Grambling, Louisiana, to discuss pending national farm legislation. Karl Kimeberly, Specialist of the Louisiana Farm Bureau, District Extension Agent, H. C. Sanders and the white County Agent, J. A. Shealey were the principal speakers. E. F. Purvis, Negro County Agent, was in charge of the meeting.

The Tuskegee Agricultural School on Wheels—sometimes called the Movable School—gave demonstrations to Tallapoosa County, Alabama, October 12 to 15. D. D. Crawford, Negro County Agent, and Miss E. L. Beele, Home Demonstration Agent, were in charge of arrangements.

Rug making from burlap sacks was one of the successful projects undertaken by members of the South Mansfield (Louisiana) Self-Help League. Twenty-six of these rugs were recently displayed and the first prize was awarded to Mrs. Ruby Taylor. Miss Stazzie M. Hudson, Negro Home Demonstration Agent, is organizer and promoter of the League's activities. The prize winning rugs will be displayed at the Louisiana State Fair.

## LEON R. HARRIS

(Continued from Page 1)

ton—30 cent corn and 3-cent hogs. And he was being taught to produce more and better—to produce abundantly, and at the end of every productive year, he was still giving, giving and giving—everything he made to pay his debts and was still in the hole.

But who was teaching him how to earn more and save more and have more and be more? The N. F. C. F. realized that what the farmer could save from the price he got for his products, what the sharecropper could save from the price he got for his share of his crops, what the field hand could have from the wages he received, meant to that farmer, that sharecropper and that field hand the difference between success and failure, the difference between happiness and misery.

So our units received their first lesson in co-operation when they were encouraged to buy their home and farm supplies co-operatively, that they might save and have often as much as from 10 to 50 per cent of what they had been paying for these supplies. And I might add right here that a good many local merchants learned a lesson too, that they could fool and overcharge their colored customers had come to an end, for the brother had really learned something.

### Better Marketing

The N. F. C. F. still advocates and encourages mass buying of those farm and home products which through such a method can be secured at a saving to the purchaser.

The leaders of our federation hope to increase the practice of co-operative production and marketing. Some of our units have tried it out successfully, with peanuts and sweet potatoes in North Carolina, with string beans and hay in Mississippi, and with watermelons in Missouri. We are certain the practice will enable the farmer to get more for his products which will give him more to save for the security of his family or spend for the comfort and welfare of his family. But before our farmers can do this successfully, they must go to school and study hard the fundamental rules of grading, packing, and shipping. And believe me, I know you extension agents have an awful job on your hands when you endeavor to teach these rules to the average colored farmer. I've had some experience. It's usually the argument with him that the biggest is always the best, even though the peanut is a pop, the watermelon tasteless or the sweet potato fit only for the hogs.

### Security

We hear much nowadays about security. About social security, particularly for the American wage-earner. But the farmers of this country, black and white, must also have a security program. Certainly the Negro group in America will never be safe and secure until Negro farmers are safe and secure.

The thinking, progressive and modern farmer, I mean the individual farmer, need have little fear for his security. There is no hunger or unemployment on the farm. There is a cloudless future on any farm of average fertility, if the farm is operated by a farmer who is a good farmer. Has this good farmer an employer? Certainly he has. He has an employer who will never fire him. He has an employer who will pay him decent wages if he will do well that employers work. The best employer of labor I have ever heard of are a thousand cackling hens, a few well-bred milk cows, a bunch of good hogs, fattening for meat or market, a garden full of growing vegetables, a reasonable acreage of thriving field crops, these and this is the good farmer's employer and it's the best employer of labor I know.

### Don't Get Too Old

It is not in my province in this address to tell you how you should farm in order to guarantee your security. Just don't never get too old to learn. Receive willingly the instruction of your county agents, your home demonstration agents, and those other servants of the federal and state departments of agriculture who have much to tell you and much to teach you. Yes, you can teach them something too, but you are not getting paid for doing that. The wise man, and particularly the wise farmer, keeps his ears wider open than his mouth. A county agent, up in my section of the country was telling me the other day that he was having a hard time getting his farmers to practice diversification of crops. They complained that some of the crops he had advised them to plant didn't bring in the money they wanted. Then I told him of two genuine old time farmers, brothers, up in Michigan, living on a 400 acre, rocky, hilly farm, who produced 12 different money crops on their farm, and every one of these crops during the past 10 years have brought in an average of more than $500 apiece. And these two farmers are saying that 12 crops is not diversification enough, and they are on the lookout for others.

Your farm instructors can't tell you to do anything impossible to do. I've seen a lot of miracles performed by farmers and I'm not an old man yet.

### Farm Ownership

From the beginning the National Federation of Colored Farmers has carried in its platform this sentence: "Every colored farmer a farm owner." I'll admit that's about as sensible as saying "Every colored man a church member." But no one can accuse us of not having a goal to aim for.

I believe that every Race man who has at heart the interest of our farmers, will hang his head a little in shame just as long as the plain old figures tell us that we have in this nation a Negro rural population of six and more than a half million people, and that we have among this population more than seven hundred thousand tenant farmers and sharecroppers, and less than two hundred thousand farm owners. Brother Farmers, we've just got to make those figures tell a different story.

Our organization will continue to persuade and assist worthy tenants and sharecroppers to become farm owners. It has been discovered that a tenant out of debt will earn more cash income per year than will one who is in debt. Any tenant or sharecropper who is a good enough farmer to stay out of debt has no business being a tenant or sharecropper. We of the N. F. C. F. were some of the first to realize this, and we have aided many of this type to become farm owners

We believe, too, that the best place for a colored farmer to purchase a farm home is in a colored farm community. He'll get along better than he will anywhere else. We believe, too, that the family-sized farm should be the goal of every colored farmer. I remember we assisted a Mississippi farmer in purchasing a farm of eighty acres—plenty of land for him to farm right, and after he had made a couple of payments, lo and behold one day I received a letter from him and in it he requested assistance in purchasing an adjoining farm of 120 acres. And why do you reckon he wanted it? He said he wanted to be a big farmer, like his neighbor, Mr. Jack was. We have too many of these big farms and too many of these big Mr. Jacks in this country. Well, we don't need any more of them, and it'll be a blessing when we get rid of 75 per cent of those we have—the big farms and the big Mr. Jacks too. What we want is security of tenure for all good farmers—not just for the biggest ones and the smartest ones and the richest ones.

The N. F. C. F. will help, in every way it can, its members to become owners of family sized farms in progressive communities of Negro farmers.

### Future Objectives

Our work has just begun. The future lies before us. This is a new day and a new year for us. What are we going to do with it?

We want to double the membership of the N. F. C. F.

We want the co-operation of all agencies interested in and working for the welfare of Negro farmers.

In counties having a major Negro farm population, we desire to see more Negro representation in these counties' agricultural policies.

The N. F. C. F., in cooperation with a standard Negro insurance company, desires to furnish the colored farmer with a practical insurance policy that will give him the value of every dollar he puts into it.

There are too many Negro farmers and dependants in some counties of the several states and too few in others. We shall continue our efforts to re-locate our members where they can farm satisfactorily and earn a decent livelihood.

We admit that we will discover some landlords and plantation managers who refuse to give their tenants and sharecroppers decent contracts—who persist in overcharging them for the necessities of life—and who, in many insidious ways, take advantage of their poverty and helplessness. We shall continue to fight the methods of these enemies of all American farmers.

We desire to see a more general observance of Farmers Sunday which was initiated by the N. F. C. F. seven years ago.

We desire to see a substantial increase in the number of our farms

women's clubs affiliated with our organization.

We desire the affiliation of more groups of young farmers and young farmerettes.

We shall continue to support the farm policies of the national administration.

We hope to initiate a national cotton-picking contest, similar to the national cornhusking contest held every year in the middle west, and shall endeavor to secure a sponsor for this contest.

We shall strive to serve well the members of our organization and the great number of our group who have shown their faith in us.

## FARMERS OF NATION

(Continued from Page 1.)

The executive offices are located at 2937 South Michigan avenue, Chicago, Illinois.

Delegates attending the eighth annual convention hailed from Florida, North and South Carolina, Mississippi, Alabama, Arkansas, Louisiana, Missouri, Ohio and Georgia. On the opening day of the farm session, delegates were carried on an inspection of the college campus, giving them a chance to observe the big educational plant so skillfully directed by President Hubbard. Scattered over the vast territory provided the college by the state are several buildings recently completed. These include president's home, girls' dormitory and Science building. Other attractive structures on the campus are auditorium, academic building, faculty home, boys' dormitory and dining hall.

During recess periods, delegates were taken on sight-seeing tours. An exhibit staged by students of the school rivaled that offered by the farmers.

Directors of the convention and delegates departed Saturday praising the president on the good behavior of the students. Much was said, too, concerning the fine and tasty barbecue served during the three-day session.

**"Billboard" Jackson Speaks**

James A. "Billboard" Jackson, prominent in national affairs, addressed the group of farmers Friday morning and night. Opening his morning talk, Mr. Jackson told the delegation to patronize colored business and read colored newspapers if they hope to see the race rise.

To the young farm-student in the auditorium, Mr. Jackson urged them to go back to the farms of their fathers after graduating and use their knowledge and ideas in making better farmlands among the colored people.

**Group Hears C. A. Scott**

C. A. Scott, general manager of the Atlanta Daily World and Scott Newspaper Syndicate, Atlanta, addressed the group Friday night. Chief among the points stressed by Mr. Scott was the fact that farmers as well as every other colored person "should preserve democracy by becoming a voter."

General Manager Scott with several of his staff members made a special trip here to pledge support of the Atlanta Daily World and its affiliated papers to the farmers of the nation. He praised the entire delegation and developed the idea that cooperation and organization are two of the main factors necessary in bringing about more success to the race.

**Harris' Annual Address**

Acting President Leon R. Harris delivered his annual address Friday afternoon. A "Security Program for Negro Farmers" was the theme of Mr. Harris' address.

Stressing farm oganization, Mr. Harris declared "We must fight politically and support the friends of farmers."

Stating that people working, thinking and acting together can get more things done, Mr. Harris urged his audience of farmers to "unite your voice with thousands of other voices."

Closing his address, the speaker praised the works of the late Booker T. Washington and painted a vivid picture of the progress of Tuskegee Institute, founded by Mr. Washington.

**Welcome Address**

Albon L. Holsey, director of the Agricultural Extension of the A. A. A., thrilled his audience Friday night. He stressed organized power as the only possible chance of success for the colored farmer.

The welcome address was delivered to the farm body Thursday by President Hubbard. The student chorus delivered a fine program Thursday and Friday nights, prior to opening of the night sessions.

James P. Davis, founder, and his wife were prominent figures in each of the daily sessions. With them as special delegates from the AAA headquarters in Little Rock, Ark., were Misses Hazel Catlin and Bertha Stalworth.

Atlantans visiting the convention were J. H. Hanley, T. J. Ferguson, Rev. B. R. Holmes, A. Price, George Thornton, C. A. Scott, Thomas J. Flanagan, Robert Ratcliffe, Mrs. Lucile Scott and Miss S. Grace Bradley.

Farm agents whose reports and demonstrations proved valuable to the hundreds of farmers in session as well as Agricultural teachers from innumerable state colleges were C. L. Tapley, F. R. Spencer, E. C. Tapley, Greenville, Ga., S. H. Lee, Macon, Ga., and J. W. Horne, Covington, Ga.

State and Government officials included on the program were E. A. Miller, Assistant Director of the Southern Division of AAA, Washington, D. C.; Dr. J. A. Evans, Athens, Ga., Assistant Extension Directors; Miss Camilla Weems, Home Demonstration Agent of Ga.; Mesdames Tammy Thomas and Mayme Wesley, Home Demonstration Agents; Miss Gleana Simmons, Supervisor; T. M. Campbell, Agricultural Specialist, headquarters in Tuskegee Institute; A. L. Holsey, AAA representative, James Jackson, Representative of the Standard Oil, N. Y.; Leon Harris, Acting President, native Ohioan and one of the founders of the NFCF; James P. Davis, founder and one whose unselfish service has sounded throughout the nation, and others.

A farmer from Vaughn, Miss., won the prize of two hogs, an annual gift donated by Amos and Andy, famous radio performers.

Twelve delegates attending the convention were sent here by governors of their states.

From Columbus, Ohio, came Perry Blakeman, successful hog raiser. With him was Percy Jones, bank examiner in the state of Ohio.

A group of farmers from Florida exhibited a syrup they are marketing successfully through the cooperative plan. The leader of the group said 10,000 bottles of the syrup was purchased recently by one of the leading grocery firms of America.

The soil conservation plan was discussed by several farmers.

## HOBBIES PAY MANY WOMEN CASH INCOME

**Examples From Towels to Purses Cited by Specialist**

Hobbies? They may yield cash, s well as enjoyment, said Miss Sybil D. Bates, extension specialist in home industries. Something a woman enjoys making, and is handy at, may often become a source of income, she added, citing the following examples:

Mrs. Van Der Hey, Independence county, has revived the old needlecraft of hardanger embroidery and is finding it a very marketable product. This year she has sold $67.25 worth of hardanger embroidery and has on hand a crocheted tablecloth worth $25.

Mrs. W. E. Brooks of the Arden Home Demonstration Club, Little river county, has helped her daughter through college by selling handkerchiefs. She sells cutwork handkerchiefs for $9 a dozen and drawn work, embroidered and appliqued ones for $7 a dozen to stores in Fort Smith, Tulsa and Conway.

Corn shuck hats and purses add to the incomes of Mrs. Ollie Flowers of Wattensaw, Lonoke county, and Mrs. E. E. Streight of Prairie county.

Mrs. H. C. Carpenter, president of the Pope county council of home demonstration women, finds her flower garden profitable as well as beautiful. This year she had sold $41 worth of cut flowers without any special efforts except an occasional ad in the local newspaper.

**Sells Homemade Bread**

Mrs. Jewel Walker, Franklin county, has regular customers for her homemade bread. She bakes once a week and sells loaves at 10 cents if called for and 15 cents if delivered.

Mrs. F. C. Ashley of the Mt. Vista Home Demonstration Club, Crawford county, crochets babies' bibs while she rests or travels. She has sold 93 bibs at 25 cents each. It takes six cents worth of crochet cotton and about two hours to make a bib.

Mrs. N. A. Peterson of Shady Grove Home Demonstration Club, Searcy county, has made $45 since the first of the year by selling handmade dish towels to a shop in Kansas City. The towels are 36 by 54 inches, hand hemmed, and embroidered with Dutch dollies, Scottie dogs or Negro Dinahs.

When Mrs. Inez Craycraft of Green Forest, Carroll county, moved to Arkansas from the Kansas dust bowl, she sold her loom, but she soon traded her typewriter to a sister in Missouri for another and began weaving for profit. Last year she wove over 300 pieces, using both new and old materials. Her profit amounted to about $100.

## AFRICAN HOUSEWIFE TELLS HOW TO HOLD YOUR HUSBAND

Accra, Gold Coast, West Africa —(ANP)—Following the recent appearance in the American press of an American husband's decalogue—ten rules of conduct to be observed by married men—Mrs. Amilta Simonyish, native wife of a prominent Accra planter, this week gave her set of rules that must be obeyed by married women who wish to qualify as "perfect wives." Mrs. Simonyish's rules:

**A wife MUST NOT:**

Show jealousy—it will make her husband regret his liberty.

Worry him—he has enough cares.

Question him—if he doesn't want to talk, let him alone.

Forget that a clean, bright home and good food are the basis of love.

**Also, a wife MUST BE HER HUSBAND'S:**

Mother—taking care of him as though he were a child.

Mistress—satisfying his need for love and tenderness.

Mate—prepared to fight for him to the death.

Comrade—understand his interests, help him in his work.

Finally a wife should be neat, clean and attractive at all times, subordinate her interest to those of her husband's, greet him with a cheery smile though her heart be burdened with grief and remember that at all times, he is the boss of the household.

## DAIRY COW TO BE BOOSTED IN BIG PROGRAM

**More and Better Herds Planned for Northeast Counties.**

Jonesboro—Development of a dairy program to extend throughout northeast Arkansas will begin shortly under the direction of the Jonesboro Chamber of Commerce, working in cooperation with vocational agriculture forces in this area.

In Craighead county, plans call for speeding up the dairy program to make it a $1,000,000 industry. Dairy products already bring in approximately $500,000 annually.

At Paragould, it was pointed out, the Southern Gold Cheese Company of McKenzie, Tenn., will start operation of a cheese plant shortly. Milk routes are being worked out to take in every section of Greene county.

C. R. Wilkey, district supervisor of vocational agriculture at Arkansas State College here, announced today that distribution of 100 registered Jersey calves, bred heifers and bulls to Future Farmers of America boys and adult farmer groups for foundation stock will be undertaken.

"Increasing the number, as well as quality of milch cows by placing high production bull and encouraging saving of better heifer calves from such bull will be sought," Mr. Wilkey stated.

**Seek Wider Market**

The two agencies will seek to establish economical production, netting more profit to the farmer, by fostering feed production and establishment of permanent pastures on each farm. They will also promote the establishment of better markets for dairy products by increasing use in the trade territory and finding additional outlets.

The dairy development program will be stimulated by a strict educational program conducted by vocational agriculture instructors, announced Mr. Wilkey. Instructors in charge will include Marion Adams of Jonesboro, C. B. Atkinson of Valley View and Weiner, Eardie Shannon of Monette and Ernest Ott of Caraway in this area.

Regular dairy classes will be held for FFA students in the various high schools. In Craighead county there will be 200 FFA students. Night classes will be held in 10 or more ural schools for farmers and farm boys, and a group of farm boys interested in dairying will be instructed in Saturday meetings at the courthouse here. Motion pictures, charts and field demonstration will be included in the dairy meetings.

Education in the food value of dairy products will be given through the public schools of the county to encourage wider use of dairy products.

**Many Agencies to Aid**

Arkansas State College has indicated its willingness to cooperate in educational work and in loaning facilities for distributing the dairy calves to the FFA boys Mr. Wilkey said. The American Jersey Cattle Club has agreed to supply films and send a field agent to assist in organizing the campaign. The Soil Conservation Service has agreed to cooperate with its CCC forces, particularly in encouraging establishment of pastures on the ridge.

"A dairy region is proverbially a prosperous region." Mr. Wilkey continued, "and the conversion of the cultivated slopes of Crowley's Ridge to pastures with beautiful Jersey "cattle on a thousand hills" will stop soil erosion, build up the soil fertility and make the ridge a beauty spot of the Mississippi Valley.

"On the west of the ridge we have unlimited lespedeza hay, soybeans and rice supplies, and on the east high yields of corn, soybeans and various feeds assure an economical source of raw products to supplement pastures. Attention to hog production will accompany the dairy campaign since dairy by-products can be used very economically as hog feed."

## MILK INCOME LEADS

Milk is big business. It paid American farmers $1,417,000,000 last year, the most received from any one product. Milk is the main source of cash to about one-fourth of the country's farmers, government records show, and some 200,000 workers are employed in processing and distributing milk products.

## TWO CROPS FROM ACRE PAID WELL

An acre of new ground was kept busy last year and made to show handsome returns by O. H. Clark, Redfield, related J. G. Milholland, Jefferson county assistant agent.

First, Mr. Clark planted the acre to Irish potatoes, using Nebraska dry land certified Triumph No. 1 seed, which was bought co-operatively through the county agent's office.

Mr. Clark sold 4,800 pounds of potatoes through the Jefferson County Potato Growers' Association, and after all expenses were paid, he had $2 in cash and 70 bushels of potatoes for home use.

Then, June 21, the acre was planted to corn and interplanted with beans. Mr. Clark sold $49 worth of corn and $51 worth of beans, and Mrs. Clark canned 44 quarts of beans for home use.

The stalks and a good many nubbins of corn supplied feed for hogs.

Mr. Clark gives much of the credit for his good returns to the potato association, for without its aid in marketing, he would not have planted the potato crop, he said.

## WALNUT CROP IS THEIR PROGRAM

Five hundred 4-H club girls and boys in 25 counties of northwest Arkansas are making plans for developing a walnut planting program next spring.

The program aims at using all portions of the farm more fully, and at laying the foundation for a future source of farm income through sale of nuts and timber, said M. H. Bruner, extension forester.

"The value of nuts for food is becoming more and more recognized," Mr. Bruner said, "In neighboring states, power cracking plants are opening to supply kernels for export to Northern regions. Similar industries can be brought into Arkansas to provide an outlet for nuts grown on the farm."

The value of black walnut trees grown for timber, the forester pointed out, is now realized in many areas of Arkansas. In the northwestern section of the state, additional walnut using mills have been built recently. These mills are providing a market for walnut logs.

The club members are taking advantage of the good crop of walnuts in most sections of northwestern Arkansas to provide the basis for the program. Nuts are being gathered, hulled and then buried in the ground for storage.

Next February, when the ground is suitable, the storage pit will be opened and the nuts will be planted about the farm buildings, along fence rows, and in pastures. The young trees will be pruned, protected from animal injury and cared for by the club members.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per yer, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

**"OUR SLOGAN"**

**STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.**

**OUR PLATFORM**

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

## EDITORIALS

(From the Bible)

"O give thanks unto the Lord; for he is good: for his mercy endureth forever." Psalm 106:1.

"Come, ye thankful people, come
Raise the song of Harvest Home!
All is safely gathered in,
Ere the winter storms begin;
God, the maker, doth provide,
For our wants to be supplied;
Come to God's own temple, come;
Raise the song of Harvest Home!"
—Henry Alford

### SHALL IT BE "A GOOD BEGINNING"

When the annual convention of the National Federation of Colored Farmers adjourned the other afternoon a New Year dawned for organized colored farmers of the Nation. For three busy days we had discussed what had been. Many speakers had analyzed our mistakes and successes. We listened to words of encouragement and instruction.

Organized Farmers, what now? Shall it be a good beginning this year?

First, let us resolve to start our New Year right. Let us labor to build up our Federation. Every Unit of the N. F. C. F. should hold at once a public meeting. Invite to the meeting all farmers of your community who are not members. Persuade them to join with you.

It might be a good idea too, to do a little housecleaning. Get rid of the unfaithful, those who will not follow the plans of the majority, those who are for self only, those who will not pay their dues, those who tell your business to outsiders, those who cause trouble, those who are no good. Get rid of these members. Better have ten or fifteen true-blue loyal members than fifty who are not loyal. Organized farmers should be real he-men. You have not time to bother with whiners, squabblers and deadheads.

If you have no local Unit of the N. F. C. F. in your community get in touch with the national office and organize one. In this day and time in UNION there is good commonsense, as well as strength.

Make out a program for the new year. Let COOPERATION come FIRST. Get ready to purchase cooperatively, family supplies, farm supplies, seed, fertilizer, everything you can buy together at a saving. Do this and save money. Stop wasting. The Negro farmer is poor more because he wastes, than because he can't get. Plan on cooperative production.

Make a survey of your community. How many farm owners? How many desire to be owners? What opportunities have you to purchase farms? what can you do to bring more progressive farmers into your community? Have you a farm extension agent? What are the needs of your community? Let your national office know about your community problems.

Be active. You can't live to yourself and live in successful and happy life. Get a feeling in you to want to help yourself and the other fellow to be proud of your business—the business of farming—and let the whole world know you are proud of it.

Start the New Year right. "Start right, keep right, and you'll end right."

### WHAT HAVE YOU?

On Thanksgiving Day don't think about what you have lost. Think about what you have, and be thankful.

Most of us have good crops this year. We have plenty of food in the cellar and pantry. Heaven sent bountiful rains. Our fields were not baked and parched as they have been in recent years.

We should be very thankful for our opportunities. Colored farmers have better opportunities today to make a success of farming than they have ever had. We are gaining more friends every day. We are able to do our own thinking. We are able to work for there is no unemployment on the farm.

We should be thankful too for the future, for the unknown, and be glad we have the chance to venture into the future with nerve and with a smile.

---

There is no place like home. Many of your neighbors are repairing and remodeling now. It is a good time for you to begin. If it is only a cabin there is something you can do to make it more comfortable and more beautiful. Don't let the children grow up surrounded by dirt and ugliness. Repair and beautify your home.

---

Eat or sell the fat old hens. Don't board them this winter.

Keep the idea of owning a farm and a home ever before you. The homeowner is independent. The renter or sharecropper is not. If you are chained to the sharecropping system of farming make every effort to get loose now. There is no time like today.

---

Don't expect to have good luck all the time. Misfortune comes to everyone. It very often comes suddenly. Prepare for the rainy day.

---

He is less than half-a-man who mistreats his wife.

---

Keep the children in school. Education is the chief defense of nations and races. It will soon be a disgrace to be illiterate.

---

Subscribe for the MODERN FARMER.

### NEGRO FARM FEDERATION IN ANNUAL MEET

Forsyth, Ga., Oct. 31—The National Federation of Colored Farmers which closed its eighth annual session here yesterday adopted resolutions which pledged support to President Roosevelt, Secretary Wallace and to the Congress which will convene on November 15 "in their joint effort to devise and enact necessary emergency legislation" to aid the farmer.

The resolutions also commended the Farm Security Administration for the "hope and promise" which it offers for farm ownership and asked for Negro representation in local administration of the program.

A telegram to Secretary Wallace expressed appreciation for the new division of payments between landlords and tenants as set forth in the 1938 Agricultural Consecration Program. A similar telegram to Dr. I. W. Ruggan, Acting Director, Southern Division, Agricultural Adjustment Administration pledged cooperation in keeping southern farms within the allotted cotton goals for 1938.

**Wide Representation**

Official delegations of successful Negro farmers, selected by state Governors, were present from seventeen states. These were supplemented by other farm groups which came with Negro County Agents or as representatives of local units of the Federation.

**President Hubbard Extends Welcome**

President W. M. Hubbard of the State Teachers and Agricultural College who was host to the convention, delivered the welcome address on Thursday evening to a packed assembly in the college auditorium. For four previous years President Hubbard had been selected by the Governor of Georgia to represent the state at Federation meetings.

**Excellent Addresses Delivered**

"A thousand cackling hens, a few milk cows, a bunch of fattening hogs for meat and market, a garden full of vegetables and a reasonable acreage of field crops—these represent the good farmers employer," said Leon R. Harris, Acting President of the Federation in his annual address. "This employer will never fire a good farmer and will always pay him a decent wage."

In his recommendations, Mr. Harris requested Negro Insurance Companies to devise for the Negro farmer a practical insurance policy to meet his peculiar needs.

E. A. Miller, Assistant to Director, Southern Division, Agricultural Adjustment Administration said that the Federation, back in 1933 conducted the first referendum on the Bankhead Bill. In explaining the details of the 1938 Conservation Program, Mr. Miller said. "In 1933 you were paid for plowing up cotton, and in 1934 and 35 you were paid for reducing acreage. For 1936 and 37 the working was changed and you were paid for diverting cotton acreage to conserving crops. In 1938 goals of accomplishment will be the basis of payment. These goals which represent the acreage limits set up for reasonable crop requirements will average about 60 per cent of present acreage bases."

James P. Davis, Head Field Officer, Southern Division, Triple A and one of the co-founders of the Federation, gave a brief review of its history since the organization in 1922. "Bounties from the soil," said Mr. Davis, "were the first blessings which Nature bestowed upon mankind. Upon the farmers of the past have we depended and to the farmers of the present and future must we look for the vital necessities of life." With the active interest of the government in agriculture, Mr. Davis is confident that "the farm offers opportunities which few activities can rival."

J. A. Evans, Assistant Extension Director for Georgia described Georgia's new plan of Soil Conservation Districts and explained how farmers may participate. Dr. Evans made a very earnest appeal for "intelligent effort" to bring about "cooperation and fair play" between landlords and tenants.

Miles Hackney from Georgia, W. Riley from Mississippi, W. H. Lawson from South Carolina, H. B. Boler from Missouri were among the scores of successful farmers who gave practical and informing discussions on various topics.

Among the other speakers and visitors were President B. F. Hubert and Prof. F. M. Staley, Georgia State College, James A. Jackson, Special Representative, Standard Oil Company; T. M. Campbell, Extension Supervisor and Chaplain, H. V. Richardson from Tuskegee; C. A. Scott, President and Thomas J. Flanagan, Chief editorial writer, Scott Newspaper Syndicate; T. J. Ferguson and J. M. Handy, Atlanta business men; P. H. Stone and A. A. Turner, State Negro Extension Leaders from Georgia and Florida respectively; Miss Minnie Singleton of the Macon Telegraph and A. L. Holsey Field Officer, AAA, Tuskegee.

Prizes for the carried exhibits of farm and garden products and needlework included two registered Hampshire hogs from Amos n' Andy, a phonograph from Sears, Roebuck and Co., a plow from S. L. Allen Company, paint from Memphis Fence and Roofing Co., seed from Hasting Seed Co., tobacco from R. J. Reynolds Tobacco Co., traps from Animal Trap Company of America, etc.

### HOMEMADE ICE BOX IS BIG CONVENIENCE

"My problem of refrigeration was solved when Mr. Eddington built me an ice box," Mrs. Willie Eddington of the Medford home demonstration club told Miss Eutha Olds, home demonstration agent in Desha county.

Mr. Eddington took scrap lumber and built two boxes, one 43 by 68 and the other 38 by 63 inches. The small box was placed inside the larger one leaving five inches of space between the two. This space was filled with sand. The top was lined and made to fit down tightly.

The box was placed on the northeast side of the house, near the kitchen door, and a small shed was placed over it to keep the sun off. This proved very satisfactory during the summer months.

Ice was only delivered three times a week, but the Eddingtons with this box were able to keep ice at all times, Miss Olds said.

### DUG TRENCH SILO TO ECONOMIZE HIS FEED

"Silage will solve my feed problem." Everett Jones of Fairview community, Nevada county, told his county agent, J. L. Hiler, during a trench silo filling demonstration they were conducting.

"The acreage I have available for feed crops," Mr. Jones went on, "is very limited on my 41-acre farm. Therefore I must get the utmost benefit possible from what feed I can raise. The trench silo will go far towards filling the need for additional land I have always faced."

Mr. Jones and his wife are members of the Pleasant Hill Junior-Adult 4-H Club and are operating their farm as a farm-unit demonstration in cooperation with the Arkansas college of agriculture. Theirs is the second trench silo to be filled in the county, Mr. Hiler noted.

*We Thank You*

To Delegates and Friends. To Donors of Prizes. To Exhibitors of Farm and Farm Home Products. To all who contributed to the success of our eighth annual convention.

You have contributed your part to the success of our recent Annual Convention. We shall strive to merit your continued interest and support.

We appreciate all we have so freely received and, in turn, shall conscientiously endeavor to freely give—to our members, to our Race, and to our fellow-Americans, the devotion, service and cooperation so necessary for our mutual welfare and happiness.

Sincerely Yours,

**National Federation of Colored Farmers, Inc.**
2937 S. Michigan Avenue, Chicago, Ill.

L. R. Harris, Acting Pres. and Sec. — Maj. R. A. Byrd, Vice Pres.
Miss S. B. Wilson, Treas. — C. R. Richardson, Chm. Board of Directors.

NEW YORK CITY RETAIL STORE OPERATED BY NEGRO PROPRIETORS: 1935

New York City, with the largest Negro population (327,706 in 1930) of any city in the United States, reported 960 retail stores operated by Negro proprietors in 1935, according to Director William L. Austin of the Bureau of the Census.

The number of retail stores increased from 391 in 1930 to 960 in 1935; total values of sales increased from $3,322,000 to $3,805,000 during the same five year period, and the total, which does not include compensation for the services of proprietors, increased from $293,482 to $472,186. New York City led all other cities having 50,000 or more Negro inhabitants in the number of stores operated; in the value of sales and in the amount of wages paid to employees. The combined sales of the 449 food stores and the 172 eating and drinking places amounted to $3,043,000 or approximately 80 percent of the total sales, and with the exception of the $397,000 sales reported by the mixed classification "Other Retail Stores" no other group classification reported 5 percent of the total sales.

The highest average sales per store, $21,600 was reported by the combination stores (groceries and meets), followed by the drinking places with average sales of $16,350. Total operating expenses of the 960 stores constituted 30.8 percent of total sales, and the pay roll represented 40 percent of the operating expenses. The average operating expense ratio, in 1935, for all Negro retail dealers in the United States (23,490) was 23.2 percent of the total sales, and the pay roll was 44.2 percent of the total operating expenses reported. The 960 retail stores in New York City gave employment to 1,801 persons, included 793 employees and 1,008 active proprietors and firm members, not on the pay roll, and the average sales per store amounted to $3,964.

TIPS FROM TEA TASTERS

Tea makes its bid for favor by its flavor, not its food value. Knowing how to buy and how to prepare are pre-requisites, connoisseurs warn, to getting full flavor value.

PROFESSIONAL tea tasters have little fear that technological improvements or scientific progress in the tea industry will ease them out of their jobs. As long as people like a good cup of tea, folk with a keen sense of smell and taste will find their services needed in the tea business. A tea taster can appraise many teas in a few minutes, while the chemical analysis of a single tea is a long and expensive process.

Actual composition of each cup of tea varies with the tea and the method by which it is made. Tannin (which gives tea its briskness and pungency), caffeine (which provides the stimulant), and the essential oil of tea are its chief constituents making for flavor. However, tea leaves are composed of many other substances, too—proteins, carbohydrates, mineral and gummy matters. These components which may add or detract from the flavor of tea are present in such infinitesimal amounts that they are difficult to determine by laboratory method. As the popularity of tea is based primarily on the flavor and aroma of the liquor, to the tea producer it's the taste of his tea that counts.

Tea producers employ tea tasters to blend their teas and to test the quality of their brands. The United States Government also maintains tea examiners in five big ports—New York, Boston, Seattle, San Francisco, and Honolulu. Their job is to see that all teas, from the cheapest to the most costly, are sound, pure, and clean, and do not drop below a minimum standard of quality. Tea tasters' palates are turned to the standards set for tea by a board of seven tea experts which is appointed each year by the Secretary of Agriculture. Only tea which meets these standards and the regulations of the Federal Tea Act, which is enforced by the Food and Drug Administration, is allowed to be sold in this country for food. Tea officials examined over 91 1-2 million pounds of tea in the fiscal year ending June 30, 1937. This was almost 7,400,000 pounds more than was imported the previous year. Of these millions of pounds examined, less than 1 percent was rejected because it did not measure up to the standards of the Federal Tea Act. Reason for this small percentage of rejections is that importers acquaint themselves with the U. S. standards and see that their tea conforms with them before they ship their products to this country.

Hundreds of different varieties and blends of tea are classified under three general headings: Green or unfermented, oolong or semi-fermented, black or fully fermented tea. The classification depends on the method of manufacturing the green leaves of some variety of the plant Thea sinensis (L.) into the product known as tea.

Green, black, or oolong tea can all be made from the leaves of the same plant. However, certain countries and specific districts in certain countries specialize in making one kind of tea. For centuries both China, where the beverage probably originated, and Japan, which developed tea drinking into an aesthetic cult, have manufactured green and black tea. Today our green teas come mainly from these two countries, our oolong tea from China and Formosa, and our black tea mainly from India, Ceylon, and the Netherland Indies. Over 73 percent of the tea examined at United States ports last year was black.

Difference between black and green tea depends on whether the green leaf has been allowed to ferment or not. Though each country has its own special technique in manufacturing, there are four major steps involved in making black tea—withering, rolling, fermenting, and firing. Leaves are first dried until they have lost some of their water content, then they are rolled either by hand or machine until the leaf cells are broken down and the juices are exposed to the air. During the rolling process a chemical change begins to take place in the leaves. Oxidation of the tannin begins and the essential oil of the leaves which gives black tea its aroma is developed. In the fermentation process these two changes are further developed. The leaves are spread on trays or on a conveyor table and left in a moist atmosphere for a few hours. Tea is a bright red tannin color when it comes from the fermentation room, but it turns to the familiar black when fried. Object of firing is to check further fermentation. When tea is removed from the hot, dry atmosphere of the firing room it is ready to be graded and packed for shipping.

In making green tea the leaves are not allowed to wither but are steamed, rolled, and fired. The fermenting process, in which much of the tannin is oxidized, is entirely omitted. As it is the tannin which gives tea its pungency, green teas have a much sharper taste than black. Green varieties have very little aroma. Essential oil which gives tea its order is developed in the chemical changes which take place during the fermentation process.

Oolong tea is sometimes described as a cross between the green and black, as it has the fine aroma of black tea and the "bit" of green tea. If it is prepared in somewhat the same manner as black tea except that fermentation is stopped much sooner.

Jasmine or other "flower teas" are green, black, or oolong tea which has been scented with flowers. After the tea is fired it is spread on containers in alternating layers of flowers and tea, usualy three parts by weight of flowers to 100 parts by weight of tea. Flowers and tea are then heated together and later, before packing the flowers are either left in the tea or sifted out.

Names of tea are often marks of the variety or the country in which it is grown. Thus over 95 percent of the teas shipped to the United States last year were classified as Ceylon, India Java, Japan, Sumatra, Formosa Oolong, Ping Suey Green, Congou, Japan Dust, Formosa Black, and Japan Black. To tea experts each of these names is associated with a definite flavor. Tea connoisseurs are often as particular about the tea garden from which their tea comes as a wine fancier is of the vineyard where the grapes for his sauterne were raised. Tea growen in the gardens of Darjeeling, for instance, is favored by some tea drinkers over teas grown in the lowlands of India. Some tea drinkers prefer the black teas of China to those of India, and vice versa. Climactic and soil conditions in the season during which the leaves are plucked all affect the quality of the tea.

The evergreen tea plant will grow in many different types of soils and climates, but it flourishes best in an acid soil and in a moist atmosphere. When the plant grows wild it develops into a sturdy bush from 30 to 60 feet high. However, tea planters keep their bushes pruned down to from 3 to 5 feet. A tea bush may live for 50 years, but its prime-of-life span is only about 10 years, during which time it may yield a quarter of a pound of leaf in one season. The season in which the leaf is plucked depends on the locality in which it is grown. In Southern India, Ceylon, Java, and Sumatra—localities which are free from frosts and droughts—the plucking of tea leaves is an all-year-around occupation. In colder sections of Japan and China the plants do not put out new leaves during the winter.

Orange Pekoe tea means tea made largely from the first and second leaf of the tea shoot. It is a term to describe the leaf size and is not to be taken as a mark of quality or as the name of a certain kind of tea. Orange Pekoe tea made from the leaves of high-grown bushes, for instance, is likely to be superior in quality to that made from the leaves of low-grown bushes.

Tea experts judge the quality of tea by the appearance, twist, and smell of the dry leaf, by the color brightness, and odor of the tea infusion, and by the color, thickness, strength, pungency, and flavor of the liquor. They have many terms to describe each aspect of the tea. Appearance of the leaf varies with the kind of tea and method of manufacturing, but in general for black tea the leaf should be small, hard, well-rolled, and uniform. To test the freshness of tea, tea experts take a small handful and crumple it. An old tea when pressed will break and show dust, while a new tea has a spring to it and will no crumble easily.

Color of the infused leaf is a clue to the expert in judging cup quality. In black tea a rich golden leaf means fine tea, while a dark leaf is an indication of low-grade tea. Color of infused leaf of either black or green tea should always be even. Infused leaves of high-grade green tea are greenish yellow or greenish golden. High point in judging quality is the flavor of the tea liquor. According to one tea expert, "the ideal tea is a brisk, full, rich, flavory tea; thick and syrupy in the cup; not dark but rich in color." In describing the liquor, tasters use the word "flavor" to denote a sweetish taste and honey like smell; the word "brisk" to describe a live as opposed to a flat taste.

Some tea connoisseurs blend their own tea. Most consumers buy their tea in pound or half-pound packages already blended. One can invest as little as 40 cents or as much as $100 in a pound of tea. There are on the market blends to suit every palate and practically every purse. To find the tea that is just right, consumers should turn amateur tea tasters and track down the flavor they like best.

Type of water supply available guides fastidious tea drinkers in their choice of tea. Tea infuses more readily in soft water than in hard water. Small, thick, full tea is very satisfactory for soft water, while for a hard water a brisk, full flavory tea is a good choice. Though tea should have a bright, sparkling appearance when it is poured in the cup, the best quality tea may have a dull-colored liquor if made with alkaline water or water high in iron. In England, where teatime is more of a national institution than in the United States, tea blenders are expected to know the chemical constituents of the water in every part of England. Teas are specially blended for Kent to meet the requirements of its chalkywater, while Liverpool, known as the best tea-making place in England, requires a different blend.

Ways of making tea vary in different countries. Some like it weak and some like it strong. Most occidental tea drinkers drink tea for its pleasant and unique taste and its stimulating effect. To their palates the weak brew of the Orient is little more than flavored hot water, while the tea made by the back settlers of Australia, who are perhaps the world's heavlest tea drinkers, is so strong that it has lost all the distinctive characteristics of tea. In certain sections of Australia the custom is to put a lot of tea leaves in a pot and let them stew. English and American tea drinkers prefer to steep their tea leaves in boiling water.

There are many open secrets to preparing a good cup of tea. First use only freshly boiled water. If water is allowed to boil and reboil most of the air which it contains is driven off in steam, and the water has a flat taste which is imparted to the tea liquor. A pound of tea averages from 150 to 200 cups, depending on whether you like it strong or weak. Experts says that two-thirds of an ounce of tea to a quart of water is the correct amount. Infusion of leaves should take from 3 to 5 minutes. Tea should be made in a warm tea-pot—preferably in one made of porcelain—and after infusion the liquor should be poured from the leaves. Worst faux pas to commit in making tea is to use leaves a second time. A good cup of tea requires fresh tea leaves.

Drink a cup of tea for anything but food value. Tea has no nutritive value except for the sugar and milk or cream that is added to it.

THE DAILY DIGEST SAYS:

SOUTH EXPERIMENTING IN FLAXSEED PRODUCTION

The Agricultural Committee of the New Orleans Association of Commerce reported this week that much attention is being given now to the possibility of producing flax in certain parts of the Southern States. Heretofore, flax has been produced largely in northern areas, but the Committee says experiments are being made in its production in the Gulf Coast area. Available information seems to indicate possibilities of producing the crop on fallow rice lands and upon new lands just being put into cultivation, it was stated.

SUGARCANE BREEDING

M. N. Beeler, author of "A Safer Cane?" in Capper's Farmer (Nov.) reports that C. J. Franzke, agronomist of the South Dakota Experiment Station, and his associates, "have bred a cane which contains less hydrocyanic acid than Sudan grass.....Last season Professor Franzke's assistants completed tests on prussic acid content at various stages of growth. At no time did the new cane show more than 0.12 percent. The lowest recorded for Sudan was 0, 18. The new cane has not been named. It has been released to a number of farmers and vocational agricultural students under the designation No. 39-30-S.....The new cane should be safer than ordinary varieties of cane. It should be safer for hay. It should be safer in case greens-hungry stock break into the field. There is another selection or strain coming along that contains a lower percentage of the poison than the one which has been released. And a third, if it proves out in other desirable characteristics, contains even less than the second. This makes three low hydrocyanic acid canes, lower than Sudan grass, produced within 7 years.... ..."

Spiritual mercies are good things, and not only good things, but the best things, so that you may well ask for them; for if no good things will be withholden, much more will none of the best things.—**Spurgeon.**

## WHEN YOU BUY MEAT

Inquire as to which kinds of meat are selling at the lowest price at the time of purchase; price the different cuts of meat, and note the proportion of waste to meat per pound.

Ask for meat grade-marked with the Government grading stamp which runs like a ribbon from shoulders to legs of the animal so that each cut is marked. The grade names are:

Beef, Veal Sausage Lamb, Mutton.

GRADE.—

| | | |
|---|---|---|
| 1st | Prime | No. 1 U. S. No. 1 |
| 2d | Choice | No. 2 |
| 3d | Good | No. 3 |
| 4th | Medium Plain or | No. 4 |
| 5th | Common | No. 5 |

If there are no grade marks, look for these indications of high quality:

BEEF.—Flesh: Light cherry red in color, velvety in appearance, firm, fine-grained, minimum of connective tissue. Bones: Porous, pinkish white in color. Fat: Brittle, flaky, creamy white, marbled as a network through the meat.

VEAL.—Flesh: Fine grained, firm, somewhat moist, light pink;

(Continued on Page 7)

## COOPERATION

AMERICA'S first "model town," is to be wholly cooperative. So runs the news from Greenbelt, Md., the first of three planned communities now being built by the Farm Security Administration—successor to the Resettlement Administration—to provide housing for people of moderate incomes.

Once things are going full blast at Greenbelt, community members will elect a board of directors for Greenbelt Consumer Services, the community co-op that will manage a general store, self-service market, drug store, movie theatre, barber shop, beauty parlor, garage, and any other enterprise that a community of 900 families may need.

Since stores must be open for business when the Greenbelt's citizens move into their new homes, the Consumer Distribution Corporation has been asked to arrange for the management and operation of the co-op activities. CDC is a non-profit organization created a year ago by Edward A. Filene to help put on its feet a chain of cooperative department stores. CDC will provide working capital for the Greenbelt projects until such time as the community members can take them over.

In this case the Government is at the receiving—not the giving—end, for the stores will be run without Federal subsidy. In fact, the Government will receive a percentage of the gross sales as rent for the properties. Goods will be sold to members at market prices. Profits will be returned to consumers, a certain amount being reserved to build up capital so that members will eventually acquire complete ownership.

MEMBERSHIP in the 550 production credit associations under the Farm Credit Administration has reached a new high with farmer-stockholders numbering about 258,000. Stock in these associations is held by farmer-borrowers to the amount of $11,816,000—a gain of over 1 million dollars in a year. Said Production Credit Commissioner, S. M. Garwood, "The steady growth of these cooperative short-term credit agencies which make loans only on a sound business basis is attested by the continuous increase in the average size of production loans made, indicating the increased participation of large-scale operators."

BACK FROM Antigonish, Nova Scotia, have come the sixty-odd American members of the First Annual Tour of Nova Scotia Co-ops, arranged by the Cooperative League of the United States of America. The trip began with a 3-day conference at Antigonish. Next came a 5-day sight-seeing tour of study circles and cooperative associations in action. Members visited, as well, credit unions lobster processing factories, fish cries, and mills. Conclusion of the tour came with the regular annual Rural and Industrial Conference of cooperative educational and business delegates held on the grounds of St. Francis Xavier University on August 21. Before disbanding, delegates took steps to assure the success of a similar tour next year. The tour had been operated on a cooperative basis, savings to be returned to members. The members voted to waive their refunds, which came to the substantial sum of $400, and turned over a large part of this amount to a special tour fund.

SKIRTING close to the 2 million dollar mark, business done during the first 6 months of 1937 by the Consumers' Cooperative Association of North Kansas City, Mo., was the best on its record when sales reached $1,959,000. Growth of CCA has followed two definite policies. Beginning in 1929 with petroleum products, the board of directors has added other items as requirements for the members show that they can be supplied more economically and efficiently by cooperative purchase. When experience proves that additional economies can be made by manufacture, the cooperative has then pushed into that field. First manufacturing effort with lubricating oils was hastened because an outside source of supply proved not to provide oils of dependable quality. Now CCA manufactures, in addition to lubricating oils which it sells abroad and at home, paint, fly spray, grease, and other products, and handles many more which are made to specification for the cooperative. Paint manufacturing equipment installed in the CCA plant early in 1936 was paid for during the first 4 months it was used. Fly spray manufactured by CCA showed a gain of 12 percent in the first half of 1937 over the same months in 1936. A grocery department has been in operation just a little more than a year and a half. Sales in the first half of 1937 were greater than sales for the whole year of 1936. More than 100 items bearing the co-op label are now found on shelves of local cooperative member stores. Co-op labeled foods are packed accordng to specifications worked out in CCA laboratories. Binder-twine business for the first half of 1937 was 68 percent greater, and tires, tubes, and batteries 9 per cent above January to June 1936 sales.

## CONSUMER'S MAILBOX

"WHAT IS the best way of storing potatoes? I have noticed that some of my stored potatoes acquired a disagreeable, sweetish taste."

Most of us apartment dwellers don't have to worry about this problem. We are lucky if we have a shelf or two in the kitchen on which to lay away a week's supply of food-stuffs. But for those fortunate housewives who have a home garden and a good old-fashioned cellar for storage, we have just the needed hints for keeping the potato crop for winter use. These hints are the outcome of a study recently completed by scientist of the United States Department of Agriculture and several agricultural experiment stations in the great potato-producing States. Request for this study came from manufacturers of the popular potato chip and from restaurant men who had long scratched their heads over the question why the flavor and texture of their cooked potatoes varied continually—often to the annoyanc of customers. The experts who turned their attention to this matter found that the trouble lay with the storage temperatures.

Here is what the scientists recommend: Store potatoes at an even temperature of 60 degrees F. when they are to be eaten before New Year's Day—that is before the end of their dormant season. Potatoes intended for use in late winter months or in the spring, must be handled differently to avoid sprouting. They should be held at about 40 degrees F. Here is where the sweetish taste comes into the potato picture. It is the result of the sugar the spuds have developed in storage. So the potatoes must be reconditioned by storage at room temperature—that is 65 degrees to 70 degrees F. —for about a week or two before consumption. The unpalatable taste will have entirely vanished at the end of this time.

Of course, these directions were framed particularly for commercial firms which could control storage conditions perfectly. But there is no reason why potatoes can't be put away in the home cellar if temperature and humidity can be maintained at the right level. Apparently a cellar with a dirt floor is more satisfactory for storage than one with a cement floor. It should have an insulated partition separating the furnace from the storage space. With frequent temperature readings being a necessity, a thermometer is standard equipment.

Darkness is required in the storage room since potatoes sprout if stored in a light place. There should be a window that can be opened on mild days or nights to allow for ventilation. In the North where winters are cold, potatoes can be piled high in a bin—preferably a slat bin on legs—but they should never rest against an outside wall. In warmer regions, potatoes do better if put in baskets or crates and placed on slat shelves. If they must be stored in bins, they should be piled only a foot or two deep to avoid overheating.

Now for one more tip. Apples or any other fruit should not be stored near potatoes. The fruit will take on the earthy flavor so pleasant in the spud but so disagreeable in an apple.

## HELPFUL HINTS TO HOUSEWIVES

"IS THERE any way of telling if the food inside an unopened can is bad? How does freezing affect canned food? I left some canned goods in my summer cottage a year ago. Undoubtedly these supplies froze during the winter months, since my camp is in a region of low winter temperature. I didn't try using these foodstuffs

**Pastor's Guide**
**By Boyd**

Every minister should equip himself with a Pastor's Guide. None on the market has had a better reception than Boyd's Pastor's Guide, price 75 cents. It contains something for every form of service that can properly be held in a Baptist Church. It is the work of the late Dr. R. H. Boyd, who for more than fifty years was a Baptist pastor. It was adopted by the National Baptist Convention of America years ago. Send for a copy—**75c** postage paid.

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Pulpit Bibles**
**At Low Cost**

Every church would do well to purchase a Pulpit Bible. It is not only a necessary Book on the pulpit rostrum, but it adds to and dignifies that sacred place. We can supply you with one at prices ranging from

**$6.50** up to **$25.00**

postage or express charges paid. Any circle, any group, or any individuals would please their church and the pastor if they present them a Pulpit Bible as a gift.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**Baptismal Garments**
**For $30.50**

Every preacher who believes in the ordinance of baptism should be prepared to perform that ordinance at a moment's notice. He therefore, needs a baptismal garment, consisting of boots and trousers made into one water proof suit. We can supply this to you for $30.50. All you have to do is to send us the size of shoe you wear, give us your height, your measurement around the waist and the inside seam measurement. These garments are made to order; they are not kept in stock, because the boots are made to fit.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

**The Best Book For The Ministers**
**Theological Kernels**
*Price $2.00 per copy*

This is the best book on the market for ministers who wish to get a simple, yet impressive understanding of theology. It has the kernel out of all of the theological discussions and books, as we understand it, that can be gotten together under one cover. It is used in ministers' institutes for theological courses, and is a handy publication in any preacher's library.

Send all orders to the

NATIONAL BAPT. PUB. BOARD,
523 2nd Avenue, North,
Nashville, Tennessee.

## A LUXURY FRUIT TURNS PLEBEIAN

Once a decorative note in the fancy fruiter's, avocados now find their way to chainstore counters and make their claim on planners of more moderate priced menus

A NEW plant appearing on American window sills, vying with ferns, geraniums, begonias, and rubber trees, is the young avocado tree, grown from the seed of the fruit used for a family salad. Though the seed of the avocado may sprout in a red clay flower pot and grow into a decorative plant, if it is to develop into a full size tree bearing luscious fruit, it is much more particular about its habitat. But both the large seed and the delicious flesh of this tropical fruit intrigue the American housewife. Over 20 million pounds of the fruit was eaten in this country in 1935.

Until recently the avocado was known as a luxury food in the United States, appearing as a salad de luxe on hotel menus and served in the average home only as an extra special delicacy. Reason was the usual one—cost. The first avocados grown commercially in this country sold as high as a dollar or more a piece. Today with large orchards in Florida and California, with shipments of fruits sent from Cuba and Mexico, the avocado has taken a nose drive in price.

"Nutty" taste of the avocado, unlike that of any of our more familiar fruits, is still strange to many American palates. In Mexico and Central America, the aguacate—the Spanish name for the avocado tree— is a familiar landmark. As elms and maples tower over the cottages of New England, aguacate trees guard the entrance of many a Mexican home.

"Tortillas and avocados," say, the natives "make good eating." Nutritionists nod their heads in assent, especially as to the good eating qualities of the avocados. The buttery flesh of the avocado is richer in oil than any other fruit except the olive; it contains some proteins and is a fair source of minerals. It also makes a showing of vitamin virtues. Most varieties of avocados contain vitamins A. B. D., E, and G. Some even run the gamut of the vitamin alphabet and add a small quantity of C to the list. Doctors often prescribe avocados as an A-1 food for diabetic patients who must have a diet minimum carbohydrate content. Avocados contain no starch and less than 1 percent of the fruit is sugar, yet, because of its generous supply of oil, it is a filling food, high in calories. The oil content of an avocado varies from 7 to 26 percent, depending on the variety. Caloric value depends on oil content. One-fourth to a half of a medium size avocado usually averages 100 calories. Composition of avocado oil is similar to that of olive oil. In digestibility, avocado oil is rated with butter fat.

Because of their texture and flavor, avocados combine well with acid fruits and vegetables such as oranges, grapefruit, and tomatoes, or they are good served "on the half-shell" with a little salt, lime, or lemon juice, or with a peppy French dressing. Real devotees of the avocado use them as a flavoring for ice cream, a sandwich spread, or addenda to soups, consommers, and omelets. Advocados are generally eaten fresh. Cooking detracts from their flavor and gives them a bitter taste. As yet no method has been devised for canning them.

Popular name for the avocado is "alligator pear." Scientists frown on this term, calling it a misnomer. The avocado is not even a distant relation of the pear family. Together with the cinnamon, sassafras, and camphor, it belongs to the laurel clan is a tropical and subtropical evergreen plant indigenous to Mexico and Central America. Due to the popularity of its fruit, the tree is now cultivated in many countries, among them Hawaii, Cuba, Australia, South Africa, southern France and Spain, in the northern half of South America, in Central America, Mexico, and in Florida and California in the United States.

Spanish adventurers, shortly after their conquest of the New World, are credited with bringing the first avocado seedlings to Florida. Since the turn of the twentieth century the United States Department of Agriculture has studied the life habits of the avocado. Government plant explorers have wandered through Central America, Peru, Ecuador, Chile, Mexico, and the West Indies for types of the fruit best adapted to Florida and California climates. The first commercial grove was started in Florida about 1900; in California in 1910. Today there are about 8,000 acres of avocado orchards in California and about 2,500 acres in Florida. As the crop at home and abroad matures at different seasons, the avocado, especially in the markets of large cities, is available the year round. California ships her crop in winter and spring, Florida in summer and fall. Cuba's avocados ripen in July, August, and September. In the year ending July 30, 1937, Cuba sent us 9,084,000 pounds of the fruit.

There are over 400 varieties of avocados, which vary greatly in size, shape, color, and texture of skin, flavor, and nutritive value. Mature avocados, depending on the variety, range in weight from 6 ounces to 3 pounds. The shape may be round, ovoid, or bottleneck; the skin may be thick or thin, smooth or rough. Color varies with species, ranging through shades of green, purple, maroon, and dark mahogany. Shape, color, and texture of skin have little relation to eating quality. Goodness is dependent primarily on maturity of fruit and high oil content.

Hundreds of varieties of avocados are conveniently grouped into three races—Mexican, Guatemalan, and West Indian. Varieties of all races are cultivated in this country. Fruits of the Mexican are, as a rule, thin-skinned fruit averaging about 8 ounces. Though the fruit has a delicious flavor, because of its small size and tendency to bruise easily it is not cultivated commercially in this country. General characteristics of the Guatemalan varieties are thick, rough, shell-like skins in shades of dark green, red, and bronze. Popular variety with the California growers is the "Fuerte," a hybrid between the Guatemalan and Mexican races. The Fuerte is a fruit weighing from one-half to one pound, is of an attractive light green color, has a high oil content, and excellent flavor. The Fuerte is much more resistant to cold than many other varieties. Most sensitive to frost are the West Indian varieties of avocados, cultivated more in Florida at the present time than in California. The skin of the fruit is always smooth and leathery, and in green skinned varieties is always a yellowish green rather than a dark green.

Like the orange and lemon, all varieties of avocado want a climate free from frosts and from intense heat waves. Refusing to live with its roots deep in water or in parched earth, the avocado demands a moist soil with good drainage. The hard but brittle wood of the trees snaps easily in angry storms. If an orchard is to have a long life, it must be situated in a spot protected from sweeping winds. Granted that an orchard has perfect soil and climatic conditions, it demands from its caretakers constant protection against insects and blights.

In blossoming season the tree is a yellowish, greenish mass of flowers, but only a small percentage of its profuse blossoms bear fruit. The yield depends largely on variety, soil, and climatic conditions and the size of the crop the previous year. A good yield per tree in a well-cared-for, well-situated orchard is from 3 to 5 crates of fruit a year. Prices which growers receive for their crop vary with varieties grown and season of shipment. Growers' returns usually range from 2 to 15 cents a pound. According to studies made of Florida avocado orchards, the average cost of maintaining a grove in good condition ranges from $75 to $100 an acre a year.

Problems a plenty plague growers of this fragile fruit. One of them is knowing the exact moment when it should be picked. Unlike most fruits, the avocado hangs out few signals that picking time has come. As maturity approaches, only slight changes in the color of the skin and stem appear as a warning to growers to get on the job. Nor does the softness of the fruit give the tip-off, because avocados do not soften on the tree. Calendars are little guide, either, since the ripening age of one variety may change from season to season. Yet knowing just when to pick is a prime prerequisite to getting best values—in money for growers, in flavor for consumers. As the fruit matures, its fat content increases, and the richer in fat the better in flavor are avocados. Immature ones have a watery, insipid taste. Overripe avocados rate black marks, too, because they are apt to be rancid and unpalatable. Spotting the the moment when the fat content is at its best is a tricky business. The surest test is a laboratory one, but obviously growers cannot rush off to laboratories to decide the matter for them on every and all occasions.

Great care must be taken, too, in picking avocados. Each fruit is clipped from the tree and is carefully handled so that it will not bruise. Usually pickers are equipped with canvas bags or buckets lined with excelsior. When the fruit is gathered, it is then taken directly to the sheds for grading and packing. Most fruits taste best when fresh-picked, but the avocado requires 10 or 12 days' respite to "soften up" before it makes good eating.

For marketing their crops the growers of California and Florida have organized cooperative associations. Organizations in each State have carried on research work studying the idiosyncrasies of the avocado and breeding hardy varieties which will rate high in flavor and with-stand long distance shipping. They also advise growers on the best methods of fertilizing, spraying, and general grove care. Both cooperatives have made an attempt to standardize grades and packing methods, to regulate movement of the crop to market, and to advertise their product, which they hope in time will be as common in the American fruit basket as the tropical banana.

No Government grades are established for the fruit, but ambitious growers have established their own grades. Fruit from California which has an oil content of at least 8 percent and measures up to the top grade in keeping and shipping qualities and general marketability are stamped "Calavo." "Flavocado" is the trade name stamped on fine-quality avocados marketed through the Florida Avocado Growers Exchange.

Consumers' preference in avocado varies in different sections of the country, but predominant choice seems to be for the medium half-pound to pound size fruit, green in color, and with a fairly smooth or pebbled skin. Appearance evidently accounts for preference, as size, texture, and color of skin reveal little as to quality of fruit. Avocados are best for eating when the flesh is soft and yellowish or yellowish green in color. Texture of flesh should be butterlike. Avocados which do not have this buttery texture are apt to have a flat, watery taste. "Mushiness" is characteristic of the flesh of overripe fruit. Pressing a fruit gently will give some indication of its ripeness. Thin skinned varieties yield readily when the flesh is soft; thick skinned types yield slightly. Fruit with dark, sunken spots and broken skins should be avoided. Both are indications of potential decay. The seed of the fruit is always fairly large, but it should make up less than a fifth of the total weight.

If an avocado needs a little more time to soften before serving, place it on a shelf in a room at normal temperature. Refrigeration retards softening. To hasten the ripening process, wrap the fruit in a cloth for as long as necessary. The flesh of an avocado that is just right for a salad will stay bright for an hour or so, but in time it is bound to darken. No more of the flesh should be peeled than is to be used for one meal. The remainder should be put in the icebox, but never directly on the ice or near the ice coils.

---

"It is only by divesting our minds of questions of ownership and other machinery of distribution, and by looking solely at the question of consumption—asking ourselves what is the annual product, who consumes it, and what changes would or could we make—that we can keep in the world of realities." —JUSTICE OLIVER WENDELL HOLMES

## WHEN YOU BUY MEAT

(Continued from Page 6)

the lighter the flesh, the more evidence of tenderness. Bones: Soft, red, small. Fat: White in thin layer over the exterior; pinkish on the interior of the carcass.

CALF.—Flesh: Firm, fine grained velvety, light tan to reddish brown in color. Bones: Soft, small, very red. Fat: Generous quantity, creamy white.

LAMB AND MUTTON.—Flesh: Firm and fine grained; color varies from pink in lamb to dull red in mutton. Bones: Most important indication of age is the break joint just above the ankle, which breaks in four well defined, smooth, moist ridges in lamb; less well defined, more porous, dry ridges in yearling lamb; cut as a smooth joint in mutton. Fat: Creamy or slightly pinkish in young lambs, becoming white in older animals.

PORK—Flesh: Light, grayish pink in color, firm, and fine textured. Fat: Firm, white, marbled throug meat.

## SURPLUS OF POP CORN

Pop corn growers are in trouble. Big imports are coming in from South America, and after paying the tariff of about one-half cent a pound, is selling in New York for three cents a pound. Growers who specialize in pop corn are finding, too, it is said, that many field corn producers put some of the acres they took out of field corn under the AAA, into pop corn. The South, once a good market for pop corn is now growing its own.

## COTTON ACRES PAYING BETTER IN LIVESTOCK

Seeding much of his cotton land to such crops as cowpeas and lespedeza, including some that scarcely made 150 pounds of lint to the acre, T. A. Prewitt, merchant and planter at Tillar, has launched profitably, he feels, into the production of livestock.

All together, Mr. Prewitt has turned 350 acres of cotton land into soil-saving and feed crops, said J. P. Pickren, county agent. About 280 acres of his is in lespedeza meadows and pastures. The county agent continued:

"This summer Mr. Prewitt has sold 30 two and three-year old steers which brought him 5 1-2 cents in his pastures; he also sold 11 calves, three to four months old weighing around 350 pounds, at 7 1-2 cents per pound. The calves and steers were raised at practically no cost, since during the winter the steers were allowed to run in the corn fields, which supplied them with feed until far into the winter.

"Mr. Prewitt now has a herd of 160 cows which he intends to carry through the winter. He has fenced a 500-acre woodland on which he intends to turn his herd. This woodland has an abundance of swamp grass which is available for grazing throughout the winter.

"Mr. Prewitt says he intends to specialize in raising calves for the market as soon as he has obtained a sufficient number of heifers to enable him to place 100 calves on the market each year. He has a registered Hereford bull to which he will breed his mixed herd of cows until he has a fairly good herd of white faces."

## GOT OVER $100 FROM FLOCK OF 14 SHEEP

More than $100 profit at no expense was made on a small herd of sheep by William N. King of Beaton, reports John W. Measel, county agent in Hot Spring County.

From his flock of 14 ewes and a good ram, Mr. King sold enough lambs and wool to total $117.85.

Mr. King has been making a profit from his flock for several years, with the only cost being that of shearing and, during especially bad weather, that of feeding half a pound of cottonseed per head, the county agent said.

## GIVES PROS AND CONS OF LIGHTS FOR LAYERS

The poultry market this season raises a question as to whether it will pay to light the flock in order to speed up laying, says C. E. Rhode, of the Missouri college of agriculture.

Heavy storage stocks of eggs are tending to hold prices down, though this is somewhat offset by cheaper feed, the specialist continued.

Prices of eggs are expected to advance after January 1, Mr. Rhode added, so that it may be a good plan to delay lighting the flock for production of market eggs.

Lighting has other advantages, however, which may make it pay earlier, the specialist pointed out. One is that lighting helps to keep pullets from moulting during the fall and winter.

Thus, he said, the use of lights now may result in better returns from the pullets later, when eggs seem likely to be higher. He added:

"Lights have some effect, too, in hurrying up the laying of late-hatched pullets. They also aid in bringing molting hens back into production, which may make lighting profitable where winter eggs are wanted for early hatching."

## PIGS PAID ON LAND HE TOOK OUT OF COTTON

'A $100 net profit on 21 head of feeder pigs proves that we can use our land with good results for something besides cotton,' J. C. Rapp, McArthur, told J. J. Pickren, Desha county agent.

"As soon as the agricultural conservation program was put into effect I started a hog and cattle program to supplement my cash income," Mr. Rapp continued, "I seeded a five-acre hog pasture with Bermuda, lespedeza and hop clover.

"My three sows had access to the pasture and were fed a mixture of corn, oats and tankage. They raised 26 pigs, of which I sold 21 for $282.

"Figuring the corn at $1, oats at 60 cents per bushel, labor at 15 cents per hour, and allowing a liberal amount of tankage and interest, my hog have shown a much larger dividend on the land than cotton, and have given me a market for feed produced on land taken out of cotton production."

## THESE GARDENS GROW SOME UNUSUAL PLANTS

Members of the Safe Home Demonstration Club, Greene county, have unusual sidelines in their live-at-home programs, according to Mrs. Geraldine G. Orrell, home demonstration agent.

Mrs. O. H. Barner, gardening local leader, grows, thyme, horehound, dill, sage, sassafrass, mint, rose geranium, and chives for seasoning.

Mrs. D. C. Eastep not only grows many of the condiments that she uses in cooking but cultivates several medicinal herbs—ginseng, mullen, May apples, wormwood, bramble roots and golden seal.

Mrs. E. J. Barner has raised citrons for several years, and has prepared all the candied citron needed for herself and her relatives for their Christmas cake baking.

## PLANTED KUDZU AND IT HALTED DITCH CAVING

Kudzu has proved its value in controlling caving ditch banks on the arm of W. J. Hansbrough in the Pucell community, Green County, said John Stephens, county agent.

Several years ago it was necessary to dig a narrow drainage ditch through Mr. Hansbrough's farm, but the nature of the soil was such that the ditch banks caved off as a result of the large amount of water carried.

So six years ago Mr. Hansbrough got 500 kudzu cuttings and planted half the length of the ditch with them. After the vines attained a good growth, the caving stopped. Where there is no kudzu, the caving has extended into the field for four or five feet.

Some of the vines have reached a length of 50 feet, and where it has been possible to mow them, Mr. Hansbrough has got good cuttings of hay.

"Kudzu is valuable crop for three reasons," Mr. Hansbrough told Mr. Stephens, "in the first place, it keeps soil from caving or washing away with its dense growth. In the second place, it is a legume and aids in building the soil. Third, it makes a good hay crop."

## SHOOT FAST RABBITS, SLOW ONES ARE SICK

ARLINGTON, Va., Nov. 17.—The rabbit that lost the famous race to the tortoise was slowed down by tularemia.

Although not intending to detract from the moral of the ancient fable, Dr. Earle G. Brown, Arlington county health officer, substantiates that startling fact in a treatise released today for the benefit of hunters and hunters' wives on the cause and prevention of tularemia—the dreaded rabbit disease. He states:

"Never catch a rabbit that is sluggish enough that it can be run down and killed with a club as that rabbit is sick or it could not be caught."

Other facts about the disease, many little known, were explained by Dr. Brown as follows:

"The infection may also be carried by opossums, skunks, squirrels, or coyotes, and some cases have been attributed to quails.

"Forty per cent of the persons who contract the disease are women.

"It is characteristic of the disease that the majority of cases occur during the hunting season.

"Care should be taken to prevent injury while dressing a rabbit, and perferably rubber gloves should be worn.

"Rabbit meat thoroughly cooked is harmless."

## PAYS LANDLORD AND TENANT TO WORK TOGETHER

### INSTANCE OF HOW BOTH MAY GAIN CITED FROM FRANKLIN COUNTY

E. D. Hall and Harvey Walker of Webb City, Franklin County, show how a landlord and his tenant can work together to profit jointly, says J. O. Kumpe, county agent.

About eight years ago Mr. Hall rented some cotton land to Mr. Walker. That year Mr. Hall told his tenant that he could have an acre of land for truck, and gave him wire to fence the land.

Mr. Walker took advantage of this offer and now has a year-round garden. Last summer he had more than enough blackberries, grapes, youngberries, and strawberries for home use. Mrs. Walker canned about 1,200 quarts of fruit and vegetables from the garden in 1936.

TENANT'S PLACE SECURE

Mr. Hill has been offered $25 extra for the same land and truck garden by other tenants in the community, but he will not part with the Walkers. They practice the live-at-home program, and that is what he is trying to teach all his tenants to do.

Mrs. Walker needed a place to put the canned fruit and vegetables, and Mr. Walker went to Mr. Hall for advice. An old building had burned on lots owned by Mr. Hall in Webb City, so they took the foundation walls which were made of six-inch cement blocks and made the walls for a storage house.

Mr. Hall spent $30 for nails and roofing, but says that he has a $200 storage house on his farm. What is more important, he has the trust and good will of his tenants.

## PLANTING OUT ROSES

There has been considerable discussion as to the best time to plant roses in the South. We may assume, that if all things are equal, late November or December is the best time to plant.

But "all things" are never equal. For all "intents and purposes' January and February are just as good as December. This is especially true if the plants, as usual, are field grown Southern plants which are dug in the fall and stored in bundles in sheds until shipped.

The thing to be "scared" about is the fact that the plants lay in bundles in warmer climates than ours and the buds may spring into growth before any new root formation has taken place.

## MEAT GRADES AT YOUR SERVICE

### MRS. BLANK'S BUTCHER GIVES HER SOME POINTERS ON HOW TO REDUCE THE GUESSING ON QUALITY IN THE MEATS SHE BUYS

MRS. BLANK wore that faintly anxious look which often marks the moment when the family carver first applies the knife to the roast. Would the beef be tender? Would it be full-flavored and "just right?"

She received her plate, scanning critically the slice of beef upon it. After all, this was the substantial foundation upon which a good dinner is built. Such a meal is no better than its meat!

Mrs. B. tasted the beef with all the critical regard of a good cook. It was fair. But only fair. Why on this particular occasion, when she had gone to such pains to try to get a really excellent roast, couldn't it have been just that? It wasn't bad; neither was it remarkably good.

Now this was a somewhat special occasion. There were other times when Mrs. B. was not accustomed to shop for the best roast of beef on the market. The Blank family lives like millions of other American families. For most ordinary dinners Mrs. Blank tries to buy meat thriftily—looking for reasonably good quality at not too high a price. But this was one time when she wanted and thought she had paid for the best.

Why was a roast beef such a gamble? Couldn't one find a way to reduce the risk of getting just average quality meat when you think you're getting tops and are willing to pay for it? Must every housewife be as expert as the meat salesman, simply in order to get the quality of meat she thinks she's paying for?

As it happened, Mrs. B. learned not long afterward that her Government was trying to help her answer some of those questions. She had changed most of her meat buying to another store, and it was here that the manager first told her about the beef that had been graded for quality by the Federal Government.

She was interested at once. Here was something that she had not known about. Something that sounded as though it might be on the right track.

The meat manager showed her a loin of beef on which was stamped a long ribbon of words in purple ink, repeating over and over, "U. S. Good Steer." All the way down the back ran that purple legend so that virtually any cut out of that quarter of beef would show those significant words, "U. S. Good Steer."

"So that is the grade of the beef, is it?" asked Mrs. B.

"Yes, Mrs. B." answered the meatman. "that is the grade stamped there by the Government grade expert. And of course it goes without saying that the Government man has no personal interest in the meat. He is like an impartial umpire. He judges its quality to the best of his trained ability and according to standards set up by the Government, and labels it. From there on the meat sells for just the grade which that stamp says it is."

Another stamp on the meat caught Mrs. B's eye—a little purple circle within which were a couple of numbers and the words, somewhat abbreviated, "U. S. Inspected and Passed."

"Is that something about the grade of the meat, too?"

"No, ma'am, answered the meat man. "Don't confuse that little round stamp with the grade stamp. That little circle is a Government stamp, too, but it shows that the meat was inspected and is free from disease. Meat slaughtered in most packing plants carries that little circular stamp but that hasn't anything to do with this matter of grade that I am talking about. Don't let anyone fool you by telling you that the round circle shows the grade of the meat. It doesn't, as you can see by reading it."

"So there may be more than one kind of purple stamp mark on the meat?"

"Well, the circle is always here when the meat is prepared under Federal inspection. That passes it as disease-free and wholesome. But let's disregard that for the moment. What I am talking about is this stamp with the words 'U. S. Good Steer." This is the one that shows the grade of the meat. Also what class of animal it came from. It shows that it came from a steer and that it falls within the grade called "Good".

"Suppose it didn't come from a steer, what would it come from?"

"The grade stamp also tells whether the meat is from a steer, heifer, cow, or bull. As you probably know, a properly fed steer produces the very finest beef; but a well-fed heifer makes excellent beef, too. Some of the lower grades might come from a cow or bull."

"So it is a good idea to notice which kind of animal the beef came from as well as the grade of the beef?"

"Yes; that often cuts some figure in the quality of meat."

"But now about this grade business; is 'Good' the highest grade?"

"Not exactly the highest. The Government has seven grades for beef. The highest one is called 'Prime.' Then the next best grade is 'Choice'. Then the next one is this that you are looking at, 'Good' Then the next four grades in order are 'Medium,' 'Plain', 'Cutter,' and 'Low Cutter.' You won't see those lower grades for sale in this market."

"Wait a minute! Let me get this straight. Tell me those better grades again."

"'Prime' is the highest. Then come 'Choice,' 'Good,' and 'Medium' in that order. I should say you had better forget about the lower grades. Remember Prime, Choice, Good, and Medium. Those are the grades we handle and they are the ones you will want to buy."

"Probably I won't be able to remember which grade is which the next time I come in. You ought to have a card hanging up here telling the names of these grades and what each means."

"Yes, that would be a good idea. Still, I think you will remember them better than you think, once you get the habit of looking for this Government grade stamp on the meat."

"I am certainly going to look for it hereafter. But I wish you would tell me a little more about these grades. Just what does each one mean anyhow? Which would I want to buy at different times—and why?"

"Prime comes from steers or from the very finest heifers, never from cows or bulls. It is said that only about 1 percent of all cattle fall within the Prime grade. It is the cream of the crop. It means steers are bred for beef, and grain-fed for a long period. It means that the color, grain and texture of the flesh, the color and structure of the bone, the color and arrangement of the fat are such that the meat should be of top quality. , Prime beef doesn't sell much in the ordinary stores; but some of the best markets sell it. Much of it goes to the fine hotels, restaurants, clubs, and the like."

MEAT GRADES AT YOUR SERVICE
(Continued from Page 9)

"Then the next grade is Choice, you said?"

"That's right. Choice is the top grade we handle, and it is good enough for anyone!"

"And what kind of cattle does the choice beef come from?"

"Only from very well-fed steers or heifers. And only from cattle bred for fine beef conformation, that is, bred for the bodily form that gives the largest percentage of fine cuts with greatest economy in cutting. It means that you get more lean meat in proportion to the amount of bone in the retail cut. Also that it is fine quality meat with fat of the right amount and well marbled through the tissues. You ask for U. S. Choice' grade the next time you want a really good oven roast or a Porterhouse steak. You can pay your money for that kind of meat and you stand a much better chance of getting something very satisfactory than if you buy without regard to a grade mark."

"Indeed, it sounds good. But perhaps I won't be in the market for the higher-priced beef grades the next time I come in. I wish you would tell me a little more about those lower grades."

"Certainly. The next lower grade is this one you are looking at now, 'U. S. Good.' It looks good, too, doesn't it? It is splendid meat. This is what I usually take home myself. It doesn't sell at quite as high a price as Choice and gives you good value for your money."

"Tell me a little about this grade, please."

"This Good grade comes from what I might call the less finished type of grain-fed cattle and some from the highest type of grass-fed cattle. You understand that in general cattle do not fatten on grass as well as they do on corn. But some grass-fed cattle are good enough to get into this grade."

"The Good beef carries less fat than the Choice?"

"Yes, less fat. But it carries a fair amount of fat. You will see a limited amount of marbling."

"By the way, is this what you call marbling, these lines of fat meandering around through the lean meat?"

"Yes, that is what meat men call marbling. You notice there is a certain amount of it in this beef. In general, the Good grade means beef reasonably young and tender. No one need hesitate to buy the Good grade for ordinary family meals."

"And what did you say the next lower grade is? Prime, Choice, Good, then—let me see—Medium? Was that what you said?"

"That's right. The next one down is Medium. Now the Medium grade gets down to where you can economize. This is the beef to save money on when you want to, with pot roasts, stews, and so forth. Properly cooked, this meat is worth what it costs. Remember I am not advising this for oven roasts and steaks for your special dinners. This is meat at a lower price. You have to take account of the lower price when you are figuring what this Medium grade is worth on your table.

"This isn't from the best-fed steers and doesn't carry much fat. You won't see much marbling in this cut. But this will save you money on your pot roasts and stews—on the so-called moist cooking. That is about the story for the Medium grade."

"Well, this is very interesting. Now are you going to tell me about the still lower grades?"

"No, madam, I don't believe I will. At least not this time. I am afraid it would only confuse you. You probably won't see any of those lower grades in the stores or markets around here anyway. If you will remember especially those three grades—Choice, Good, and Medium—you can buy your beef to fit the needs of both your table and your purse on every occasion."

Mrs. B's eye wandered down the showcase filled with attractive cuts of many kinds.

"And does the Government grade other kinds of meat than beef?" she asked.

"Yes," responded the meat man, "they do the same sort of grading on veal and lamb and various manufactured products."

"And are the grades on veal and lamb the same as those on the beef?"

"Practically the same. Just as I told you in the case of beef, if you will remember about the three grades, you won't have any trouble buying veal or lamb no matter what the occasion or what price you want to pay, and in the case of these meats you don't have to bother about the class."

"You spoke about manufactured products. Do you mean sausage and that sort of thing?"

"Yes, sausage, frankfurters, bologna, hams, bacon, and all those manufactured meats. They do the grading on a rather different basis in this case, however. The Government grader takes account of a number of different qualities in those products—such things as color, firmness, compositions texture, flavor, condition, aroma, uniformity, and I don't know what else. If all these things measure up to the top standard set by the Government, the meat is graded as U. S. No. 1. That is the only grade the Government has been requested to certify so far. If the ham and bacon or sausage isn't good enough to be graded No. 1, it simply doesn't get a U. S. No. 1 Certificate of Quality.

"Of course you remember that all meat from Federally inspected plants must have the little circular stamp showing it to be disease free. Also many of these prepared products have stamps showing private trade names or terms of various sorts. But all that has nothing to do with the particular thing we are talking about. What we are talking about is the certificate of grade or quality.

"With this kind of product you look for something a little different. Instead of that long ribbon of purple words stamped on the meat, the Government grader ties a little round cardboard label to the meat or the same label may be printed or stamped on the container. On this little round label are printed the words 'Certificate of Quality' and underneath that, 'U. S. No. 1 Grade'. The tag may also show what packer made it, the date of grading, and so on."

The meat man reached in the showcase and drew out a package of sausage on which was printed the little round label.

"This sausage, for instance," he said, "is U. S. No. 1 grade. Of course some people like a lot of sage in their pork sausage or a lot of pepper in some other kinds. Others don't like these things at all. This grade label doesn't settle the question of taste but it does mean that as carefully as can be judged, in this package you have a product of general excellence."

"So then there isn't any choice of lower grades at cheaper prices with these products?" asked Mrs. B.

"The Government service is not compulsory, and so far it has never been asked to certify lower grades on this type of meat. This, you see, is entirely a grade for excellence. If you want to shop for something different, you are on your own as far as the Government stamp is concerned."

MEAT GRADES AT YOUR SERVICE

"It is peculiar that I never heard about this Government meat grading before. How long has it been going on?"

"Oh, a matter of 10 years. It's entirely a voluntary thing with the meat trade. Dealers who want their meat graded by the Government can get it done, and they pay for having it done. The service is maintained in most of the large cities. I understand that the Government men grade hundreds of millions of pounds of beef alone every year now. And I hear that a great many of the better hotels in the big cities now will buy only Government-graded meats".

"But a good many stores and meat markets still don't have this graded meat, do they?"

"No."

"Why not?"

"Well, I expect the final reason, when you get right down to it, is that the public demands these things very slowly. It will come in time. It will be a universal system.

That is because it's in line with progress in all lines of marketing of food products. It makes it possible for the producer to get paid for the quality he produces. For the consumer it cuts the risk of paying for quality but not getting it, and helps her to select the quality that she can best afford.

"You are the consumer and in the end the meat trade will have to give you what you want. If you ask for Government-graded meat every time you go to market sooner or later you will get it."

"Only through a clear understanding by every citizen of the objectives, organization, and availability of the Government agencies can they render truly effective service and assure progress toward economic security."

—FRANKLIN D. ROOSEVELT.

## HELPFUL HINTS TO HOUSEWIVES

(Continued from page 6)

this year because I did not know whether they were safe."

There is one good check on the condition of food in unopened cans—the tell-tale bulge at the ends which indicates spoiled food. Spoiling food generates gases that exert pressure against the walls of the container, therefore curve the ends of the can outward. Ordinarily these end plates are flat across or slightly concave, as you may have observed.

There is no danger in eating canned foodstuff that has been frozen, unless the ends of the can from which it came bulge outward. That is the same rule that applies to unfrozen food too. Freezing may lower the grade of some canned products. That is, it may affect the taste and appearance unfavorably. But then there is this to remember: Even unfrozen. your canned goods might not have been in as good condition the second summer as the first. Time takes its toll in quality where canned goods are concerned.

"THIS YEAR I expect to purchase a new winter cloth coat--a real event in my life. Can you give me advice that will help in making a good selection?"

Confronted with this large order we sent out an SOS call to the Bureau of Home Economics. The Bureau thinks shoppers are wise to ask for outside assistance, because the many new weaves and mixtures of fabrics on the market make it difficult to judge quality in coat fabrics. That is why so many people are agitating for labels on ready-made garments that tell about the fabric. Tags provided by manufacturers can furnish the way of finding out what you are getting, since the manufacturer is the only one who really knows what has gone into the making and finshing of the cloth. But such labels on coats are rare. So customers should take a long breath, summon their courage, and prepare to do a lot of asking. First ask the salesperson whether the coat you are considering is all wool or a mixture, and find out the quality of the wool. If she dosen't know, carry the matter a step further to the buyer. In case she fails you, get a written statement from the store that it will make a complete adjustment should the coat soon show defects with normal use.

Good quality wool gives a feeling of aliveness and springiness as you crumple it in your hand. Good coarse types of wool are best suited to coats from which you want hard wear. Soft fine wools are adapted to dress coats. Poor quality woolens are the ones to avoid at any price. They may be fibers that have been reworked until they are uneven, harsh, and stubby with most of the natural qualites of the wool destroyed. These fabrics feel heavy and boardy—to use the adjectives of the Bureau of Home Economics—and have no springiness. Coats made of such goods become baggy: the material looks matted and dull.

If the coat is a mixture, find out what the other fibers are and what is their quality. Wool is often blended with secondary fibers to reduce cost. The job may be so skillfully done as to avoid detection, but the other fibers may give the material undesirable characteristics. For instance, a large amount of cotton added to wool would make it less warm, less long-wearing, less wrinkle-resistant, and less likely to hold its color. To sum up these minus values a coat made from such material would be less likely to give satisfaction. When silks or synthetics are mixed with wool to give it a special fleck, you will want to know whether the second fiber is silk or a synthetic because silk is stronger and more elastic. Examine a coat fabric on both sides. For durability you will want a firm weave without loops on the surface to snag. Pull the fabric both ways to see if it stretches to excess. All material should be thoroughly shrunk, and colors should be fast to sun, cleaning, and perspiration.

Lining, interlining, style, workmanship—all these count toward a successful purchase. Consumers not familiar with tailoring are bound to run into trouble in judging workmanship in a garment that has so much of its detail hidden from view. However, they should remember to look for precise workmanship, short stitches in seams, and strong thread. Each part of the coat should have received a thorough pressing before the coat was put together.

# GOVERNMENT FINDS PROFITEERING ON HOLC BORROWERS

## Official Sees Danger in Reducing Interest on Home Loans

Washington, Nov. 18—(ANP)—Because of many inquiries from various sources, such as from the HOLC field force, building and loan associations, savings banks and insurance companies, as to the effect of legislation which would reduce the interest rate and extend the period of amortization (repayment) of Home Owners' Loan Corporation loans, Charles A. Jones, general manager of HOLC, has issued a statement which clarifies the issue. The official also criticized those who seek to make money at the expense of borrowers. Declared General Manager Jones:

"In 1933 Congress assigned to the Home Owners' Loan Corporation the task of saving the homes of American families who were facing foreclosure and eviction. During the three-year lending period, it made this protection possible for 1,021,817 in critical distress by granting to them mortgage loans totaling $3,092,870,784, at the lowest rate of interest and over the longest repayment period ever before granted in the history of the country.

"Among those helped by the Corporation were some who apparently had no intention of meeting their obligations. Others accepted loans hoping and believing the Government would never actually make a real effort to enforce repayment. A few negotiated loans in all good faith who would never be able to meet their obligations, due to no fault of their own . . . .

"During the last session of Congress several bills were introduced to cut the rate of interest on HOLC loans from the present low rate of 5 per cent to rates ranging as low 2½ and to extend the amortization period from the present fifteen years to periods ranging up to thirty years. It is significant that the agitation for a revision of the HOLC mortgage terms has not sprung at all from any spontaneous movement of HOLC borrowers. It came from a few small groups of men who thought they saw an opportunity to make money at the expense of borrowers.

"The Board of Directors of the Home Owners' Loan Corporation is unanimous in its conviction that no reduction from the present rate is justifiable. Experts of the Board estimate that the refinancing of loans bearing interest at 2½ per cent and running for 20 years would cost more than one billion dollars, which would have to come out of the United States Treasury. In the end the neighbors of HOLC borrowers would have to pay for this loss in taxes . . . . .

"An analysis of the situation then leads to these conclusions:

1. The suggested changes would have little or no effect on future foreclosures.

2. The proposed changes would result in heavy losses which the taxpayers would ultimately have to pay.

3. There is no real desire or demand on the part of HOLC borrowers for such changes.

4. HOLC collections are continually improving and its rate of foreclosures has passed the peak.

The HOLC must be permitted to build up reserves to meet losses.

6. A lowering of interest rates would seriously influence the general home mortgage market.

7. The savings of millions of people in mortgage lending institutions would be adversely affected.

# Colored Farmers, Organize

## Christian Living Schools Get Ward And Eichelberger

Chicago, Nov. 18 (ANP)—Ten Schools of Christian Living were conducted in the metropolitan Chicago area during the week of Nov. 8-12. These schools included courses in "Home and Family Life," "A Church Program For Today," "Social Issues Calling for Christian Action," and "The World Outreach of the Church." There were more than 2,000 paid registrants in these schools aside from the culminating service in the Chicago Temple on the Sunday afternoon following.

There were 60 members of the faculty only two of whom were colored. A dean, a counselor, and four teachers were assigned each school. Dr. A. Wayman Ward, pastor of Greater Bethel A. M. E. church, was a counselor, and Dr. James W. Eichelberger, Jr., Secretary of Christian Education of the A. M. E. Zion church, was a teacher of a course in "Social Issues calling for Christian Action."

## Attend Conference At Vassar College

Philadelphia, Nov. 18 (ANP)—Mrs. Addie W. Hunton, of the national board of the Y. W. C. A., and Mrs. Addie W. Dickerson, member of the International Council of Women of the Darker Races, attended a conference at Vassar college last week. The theme of the conference was world peace and the student delegates took the oath to refrain from all war activities of any nature what-so-ever.

Mrs. Dickerson and Mrs. Hunton were the only Negroes present at the conference and were included in all activities, living in the quarters assigned to the delegates and participating in all sessions.

In reporting on the conference, Mrs. Dickerson said that the spirit of cooperation between the delegates was one of the finest that could be found anywhere and that there was a genuine feeling of brotherhood among them.

## Organize Omega Frat In Mobile

Mobile, Ala., Nov 18 (ANP)—A graduate chapter of the Omega Psi Phi Fraternity was organized here last Friday night when members met in the office of Dr. E. B. Goode. The Omega Fraternity has been noted for its encouragement of achievement among Negroes and holds an annual Negro Achievement Week, presented this year Nov. 11-17. Many men of national prominence are members of this fraternity and it is planned that some of them will be invited to Mobile.

Making the new graduate chapter of value to the city was discussed and groups were appointed to study the possibility of making the organization of service to the local Junior of Commerce and other civic organizations.

T. C. Lassiter of Talladega College, A. J. Cooper of Hampton Institute and Dr. E. B. Goode of Talladega College and Meharry Medical College head the new graduate chapter.

## Burned To Death

Conway, S. C. (ANP)—Shortly after midnight Sunday a fierce fire swept the Myrtle Beach home of Mr. and Mrs. Bingham Vereen, spread so rapidly the husband's escape was cut off and his body seared almost beyond recognition. He was dead when reached by firemen, but his wife escaped. Sheriff W. Edward, following an investigation, ordered her arrested and placed in the Conway jail, pending the inquest, scheduled for Friday. The wife told the Sheriff her husband was drunk, that she had no idea how the fire started.

# COLORED BOY OF ATLANTA JOINS IN KLAN CELEBRATION

## Swipes Kleagle's Hood And Struts to Glee of Onlookers

Atlanta, Nov. 18 (ANP)—Led by a police escort on motorcycles, more than 50 cars containing an estimated 250 Ku Klux Klansmen paraded through both Auburn avenue and Decatur street, leading Negro thoroughfares, early Tuesday night.

But this demonstration by the hooded brotherhood did not strike terror into the hearts of the colored observers who lined sidewalks, homes and business houses watching the parade pass. One onelooker, known on Auburn as a "bad man," stepped from the sidewalk when the cars were halted because of heavy traffic and snatched the hood from the head of a Klansman.

The white man said nothing nor, did he make any effort to regain the regalia. The Auburn character placed the hood upon his own head and entertained the spectators with various antics long after the parade had finally gone its way.

J. A. Colescutt, Klan organizer, said afterward the demonstration was part of a "nationwide program of Klan mobilizations."

## Close Chicago's Hamilton Club

Chicago, Nov. 18 (ANP)—The Hamilton Club, famous Republican organization for nearly fifty years, closed its doors over financial difficulties this week. The organization is remembered because of the ban against Negroes riding in its passenger elevators which attracted attention some five years ago.

# JOHN P. DAVIS AND WIFE SEE RUSSIA

Moscow, Ussr, Nov. 18 (ANP)—John P. Davis, secretary of the National Negro Congress, and his wife, Margaret, were interested onlookers along with workers' delegations from many nations as Moscow turned out en masse at the Red Square to observe the 20th anniversary of the Socialist revolution during which more than 1,500,000 citizens paraded after a huge military demonstration.

"One of the most thrilling sights of the entire observation was that of young Paul Robeson, Jr., carrying the banner for the schools of the entire district in which his school is located, that of Sverdlovsk," said Davis afterward.

Commenting on hundreds of armed workers who passed in review, Davis said, "No other country in the world would dare arm its civilian population with guns supplied by the government. This is a concrete refutation of the oft repeated slanders that there exists differences of ideology between the people, the government, and the military might of Soviet Russia, a typical example of which I saw in Red Square it is one of the finest and most effectve guarantees and forces for peace and democracy there is in the world."

The congress secretary was a guest of the Moscow Soviet Saturday at a festive occasion in the Bolshoi theatre and Tuesday was an honored guest at a reception given by Soviet trade unions to visiting worker-delegates at which national leaders spoke. Davis will visit Soviet resthomes, plants and factories as a guest of the Soviet trade unions and plans to devote some attention to well-to-do collective farmers in order to contrast them with the plight of American sharecroppers.

## BUZZARD HITS CAR, INJURING MINISTER

Thomasville, Georgia, Nov. 7. — The Rev. P. C. Barkley, of Cairo, Ga., field representative for the Georgia Baptist Orphans Home at Hapeville, Ga., sustained a severe cut on his left hand and minor cuts about the face and head Friday afternoon north of Pelham, when a buzzard flew directly into the windshield of his car, smashing the glass into his lap.

Mr. Barkley drove on to Pelham where he was given first aid treatment, later coming to Thomasville, and from here was accompanied by his daughter, Mrs. W. M. Searcy, a resident of this city, to his home in Cairo, where he is recuperating. A large piece of the glass almost severed his thumb, and he was weak from loss of blood when he arrived in Pelham.

## TECHNOLOGY ON THE FARM

**Consumers have common interest with the farmer in the turn that technological developments may give to rural life. Here we have some observations that Government experts, turned prophets, make about technology and the future of agriculture.**

There is fascination in forecasts whether made by a gypsy fortune-teller whose palm has been crossed with silver or by a Jules Verne writing of things yet to come. Prophesy can amount to more than a pastime in certain circumstances. If based squarely on knowledge of past trends, it can serve as a key to successful planning. To bring the matter to our own home grounds, a review of past events followed by a long look ahead into the future might help America put her natural resources to best use. Not that anticipation would provide a beacon by which business, agriculture, and labor could chart an undeviating course. That would be too much to expect. But at least it would suggest a general direction in which to steer.

With this belief, members of the National Resource committee agreed, and on the strength of it, set themselves the task of making predictions in the field of technology. Reason for their choice of subject: Invention is the greatest general cause of change in the modern world. For instance, the automobile, a curiosity in 1900, has within 30 years transformed cities, created a whole new unit of population—the metropolitan area. It affected countless lives by drawing thousands of persons from remote districts into the trade belt widening around cities and by hurling city populations into suburbs. The inventor of the auto has been said to have wielded more power than Caesar, Napoleon, and Genghis Khan rolled into one.

Now the result of the Committee's study of technology, past present, and future, appears in a volume, "Technological Trend and National policy," the first major attempt to show the kinds of new inventions which may affect living and working conditions in America in the next 10 to 25 years _____It emphasizes the importance of national efforts to bring about prompt adjustment to these changing situations with the least possible social suffering and loss and sketches some of the lines of national policy directed to this end."

Though the Committee deals with many fields touched by technology, its findings in only one field—that of agriculture—concerns us in this article. Anyone hoping that the Committee charted a map showing just the road that agriculture, mounted on its sturdy steed technology, will take is bound to be disappointed. Predicting is a tricky business beset by pitfalls. Government forecasters prefer to leave extravagant phrases to the crystal gazers and stick closely to caution.

Consequently they have surveyed the past, pointed out general trends that will probably continue, and posed the problems faced by technology and agriculture rather than offered solutions to those problems. Following their lead, we will treat of generalities. We will discuss the advance of technology in the field of agriculture and its implications. More particularly we will try to shed some light on the questions that America must face if she is to plan intelligently for the future of agriculture.

Technology as a tool of industry is a familiar story. Less familiar is the drama played with technology and agriculture as protagonists, stirring as it is. Technology has brought new machinery to the farm. It has brought power and light. It has contributed better plants and livestock. It has increased knowledge of soil. It has provided ways of coping with plants pests and disease. With surprising versatility it has handled the perfecting of marketing and managerial technique. Nor has the bottom of technology's bag of gifts been reached. This it is safe to say. Technology, for all its accomplishments, is just getting off to a good start. Maximum efficiency, as a result of technological development, is still a lodestar on the distant horizon.

Let us take a closer look at the contributions technology has made to agriculture in the past. At the birth of our Nation, American farmers tilled their soil as their ancestors had done thousands of years before. Plows were crude wooden affairs. Sowing cultivation, and harvest were matters for hand methods. Then, soon after the Revolution, commenced the long parade of inventions that carried farm productivity to new highs.

This series led off with the cotton gin. The grain cradle and iron plow came close upon its heels. By 1840 the threshing machine appeared opportunely since plenty of land was now available for growing the grain that was in demand in foreign markets. Invention flowed along steadily until the Civil War, when drain on the country's manpower spurred invention to new speed that resulted in the mowing machine, the steam tractor, the reaper. Climax of the development of farm machinery came later with the advent of the internal-combustion tractor, at last making possible conquest of the huge areas that had thus far resisted man's encroachments.

Meanwhile technology broadened its range of helpfulness. Breeding experiments resulted in better livestock, and in plants that could resist disease, yield larger harvests and hardier fruits. These new and improved strains of plants conspired with the tractor to help man to dominate the plains. New corn types pushed the Corn Belt westward, and importations of Russian wheat sent wheat-growing in the same direction. At the same time a war or plant disease brought victories all along the farm sector. Hoof-and-mouth disease was wiped out and rust-resistant wheat was developed. This story does not begin to cover the contributions to agriculture made by technology—the advances in transportation by motor truck, improvements in refrigeration that opened the way to improved quality in farm products and to reducing waste, the market news service that by radio reports keeps the farmer abreast of price changes so that he can take advantage of favorable conditions.

Figures show the way that contributions of technology stepped up productivity of the agricultural worker. Since the year the Constitution was framed, the farmer's ability to feed city people, as well as himself, has increased many times. In 1840 agricultural workers comprised 77.5 percent of all persons gainfully employed in the United States; since then, the proportion has dropped steadily until in 1930 it was only 21.5 percent. Rate of increase in productivity, it seems, is a rising tide with no sign of abatement. Just as this trend in the past has spelled social change, so we must expect social cost as corollary to technological changes in the future.

We have mentioned contributions of technology that aimed directly at the goal of high farm efficiency. Results may be called the primary influences of the new technology. In another way it has increased farm efficiency by making available cheap materials and tools which the farmer can buy with farm products rather than produce himself.

Technology has affected rural lives in an indirect way. Inventors of the automobile, radio, telephone probably never gave the farmer and his problems a thought, yet their inventions left their mark on rural lives. Automobiles, the telephone, newspapers, the radio broke down provincial barriers, affecting rural fashions, manners, and morals. Invention brought the world to the farmer's door.

At least it brought the world to certain farmers' doors, for both these streams of influence—primary and secondary—spread unevenly over the countryside. This fact bears repetition. As the report says, "Farmers do not and cannot apply at equal rates the products of science and invention. Out of this fact arises one of the most significant impacts of technological change in agriculture." Technology is often hissed as the villain responsible for the fact that one farmer has his autos and electric refrigerators, while a second goes without. But guilt should rest not on invention, but on society, for the difficulty is with the "failure of the economic and social system to make needed readjustments."

Low incomes seem to be the main reason for certain farms lacking the modern conveniences—the electric power, refrigerators, etc—that ease the rigors of farm life. Other farmers may be without such equipment yet have the finest tractors and machinery the market offers. These are the men who have emphasized production efficiency to such a point that they have overcapitalized their land and so lost their chance to have the household comforts enjoyed by some of their less prosperous brothers. In some types of agriculture per-capita production has increased much more slowly than in others. Mechanization hasn't helped the cotton, fruit, and tobacco grower as much as it has aided in the production of grain and hay crops.

Many times forces beyond the control of individual farmers militate for or against the use of discoveries. The relatively great distances between farms in the United States has handicapped electrification. In the case of tractors, topography has tabooed them in certain districts where land is too hilly or poorly drained. Dollars and cents raise a more general barrier to use of tractors, for tractors are expensive. Even though tractors may result in lower production costs and higher net incomes, their initial expense isn't justified if equipment is idle beyond certain time limits. A four-row corn planter, as the report says, is not economically justified on a farm that has only 10 to 20 acres of corn. Thus there has been added to the terms "man-sized farm" and "family-sized farm," the expression "tractor-sized farm."

Between these classes, "man-size," "family-size," "tractor-size," competitive tensions have grown up as technology advanced. "The man with the hoe and the man with a tractor" are not competitive equals where they are engaged in the same type of farming. There is bound to be resentment on the part of the small farmer toward his economic superior. Competitive tensions are bound to grow if agriculture continues in the way it has been going—toward greater concentration of land ownership with fewer farmers on fewer farms. Already legislators have grown alarmed at the turn agriculture has taken, have advanced legislative proposals to check both concentration of land ownership and tenancy in commercial farm production. Proposals to curb "corporation farming" have been made in several States. Programs to assist tenants and sharecroppers to buy land have been offered.

Some people might claim that technology in its advance has gathered such steam-roller force that it will inevitably sweep agriculture along toward greater concentration of land ownership no matter what opposition might be raised by man. The Committee on Natural Resources feels that this much is true—the force of technology cannot be stopped. But it feels that such force could be directed into socially desirable channels. If such guidance is attempted—and it is the hope of the Committee that it will be—a matter of prime importance is to agree upon a goal for agriculture. The alternatives, as the Committee sees it, are these:

"Should agriculture strive for maximum efficiency in production with larger and larger units, more concentrated ownership and management, and fewer and fewer farmers? "should it seek to support a large population with small incomes with an increase in th enumber of farms—an increase which would limit the application of technology?

"Should it seek some middle ground in which the ideal of 'family farms' is uppermost, that would limit without eliminating, further technological advance?

"Is there more justification for imposing a bar to technological advance in agriculture than in the case of numerous industries that have moved out of homes and small workshops into large factories?

"Instead of seeking to restrain technological advance would social ends be better served by concentrating on efforts to increase industrial production and employment in the expectation that jobs would ultimately be available to many excess agricultural workers?"

Answers to such questions the Committee does not try its hand at tracking down. Instead it shows the consequences that would result from certain courses of action and points out obstacles in the way of reaching other objectives. In other words, it puts up signposts along the variou technological roads that agriculture can follow, but doesn't dictate a choice.

To return for a moment to the present trend in agriculture. As we have said, technological trends in agriculture have generally been toward bigness, toward extensive cultivation of large areas. There are important exceptions. Recently a curbing influence has been met in the development of small machinery units. In certain regions where there is intensive land use, farms have become smaller. But in general large-scale operation is growing. It brings certain advantages that cannot be denied. Larger units tend to reduce production costs and increase net income. They make possible a greater division of labor with more specialization; they justify larger investments in machinery; they make possible purchases of supplies in large quantities and reduce overhead much as large factories are better able than smaller competitors to cut costs.

So far the promises held out by the trend toward bigness look alluring. But if we start dreaming of achieving maximum efficiency quickly by sailing with this tide we run into trouble. The readjustment in terms of reorganization into larger units would be impossible in a short time. Capital has scanned the farming picture closely and seen risks it would be loath to assume. It has seen that the farm unit, no matter how large, cannot harvest the monopoly gains that in many cases grow out of consolidation of industrial units. Bankers know that the fixed costs of large units are much higher in agriculture than in industry. Production and prices seesaw perilously. Vagaries of weather and hostile insect pests offer threats to the farmer that the captain of industry does not have to face. Capital has seen these risks send corporation farms to the wall where the farm enterprise built around a family has been able to survive. The family has a tenacious loyalty to the home place that leads it to continue producing even when returns on its labor reach low levels.

Now from the farmers' point of view readjustment toward large units would be downright undesirable. Farmers are no fools and aren't going to part with their holdings until they see ahead some better way of making a living. The depression slammed a gate across the road to urban industrial employment. Already in recent years farms have had to support more people than ever before. In 1935 over 2,000,000 more people were living on farms than had been 5 years earlier. Another 2,000,000 farm youths were staying at home rather than try their luck in cities as they would have in normal times. In 1936 when the farm population resumed the decline of pre-depression years , there was again a slight net movement of people from farms to cities. But there is not yet any certainty as to how many people the cities can take from the farm population and put to work at city jobs.

Talk about farm technology leads easily to the assumption that maximum efficiency is what we want. That is a large assumption. For estimates, say that maximum use of present technologies alone would increase our agricultural output from 25 to 50 percent. This would mean vast unsalable surpluses, for, to quote the report, "agriculture continues to stand face to face with the problem of an increasing potential capacity to produce out of proportion to its capacity to gain outlets for its products. Foreign markets for farm products are not being reopened rapidly. Yet the Nation's farm plant continues to be on a scale capable of sending 12 to 25 percent of its output abroad in years of average crop yields.

## TECHNOLOGY

(Continued from Page 13.)

"Domestic requirements for farm products remain relatively inelastic. There is doubt whether consumption at present levels of consumers' incomes would increase more than 10 percent even if it were possible to reduce prices of farm products 25 to 50 percent. Domestic consumption of farm products remained relatively stable during the years 1930 to 1933 while farm prices were extremely low. Since food habits are relatively inflexible, it is doubtful that any but the very poor would consume much more as a result of a substantial increase in consumer income."

Altogether, it appears that the family-size farm—long a traditional objective in American agriculture—still has much to recommend it. It has, also, various aids that it can enlist in its competitive struggles Cooperation is one of these. Already cooperative marketing and buying have made a place for themselves in agriculture. It is probable that they will be of further service to the family-size farm. Already cooperative ownership of farm equipment has brought machinery to the small farm that would ordinarily be out of reach. Cooperative ownership of farm equipment such as threshers, wood-sawing rigs, creameries, grain elevators, and terracing machines offer a big field for expansion of the cooperative principles as an aid to family farming.

Farmer consumer cooperatives have already done a large volume business in the purchase and distribution of production goods such as fertilizers, feeds, twine, gasoline, and oil, and this trend seems certain to continue.

Cooperative farm-management associations have sent their experts to small farms to measure labor, feed, machinery, and from their findings to develop programs for better farm production.

To go out of the cooperative field, such institutions as the land-grant colleges, the United States and State Departments of Agriculture carry to small farmers the results of research study which they as individuals would not be able to undertake.

Data piled up in abundance are the working material for forming points of view and for evaluating the social gains or social costs arising from different courses of action. Such data we can gather from individual chapters in the report, each of which deals with one of the fields of technology that has contributed to major changes in agriculture.

It is for consumers to examine such material if they are to have a clearer idea of the farmer problem—a problem with which their own fortunes are closely bound.

## CHICAGO, ILLINOIS—RETAIL STORES OPERATED BY NEGRO PROPRIETORS: 1935.

As recently announced by Director William L. Austin of the Bureau of the Census, Chicago, the second city in the United States in Negro population (233,903 in 1930), occupied third place in 1935 in the number of retail stores operated by Negro proprietors and in the value of sales; in the number of employees, and in the amount of wages paid to employees. Although no data are available which show the exact number of retail stores (operated by proprietors of the different racial groups) that have no paid employees, it is estimated on the basis of a special tabulation that approximately 40 percent of ALL retail stores in the United States are operated entirely by proprietors and their families who receive no stated compensation.

In 1935 Chicago reported 724 retail stores operated by Negro proprietors whose sales for the year totaled $2,735,000. These stores gave employment to 1,349 persons including 743 proprietors not on the pay roll, and 606 employees who received $361,061 in wages. Operating expenses amounted to $802,000 or 29.3 percent of the sales and the pay roll was 45 percent of the total operating expense, as compared with 23.2 and 44.2 percent respectively for all Negro retailers in the United States.

Fuel and ice dealers reported the largest total value of sales, followed in the order named by sales made in drinking places, combination stores (groceries and meats), restaurants, cafeterias and lunch rooms, drug stores with fountains and grocery stores (without meats). No other kind of business reported sales amounting $100,000 during the year. The Combined sales of the food stores, and eating and drinking places amounted to $1,380,000 or slightly in excess of 50 per cent of total sales reported for the 724 stores whose sales at retail exceeded 50 percent of the total sales.

## THE DAILY DIGEST SAYS:

### CORN LOANS ANNOUNCED

Secretary of Agriculture Wallace yesterday announced the Commodity Credit Corporation will make loans, ranging from 44 to 50 cents a bushel on corn, from a commitment of 75,000,000 made to the CCC by the Reconstruction Finance Corporation. Wallace also revealed terms upon which the loans will be made, the principal feature of which was a sliding scale of loans based on moisture content of the corn sealed in farmers' cribs, as gauged by representative samples. Loans will be made only to farmers participating in the 1937 soil conservation program (Washington Post).

### TRAINING FOR RURAL DOCTORS

"Rural health will be benefited in years to come because of a $300,000 gifts for a medical center to train rural doctors at a new Boston diagnostic hospital, thanks to a gift from William Bingham, Bethel, Maine, which supplements his earlier gift of $400,000," says Farm Journal (October). "Country doctors from all over New England will be sent to the hospital for periods of free post graduate training; exchange physicians will take care of their patients. Without a doctor since the army claimed their physician last winter, the town of Petersham, Mass., with 600 people, has voted $1,200 a year for a doctor to come and live in a rent-free house. For that salary he would serve as school doctor and keep whatever he makes on the side."

SEVEN YEARS AGO, the production of tomato juice was negligible; but in 1936 the production totalled 9,000,000 cases of 2 dozen, number 2 cans, said Dr. F. A. Harper of Cornell University, commenting on the expansion of the juice industry in recent years.

ONE OF THE LARGEST APPLE CROPS, in the past 10 years and a above-average grape crop indicated by the Bureau of Agricultural Economics in its monthly review of the fruit situtation. But the domestic demand for these fruits is expected to be better than in recent years; and improvement also is expected in foreign demand, especially for apples.

LOUISIANA'S increase in yields of sugarcane within the last few years—from 13 to 21 tons per acre average—has been almost entirely due to new varieties reported the Louisiana Experiment Station. Further increases are expected from improved soil and better cultural practices.

ONE DAIRY COW with a production of 400 pounds of butterfat a year will normally return as much above feed cost as 3 average cows, said the Illinois College of Agriculture. In one improvement association a herd of 11 good cows produced 39,591 pounds less total milk, yet returned $84 more above the cost of feed than 24 low producing cows in another herd.

### FEWER HOGS THIS FALL; MORE PIGS NEXT SPRING

Fewer hogs going to market this fall than last, but a considerable increase in the 1938 spring pig crop were reported in prospect, this week, by the Bureau of Agricultural Economics. And in view of the somewhat smaller tonnage of hogs to be marketed this fall and winter and with fairly high levels of consumer demand for meats, the Bureau expects hog prices to average at least as high as a year ago when the average price at Chicago was about $9.90 a hundred pounds. A "very favorable" corn-hog price ratio was reported in view of the larger supply and lower prices of corn this fall.

### DRY ICE KEEPS CORN

Dry ice in carloads of corn is the newest idea. The credit for this innovation goes to an Iowa shipper who placed 500 pounds of the refrigerant on a shelf on one end of the car and a like amount at the other end. The corn arrived at Kansas City two days later cool and sweet with 21.6 percent moisture. After inspection and before arrival at the elevator the contents began heating. Two other cars shipped at the same time without dry ice were heating before inspection. Evidently this method of keeping high moisture corn from heating in transit is worthy of further study. (Grain and Feed Journals, October 27.)

### MISSISSIPPI URGES USE OF COTTONSEED MEAL AS FEED

Wider usage of the low-priced cottonseed meal resulting from Mississippi's 2,000,000 bale cotton crop will do much to compensate farmers for the correspondingly low price of cottonseed, according to Commissioner J. C. Holton of the Mississippi Department of Agriculture.

The Commissioner says that from 2,000,000 bales of cotton this year there will be derived about 888,000 tons of cottonseed which in turn will yield about 365,000 tons of cottonseed meal. Cottonseed meal, he points out, is selling around a penny a pound —too little, relative to the price of corn, considering that "experiment stations have shown that in true feeding value cottonseed meal is twice as valuable as corn, pound for pound."

### YELLOW SOYBEANS IN DEMAND

"One of the major processors of Soybeans has refused this year to buy black or brown soybeans", says Grain and Feed Journals (October 27). "Into this classification falls the Wilsons, Virginias, Laredos and Mammoth Browns that have been popular in southern areas because of their ability to produce hay. The objection to the black or brown beans is that they contain an average of 5 percent less oil than do the popular yellow beans like Illinois, Dunfields, Mukdens, Mandels and Manchus. This low oil contents, according to leading processors, justifies a discount of 15 to 20 cents per bushel on the black and brown beans, depending upon the price of soybean oil. The black and brown beans average only 14 to 15 percent of oil or about 8 1-2 pounds to the bushel, while the yellow beans will run 19 to 20 percent of oil, or about 11 1-2 pounds to the bushel."

### CONTROL OF YOLK COLOR

The scientific chicken breeder and egg farmer can now supply eggs whose yolks are colored to suit the customer's fancy, if he follows the advice of Prof. H. E. Botsford of the New York College of Agriculture at Cornell. Control of the hen's diet to let her eat more or less of a certain dye, xanthophyll, found in a number of plants and grains, is the method Professor Botsford recommends. Customers generally prefer eggs of a medium yellow yolk, he reports. Extremely deep orange and very pale yolks are not desired by the average restaurant eater who orders his ham and eggs each morning. Xanthophyll is found in green cabbage leaves, yellow corn, alfalfa, clover, grass, oats, rye and rape, greens which are essential to the growing chick who should be fed them. When the chick becomes a hen and settles down to the business, these foods which are rich in the dye should be cut out, he asserts. (Science Service).

### U. S. CORN IN DEMAND

The best foreign demand for American corn in several years developed last week, and the trade estimated that 3,000,000 bushels or more had been sold, the first important business since 1932, when clearances in the calendar year aggregated 7,880,000 bushels, according to a Chicago report to the New York Times. The trade is inclined to look for this figure to be exceeded this season because of a shortage of corn in Argentine and an aggressive demand in Europe, where Germany, in particular, is importing corn to feed livestock.

### CHAMPION CALF

Twenty-year-old Donald Ray Fulkerson, who raised a $25 calf to a grain champion, proudly stood by Friday and watched the American Royal auctioneer sell his prize winner for $900, says a Kansas City report by the Associated Press.

### CONSUMERS HINTS AND HELPS

Important reminder is to watch the indicator on the scale to make sure that your grocer isn't short-weighing you even though his scales are correct. Consumers might ask their sealer to arrange a practical demonstration with a tested scale. For this the convention gave first-rate hints: "Weigh that 5-pound bag of loose sugar that was put up overnight. Weigh the package of bacon—last year 100 retailers in New York City pleaded guilty to selling 6-ounce packages of bacon for half-pounds. Can you tell how much air is whipped into your ice cream when it is sold by bulk instead of weight? This is one of the new ways of wrapping up air and selling it."

Consumers would do well to remember that every weights and measures inspection service must have sufficient funds, well-trained personnel, and full equipment if it is to prove a good watchman of public interests. In New York City, it is reported, the weights and measures department still has no fuel-oil gage to check the meters of fuel-oil dealers, though they have equipment for weighing coal trucks and testing gasoline meters.

General in application, these suggestions should be useful to housewives wherever they are—in Peoria or San Francisco as well as in New York City.

### LAMBS THRIVE ON RICE HULLS

#### SHOWING FEED VALUE IN TEST RATION, SPECIALIST SAYS

It looks like rice hulls have feed value, and are not guilty of causing digestive disturbances by irritating the intestinal tract, says A. R. Patton of the state college of agriculture.

At least, he added, lambs in a feeding test at the college are doing well on a ration containing rice hulls, though the test is not completed yet, and the last word cannot be spoken until it is.

In this experiment, four lambs used as a control are being fed a ration containing 50 per cent alfalfa meal, 40 per cent yellow corn and 10 per cent cottonseed meal, and four similar lambs are being fed a ration of 30 per cent alfalfa meal, 20 per cent rice hulls, 40 per cent yellow corn and 10 per cent cottonseed meal for testing the rice hulls.

Replace Part of Alfalfa.

It will be seen that the control ration is exactly like the test ration, except that 20 per cent of ground rice hulls is substituted for an equal part of alfalfa.

During three months of the test, the lambs on the control ration, weighing a total of 440 pounds, have eaten 491 pounds of feed and gained 49 pounds. The lambs on the rice ration, weighing 400 pounds total, have eaten 501 pounds of feed and gained 48 pounds in weight.

Thus the control lambs have gained one pound for every 10 pounds of feed consumed, while the test lambs have gained one pound for every 10.4 pounds of feed eaten or about the same gain efficiency.

Yet 20 per cent of the test ration was rice hulls, declared to be of low food value, and at present having practically no market value, Mr. Patton pointed out.

# THE MODERN FARMER

Vol. X. NASHVILLE, TENN., DECEMBER 15, 1937 No. 11.

# FAR REACHING AMENDMENT TO FARM BILL PRESENTED TO CONGRESS

JAN - 1 1938

## WOULD PENALIZE GREEDY LANDLORDS

### Act Would Curtail Benefits to Those Who Force Share Croppers and Tenants

Washington—Striking directly at the tenancy situation is an amendment to the farm bill sharply curtailing benefit payments to landlords who force sharecroppers and tenants off of their land, an amendment which will probably be favorably voted on by the House before the bill is passed.

It has already been introduced by Representative George H. Mahon of Texas and has the support of Representative Marvin Jones, chairman of the House Agriculture Committee.

Under the proposal, landowners who have had tenants on their land at any time during the three years previous to the participation in the farm program will have the benefit payments on the particular farm cut in direct proportion to the number of tenants who have been forced off.

Mahon pointed out that if, for instance, a farm has been getting $400.00 a year in benefit payments, to be divided among the owner and sharecroppers, the latter's shares will hereafter revert to the treasury instead of going to the owner, in case those tenants are left off the farm. Thus far in the farm programs, he said, owners have been getting their own share and what formerly went to the tenants, in cases where tenants left the land. Under the amendment, they will get only half of the total for the farm.

### PUMPKINS SUPPLY TWO KINDS OF FOOD

A. F. Yeager, North Dakota plant specialist, has pulled another one out of his bag of crop tricks, says Successful Farming. Now he introduces a new pumpkin that, in addition to being a good one for pies, bears seed which rivals some of our common tasty nuts—as an after-dinner tidbit or a between-meal snack.

It does not seem strange to Yeager that pumpkin seeds may become commonly used for such a purpose. He knew for a long time that once one got under the tough seed coat, pumpkin seeds are crisp, crunchy, flavorsome. He visioned a pumpkin whose seed didn't have a coat.

He did not breed such a crop, but got one from Austria, found that it matured a good-sized, fair-quality pumpkin in North Dakota. Roasted in butter and salt, the seed is something to exclaim about, it is declared. The variety is called the Dalmatian.

A limited distribution is being made of this new variety, while Professor Yeager does breeding work with it to further improve the pumpkins for pies and give it a little earlier maturity.

## SUBSTANTIAL DECLINE SHOWN

### Public Relief Figures by Social Security

Washington, D. C.—Total obligations incurred for public relief in the United States were substantially lower during the first nine months of 1937 than during the corresponding period of 1936, according to figures made public today by the Social Security Board. From a total of approximately $1,837,907,000 for the first nine months of 1936, the aggregate of payments to needy individuals from all public sources declined to $1,685,491,000 during the first nine months of 1937, it was stated.

The figures which were released by the Board are compiled regularly in collaboration with other Federal agencies and with State and local authorities. The totals include payments for all types of public assistance from Federal, State and local funds, wages under the Works Program, subsistence grants under the Farm Security Administration, and general relief from State and local funds.

Total payments during September 1937 amounted to $159,729,000. This represented the lowest total for any month in almost two years, and is $37,111,000 less than the amount incurred in the same month of 1936. Included in these totals are payments of $34,841,000 in September 1937, and $19,358,000 in September 1936, to recipients of old-age assistance, aid to the blind, and aid to dependent children, under the Social Security Act. While obligations incurred for public assistance under the Social Security Act have increased fairly steadily since February 1936, the increase has been more than offset by declines in payments for other types of public relief.

Reports on numbers of persons and families assisted and expenditures under relief, works, and assistance programs are collected or compiled for the Social Security Board by the Division of Public Assistance Statistics of the Bureau of Research and Statistics, and are published in a monthly bulletin, **Public Assistance: Statistics for the United States.**

The current issue of that bulletin indicates that in September there were 1,470,000 recipients of old-age assistance in 49 cooperating States, comprising 19.2 per cent of the estimated population in those States aged 65 and over. This percentage ranged from 58.9 per cent in Oklahoma to 3.8 per cent in Tennessee. The average payment per recipient was $18.97 for September. The size of the average payment per recipient ranged from $40.06 in Colorado to $4.39 in Mississippi.

In 35 States cooperating in the program in September, aid was extended to 39,000 needy blind persons. The average payment for the month was $25.87. In 39 cooperating States, aid was provided in September on behalf of 482,000 dependent children in 194,000 families. The average monthly payment was $30.64 per family.

(CONTINUED ON PAGE 2)

## CONSUMER'S GUIDE QUERY

### Question of Future Food Supply Discussed

What is your community doing to get food for its future citizens? Providing school lunches is one of the easiest ways a community can earn a dividend immediately in healthier youngsters, later in sturdier grown-ups. The Government's Works Progress Administration gave this community service a big boost when it inaugurated its school lunch program in many cities throughout the country. In the past year and a half it fed over 1,000,000 undernourished children. As relief funds contract, the job falls back more and more on the communities themselves. Do you know how many children in your schools are undernourished? Do you know what kind of lunches they are getting? Are your consumer organizations taking a hand in getting a school lunch program started?

Headliners in such a program in many communities are the cooperative extension workers. Last year they organized lunches for nearly 600,000 school children. The success of these and other lunchrooms, organized under the drive of civic organizations, 4-H Club girls, and others, are proving that no school is too small nor too poor to have some sort of hot lunch for its boys and girls. It is also proving that the extra effort expended to establish these lunches definitely pays in the better health of the children.

In some cases, communities are providing their children only one hot dish, and the children bring the rest of their meal with them. Sometimes the community sets up a central kitchen, where the complete lunch is prepared and then rushed out to the school buildings. Some schools are lucky enough to be located near a church with a kitchen, where food is prepared. There are scores of ways of doing this job. It just takes some imagination—and drive—to find the best way in each community.

A good lunch for school means a nourishing, well-balanced meal, not a fancy repast. Hot food isn't absolutely necessary. Cold food is better than nothing. Whichever it is, the Bureau of Home Economics gives tips on what should be in a week's school lunch menu: Besides the main dish, each child should have at least one full glass of milk each day; some fresh fruit each day; tomatoes twice a week.

## AFRICA AND SOIL EROSION

### Fight Against Land Fertility Started for Negroes

Johannesburg, S. A.—Soil erosion, which threatens the Union of South Africa even as it threatens the United States, is being fought systematically here.

One of the most difficult phases of the war against it heretofore has been the indifference or even the opposition of the farming and cattle-owning Negro tribes.

In order to make effective the elaborate new soil conservation program, authorities here are taking advantage of the ancient active custom of holding an entire kraal (village) responsible for damage done or offense committed by any of its members.

The system of collective responsibility is being put into effect with the co-operation of the more progressive chiefs and leaders of the Bantu people, in whose territory lies a great deal of the erosion-threatened land. If a dam, embankment, bridge, or any other engineering work is in any way molested, or even if trees and shrubs are wantonly harmed, a commissioner representing the Union government can hold a hearing on the spot, and make the headman of that district responsible for tracking the offender.

Overgrazing, a serious cause of erosion is also guarded against. Cattle grazed on erosion-threatened range without proper authorization can be seized, and a fine levied to boot. All moneys thus collected go first to repairing the damage, and any balance is added to the native development fund for the advantage of the Bantu themselves.

### MOISTURE HELD IN SOIL DETERMINES PASTURE

Grass growth on fertile pasture land is not determined by the amount of rain that falls unless the rainfall is very scarce. Rather it depends on the amount of rain water that's held on the land, according to the Soil Conservation Service. Holding water on the land where it falls is also a sure way of checking soil losses.

Contour ridges and furrows are proving effective in storing raindrops on grassland. Thousands of farmers in the Great Plains who have tried these moisture-holding structures say that ridges constructed fifteen or thirty feet apart, or furrows built ten to twenty feet apart, hold most all the rain that falls and greatly increase the yields of grass.

—Nashville Banner.

The 400-foot Spire to the Sun of San Francisco's 1939 World's Fair will be lighted with intense white on the outside, a rose red within.

## MR. I. W. DUGGAN'S ADDRESS

### AAA Officials Say Rules Safeguard Tenants

I. W. Duggan, acting director of the Southern Division of the AAA, said that producers who buy the cotton of tenants or others will not be entitled to a Commodity Credit Corporation loan or a price adjustment on that cotton.

Mr. Duggan saaid he had received reports of producers buying their tenants' share or other cotton of the 1937 crop under the impression that the cotton purchased could be pledged as collateral for a 1937 Commodity Credit Corporation loan. A producer is eligible to obtain a loan on the cotton grown by or for him in 1937, but he cannot pledge as collateral for a Commodity Credit Corporation loan any cotton acquired from another.

Mr. Duggan also said he had received reports of producers buying out tenants' shares of the 1937 cotton crop with the intention of applying for price adjustment payments on the purchased bales.

"The regulations of the Price Adjustment Payment Program provides that a grower may receive a payment on cotton grown by or for him in 1937 and sold before July 1, 1938," he said. "If a tenant sells his share of the cotton to the landlord, then the tenant is entitled to apply for a price adjustment payment on that cotton, up to 65 per cent of his share in their base production for 1937. However the law permits recognition only of the first actual sale made in good faith by the grower of the cotton in the usual course of business; therefore, a resale of the tenant's cotton would not qualify the landlord to apply for a price adjustment payment. The landlord would, of course, be entitled to sell his own share of the cotton and apply for a payment on that cotton, up to 65 per cent of his share in the base production.

"For a producer to obtain a loan or price adjustment payment by misrepresentation on cotton other than that on which he is eligible for a loan or payment, would be violation of the criminal provision of the law under which the funds are available."

## Armstrong Stops Brown In Second

Buffalo, N. Y., Dec. 2 (ANP)—Homicide Henry Armstrong needed only 39 seconds of the second round to knock out Joe Brown, Syracuse white boy, in a nontitle match scheduled for 10 rounds Tuesday night. A storm of rights and lefts sent Brown down for a nine count near the end of the first round. As the second started, Henry drove his foe across the ring with a barrage of blows and finished him with a right to the jaw. Armstrong weighed 130 pounds; Brown, 128.

## SUBSTANTIAL DECLINE

(Continued from Page 1)

The amounts of total obligations incurred for payments to needy individuals, including recipients of public assistance under the Social Security Act and other State plans, earnings of persons certified as in need of relief employed under the Works Program, and subsistence payments under the Farm Security Administration, are shown in the following table:

| 1936 | |
|---|---|
| January | $209,581,000 |
| February | 216,042,000 |
| March | 226,125,0000 |
| April | 212,926,000 |
| May | 200,415,000 |
| June | 197,810,000 |
| July | 187,010,000 |
| August | 191,158,000 |
| September | 196,840,000 |

## AN EXPERIMENT IN MILK DISTRIBUTION

### NEW YORK CITY SHOWS HOW TO CUT OUT THE FRILLS AND CUT DOWN THE PRICE TO BRING MILK WITHIN POCKETBOOK RANGE OF LOW-INCOME CONSUMERS

NEW YORK CITY, 6:30 in the morning. A crowd of neighbors—men, women, and not a few children—chat in front of a store that was vacant last week and still displays an aging "For Rent" sign. Now it is a city milk station.

An immense truck drives up. Quickly the people in front of the station begin to form into a line. The driver and his helper unload tray after tray of milk bottles. They hustle the milk inside. An attendant begins passing it over the counter to the customers. One man tries to wheedle three bottles from him, but is informed with mock brusqueness that his identification card does not show that he is entitled to that much unless he has acquired a new baby. The women laugh. One gets three bottles without a word. Evidently she has the required number of children.

At 8:30 a. m., the milk station closes and the last customer goes off with her milk, putting away her newly punched identification card in her bag. Stores begin to open now, but the milk station has closed in tiime to offer them no competition.

Less energetic milk consumers can have their milk delivered to their doorsteps at 13 cents a quart.* Or they can drop into the corner grocery and buy it at a cost of from 9 to 12 cents. (Most milk sells in stores at 12 cents.) The people who are entitled to buy from the milk station get theirs for 8 cents a quart.

These milk stations, with their low cost cash-and-carry system of selling, are the city's method of meeting an emergency. The station described is one of 149 scattered throughout the city. This particular station was "borrowed" by the city from the landlord rent-free. He is looking for a tenant, and when he finds one who can pay, the milk station will have to find another generous landlord with a vacancy. Meanwhile the city saves rent, which means that the landlord, as a taxpayer, is saved some tiny additional tax payment. He also gets his store cleaned up and would just as soon have it put to such good use as have it stand idle.

One attendant provided by the city—usually a WPA workers—punches customers' cards at the station; another, provided by the distributor, sells the milk. Because the store is open only 2 hours, it isn't necessary to keep the milk on ice. The city's cost for handling the milk is: rent, nothing; service nothing; accessories, nothing. And like all established dealers, it passes these charges on to the consumer.

Other economies along the line make it possible for dealers to provide the milk handled at these stations. One distributor serves each station, unless the amount of milk sold is too great. A station selling as much as 5,000 quarts may be serviced by two distributors. Economy No. 1 for the dealer, then, is low delivery cost. He can dispatch one truck carrying a full load, to a station where it is tied up for a short time only. There is no overlapping in delivery. Cutting out the cost of soliciting business and the cost of collections adds Economies No. 2 and No. 3 for the distributor. He suffers no bottle losses because each customer must pay 3 cents for his bottle or bring back the empties for full bottles. Call that Economy No. 4 Add the economies in overhead expenses resulting from using plants at greater capacity and the list totals up to an impressive figure.

Who are the customers? Well, to start with, they are not in the upper income brackets. None drive up in sport roadsters. People bothered by heavy income taxes won't stroll down at 6:30 in the morning to save 10 cents on a bottle of milk. But there are a lot of people who will; some on relief, some with jobs.

Take the case of a family with in. off debts incurred during a jobless period of 4 or 5 years ago, the period of 4 or 5 years ago, the mother recovering from a recent illness, the three growing children in school. Let's say the father is an architectural draftsman but still unable to find employment in his own vocation, due to the fact that the building industry has lagged behind the recovery processsion. His emergency employment doesn't pay nearly his old salary, and he can't afford extras in the way of service. But he has an intelligent understanding of the nutritive value of milk for his growing children, and he's willing to walk to the milk station each morning to get 2 quarts for 16 cents, instead of sleeping a few minutes longer and paying a driver 13 cents for only 1 quart.

*Prices in this story are as of November 1, 1937.

### CONSUMER'S GUIDE

To be entitled to buy from a milk station, this father must first sign a statement to the effect that neither he nor any member of his family can afford to pay the regular retail price for the amount of milk the family needs. He also states the number of people in his family, the family earnings, and the number on welfare or home relief. No inquisition into family finances follows, and no investigation in the absence of complaint or suspicion is made. Anyone who signs this statement receives a numbered identification card, signed by the Commissioner of Public Welfare, which is good for 3 months. Each time the holder buys milk, a hold is punched in his card.

This is no out-and-out charity plan, nor a straight commercially operated method of distribution. 't comes between, but much nearer to the second. Milk companies cooperate in it because it provides sure sales to people who would otherwise not be in the market or would not purchase as much milk any other way. For 3 years they have been supplying milk to milk stations. Obviously they are not in business for their health, however healthful their product may be, and they wouldn't go on furnishing milk to the city day after day if this part of their business were running at a loss.

Dairy farmers get a break, too, because the city has increased the market for their product. While no official check is made to see that farmers are paid Class I price for this milk, the margin between the 8-cent retail price and the 6 1-2-cent farm price for Class I milk would seem to be ample to cover the greatly reduced costs of distributors for this business.

The city handles the bothersome business of finding the vacant stores, brushing them up, and setting up boards for counters from which the milk can be sold. It attends to maintaining the lists of customers and handing out identification cards.

If there are any charges of abuses, the city tracks them down. Not the least contribution to reducing the cost of this method of distributing comes from the land lords of the vacant premises which are turned to this socially useful purpose.

Are consumers satisfied with this system? Doubtless some of them grumble when the alarm clock rings, especially on cold and wet mornings, but whatever the inconveniences to them, they endorsed it last year to the extent of 32,000,000 quarts. This is an impressive endorsement, even in a city with New York's immense population. Every morning some 35,000 purchasers were taking a walk to buy a daily average of 90,000 quarts.

After 3 years of operation there are many demands for more stations in neighborhoods not yet served. It has been urged that schools should be used before school hours to provide additional milk stations. Of the 149 stations now operating, 99 are in stores used later in the day for the distribution of surplus food commodities to relief families. Fifty are in baby health centers, supervised by the Department of Health and supported by private funds, such as the famous Milk Fund for which so many prize fighters have been knocked out at benefit bouts.

New Yorkers have been educated by 20 years of intelligently directed campaigns to appreciate the importance of milk to health. Knowing the value of milk in the diet and fitting it into food budgets are two very different things. Many budgets just can't be made to stretch to cover anything but the cheapest, most energy producing foods. For some families, free milk has been supplied by charity. But even consumers with thin pocketbooks shy away from that kind of subsidy. For them, New York's compromise plan of making it possible for distributors to pare their costs to the bone and indueing them to pass on the savings in a low price is designed.

Initiation of New York's plan came as a result of an empasse over proposed higher prices. In 1934 New York's State Legislature established a system of milk control—now considerably modified—which gave power to the Commissioner of Agriculture, acting with the advice of an advisory committee and through the offices of an executive agency called the Division of Milk Control, to fix prices to be paid to farmers and prices to be charged by distributors. (The law now does not permit the fixing of resale prices.) Drought later that year pushed up the cost of feed to farmers, who then pressed the Commissioner to increase the prices to be paid to them. They asked for an advance of a fraction of a cent a quart. Distributors claimed that this would force them to advance the price to consumers a full cent Consumer-minued members of the advisory committee offered evidence to show them 1 cent more on the price of milk would result in cutting down the consumption of milk, because in the poorer districts of the city consumers just couldn't "go" the higher price.

A compromise way out of this jam was proposed and adopted. Producers were allowed and extra half cent a quart, distributors were permitted to step up their price for milk delivered to homes by 1 cent, and "as an emergency measure to afford relief to needy families," a plan was initiated to make milk available to them at 8 cents a quart through the baby health stations. Legislation by the health department to supervise the city followed, authorizing the city's health department to supervise the sale of this milk.

When morning broke on the day of the price increase, 53 stations were opened for the sale of 8-cent milk. First day's supplies of some 9,000 quarts disappeared in a flash. More than a thousand people had to be turned away. Next day supplies were increased to 13,000 quarts and still that was not enough. On the third day 17,000 quarts were sold long before the 2-hour period had passed.

Bulk of the supplies for this trade came from one large company. Other distributors seemed to hold off. When the city announced that the State of Wisconsin had offered to provide all the milk that was needed for station sale, local suppliers appeared on to join up less reluctantly. Toward the end of June 1934, 64 stations were in operaton and more than 26,000 quarts were being purchased by close to 15,000 families.

Difficulties and worries a plenty lay in the path of this unique experiment, but desplte them it went along its uneven way with no from other distributors to supply. Then the Commissioner of Agriculture issued a new schedule of prices to farmers, stepping up their returns again by a fraction of a cent a quart. No increase in prices to consumers was milk at a maximum of 8 cents only, and that if an increase was desired they could request a hearing before acting on their own. Until that action the sale of milk must continue at 8 cents.

No request for a hearing followed, but immediately the major distributor to the stations announced its supply of 25,000 quarts would not be available the following morning at this price. By 10:30 that evening the Health Department had secured sufficient milk major jolt until September 1936. its needs. Since that period the larger distributors have not partlcipated in the station sales, although prices to producers are lower. Smaller companies have gone along. Distribution got up to 90,000 quarts daily.

Does the plan meet with objections? Of course, there have been many, some that merit the closest scrutiny. There have been rumors that the distributors' narrow margin encourages chiseling in prices paid to producers. Some State and city officials doubtless consider the plan a "headache" and fear that it will break down the whole system of State milk control. Retail dealers have complained that it has cut down their sales.

Against these objections is the tangible fact that thousands of families are getting a supply of milk which they could not afford at regular prices. There is the additional fact that it comes closer than most schemes for getting milk to needy families on a commercial rather than a charity basis.

## But Finally He Landed In Jail

Evanston, Ill., Dec. 9—(ONP)—For 37 times Albert Ware had been arrested and paid fines totalling $327. But he had never spent a night in jail during his 11-year battle with the police force until he was nabbed Monday night for the 38th time.

Ware runs a club police call a gambling den. On each of his first 37 arrests, he was able to provide bail pay his fines, and stay out of jail. Arrests No. 35, 36 and 37 occurred the week before No. 38, and each time he promptly posted $200 bail on charges of violating fire laws at his establishment.

But finally the police woke up. They discovered that under the fire law Ware could be held without bail until the next court hearing. So for the first time he passed a night in a prison cell.

## Scottsboro Boys Deny Split With Harten

Brooklyn, N. Y., (C)—Eugene Williams and Willie Roberson, two of the four freed Scottsboro boys, in a long letter to the press, denied a split with the Rev. T. S. Marten, local minister, who has acted as a sort of "godfather" to them since their arrival from the South. The boys say Rev. Harten has fed them, given them clothes and money, and looked after them when no one else would help.

## Power Company Advertises Colored Man

Houston—(C)—The Houston Defender, C. F. Richardson, editor, carried a 108 inch ad. from the Dallas Power & Light Company last week, advertising the fact that Frank Malone, colored, had served the company for 46 years. A large photo of Malone was carried in the copy.

Motoring visitors to the 1939 World's Fair of the West will burn 60,000,000 gallons of gasoline in California alone.

## CHECK YOUR VITAMIN C

Richest source is citrus fruit, and oranges are tops among citrus fruits for this valuable nutrient that helps bodies to resist fatigue, loss of weight and appetite. Market forcasters predict a banner winter for oranges, with millions of boxes more than average coming to market. Here are some facts about "kid-glove" oranges—tangerines to you—on markets from November to January.

NOT so many years ago, if you were living deep in the woods of Maine, orange juice for breakfast was something to write home about. Today, wherever you happen to be in the United States—north, south, east, or west—and whatever the season, citrus fruit, both fresh and canned can usually be purchased at the store around the corner. Thanks to rapid transportation and efficieent methods of distribution, fresh oranges are regarded as a staple food in Maine just as they are in the Southern States where they are grown.

Orchards in California, Florida, and the Gulf States supply the markets of the Nation with oranges the year around. California sends them east by the carload each month. Her heaviest shipments of dessert oranges come to market from November through May, and her juice oranges are shipped from May to November. Florida and the Gulf States send the bulk of their crop from October to June.

Two leading types of oranges packed in these million of boxes are navel oranges, often called dessert oranges, and Valencias, famed for their juice. Both types belong to the sweet orange family. However, a small percentage of our orange crop belongs to the Mandarin group and is known by the trade as "the kid-glove varieties." Kid-glove oranges, are looseskinned types, come to town for only a few months of the year. A few carloads appear in October, but they play their most important role in the citrus parade during the holiday season, from November to February. In February they make their exit and leave the stage for the great family of sweet oranges.

To most consumers an orange which sheds its skin with the greatest of ease means a tangerine. In reality the tangerine is only one group of the Mandarin type. The bright orange-yellow kid-glove oranges that reach the market in October and November from southern Alabama, southern Mississippi, and certain other sections of the Gulf Coast region belong to the Satsuma group of Mandarin orange. To devotees of dessert oranges, the early appearance of the Statsumas is always welcome. Navels from California are not at the peak of their season in the early fall, and the high-grade sweet oranges from Florida have not as yet appeared in quantities when the Satsumas are plentiful.

The leathery rind of the Satsuma is much lighter in color than that of the true tangerine, but as it peels as easily and divide as readily into sections, to the consumer it is just a lighter-colored tangerine.

True tangerines are shipped from the South in December and January. The rind of the tangerine is such a deep orange that it can almost be called a tomato red. The flesh is also a darker orange than that of the Satsuma, and it matches the Satsuma's 1 to 4 seeds per fruit with 7 to 20. Like the Satsuma, it has a sprightly flavor and pleasant aroma.

California leads in the production of navels and Valencias, but when it comes to cultivating the climatic conditions of the Gulf States step into first place. Growers in Louisiana, southern Mississippi, and southern Alabama are inclined to favor the Satsuma above all other oranges, as it is the most trost-resistant of all the orange types. Both the soil and climatic conditions of the Gulf Coast region are well suited to the raising of the Satsuma orange. Attempts to date to raise loose-skinned oranges in California have resulted in a small-sized, somewhat acid-tasting fruit.

Tangy taste of the Satsuma and tangerine, their pleasant well-blended, acid-sweet flavor, make them a perennial favorite, Consumers' most frequent complaint against Satsumas and tangerines is that sometimes they are dry and the pulp is woody. Insipid flavor may be due to soil conditions or to freezing. Unfortunately, it is difficult to tell by the look of an orange whether it has been frozen or not. A good quality tangerine, like a good quality orange, should be juicy. If full of juice, it will feel heavy for its size when held in the hand. Like sweet oranges, the skin should be fine-textured and well-colored, either deep yellow or orange, depending on the variety. Fine appearing fruit does not always signify fine eating quality, but chances are that if an orange is well-formed and mature, and if its skin is fine-textured for its variety, it will be as good as it looks.

Government grades are established for Satsumas, tangerines, and other members of the Mandarin can. Top grade is U. S., Fancy. Others are U. S. No. 1, U. S. No. 2, U. S. No. 3, and U. S. Combination. A box labeled with the latter grade may be a mixture of U. S. No. 1 and U. S. No. 2 fruit. These Government standards, in addition to factors affecting appearance, are based upon such factors as maturity and freedom from damage by dryness and defects which are a likely source of decay.

All orange orchards require careful cultivation if they are to bring results to the grower, but kid glove varieties in particular need exacting care. Even with attention, the yield per tree is usually not as much as that of the sweet orange. Since in China, the native home of the orange, loose-skinned varieties were costly fruits which only the well-to-do could afford, a western scientist, searching for a name for the looseskinned varieties, classed them as the Mandarin group. Years later, a Florida grower jokingly called them the "kid-glove" varieties and the name stuck.

In this country, the tony name does not mean high cost. During December, when the season for Mandarin oranges is at its heights, and the navel season is not yet in full swing, fine-quality tangerines are often one-quarter lower in price than navel oranges. Like navels and Valencias, varieties of the self-peeling type are considered an excellent source of Vitamin C.

## Plan Big Youth Health Program In Chicago, Ill.

Chicago, Dec. 2 (ANP)—Parents, teachers and other interested in the welfare of youth, will attend a free health program and exhibit Monday, Dec. 6, at Provident Hospital.

The purpose of the meeting is to create health consciousness in young people and show how health can be promoted through the thoughtful choice of Christmas gifts for children. The program is sponsored by the youth Health Advisory Committee of Chicago Urban League and the National Youth Administration, of which William J. Campbell is state director.

The hospital program will show how children are made health conscious through movies, songs and discussion; how they are taught to build up good health attitudes through handicraft, games and parties, and how they are aided physically through exercise, play and physical examinations.

Members of the Youth Health Advisory Committee include: Dr. John W. Lawlah, medical director, Provident Hospital, chairman; Frayser T. Lane, Chicago Urban League, Miss Carrie Bullock, Visiting Nurses Associaiton; Mrs. Florence C. Williams Chicago Tuberculosis Institute; Mrs. Zephyr H. Stewart, Social Service director, Provident Hospital; H. H. Crawford, Wabash Y. M. C. A., Dr. William D. Giles, Lincoln Dental Society, Chauncy C. Willard, principal, Du Sable high school; C. C. Dawson, of the NYA and Miss Ruth W. Howard, director of the Health Education program of NYA.

## Dining Car Cooks Get Wage Raise

New Haven, Conn., Dec. 2—A. N. P.)—Wages of all dining car cooks and waiters on the New York New Haven and Hartford railroad were increased by 5 1-2 per cent in result of conference of representatives of the company and officials of the Brotherhood of Dining Car Employes, held in the New Haven Railroad general offices here recently. Increases began as of Oct. 1. Grand President Rienzi B. Lemus, Past President E. G. Hopkins and Chairman Oscar Jones of Local No. 2. of the brotherhood appeared for the employes.

In 1931 and 1932, on proposal of the company, the cooks and waiters agreed through the brotherhood to accept wage cuts of 10 per cent on same terms and conditions acceptable to the 21 standard railroad brotherhoods. In 1935 the amount was restored to all by the same process; and because of that the New Haven management granted 5 1-2 per cent increase upon Mr. Lemus' application, without prior agreement.

## NOVEMBER CORN GRIND

A corn grind of 6,108,155 bushels during the month of November for products going into domestic use was reported through the Corn Industries Research Foundation in behalf of eleven refiners of starches, syrup, sugars and other products of corn.—Nashville Banner.

## Social Worker Of Minneapolis Feted

Minneapolis, Minn., (Jose H. Sherwood for A. N. P.)—All organizations and individuals who took part in the 'perfect tribute) to Miss W. Gertrude Brown, resigned head resident of Phyllis Wheatley Settlement House, on November 4th can feel justly proud of their accomplishment in making it possible for the citizens of Minneapolis and St. Paul to give public expression of genuine regret at losing this splendid woman.

"No person ever deserved a public ovation more, and no one in Minnesota, white or colored, was ever accorded more deserved praise and sincere respect than this citizen who has lived in Minneapolis these past 13 years" said Ethel Ray Williams, general chairman and coordinator of voluntary Twin city organizations who sponsored the bon voyage dinner for Miss Brown.

Rev. Damon Young of Border M. E. Church presided. Telegrams and letters from the Governor of the State, Mayor Minneapolis, state department officials, city council and school board members, co-workers and friends from New York to San Francisco, and from Chicago to New Orleans, filled the speakers' table. Musical numbers were given by the Grace Notes of St. Paul and S. Edward Stallings, graduate student at the University of Minnesota.

Following the banquet open house was held at the Settlement for friends, and neighbors and children of the community. Miss Brown was showered with gifts from individuals too numerous to mention. Following are some of the group presentations: Gold neckchain and watch from the Board of Directors of the House, a $100 government bond from the citizens of the Twin Cities, a distinctive silver pitcher and tray from the staff of the house, a leather traveling case from the Sewing Unit, a Silver traveling cup from the Rhythm Flashes Club, a leather bill fold and coin purse from the High Lights Club; a matchless circular friendship brooch set with two diamonds from the heads of Twin City Settlements, and two scrolls—one from the social workers of Hallie Q. Brown House, and one from the Minnesota-Iowa Club. The Educational Boosters Club, of which Miss Brown was president, presented her with a lovely house coat.

A short program of musical numbers by the Jubilee Chorus, the Harmony Four, the Sumner Boys' Quartette interspersed the presentation of gifts. The high light of the evening came as a great surprise when the last number of the program proved to be Roland Hayes who sang four of Miss Brown's favorite songs. Mr. Hayes happened to be passing through Minneapolis and stopped in to pay his respects to Miss Brown.

Miss Brown plans a rest of a few months with friends in the East after which she will tour the South, visiting schools and institutions and filling a number of speaking engagements.

## YOUR FOOD SUPPLIES AND COSTS

MEAT supplies during 1933, especially pork and better grade beef, are expected to be larger than this year and lower prices are in prospect. The gain is total supplies is expected mainly during the last half of 1938, when hog slaughter probably will increase considerably. Beef and veal supplies may be slightly smaller than during 1937, but will include a larger proportion of better grade cattle. Lamb supplies most likely will be about the same as in 1937.

Top grades of eggs and beef are selling at a much larger than usual margin above prices for average grades. Supplies of average grade beef and eggs have been relatively large compared with top grade products. Due to large storage holdings, storage egg prices have been considerably lower than a year ago. In October their prices declined instead of advancing seasonally. Prices of higher grade fresh eggs, however, have been moving up and are only slightly lower than in 1936.

Sharpest monthly decline in average retail food costs this year occurred from September 14 to October 12, when prices of all major foods except eggs and dairy products moved down. As a result of this 1-percent decline, the retail cost of the items in the consumer's market basket on October 12 was only slightly above the level reached in February, the "low" for 1937.

Retail food costs, however, remained above their level a year ago, primarily due to meat prices. On October 12 the index of retail food costs as reported by the Bureau of Labor Statistics was 84.9 perecent of the 1923-25 average and 2.5 per cent above a year ago. The increase of 15 percent over a year ago in meat costs canceled most of the 10 percent drop in fruit and vegetable prices. Dairy products, sugar, and cereals and bakery products were about 3 percent higher than a year ago, and egg prices about the same amount below.

Meats and fruits and vegetables led the downward parade of food prices during the 4-week period. Prices of all meat items except smoked pork products went down. Sharpest declines occurred in fresh pork and beefsteaks. Lower prices on apples, citrus fruits, and most fresh vegetables pushed down fresh vegetable costs to their lowest level since October 1935. Prices of dried beans and canned vegetables continued to move down from their midsummer s peak, but these items still are above their 1936 level prior to the drought. Lower cornmeal and flour prices were the major factors responsible for the slight decrease in cost of cereals and bakery products.

Food costs dropped in all regions. Sharpest declines occurred in the North Central and Southeastern States and smallest in the far West. The downward movement in the Midwest and South carried food costs below their level a year ago. In all other areas costs were higher than a year ago, but increases above the United States average prevailed only in New England and Middle Atlantic cities.

Fresh vegetable prices generally advance from fall to winter months because supplies are small and either come from distant producing areas or from storage. Prices often fluctuate sharply because heavy rains damage tender winter-grown truck crops. Fresh winter-grown vegetables come from the Southern and Western States. The three staple crops—cabbage, potatoes, and onions—however, move from ware-houses in Northern States. First vegetable shipments from the Southeastern States arrived at markets during late October and are expected to increase seasonally.

## GOT $37.50 WORTH OF POTATOES AND BEANS OFF ONE-TENTH ACRE

One-tenth of an acre provided the T. E. Megee family, in Perry county, with $37.50 worth of food for their table, they estimate.

The small plot was rented last spring for a potato patch, because the home garden wasn't large enough, Mrs. Megee, a member of the Bigelow home demonstration club, told Miss Helen M. Austin, county home demnostration agent.

Four loads of barnyard manure and 75 pounds of a 6-8-4 fertilizer were applied, and the plot yielded 30 bushels of potatoes.

Lima beans were planted after the potatoes were dug, and when frost killed them, Mrs. Megee had canned 105 quarts, besides a bushel of dried beans stored for winter, and a half-bushel of fresh ones sold.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer. 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per yer. 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## PLANTING ROSES

Planting roses in the South is not a difficult operation and requires no special technical skill.

A few points should be observed which are in the main true in the case of planting any plant which has no soil on the roots.

Most of the roses planted in the South are field grown and are shipped with no soil on their roots. Generally they have been pruned back to about 12-inch canes to save shipping cost. When they arrive they should either be planted at once or else "heeled" out in a trench to await planting. The entire plant should be covered with soil.

The hole to receive the plant should be large enough to accommodate the roots without crowding or bending and deep enough to permit the plant to be set so that the point at which the plant was budded will be just under the surface of the soil.

Cut back the canes to about six inches in length and remove all but four or five of the strongest. Prune off the broken or "frazzled" ends of roots before planting. Remove any broken or damaged roots.

Spread the roots in the bottom of the hole and thoroughly firm the soil. either with the feet or a suitable instrument. Place loose soil on the surface.

If zero weather is expected, hill up the soil about the plant to a height of about six inches.

Water may be added to firm the soil about the roots but is not necessary if the soil is damp. Do not place manure in the hole before planting.

## PORK CONSUMERS NOW WANT STREAM-LINED HOGS OF LEANER TYPE

Styles in hogs have varied widely, ranging from the short, fat type of years ago, to the larger, longer, and narrow hogs of recent years.

Just now the style trend is toward a medium type that gains as economically as the larger type hog. but produces the medium-sized cuts of meat that the market now favors, says the U. S. Department of Agriculture.

Buyers like hams of from 10 to 14 pounds and bacon with plenty of lean meat, the department experts point out, adding:

"In general the long, narrow hogs have a higher proportion of lean meat—ham, loin, picnic shoulder, and shoulder butt—and less of fat cuts, including bacon.

"Favored weights vary over the country. In the Corn Belt buyers like 220-pound hogs in the eastern centers, 250-pound animals for farther West.

"New England packers prefer rather heavy hogs, 250 to 260 pounds.

"New York City slaughtering mainly for the fresh-pork trade, and 175-pound hogs are favored.

"Baltimore likes them even lighter."

## England Recalls Trinidad Governor In Riot Probe

London, Dec. 9—(ANP)—Sir Murchison Fletcher, governor of Trinidad and Tobago, has been ordered by the colonial secretary to return to London for a conference on the recent labor riots there during which many natives were killed and hundreds arrested.

The governor is believed to be favorable to the workers. Since the recent strike and trouble, the oil and other big business interests in the islands have been bitterly denouncing Sir Murchison and demanding his recall for having spoken critically of the miserable conditions in which their employes are forced to live.

## Bishop Sims Holds West Alabama Conference

Greensboro, Ala., Dec. 9—(By Page M. Beverly for ANP)—The West Alabama A. M. E. conference closed its annual session at St. Matthews church, of which the Rev. A. Jones is pastor, on Sunday afternoon at which time Bishop D. H. Sims read the appointments.

Bishop Sims had the conference so organized as to raise all money on the first day. The rest of the time was spent in a church clinic in which all questions affecting the church were asked and answered.

Gov. Bibb Graves sent a message to the bishop to come to Montgomery to meet on Thanksgiving day for a conference. The bishop accepted and spent the better part of the day discussing matters pertaining to colored people of Alabama with the chief executive.

## Colored Women Make A Bad Matter Worse

(By William Pickens for ANP)

Excuse me for telling this. I only tell it as the truth, and this particular truth may not do any good, but the telling of it will do no harm, at least no harm that I care a jig about.

succeeded in making something suceeded in making something worse, which I had always supposed was already as bad as any human thing could be: she has succeeded in adding to the horrors of jim-crow travel in the south. Since she has acquired the social half-sanction of smoking in public, she shows no respect for either God or man,—or for other women. In a little jim crow car-end, 15 feet long by 7 feet wide, she will light up and fill the place with her infernal smoke, although all windows are closed in winter,—without so much as politely asking whether any of the other men and women crowding the dirty little cell are going to be tortured by her useless performance.

Wait a minute! No, it's not because the railroads do not furnish a smoking compartment for colored smokers: there's a smoking cubbyhole about the same size as this woman smoking hole right there in front of her, and there's not a single soul in it. It is simply, solely and exclusively because it has never occurred to these ordinary members of the group to have any respect for the comfort of others, unless they are compelled to do so. The conductors do not compel them to go to the smokers, unless there are loud and persistent complaints, for white trainmen do not care what tortures segregated Negroes may inflict upon each other; besides, their animal-like disregard of each other becomes an added excuse to the white for keeping Negroes segregated. When traveling in the north, where white and black would have to suffer together, if either were subjected to this torture, I have seen the conductor, without waiting for complaints, firmly tell white women passengers: "You cannot smoke in here. There's a smoker. You will have to go there or stop smoking."

And to think that in years past, I have several times risked being shot by forcing smoking white men out of a car where colored women were riding,—sometimes compelling the conductor and trainmen to respect the presence of a lone Negrom woman by ceasing to smoke. Once in Alabama a conductor threatened to shoot me ,but he stopped smoking. At another time in the same state, when I asked the trainman not to smoke because there was one colored woman of the backwoods and unknown to me, present in the jim-crow coach, the trainman offered to fight me and I had to stand up in the aisle to be fully ready for the attack before he quieted down.

Now I begin to wonder what in the thunder I was risking my life for. Since the colored woman has started smoking she doesn't care a bang for non-smoking males or for other colored women. Often when we are fighting in human history, we really don't know what we are fighting for: we are just following a formula.

I had always said that the jim-crow car was such an instrument of torture that nothing devilsh could be added to it; but what it took to make it worse, this careless colored woman, who is anxiously aping "smartness," is showing us now that she's "got it." May her reign be short. Or pretty soon the railroads will stop providing smoking compartments for colored passengers.

## Five Wives Show Up For Dead Man's Insurance

San Juan, Puerto Rico, Dec. 1 (ANP)—Last week a laborer on the Ponce aqueduct died and the following day officials of the Workmen's Compensation State Fund were surprised when five women, presented themselves at various times during the day, each declaring she was his wife, and demanding his insurance. A check-up of the records revealed that he had really been married twice. The status of the other three "widows" is being investigated. According to the Compensation Act, a share in the insurance may be alloted to illegitimate children.

## Worker Burns To Death 85 Feet Below River

Atchison, Kan., Dec. 2—(A. N. P.)—Last Thursday while working in one of the chambers of a big pier, one of the units under construction for the new toll-free bridge across the Missouri River, James Jackson, 40, a sand-hog. was burned to death 85 feet below the surface of the water when his clothing accidentally caught fire. His was the first fatal accident since construction of the bridge began.

## Illinois Old-Age Pensioners To Get Surplus Foods

Chicago, Dec. 2—(ANP)—It was announced here Monday by John C. Weigle, public welfare administrative assistant, that Illinois old-age pensioners, in addition to their monthly allowance, will be given Federal surplus commodities. The food items will be supplied by the Federal Surplus Commodities Corporation to the Illinois emergency relief commission for distribution to the aged needy.

## Chicago Plans Model Youth Congress

Chicago, Dec. 9—(ANP)—A planning conference to prepare for the all-Chicago Model Youth Congress to be held in March, 1938, has been called for December 12th, at the Morrison hotel here. Negro youth will be represented at both the planning confab and the big meeting next March. The discussion December 12, on juvenile delinquency will be led by Pauline Redmond. youth director of the Chicago Urban League.

## Malliet Named Haitian N. Y. Correspondent

New York (C)—A. M. Wendell Malliet. staff writer of the Amsterdam News, has been notified by Antonine Bervin, secretary general of the National Haitian Commission of Intellectual cooperation of Port au Prince, that he has been chosen by the Council of the organization as New York correspondent of the Commission.

## WPA WORKERS IN LOUISIANA SENT TO CANE PATCHES

**Baton Rouge,** La., Dec. 2—(ANP)—An estimated 5,000 Negro WPA workers, hastily recruited from projects over the state, were ordered transported by the Louisiana national guard into the sugar bowl district Tuesday to save $6,000.000 worth of cane from cold weather.

Orders were given out by Gov. Richard Leche, ill with influenza at his mansion. He telephoned the mayors of various cities and ordered WPA work suspended for the emergency. He said that, because of the recent unseasonable and prolonged cold weather, there was grave danger that if the standing cane was not windrowed within the week it would sour and be a total loss.

You cannot make Christ know you if you do not know him.—Bishop Johnson.

## Astrology, Its Meaning And Service to You

(By Cora J. Gibson for A. N. P.)

Astrology—star knowlegde—is the study of Cosmic Law and its principles. There are certain correrespondences in all nature which may be interpreted by the positions of the planets and signs of the Zodiac. As applied to the individual. it is called Natal Astrology.

At the time of birth, the positions of these celestial bodies and their relationship to each other, INDICATE certain impulses and mental factors within us. We call these impulses "vibrations." They are named for the planets in our Solar system. The nature of each vibration is different; and the degree of power emanating from each vibration varies according to the position of the planets at birth.

The position of the Sun, Moon and planets tell the story of your special group of vibrations which will not be exactly the same for over twenty-five thousand years. That is why a horoscope (or time clock) erected for the moment of your birth relates specifically to you____ what you have; and the philosophy of Astrology points the way to self-development___or what you may become. In other words, the proper use of your particular unit, called "self," will bring you what is commonly known as success.

For Astrology teaches that we attract to ourselves the conditions in life which correspond to the nature of our own vibrations. For instance, if the constructive Jupiter vibration has been developed, such qualities as faith, hope and optimism will be expressed through you in some department of life (which is denoted by Jupiter's position in your chart). And because of the activity of this vibration, there is attracted to you what some may call "luck" because of a stream of good fortune in some form flowing into your life; but the truth is, you have worked with the law regarding this particular vibration and the outward conditions are reflecting the inner.

On the other hand, we may be misusing another type of vibration, say, a Venus vibration. Then, there may be an indolence and laxness and general carelessness which, in turn, will attract unsatisfactory conditions repeatedly in some department of our life. There will be a lack of order, beauty and permanence because of this automatic response of the outer to the inner____because of the not working WITH the Law pertaining to this impulse.

We say "misuse" advisedly because no vibration is evil. We have been given so much material to make of it what we will. We would not be agents of free will if we were prohibited from our own CHOICE of self-expression. BUT when we use our material constructively, we work WITH the law with resulting harmonies such as health, contentment and a definite purpose in life. However, we do not break Cosmic Law by not working with it—we only go against it by the misuse of its principles. Ignorance of the law does not by any means change it. The Law is immutable. The effects we receive are always created by ourselves. It is our advantage to work with it.

We may do this by "knowing" ourselves thru the study of our horoscope which reveals our possibilities and powers, thus enabling us to work intelligently towards becoming more useful and therefore more powerful and successful personalities.

## Etta Moten Sings in Tulsa

**Tulsa,** Okla., Dec. 2—(ANP)—Sponsored by Alpha Chi Omega chapter of Alpha Kappa Alpha Sorority, Miss Etta Moten, stage, screen and radio star and featured performer in "Flying Down to Rio." was presented here last week in recital at Carver Junior High school before an audience that filled the auditorium to capacity. The program was one of a series sponsored by the sorors as contributions to the cultural side of Tulsa community life.

## HERE'S HOW TO MAKE A HEN LAY JUST THE KIND OF EGG YOU WANT

### 'Controlled Feeding' Is Secret, Denson Says, and Shows Examples

By Ed Bernd

It takes some showmanship to put across a new idea—and that's why J. W. Denson, operator of a local feed store, is carrying around a carton of eggs and several paper plates.

While the eggs all look alike from the outside, they don't from the inside. That's why the spectators have a startled look when he breaks an egg in one of the plates and it turns out to have a green yolk.

Mr. Denson's idea is this:

"A controlled egg has more base to it. It's richer in food value than an egg from a hen that is not on controlled feeding."

He means that country eggs may sell cheaper, but when you eat one for breakfast, you don't know what you're getting in food value.

Mr. Denson said he had been experimenting with his controlled feed idea recently. His hens now produce eggs which have substantial yolks. He broke a "controlled egg" in a paper plate and moved the plate around. The yolk remained solid. He broke a storage egg, shipped to Macon, and the yolk lost its shape. Then he broke a "fresh country egg" and its reddish yolk was less stable than the "controlled egg."

"I'm trying to help local poultrymen get a better price for their eggs, and at the same time benefit the consumers," Mr. Denson said. "I'll be glad to put on my little demonstration for anybody."

He quoted prices for "controled eggs" which were some higher than those for "country eggs" and for storage eggs.

The egg with the green yolk was produced by giving the hen food containing green vegetable coloring, he explained. That is just a novelty.

He failed, however to reveal if any of the hens had seen the green-yolked eggs—and if so what was the result.

Macon Ga., Daily Telegraph

## WANTS EDUCATION TO RISE ABOVE PRESENT ACADEMIC LEVEL

### Bishop President Sees Need of "New Birth" Of Ideals

Beaumont, Texas, Dec. 9 (ANP)—"Speaking on The Challenge of Education for Negroes in Texas," President Joseph J. Rhoads of Bishop College delivered the keynote address at the 53rd annual session of the Colored Teachers State Association of Texas, here Friday afternoon. Following an illuminating address by Dr. L. A. Woods, State Superintendent of Public Instruction, Austin, Dr. Rhoads declared that "race education must rise above the purely academic level and assume functional aspects involving growth in democratic ideals and practices in human relations, and vocational and economic adjustments; and progress in religion."

The speaker exploited the theory of race progress and security by means of so-called "minority group techniques," observing that "our difficulties are too complex and deeply rooted to admit to a single remedy The mere manipulation of external circumstances, or even the evolution of a worthy goal, ultimately will result in suicide." He pointed to "the chaotic condition in Europe, Asia, and even in America" as "costly symptoms of a distorted social philosophy." Above everything else, the solution demands "a change of heart, a new birth of devotion to democratic ideals." the speaker said.

He dealt sharp blows to "discriminatory practices which prescribe an inferior brand of education for Negro youth and unhealthy living conditions for urban Negro communities, and which constitute a menace to our state and national welfare."

MACON, GA. DAILY TELEGRAPH

### Proper Cooking of Cane Juice Is Secret of Good Syrup

Great changes have occurred in cane grinding and processing in the state. The yellowjackets are a menace to the syrup maker when the weather is warm, but the frost that came on the twenty-third of October made it necessary to grind cane promptly to prevent the souring of the juice. The weather was warm following the frost, and the yellowjackets have had a feast around the cane mills.

At Red Henry's mill in South Macon cane is ground for customers who like to drink juice fresh from the mill. It is claimed that this juice has medicinal values far in excess of that of the citrus fruits, and in South Georgia the saying goes that all malarial traces are cleared from the system when the people begin to drink plenty of cane juice and eat raw cabbage and cooked cabbage. Abundant health follows. Mr. Henry has the cane stalks washed in a barrel of water, and three layers of cloth are used as strainers for the juice as it flows from the mill into the container. In the past it has not been unusual to see cane run through a mill with shucks on the stalk and gritty roots at the bottom. A crocus sack was spread over the barrel to clear the grit from the juice as it flows from the mill. This crocus sack keeps out some of the yellowjackets, but not all.

A number of years ago two kinds of cane were planted in Georgia, the red cane and the green cane. Then came the ribbon cane, which was a red cane with a green stripe in the peeling. The relative merits of these different canes were often discussed. Gradually the impression spread that the green cane, being softer, was better for chewing, but the red cane was said to have more sugar in its juice, and was better for syrup-making. As cane chewing was not as popular as syrup eating the cane growers gradually left off their green cane patches, and now it is most unusual to see a stalk of green cane in the markets.

Coastal Plain planters discovered they could grow tenderer and bigger came than could be grown with similar work in the Piedmont Section; therefore, acreage rapidly increased in South Georgia, but the Piedmont growers contended that they preferred the Middle Georgia yielded a larger percentage of syrup for a given quantity of juice, and they prefered the Middle Georgia cane. It was insisted also that the Middle Georgia syrup was sweeter. The South Georgians did not agree on that point, but strange to say many of them have abandoned the red cane and the green cane, and are now planting Pride of Japan, or POJ, as they call it, and are pleased with it. Its stalks are small and do not grow as high as the red cane, but grow in clusters, many coming from one root, or eyelet, and its value is highly satisfactory.

Unless the juice is properly cooked the syrup made from it tends to crystallize with age, and as the Georgia cane grower wants syrup and not sugar from his cane patch he tries to prevent this crystallization. Cooking processes are said to be the only remedy. Many exhibits of the POJ and its products have been seen at the Dodge county fair, and at some of the other fairs. Now the farmers in Jefferson and Emanuel counties are growing POJ, and A. J. Knight on the Wadley-Swainsboro highway has made a crop of it for the second year. He says it is a success from every standpoint. He likes the syrup and juice as well as that from any other cane. He says the plant grows better in land not too highly fertilized. He applied a top dressing of soda and produced twenty-five to thirty stalks to the hill. Where cotton will grow, he says the cane will flourish:

While Mr. Knight makes his fine cane crop and other revenue-producing crops on his farm Mrs. Knight is bringing in the cash by selling quantities of vegetables from her garden, as well as milk, butter, and eggs. The cooperative markets in Swainsboro enable her to dispose of those side crops. She says the market is a blessing to farm wives, and she can make more money out of her little enterprises than can be made out of the cotton crop on the farm.

MACON, GA., DAILY TELEGRAM

### Georgia Returning as Poultry Producer—Rhode Island Red Sets Record—Peanut Oil Favored in Curing of Meat—Truck Crops Grown in Wilcox.

The Georgia College of Agriculture at the State University has recently published its progress report for the twelfth Georgia National Egg Laying Contest. It says:

"A pen of Rhode Island Reds from Columbus, Georgia, made the highest record of any heavy breed pen and not only achieved this record, but was fourth high of all the heavy breeds competing."

Texas. North Carolina, South Carolina, and Georgia, supplied the contestants that were within the 15 high groups. The Rhode Island Reds referred to as leading all other heavy breeds belong to the Oak Mountain Poultry Farm of Waverly Hall. Georgia, but they are kept by the proprietor, J. E. Humes, for his personal attention at his home in Columbus. His pen of Rhode Island Reds made a record of 2,825.75. He had a pen in Florida that scored 2,812 in egg laying. The Georgia record is the highest ever made by heavy breeds in the state, according to the progress report. One Rhode Island Red hen scored 315.8. Mr. Humes' Oak Mountain White Leghorns made second high place and won 2,842.80 points.

The progress report contains interesting information for poultry and egg producers. It shows what the various breeds of chickens are doing, and what the various breeders are doing to raise standards.

When Georgia decided to let Tennessee raise her chickens while Georgia spread the report that Georgia mortgages the friends of Tennessee and the unwitting enemies of Georgia spread there port that Georgia sand didnt' have enough grit in it to raise chickens. The poultry in Georgia developed the roup, and cholera, and distemper, and moulted, and had the highstrikes and at times they refused to lay eggs, so Tennessee produced the poultry and eggs, and Georgia bought them. Then came such men as J. E. Humes, A. E. Guinn, the Booth Farms, the University of Georgia Farm, W. A. Seidel, J. C. Tomlinson, R. H. Sturgeon, R. C. E. Wallace, and others, who have re-established confidence in chicken raising in the state, and have shown that chickens, like hogs and cattle, and horses, and mules, need feed and care, and that they cannot be raised like wild creatures. In the old days the only profitable hog, or cow, or chicken, or turkey or duck, or guinea, was the one that wouldn't cost anything for feed. He must be a rustler and go into the wild woods to get his living, or else feed on that which would otherwise go to waste. Today's producers of poultry and livestock give as much attention to feeding as to breeding. Both are important, and the animal or fowl is used to convert feeds into profits.

## 25 EDITORS HEAR GOVERNMENT MEN DELIVER ADDRESSES

### Leaders Seek Aid of Colored Papers for New Deal Farm Program

Washington, Dec. 9 -(ANP)—Twenty-five Negro editors from various sections of America set in conference here Wednesday and Thursday and heard Henry Wallace, secretary of agriculture; Dr. Will Alexander, director of the Farm Security Administration; Dr. C. W. Warburton of the Farm Extension Bureau and their assistants, describe how those agencies which affect intimately, more Negro people than any other governmental departments, are functioning in their efforts to aid the rural population of the country live fuller lives.

The meeting which was held in the press room of the new agricultural building had been called in recognition of the part which the Negro newspaper plays in the lives of colored people and to permit the editors, most of whom live in urban centers, to get a fuller grasp on the problems which face the largest single Negro group in the country, the farmers. It is hoped the newspaper representatives will develop a broader interest in the rural situation, acquaint themselves with the news sources available so as to be better able to disseminate information and more effectively interpret happenings in agriculture and its allied fields. Fuller knowledge on the part of Negro farmers of the governmental services available and of the new programs being instituted is expected to enable them to take better advantage of the opportunities open to them.

**Must Increase Farm Income**

"We have asked you to come here," said Secretary Wallace, the first speaker, who himself had been a farm paper editor before assuming his present post. "because you represent a large and important segment of our farm population. In order to develop national prosperity the earning power of all of our farm population must be raised. Both labor and agriculture must have their incomes increased so that the one may support the other.

"The farmer must get adequate income in order to be able to buy the products which the city worker produces. Labor must have employment so that he in turn can purchase the commodities which the farmers raise." The secretary cited figures and drew charts to show how dependent these two great factors in American life were upon each other. He also described the pending farm legislation before congress and told the purpose of the proposed ever-normal granary.

Dr. Will Alexander, head of the Farm Security Administration and former secretary of the Interracial Commission, the latter an experience which has enabled him to see the Negro's problems clearly and proffer more than normally sympathetic aid, explained that the primary job of the FSA was to get farmers off relief.

**Relief Urgently Needed**

"More than a million farm families need relief," Dr. Alexander said. They have been ruined by a century of unscientific, one crop farming, unjust interest rates, over-burdening, exhaustion of the soil and tilling of poor land which cannot produce an adequate crop."

**Many Editors Present**

Among the editors present were: Robert L. Vann, Pittsburgh Courier; C. A. Franklin, Kansas City Call; Thomas W. Young, Journal and Guide; J. E. Mitchell, St. Louis Argus; Roscoe Dunjee, Black Dispatch; Wm. A. Fowlkes, Atlanta World; M. D. Potter, Tampa Bulletin; Mrs. Mayme Osby Brown, Louisiana Weekly; Claude A. Barnett, Associated Negro Press; I. M. A. Myers, Palmetto Leader; W. C. Buford, Louisville Leader; Dr. C. B. Powell, Amsterdam News; Arthur M. Carter, Afro-American, W. C. Hueston, Washington Eagle; Fred R. Moore, New York Age; Carter Wesley, Houston Iniormer; E. Washington Rhodes, Philadelphia Tribune; Leon R. Harris, Modern Farmer; Robert A. Pelham, Capitol News Service; Dr. Kelly Miller, Washington; Louis R. Lautier, Washington; T. M. Campbell, Tuskegee Institute; Ralph Matthews, Afro-American; J. B. Pierce, Hampton Institute, Charles E. Hall, Bureau of the Census; Florence R. Murray, Washington Tribune; Dutton Ferguson, Flash Magazine; Mrs. Robert R. Moton, President, National Association of Colored Women Inc., Capahosic, Va.; James P. Davis, Southern Division, AAA; Albon L. Holsey, Field Officer, Southern Division, AAA; Joseph H. B. Evans, Farm Security Administration; A. Atkinson, Division of Information AAA.

F. C. A. SHOWS DROP IN FORECLOSURES

### Farms Lost in This Way 23 Per Cent Fewer Third Quarter of 1937 Than Last Year.

Farm foreclosures during the third quarter of 1937 were 23 per cent less than for a corresponding period in 1936, according to a statement today by A. S. Goss, land bank commissioner of the Farm Credit Administration.

Mr. Goss said the 9,719 foreclosures for the period were the fewest in any three-month period since 1933, when such data was first compiled by the Government.

"With the exception of loans by the Land Bank Commissioner," Mr. Goss stated, "foreclosures have shown a decline on all types of loans during the third quarter of 1937, compared to a year ago. Federal Land Bank foreclosures declined 34 per cent, while the total private lenders declined 26 per cent and was 47 per cent below the corresponding period of 1934. The increase in Land Bank commissioner foreclosures is accounted to a considerable extent by the aging of loans."

The number of farm mortgages recorded throughout the country during the third quarter of 1937, included both new loans and renewals, was less than for any other three-month period during the last four years for which data is available, he said.

## SHRUBS, VINES AID IN SAVING SOIL

Shrubs and vines frequently considered as pests may be staunch allies to the farmer, according to Forrest V. Durand, biologist of the 25,000-acre demonstration area recently established by the soil conservation service in Robertson County.

The use of native vegetation on the farm to control gullying and sheet erosion is too often overlooked, he said. Natural vegetation such as wild plum, coralberry, wild rose and hazelnut is left undisturbed along fence rows, especially where fence lines follow the contour or cross drainage lines, will not only act as effective checks to erosion, but will provide food and cover for wildlife.

Such vegetation is frequently removed to improve the appearance on the farm. If allowed to remain, the shrubs and vines will assist in stablizing slopes and controlling erosion, and at the same time give shelter and food for native game birds and songsters. Although some species of vegetation are considered as pests, the recommended types will not spread into cultivated fields and they have little effect on the life of the fence itself.

In the erosion control demonstration in Roberson County, as well as that in Gibson County, cooperating farmers are agreeing to permit native vegetation to remain along fence rows. If the shrubs grow too tall and shade crops, they are trimmed to the desired height but are not removed.

# MIRACLE INTERVENES TO SAVE MAN'S LIFE AND HE'LL LOSE IT

### Killer Has Horrible Experience Trying to Beat The Law

Raleigh, N. C., Dec. 2—(ANP)—Only a series of virtual miracles has saved Exam Cox several times in the past few days from death—in order that he may go on trial to face almost certain death in the state's lethal gas chamber.

Cox, 24, and of magnificent build, was wanted on a charge of murdering a state policeman. Last Friday he was started from Washington, D. C., for Goldsboro by Deputy U. S. Marshal Harold Quinn and Sheriff Paul Garrison of Wayne county. Becoming hungry on the way, he was allowed to eat at a lunchstand.

With speed that left the officers stunned, the handcuffed youth plunged backward into a ravine and fled through the night. A posse of 50 department of justice agents and bloodhounds searched in vain. Cox meanwhile found a log containing a nail and patiently sawed off the handcuffs. He had heard that police could identify a man by his teeth so he picked the gold out of his own with the spike.

Next night Quinn and Garrison, from whom he escaped, were patrolling the vicinity of Accotink, Va., where he had disappeared. Suddenly a gaunt, mud-spattered figure loomed on the road and was delighted when offered a ride. It was Cox.

The escapec got into the car before he recognized these were the last persons he wanted to see. With a cry of alarm, he lunged out of the auto and plunged 80 feet from The Richmond highway bridge.

In all history, no one had survived a leap from the bridge, and after a search, the officers concluded Cox was dead. But late Monday a man with a broken leg and shoulder crawled to the main highway. It was the missing youth. He had fallen into three feet of mud, and was half starved and freezing.

Cox will recover, physicians say.

## THE NEWS AT A GLANCE

### Condensed Summary for Busy Readers

(By Albert G. Barnett for A. N. P.)

OSSING. N. Y.,—After two and a half months of work Mrs. Elina Krylenko last Sunday unveiled two beautiful murals she had painted in the Star of Bethlehem Baptist Church here. Located high on the wall on either side of the chancel, one mural depicts the crucifixion, the other the Sermon on the Mount. Rev. T. R. Washington. pastor of the church explained that the artist had done the work free of charge, had it been a commercial assignment here charge would have been $2,000. A collection of $62.42 to cover materials, was taken up by the congregation. The famed artist is the wife of Max Eastman, and the sister of General Nickolai Vasilyevich Krylenko, Soviet Minister of ustice..

NEW YORK CITY,—Facing maximum term of three years i the penitentiary, Priscilla Paul 40, Father Divine "archangel" a his 115th St., "Heaven," was convicted last Tuesday of third-degree assault in Special Sessions on the complaint of Humility onsolation, former "archangel" of he cult. With two unidentified men, "archangel" Paul was alleged to have led in the beating of he complainant on June 17. She will be senteneed on Sept. 24.

MACON, Ga.,—John McMurray, 6-year-old Lizella County Farmer and a watermelon addict, last Monday after a week-long feast on his favorite fruit, found himself suddently seized with violent pains, rushed to the emergency room to the city hospital. Doctors examined him, discovered he had not only eaten too many melons—but the seeds as well. Warned of the danger of including the seeds in his diet, he was treated and sent home.

MEMPHIS,—Taking an active part in last week's city-wide health-promotion and disease-prevention program was the Collins Chapel Connectional Hospital, founded in 1909 by the C. M. E. Church. The hospital, of which Dr. W. S. Martin is superintendent, occupies two floors, has 50 beds, medical and suryical departments, one major operating room, fracture room with Horlick fracture table; a gas machine, laboratory and maternity room with 20 bassintes. Church-endowed, the hospital's $1,500 yearly allotment takes care of the expenses.

LAFAYETTE, La.,—Last Monday morning, while walking leisurely along the highway near the city, Luke Thomas, colored saw a small bundle lying in the road, looked closely, discovered it was a newly-born white baby. Dr. William Melaneron of Calenero, summoned hastily by Thomas, reported the infant in perfect health, had it removed to Charity Hospital, where several offers have already been received for adoption of the waif.

RALEIGH, N C.,—Last month Dr. M. R. Trabue of State College, Pa., needing a colored cook, wrote here to C. R. Adams, assistant director of the State Employment Service. Adams sought vainly, could find none, finally sent Dr. Trabue his own cook. Shortly hereafter, Dr. Trabue wrote Adams again, sought another cook for a friend and Adams sent his newly-hired chef. Last Week Dr. Trabue wrote that he wanted Director Adams himself—to be affiliated with him in the department of education at Penn State College. Adams went.

GRAPELAND, Texas.—A colored farmhand, Isaac Johnson, last Tuesday ended the hunt of thousands of soldiers, Boy Scouts, CCC workers and nearly 100 army airplanes—when, while looking for stray cattle he stumbled on the wreckage of the missing army training plane, demolished beyond recognition, the pilot, Guy Edgerton, dead in the cockpit. The plane had been missing for two weeks.

WASHINGTON, D. C.,—Santiago Iglesias, Resident Commissioner of Puerto Rico and Rafael Matinez Nadal, President of the Puerto Senate have protested to Secretary Ickes and Postmaster General Farley against the Puerto Rican mural painted by Rockwell Kent in the new Postoffice Building. Said Mr. Iglesias: "It is nothing but perverse propaganda against our country." Exclaimed Senate President Nedal: "It is an insult! It must be wiped out! I protest."

## Arrested On One Charges, Man Confesses Another

Raleigh, N. C., Nov. 30—(ANP)—Arrested last Tuesday on the charge of robbing Leon Young, taxi driver, of $4, Prisoner Henry W. Jones, 21, surprised police by confessing that on October 2nd he had held up another cab driver, George R. Jones, and taken $6.50 from him. Jones was bound over from City Court to Superior Court on a $500 bond for each charge when he appeared before Assistant Judge Paul C. West. He was jailed on failure to post the bond.

Another prisoner, Richard Satterfield, a former convict, appearing before Judge West, was found guilty of the larceny of two pairs of trousers, drew sentence of 18 months on the road gang. Detective Joe Lowe said that Satterfield had spent 13 of the past 15 years as a prisoner on the roads for various crimes, including burglary, larceny, vagrancy, and gambling.

San Juan, P. R., (ANP)—Monday was moving day for scores of workmen and their families, when the first tenants of the model, three-story, reinforced concrete apartments, erected by the Puerto Rico Reconstruction Administration—entered their new homes, which rent at from $2 to $4.50 per room weekly. Accomodating 216 families, the building occupies a block of the Puerta de Tierra waterfront, were built on reclaimed land.

## Ben Ames Speaks At Spelman College On "Europe Uncensored"

Atlanta, Ga., Nov. 28—(Special)—Declaring anyone to be criminally insane who has actually seen a war and still wants to have one, Ben Ames, American war correspondent and journalist, and a Fellow of the Royal Geographic Society of London, in his first lecture since arriving in this country from Spain four days ago, today told the students and faculties of the affliated schools of the present situation in war-threatened Europe as he has had opportunity to observe it. The lecture was held in Howe Memorial Hall, on the Spelman College campus, at the first assembly of the college year.

Mr. Ames has traveled in almost every country in Europe in an effort to find out what the people are thinking. Germany, he believes, has got involved in the Spanish situation more deeply than was intended, because Germany fundamentally wants to be friendly with England. France is so much concerned with defending her own borders and interests that she has had no other active foreign policy. Italy, in his view, is the most aggressive and belligerent nation in Europe. Mr. Ames has observed that Italy and Germany are assembling the latest and freshest equipment for untra-modern warfare, having sent old equipment to Ethiopia and Spain In Spain, Mr. Ames believes neither faction is likely to achieve a decisive victory.

At the close of his lecture, the speaker showed several films of motion pictures of the destruction wrought in Spain as an outgrowth of the war between the Loyalists and the Rebels, which he had taken, oftentimes, at the risk of his life. The pictures contain scenes of refugees, of children playing in the streets directly after planes have bombed the city, of beautiful buildings and churches that have been destroyed, of the soldiers fortifying the city of Madrid, which according to Mr. Ames, will never be captured.

Although still a young man, Mr. Ames has for the past seven years been a special correspondent for the United Press and other syndicates in Europe and Northern Africa. During the Italian-Ethiopian conflict, he was chief correspondent for the United Press in Ethiopia.

## POOREST COW YIELDED 566 POUNDS OF FAT

When one cow in a herd produces 566 pounds of butterfat in a year, it is a satisfaction to the owner, but when a whole herd of 35 cows each produces that amount, or more, it is a new world record for a dairy herd.

This record was made by Ralph Van Schoych, Hillsdale, Ohio, says the Farm Journal. His cows are Holsteins. One produced 793 pounds of fat for the year, and several went over 600 pounds, the account states.

The cows were fed silage, alfalfa and commercial dairy feed, and were milked three times a day.

## Experts Say Mechanical Cotton Picker May Displace 500,000 Workers

Washington, D. C., Dec. 2—(ANP)—In a report last week to Works Progress Administrator Harry L. Hopkins, WPA agricultural economists declared that with further refinements and developments the mechanical cotton picker, within five or ten years, might lead to the displacement of 500,000 field workers.

Other probable effect of the widespread use of the automatic picker: reduced number of tenants and sharecroppers; greater uses of machinery in other phases of cotton culture; an increase in the size of cotton farms and a shift by cotton planters to those areas best suited to tilling and harvesting by machinery.

The experts, however, said that at its present stage the mechanical picker fails to get all the cotton in the fields, loses part of the seed, places trash in the lint. They estimated the present cost of picking cotton mechanically at $1.65 per hundred pounds, as compared with $100 per hundred for hand picking. The expert's conclusion: "The mechanical picker in its present state of development is not likely to take the cotton belt by storm."

## Scottsboro Boy's Condition Critical

New York, Dec. 2—(CNA)—Ozzie Powell, one of the still imprisoned five Scottsboro boys, is in a critical condition at Kilby Prison, Montgomery, Ala., according to Joseph Geldes, Southern representative of the National Committee for Defense of Political Prisoners.

Geldes arrived in this city this week to attend a conference on the defense of the boys. He reported he visited the boys in Kilby Prison shortly before coming here and found Powell "a shadow of his former self." Powell was wasting away, he said, under the rigorous prison regime at Kilby. The condition of the other boys is also serious, he declared.

Following Geldes' report, Richard B. Moore, of the International Labor Defense, proposed "emergency measures" to intensify the mass and legal fight for the freedom of the five boys, and for their transfer, meantime, to the Birmingham County jail

## Truck Driver, Hurt In Highway Crash, Saves Firm's Cash

York, S. C., Nov. 30 (ANP—A remarkable demonstration of fidelity and courage was given in York country last Saturday by Sam Wilfong, a truck driver for the McWhirter 5c and 10c chain store company. Intrusted with two bags, containing large sums of money, for delivery at the York headquarters of the firm, Milfong's truck was in collision with another car on the highway between Great Falls and Rock Hill, and in the crash he suffered a brain concussion. Despite his injury and thinking only of the money entrusted to him, Wilfong managed to drive his truck to Rock Hill where he chanced to see Dr. R. J. Settle, whom he knew. Wilfong turned over the money to the physician, asked him to rush it to the company's office in New York. Dr. Settle took the courageous man, cut and bleeding and in a dazed condition from the pain, to a Rock Hill hospital where still incoherent, he was unable to give details of the crash.

War is but an organized barbarism,
And an inheritance of the savage state,
However disguised or ornamented.
—Louis Bonaparte

### MUDDY WATER WARNS AGAINST SOIL EROSION

Muddy water is a danger signal, a warning that topsoil is being washed off fields. Strip cropping, with alternating clean-cultivated and close-growing crops, is one of the best ways to reduce this loss, say scientists of the Soil Conservation Service.

During or right after a hard rain, water is muddy as it enters the upper side of close-growing strips from the clean-cultivated areas. On the lower side of the close-growing strips, run-off water has decreased in volume and is much clearer. The change is caused by the dense vegetation which filters out soil particles and impedes water flow, allowing more moisture to penetrate the soil.

On steep slopes a larger number of comparatively narrow strips check soil losses more successfully than a few wide strips, the soil specialists say. A visit to the nearest Soil Conservation Service demonstration area, where strip cropping has been planned carefully and put into practice on a number of farms, will help the farmer in laying plans for this own farm—Banner.

## Judge Settles Memphis Church Feud

Memphis, Nov. 30—(ANP)—A spirited fight between two warring factions last Sunday at Summerfield Baptist church, during which 60 participants allegedly hurled chairs and song books at each other, ended Monday when three of the combatants told their story to Judge Marion Boyd in City Court. Testimony at the hearing revealed that hostilities started at the church when both factions lifted their voices in song, but sang different hymns. Patrolman Cummings, called to pacify the bellicose congregation, arrested three men. They were all dismissed by Judge Boyd.

## Brooklyn Police Saves Two Girls

Brooklyn, N. Y., Dec. 2—(A. N. P.)—Two sisters—Vernee Lane, 10 and Collette, 3—trapped in the third floor of an apartment building on Herkimer St., were rescued last Tuesday by Patrolman Herbet Downward, attached to the Creedmore, Queens station.

The policeman, off duty was passing the house when he suddenly heard the older girl's scream for help. Rushing to the apartment he broke in the door. Found the children's clothing ablaze, rushed them to safety. Vernee, partially blind was burned on both hands, her sister about the face. Mrs. Collette Lane, the mother, had locked in the children in the house, was out on a shopping trip.

### PAY LABOR FAIR WAGE FARMERS FAIR PRICE

Agriculture has some loyal friends and supporters in Congress. Rep. Wright Patman of Texas pointed out that the protective tariff compels the farmer to pay a much higher price for what he purchases than is paid by people of other nations. Rep. Patman very ably contends for the establishment of a fixed price for basic farm products. "This Congress passed what is known as the bituminous coal price fixing bill, it will be just as consistent in the passage of a similar bill for cotton and wheat," declares Mr. Patman. "In addition to price fixing in regard to coal, oil, railroad rates, insurance, telegraph, telephone, electric power, water, gas, ginning, compressing, warehousing, ocean freight and interest, an effort is being made in Congress to fix the price of labor, which directly affects the farmers, who receive 5 and 10 cents an hour for their work. If farmers were to receive parity prices they would receive less than 20 cents an hour for their work."

"In view of prices having been fixed against the farmer," continues Rep. Patman, "and in view of the protective tariff which makes him pay twice as much for his machinery as a farmer in Mexico is compelled to pay for the same machinery from the same manufacturer, it is the humane duty of Congress to do something to give the farmers a compensating benefit for the disadvantages and discriminations that Congress is causing them to suffer. We should pay labor a fair wage. We should pay farmers a fair price."

## Select Cast For "Brown Sugar"

New York, Nov. 30—(ANP)—Brown Sugar, the new play to be produced by George Abbott will open Nov. 22 at the Majestic theatre in Brooklyn. An imposing list of artists has been selected for the cast among them being Juan Hernandez, Beulah Edmunds, Christola Williams, Richard Huey, Georgette Harvey, John Bunn, Alvin Childress, Katherine Lavall and Martin Slade. The show which was written by Bernie Angus, revolves about life in Harlem and after its showing in Brooklyn expects to go to Broadway.

## School Founded By President's Wife Opens

Warm Springs, Ga., (C)—The Eleanor Roosevelt Industrial School opened Tuesday with Norman Wilson, Hampton graduate, as principal. Mr. Wilson said the school, founded by the President's wife, and dedicated last spring by President Roosevelt, "will train the hand as well as the mind." The building cost $12,000 and was erected through a PWA grant and private subscriptions. The building is located on the outskirts of Warm Springs. On the opening day 126 students were enrolled, and 200 more are expected Class room work goes through the ninth grade.

## Knoxville Launches Drive Against Syphilis

Knoxville, Tenn., Nov. 30—(ANP) At a meetiug just held at the Faragut hotel, attended by health, social, civic and educational leaders of both racial groups an elaborate program has been staged by which it intends to determine the spread of this disease among Knoxvillians and adopt measures for its eradication.

Dr. W. H. Enneis, chief health officer of the city is the moving spirit behind the movement, with the health departments of the state and United States collaborating. The slogan adopted is "Syphilis Must Go!"

### A FARM FOR EVERY FARMER

Rep. Will Rogers of Oklahoma, not only pleads for Congress to guarantee farmers a reasonable profit above cost of production for all farm commodities, but goes it one better, and asks for a farm for every farmer. Rep. Will Rogers makes this declaration: "This Government is great enough and is strong enough to provide a program which will take care of surplus production and lay in store for the lean years. In addition to guaranteeing cost of production for farm products we should inaugurate a program which would make possible, as one Oklahoman said, a farm for every farmer. Fair prices for farm products will help make this possible. Low rates of interest on long-time loans would enable farmers to repossess farms lost during the past few years. With fair prices for farm products and Government loans at low rates of interest, tenant farmers could soon buy their own farms. It is my hope that in the special session of Congress we can enact legislation which will make it possible for every farmer to own his own farm. In no other way will we insure a permanent and lasting prosperity for the American people."

We agree with Rep. Patman and Rep. Rogers. Both are in close touch with farm problems. I recall that Bill Nye said, "An expert is just a dern fool away from home," and there are self-anointed agricultural experts holding down jobs in Washington whose knowledge of farming may not extend far beyond their having heard someone sing "Little Boy Blue come blow your horn, Call all the funny folks out of the corn."

### GINNINGS UP TO NOVEMBER 14, 1937

A release from census bureau reported a total of 14,949,078 bales of cotton of this year's growth ginned up to November 14. Ginnings to November 14 of last year totaled only 10,767,140 bales. A recent crop report estimate reflects that we will have eighteen and one-fourth (18¼) million crop this year.

Ginnings to November 14 this year and last year by states were as follows:

Alabama 1,479,167 running bales this year, and 1,092,574 last year.

Arizona 127,530 and 103,369.

Arkansas 1,429,713 and 1,148,817.

California 395,486 and 268,356.

Florida 34713 and 27,410.

Georgia 1,362,600 and 981,732.

Louisiana 976,195 and 730,427.

Mississippi 2,112,093 and 1,776,367.

Missouri 242718 and 279,235.

New Mexico 93,279 and 81,966.

North Carolina 628,953 and 433,-906.

Oklahoma 594,233 and 254,624.

South Carolina 877,197 and 640,-968.

Tennessee 436,708 and 376,282.

Texas 4,118,882 and 2,536,478.

Texas

Virginia 26,647 and 23,315.

All other states, 13,044 and 11,314.

## A MISSIONARY HYMN

By Rev. Henry Burton, D. D.

There's a light upon the mountains,
and the day is at the spring,
When our eyes shall see the beauty
and the glory of the King;
Weary were our hearts with waiting,
and the night-watch seemed so
long,
But His triumph-day is breaking,
and we hail it with a song.

In the fading of the starlight we can
see the coming morn;
And the lights of men are paling in
the splendors of the dawn;
for the eastern skies are glowing as
with light of hidden fire,
And the hearts of men are stirring
with the throbs of deep desire.

There's a hush of expectation, and a
quiet in the air,
And the breath of God is moving in
the fervent breath of prayer;
For the suffering, dying Jesus is the
Christ upon the throne,
And the travail of our spirit is the
travail of His own.

He is breaking down the barriers,
He is casting up the way,
He is calling for His angels to build
up the Gates of Day;
But His angels here are human, not
the shining hosts above,
For the drum-beats of His army are
the heart-beats of our love.

Hark! we hear a distant music, and
it comes with fuller swell;
Tis the triumph-song of Jesus, of
our King, Immanuel!
Christians, go ye forth to meet Him!
And, my soul, be swift to bring
All thy sweetest and thy dearest for
the triumph of our King!

## PROBLEMS FOR DISCUSSION

**Problem 1: How will following the leadership of the Good Shepherd bring us safely through the moral danger spots of life?**

**Problem 2: What are some of the false lures held out to young people today and how can they be recognized as false by followers of the Good Shepherd?**

**Problem 3: Suppose the door to God's fold were a set of rules and commandments instead of Christ, the Living Door, what difference would it make?**

**Problem 4: How can we recognize in Jesus the true Leader to whom we should give complete leadership in our lives?**

**Problem 5: If we catch the Spirit of the Good Shepherd what will be our attitude toward all other members of his flock? What possibilities of co-operation will the right attitude open up?**

## WHAT WOULD YOU DO?

When Nelson reached home, he called Clara on the phone.

"Listen," he said, recognizing her voice. "I'm planning to go to hear Wreckrack, Thursday night, and I thought you might like to go."

"Wreckrack!" Clara repeated. "You don't mean that dreadful man!"

Nelson laughed. "'Dreadful man' is a rather vage description."

"Well, the one I mean wants to tear down everything: the home, the church, and the state, and believes in violent revolution, according to reports. Is that the man?"

"Sounds very much like him," Nelson admitted, still smiling. "From your tone I judge you don't care to accompany me on Thursday."

"Of course I wouldn't go to hear such a man," Clara cried. "And I don't think you should either."

"O well,' Nelson said, his smile vanishing, "that's a question I'll have to decide for myself."

"You claim to be a Christian," Clara continued; "you pray, I judge, to be protected against temptation. And yet you plan to go to hear a man who subtly attacks everything you have been taught to regard as sacred."

"You're taking a very narrow view," Nelson said, and his voice was sharp. "One ought not to be afraid to hear the other side."

"If you were making a serious study of sociology and economics with a view to exploding false theories, it might be different. But I think it is foolish to dabble in such matters. I shouldn't want to lend the influence of my presence to such meetings. I'm not afraid for the truth, I'm afraid for you. You call it being broad-minded, but in my opinion you're deliberately running into danger by dabbling in such matters. If you want to do some investigating, why not begin by making a thorough study of the reason for your present beliefs?"

What should be a Christian's attitude toward those who attack religion? In Nelson's place, what would you do?

## EROSION BLAMED FOR SMALL YIELD

### Georgia's Average Output Per Acre Is Lowest in Nation, Walter Brown Says

At the present low yield Georgia farmers would have to cultivate an additional 10,000,000 acres to feed the state's population and livestock, an agricultural expert said here yesterday.

He was Walter Brown of Athens, state director of the extension service department, who spoke on Georgia's Agricultural Advantages and Problems at the Lions club luncheon meeting in the Hotel Dempsey.

"Our yield per acre is the lowest in the nation, which places us 39th in the income from farms, yet we have the largest state east of the Mississippi," said Mr. Brown. "The seat of the trouble lies in soil erosion, worse here than in any other state."

Mr. Brown said Georgia farmers, however, seriously have started erosion prevention practices and are now among the leaders in planting soil building crops.

**Importations $40,000,000**

"Every year we have to import $40,000,000 of feedstuffs for our livestock," he said. "Yet our climate and diversified soils enable us to produce a wonderfully wide variety of crops and foodstuffs."

Mr. Brown said Georgia made greater progress from 1935-37 than any other state in the increase of livestock values. He declared farmers have a "wonderful opportunity to make hogs a primary cash income source."

Georgia leads in the production of peanuts, pecans, melons and sweet potatoes, ranks second in peaches, third in tobacco and 27th in livestock.

Stanley Elkan, program chairman, presented D. F. Bruce, Bibb county agricultural agent, who introduced Mr. Brown. Al Owens, Mercer student, and Channing Cope, Atlanta, were also presented as guests.

**Grapefruit Flavored**

Grapefruit is beginning to have the true-flavored sweetness of sun-ripened fruit and every shipment brings a slightly better product.

Grapefruit was originally named "shaddock" for the man who first tried to bring the fruit to Florida from the West Indies. He was shipwrecked, but the waves washed the fruit ashore where the seeds sprouted and the tree grew and produced a coarse-grained, bitter fruit. Horticulturists began to work on the product and they produced the delicious "pomelo" whose name was later changed to grape fruit, because it is valuable as a builder of resistance for it is rich in vitamines, particularly vitamin C.

Here is a pleasing combination for grapefruit in salad.

**Grapefruit Pecan Salad**

2 grapefruit
2 ounces shelled pecans, chopped.
1 package lemon flavored gelatin.
1 cup grapefruit juice.
1 tablespoon sugar
3-4 cup boiling water

Peel, remove white skins and separate the grapefruit into segments. These segments should then be cut into three or four pieces. Dissolve the gelatin and sugar in boiling water, then add grapefruit juice. When the mixture begins to thicken slightly, add the grapefruit segments and the chopped nuts. Pour into mold and let chill. Serve on lettuce leaves with mayonnaise.

**Ginger Grapefruit**

Cut out sections of grapefruit carefully, remove all white membrane. Fill individual sherbet glasses with grapefruit sections and juice. Add 1 teaspoon of preserved ginger to each serving sprinkle with a teaspoon of shredded cocoanut and serve cold.

Questions are invited. Address Susan Myrick, care The Telegraph.

## Says Woman Jury Needed In Scottsboro Trial

New York, Nov. 30—(ANP)—If the Scottsboro trial jury had been composed of women, different verdicts from those consistently handed down would have been probably, according to an article appearing last week in a New York daily by Dorothy Dunbar Dromley, staff columnist.

"It is the law in the state of Alabama that in a case where a woman accuses a man of criminal assault no corroborating evidence has to be produced," she said.

"This doctrine that a woman can convict any man she chooses by pointing an accusing finger at him may seem justifiable to the type of Southern man who believes that the only way to handle the Negroes is to keep them terrified of the whites. Ipso facto, a Negro is guilty of any charge a white person makes against him, and he is doubly guilty if that white person is a woman because Southern womanhood, even the womanhood that rides freight cars, must be kept on its pedestal as a matter of race policy.

"I've been told that I would better understand this curious philosophy if I had ever lived in the South. I'm not sure that I should understand it even then, and I'm not sure that all the women of the South subscribe to it, either. Women see through each other, and I suspect that if women jurors had passed on Victoria Price's story they would have picked it to pieces, as it deserved to be. They would have been skeptical of her truthfulness. (1), because the doctor's examination after the alleged assault showed no injury to the two girls, and (2), because Ruby Bates, her companion, no longer corroborates the story.

"I don't know what hope there is of a further appeal in the Alabama courts on behalf of Haywood Patterson, of Clarence Norris who has been sentenced to death, and of the three others. Very little, I fear. But I am convinced that Alabama and every other Southern state that makes a great point of protecting the honor of women, and that gives more than lip service to justice should have put women in the jury box to judge the credibility of charges made by their own sex."

## SHEET EROSION MAY GO UNNOTICED

When a field is being robbed by sheet erosion, the theft may go on for years without a farmer knowing it.

Erosion which carves deep gullies is pretty obvious. But soil conservation workers know that sheet erosion works so slowly and quietly that it may not be evident until too late.

If a farmer looks at his rolling hillside fields from a distance and sees light-colored knolls in dark-colored fields, or if the color of a sloping field fades to a light tan or grey, as his eyes travel up the slope, he is seeing the results of sheet erosion, which strips away thin layers of topsoil a little at a time, G. E. Martin, University of Tennessee extension service rural engineer, says.

This same test can also be made when crops are growing. Corn, cotton, tobacco and other crops may be making fine growth on the lower parts of a field, but up above where sheet erosion has been at work, the stand is thinner and plants are not doing so well.

Terraces, permanent pasture, winter cover crops and strip cropping on the contour, are ways to prevent and stop the thief, sheet erosion.

## LOOKS FOR DAIRY PRICES TO GO UP

Somewhat higher prices for butter and cheese are probable this winter and spring, with some further drop in feed prices, according to V. L. Gregg, extension dairyman.

"Prices of butter and cheese are expected to average the highest since the winter of 1929-30," the specialist said.

"The country's milk production on October 1 of this year was about two per cent less than for 1936, but this was probably due to poorer fall pastures than last year.

"Winter production may be expected to run slightly higher than last year, because of cheaper and more abundant food supplies. Storage stocks of butter and cheese on October 1, though larger than a year ago, were below average for that date, and the lowest since 1932.

"Consumption of butter in August this year was three per cent higher than a year ago, and cheese consumption was six per cent higher in the same comparison."

But though the short-time outlook for daily product prices is good, it should not alone cause Arkansas farmers to buy dairy cows, Mr. Gregg advised. It should, however, encourage herd owners to feed their cows well, he said.

## MULE RAISING EXCELS COTTON HE HAS FOUND

Little Rock, Arkansas.—J. U. Rhoden, Springfield, Ark., believes mule raising has proved much more profitable to him than growing cotton.

Mr. Rhoden said there is always a demand for well-grown, well-broken young mules.

He grows his mules mostly on pasture and roughage until they are two years old. They are then broken and put on the market, related L. Cothern, Conway county agent.

Mr. Rhoden has one 22-year old mare from which he has raised seven mules and three horse colts. The mare has been worked on the farm regularly all this time, and is still able to do good farm work.

Mr. Rhoden said the mules he has raised from this mare, estimating that the two he has on hand now will sell for as much as the one he has just sold, will bring him $1,000.

He is planning on putting more of his land in pasture and increasing the number of mares to raise more mules, the county agent added.

## MEAT ANIMAL SHORTAGE TILL 1941 IS SEEN

### Lower Prices, but High Compared With Feed Cost, Predicted

The country's livestock will not be increased to normal numbers before 1940 or 1941, in the opinion of R. C. Ashby, specialist in livestock marketing at the Illinois college of agriculture.

It will take that long to bring the country's flocks and herds up to normal from their reduced count at present, thinks Mr. Ashby, who bases his judgment on reports of the U. S. Bureau of Agriculture Economics.

Mr. Ashby, drawing on the Bureau's surveys, sums up the livestock outlook as follows:

The trend in all livestock numbers is expected to be upward during the next few years, with the larger production of feed in 1937 expected to result in an expansion in hog production and in cattle feeding in 1938.

If feed crop production in the next three or four years is equal to average supplies of feed will be large in relation to number of livestock, and livestock prices will be high in relation to feed prices. Such a situation would be the reverse of that which has existed in most of the past four years.

**Increase Next Year.**

Total supplies of meats, excluding poultry, are expected to be larger in 1938, but will continue to be less than average. The increase in total supplies of meats will likely come in the last half of 1938, and will be largely in pork and the better grades of beef.

It appears now that consumer demand for meats in 1938 probably will be somewhat less favorable than in 1937, the weaker demand and larger supplies tending toward a lower level of meat and livestock prices next year.

Because of the drouth of 1934 and 1936, the volume of pork produced in the last three years has been much below average. As a result the total production of meats in this period has been much below average.

Production of beef and veal has been somewhat larger than average since 1933.

If feed-crop production continues near the 1937 level during the next few years, the trend in pork production will be upward, but such production probably will not reach a level equal to the 1925-29 average before 1941.

## POLITICAL "DRAG" NEEDED TO ENTER HOUSING PROJECT

### So they Say in Cleveland, Ohio, as Negro Democrats Make Protest

Cleveland, Dec. 2 (ANP)—Another voice joined the clamor of criticism directed at the administrators of the local federal housing units this week when the Negro Democratic council of Cuyahoga county, speaking through its committee on public relations, disclosed that it had received more than 300 complaints and inquiries concerning the federal homes of this city.

Strangely enough, according to the release, the people of Cleveland through their letters to the committee, give ample evidence that they not only like the housing units, but want more of them.

Principal criticism is directed at the Cedar-Central units in the heart of the Negro section, but where an almost negligible number of Negro families have been able to secure admittance. During an investigation conducted recently in the city council, it was disclosed that fewer than 20 Negro families has been successful in securing suites in the Cedar-Central units of almost 1,000 dwellers.

At that time a vigorous protest was voiced in the council by councilmen Lawrence O. Payne, Septimus E. Craig and Herman Finkle, who were joined in their protests by William O. Conners, executive secretary of the Negro Welfare league. A formal protest was filed with housing authorities at Washington at that time. These officials have made no formal reply.

Democratic Council observers that many of the criticisms brought to their attention are directed at the Portland-Outhwaite project management. Practically the entire project is occupied by Negroes and is supervised by an entire staff of Negroes while the Cedar-Central is staffed entirely by whites.

The committee charges that there are protests that "influence" of the applicant and his political affiliation has measurable effect. The committee also claims that some complainants declare that they have knowledge of single persons living in the project in violation of the regulations; that tenants were forbiuden to display pictures of tneir favorite political candidates during the last election, and that many had their applications for homes rejected without the satisfaction of an explanation of any kind.

The council had instructed its public relation committee to take up these complaints with United States Senator Robert J. Burkley and made possibly to make a direct appeal to President Roosevelt.

## WORDS OF THE WISE

Knowledge may give weight, but accomplishments give luster, and many more people see than weigh.—Chesterfield.

He who quarrels with a drunken man injures one who is absent.—Pubilius Syrus.

Licker talks mighty loud w'en it git loose from de jug.—Joel Chandler Harris.

Man is the only animal that laughs and weeps; for he is the only animal that is struck with the difference between what things are, and what they ought to be—William Hazlitt.

—Exchange.

## PERSIMMON HIT BY NEW DISEASE

### Kills Trees in Two or Three Seasons, Says Forester

A disease, persimmon wilt, which is fatal to persimmon trees, has been discovered recently by research workers of the U. S. Department of Agriculture.

Although such a disease may be welcomed by many farmers whose lands are growing up to persimmon, yet the tree is valuable, says R. D. Stevens, assistant forester at the Arkansas College of Agriculture.

Persimmon logs command a high price where enough may be gotten together to make a cut; furthermore, the tree is important in soil conservation. Although it requires considerable work to keep it out of pastures, it should be encouraged in the wooded as well as in areas subject to erosion, Mr. Stevens advises.

The disease is now known only in a small area in Tennessee, but it spreads rapidly when introduced into a stand. Trees are ordinarily killed in two or three years. The symptoms are yellowing of the leaves, beginning at the tree top, followed the next spring by small light colored leaves and death in three or four months. Internally the disease may be noted by black streaks running through the wood.

## Still An Idol

Hollywood, (ANP)—It was learned here this week that competition is keen among the stars of the screen colony for tickets to the fight scenes of the Joe Louis film, "Spirit of Youth," now in production and co-starring Edna Mae Harris. The fight sequences will be shot at the American Legion Stadium, it was reported.

### FARM PROGRAM AIM IS BETTER USE OF LAND

Maintenance of farm prices and income at a fair level so that farmers will not be forced to mine the fertility out of their soil by overcropping or by other unwise use of the land is one of the principal aims of the 1938 agricultural conservation program, according to Director C. E. Brehm of the University of Tennessee Agricultural Extension Service and chairman of the State Agricultural Conservation Committee.

Director Brehm said it is generally agreed that unstable prices affect farmland about as follows:

If farm commodity prices are ruinously low, farmers tend to overcrop the land in an effort to make up in quantity of production what they lack in unit price and if prices are abnormally high, farmers tend to mine the fertility out of the soil to get as much cash as possible.

Under the pinch of low prices and reduced income, farmers virtually are forced to overcrop their soil year after year, to keep every possible acre in cash crops, even though this depletes their soil and subjects it to erosion. They are forced to do this because their fixed charges do not go down when prices of the things they sell go down. In an effort to get enough money to pay their taxes, interest and necessary production costs, farmers often are forced to try all the harder to produce as much as they can, he said.

**Fertility Reduced**

The practice in some farming areas of continually growing cash crops with rarely a compensating soil-building crop in rotation, or as a cover crop, has so reduced the fertility that it is impossible to farm this land and maintain a fair standard of living.

Fluctuating farm prices and instability of farm income have prevented many farmers from making necessary improvements and carrying out soil-building practices that their land needed.

Director Brehm explained further that when prices are high millions of acres of grassland are plowed up and seeded to cash crops and that other millions of acres of land not well adopted for the purpose, temporarily are brought into production. All of this is done at the expense of the soil, and the ultimate loss, due to erosion and fertility taken from the land, usually exceeds the money obtained from the crop.

The 1938 agricultural conservation program is designed to assist farmers in maintaining fair prices and fair income and in making wise use of the soil, he pointed out.

## JUST A MINUTE

Before you go down to breakfast—smile. Smiling is a tonic for low spirits. It is a pilot light ready to leap across spaces of indifference and ignite the burners of cordiality. It is a spark plug vitalizing the whole body system with enthusiasm.

The warmth of a smile dries out the dismal dampness and funk of oppression. A somber outlook fades into oblivion at its appearance. It changes the low blood pressure of gloom into seventy-two flashes of light heart action per minute. It is more exhilarating to the spirits than the morning's cold bath is to the body, and easier to take.

A smile—it's contagious. It is evidence of good humor, good feeling, good will. It takes about one-third the muscular effort a frown does, thereby saving wear and tear on the facial muscles and sparing the wrinkles. The creases that come from a smile turn upward and catch the sunshine, and a face full of sunshine finds a welcome everywhere. A smile unlocks doors that are barred to a frown. It leaps hurdles that are unsurmountable by a scowl. It is knee-action over rough spots.

An honest smile inspires confidence, strengthens courage, prompts respect, and animates hope. Smile! —E. Roger Jones.

## RESTRAINING ORDER ISSUED

### People of Gary Protest Official's Discrimination

### Indiana Athletic Commission Under Fire for Barring Athlete

Gary, Ind., Dec. 16—(ANP)—Sam Wurbarger, white, state atheletic commissioner was under fire this week as Garyites protested his attempts to bar Negroes from wrestling in the state. Only a restraining order issued by a local judge permitted Jack Claybourne, known as the Negro heavyweight champion, to meet Alex Kaffner, 218 pounder from Birmingham, in the feature of a card presented at the Memorial auditorium Tuesday night for the Judge Fletcher Christmas fund to aid the city's needy.

Plans to hold the charity affair had been made when it was learned that Wurbarger had turned thumbs down on the Claybourne-Kaffner match because "it is the policy of the state athletic commission to refuse permission to colored athletes to wrestle in the state of Indiana in mixed matches." However, both athletes involved are Negroes.

A long distance call put in by the editor of the Gary American, local weekly, to the commissioner's office at Indianapolis brought confirmation of the statement, with the added assertion that neither Claybourne nor any other colored wrestler would be permitted to show his wares in Gary. The restraining order was then obtained.

In an extra edition, the American pointed to the segregation practiced by guards at Dunes State park last summer in which a party of Gary and Chicago social workers were banned from swimming, and urged Indiana citizens to demand of Governor Townsend that he immediately remove Wurbarger from his state position.

## ELKS OF NEW YORK TO HOLD EMANCIPATION CELEBRATION

New York, Dec. 16—(By Cleveland G. Allen for ANP)—What will doubtless be the most evently celebration of the Emancipation Proclamation held in the history of this city will take place on Sunday afternoon, January 2, at the St. Mark's M. E. Church, the Rev. L. H. King, pastor, under the joint auspices of the Independent Benevolent Protective Order of Elks of the World. The call for this celebration on the part of the Elks was issued by J. Finley Wilson, grand exalted ruler, who appealed to the New York State Association of Elks of which W. E. Lewin is president to rally the forces for an outstanding demonstration that will be a creditable reflection on the pride of the Negroes of this city.

The public meeting at the church will be preceded by a huge parade headed by J. Finley Wilson, and in which the various lodges and temples of New York will participate. The occasion will mark the 75th anniversary of the Emancipation Proclamation. Plans are being worked out by a permanent committee of Elks representative of the various lodges and temples of New York, and of which Dr. L. H. King is chairman.

God loves to see in me not his servant, but Himself who serves all. Rabindranath Tagore.

### CIVILIAN CONSERVATION CORPS

Washington, D. C.—Colored enrollees of Civilian Conservation Corps Camp MP-3 located in Shiloh National Military Park, Tennessee, have begun the restoration of Bloody Pond, so named because its waters were dyed crimson with the blood of wounded and dying men who crawled to it to slake their thirst during the fierce fighting of April 6 and 7. 1862, the greatest battle fought up to that time in the Civil War.

The sod, which has grown over the area, has been removed and test holes dug to determine the limits of the original pond. It is believed that this will easily be determined since it has been discovered that a white clay formation existed at the bottom of the pond.

The park, which was established in 1894, is slightly more than five and a half square miles in extent. With the historic highway, 17 miles long, connecting it with Corinth, Mississippi, it constitutes an area which was vitally important in the military operations in the West.

Following the fall of Forts Henry and Donelson, the Confederates formed a new line of defense extending from Memphis along the railroad to Chattanooga, and concentrated about 44,000 troops at Corinth. Meanwhile General Grant had moved up the Tennessee River in an attempt to break the line and had taken up a position at Pittsburg Landing with an army of some 40,000 men.

On Sunday, April 6, shortly after daybreak, the Confederate line struck the outlying Federal camps and the struggle raged until evening in the woodlands, small farm clearings, and swampy ravines of the region. During the night, Federal re-enforcements arrived and on the seventh, they forced the Confederates to retire to Corinth. Fedral losses were 13,047 killed, wounded, and missing. The Confederate loss was nearly 11,000. Many of the Confederate soldiers are buried on the field.

This CCC Camp, made up of colored veterans, is restoring the area to an approximation of its wartime appearance.

Camp MP-3 has been located on this site in Shiloh National Military Park for the past two years. Their numbers have recently been augmented by the transfer of a number of enrollees from Corinth, Mississippi, twenty miles away, on the closing of that camp.

## Hold White Farmer On Peonage Charge

Mobile, Ala., Dec. 16 (ANP)—Thomas J. Hicks, 36, a white farmer of Loxley, Ala., last Monday was held in county jail here in default of $2.00 bond, to answer charges of violating the Federal peonage act and assault with intent to murder.

Baldwing county and Federal officers filed the charges after Hicks allegedly attempted to force two Negroes, Jim Smith and his wife, to work out a debt. Officers said he fired six shotgun charges into the air in an attempt to frighten the couple after they had moved from his farm. Following his appearance before U. S. Commissioner J. I. Burgett and his plea of not guilty, Hicks was held to the U. S. Grand Jury.

An International Mining Congress will be held in San Francisco in 1939 in conjunction with the 1939 World's Fair of the West.

More than 2,600,000 motoring tourists will visit the 1939 World's Fair of the West, traveling in 830,000 autos.

## HOG POPULATION CENSUS BEGUN BY U. S. BUREAU

An army of rural letter carriers this week dropped "pig cards" in the mail boxes of some 750,000 hog raisers the country over.

These cards ask the pork and lard produces how many sows farrowed on their farms during the past six months. They ask the number of pigs saved from these litters, and how many sows will be bred in farrow next spring.

The "pig count" is being made by the bureau of agricultural economics, the post office department cooperating. Though unusual interest centers in the survey this year on account of short meat supplies, principally of pork, the survey is made as of December 1 each year.

Pig production in 1937 has been estimated at 4,000,000 head less than in 1936, but a big increase is being forecast for 1938 in view of this year's large corn crop.

Other questions dealing with the pig population are are number of hogs of all kinds over six months of age on farms, and the number under six months. There are questions also about the number of sheep, lambs, cattle, calves and mules.

The bureau expects to get back about 150,000 cards and on December 23 will issue its annual pig crop report showing the number of pigs saved this fall and the farmers' hog-breeding intention for next spring.—Nashville Banner.

## WOMAN JUDGE LEADS RAID

### Big Baron Waves at Cops And Flees, Says Report

### Cleveland, Ohio Municipal Official Advocates Check on Policy Writers

**Cleveland,** O.. Dec.—(ANP)—The spectacle of a woman municipal judge, Lillian M. Westropp, leading a series of policy raids; of Benny Mason, Cleveland's biggest policy baron, waving to the raiding party as it approached his place and then fleeing in his car, and of citizens' reactions expressed in daily papers, kept this city agog last week.

Judge Westropp went along with raiding police as an "official observer' to get an insight into "conditions I thought never existed in Cleveland," she said. Officers arrested two women and two men for investigation on gambling charges and dispersed over 600 policy players at seven places.

Mason, reported to have made $1,000,000 from policy operations several years ago and since then to have retired on a pig farm, was in his sedan when the raiders drove up to the spot which was previously known as his headquarters. Mason saw them coming, and as the sqnad car screeched to a stop, the baron waved smilingly and sped away. He left behind a small crowd which had held slips with the name of his old wheel, the B. and M.

After reports of the raids were printed, local dailies received letters from readers on policy playing. One writer said operators complained business was poor because relief checks had not been distributed, and added, "in other words, hundreds of relief people who had extra money were forced to spend it for food instead of policy" and suggested that the city weed out unworthy people receiving the dole.

Another, who signed himself "Tax Payer," said, "There are thousands of policy writers and players and they are too proud to go on relief. Plenty of families wait until someone in the house writes enough policy and takes the percentage and brings home food so the babies can eat. If the policy game is broken up, you may rest assured plenty of crime will occur."

Still another wrote, "As long as there is a world there will be gambling of some sort. The policy people are only taking what is given them. Policy is something like a sick and accident insurance. You get sick if you don't hit, and it's an accident if you do. But if we are willing to take the chance, what of it?"

## A. M. E. ZION CHURCH HOLDS ANNUAL ALA. CONFERENCE

Ensley, Ala., Dec. 16—(By Page M. Beverly for ANP)—The North Alabama Conference of the A. M. E. Zion Church closed its annual session in Trinity church, 19th Street and Ensley Avenue, on Sunday night at which time Bishop Benjamin Garland Shaw read the appointments

Rev. J. T. McCall, the pastor, gave one of the greatest entertainments ever accorded the conference. Rev. H. D. Tilghman of Metropolitan church, Birmingham, assisted in caring for the large delegation.

Presiding Elders M. C. Glover and B. J Williams assisted the Bishop in the successful conduct of the conference. Oscar W. Adams, secretary of Church Extension, reported several churches saved from the auction block by wise dealing. The General Officers present in addition to Oscar Adams were Dr. H. T. Medford, secretary of the Foreign Board who spoke Friday night; Dr. Thomas Walker Wallace, secretary of the Home Mission Board and Dr. Eichelberger of the Sunday School department. Mrs. Henrietta M. Davis of St. Louis, who is president of the Woman's H. and F. M Society, delivered the chief address to the women.

The preachers addressing the conference were Revs. S. M. Avant, C. E. Stewart of Montgomery, Rev. A. E. Hudson of Tuscaloosa and several younger men. Bishop Shaw stated in his opening address that his mission in Alabama is not only to build Zion church but to aid the Negro in every movement for racial advancement.

## NORTH CAROLINA LEADERS HOLD MID-WINTER MEETING

Raleigh, N. C., Dec. 16—(ANP)—The North Carolina Committee on Negro Affairs, composed of the business, professional and civic leaders of the state, held an important meeting last Sunday and among the matters discussed were the qualifications of the candidates for election to the United States Senate, and the House of Representatives. Also discussed at length were the National Housing Act as it affects the North Carolina Negro and the present legislative program in the U. S. Congress.

Formed in 1932, the Committee has wielded a great influence for good among the Negroes of the States, the scope of its work including education, economics, politics, and social and civic welfare. Among those on the Committee are C. C. Spaulding and Dr. James R Shepard, Durham; Dr. W. H. Bruce, Winston-Salem and Prof. W. H. Hannum, Salisbury. The committee's program includes the following objectives:

"To urge equal educational advantages and facilities for Negroes in elementary, secondary, college, graduate and professional training in North Carolina.

"To encourage Negro business and to urge the appointment of qualified Negro workers both in white collar and unskilled jobs in municipal, county, state and federal government set-ups.

"To provide equal accommodation and facilities for Negroes in all penal or disciplinary institutions, .....to safeguard the Negroes' rights under social security legislation, mothers' pension, old age pension, etc.

"To encourage and stimulate the exercise of the franchise by Negroes throughout the state by larger participation in all civic endeavor; and to centralize all civic organizations throughout the state by encouraging affiliation with the North Carolina Committee on Negro Affairs, to the end that the Negroes of North Carolina will present a solid front for the solution of our common problems.

## RESEARCH BARRIERS TO NEGRO SCHOLARS

Chicago, Dec. 16 (ANP)—In the December issue of **The Social Frontier,** liberal magazine, one of the feature articles is "Real Research Barriers in the South" by L. D. Reddick, Associate Professor of History of Dillard University and an Assistant Editor of the Journal of Negro History.

Dr. Wilson Gee had written a book entitled "Research Barriers in the South" in which he laments the obstacles to white Southerners. Professor Reddick takes him to task for leaving out the Negro. This book does not even mention Fisk University, Howard, Atlanta, or Dillard though it gives much space to such little known white colleges as Converse and Sweet Briar. "The real barrier to research in the South are those which are faced by the Negro scholar," says Reddick.

To quote from the article:

"There is, too, the outrage of downright vandalism. Any number of cases of the mysterious disappearance of source materials may be cited. In one of the largest cities of the South, the files of the Superintendent of Public Instruction during Reconstruction days were removed when it became known that a study was to be made of that administration. Dr. W. E. B. DuBois reports a similar experience when a Negro Professor planned to write an account of that highly efficient Negro, Jonathan C. Gibbs, Secretary of the State of Florida and Superintendent of Public Instruction, 1872-1874."

The writer implied that some hope may be found in the few librarians who go out of their way to help and those schools "socially intelligent" enough to exchange professors with the Negro colleges. South Southerners even voted for Dr. Charles S. Johnson of Fisk when he was elected Vice-President of the American Sociological Society, but the great barriers to research in the South will never be broken down until all thoughful men band together to fight for freedom for all scholars irrespective of race, concluded the article.

## New York State Temporary Commission On The Condition Of The Urban Colored Population

### 36 West 44th Street, New York, New York

New York, Dec. (ANP)—Colored citizens themselves do not always suspect how severely they suffer from racial discrimination even in supposedly liberal communities. it is being revealed in the public hearings now being held by the New York State Commission on the Condition of the Urban Colored Population. The New York City hearing, which opened on December 13th to carry through the greater part of the current week is revealng even more damning testimony. Open violation of the varions "equal rights" laws of the state have been reported and are being proved.

Chief among the violations is that of the law regarding equal employment opportunities by public utilities, in civil service and on public works contracts. A serious housing scarcity with consequent over-crowding and exhorbitant rentals has already been proved. Pernicious racial practices by departmental supervisors and heads in the public service have been uncovered, as for instance when it was found that Negro janitors in the State Capitol buildings were receiving $200.00 a year less than their white fellow janitors.

The Commission, created by the Legislature at last year's session, began its work in September and has until March 1st to complete its preliminary investigation and report. While a small staff of field workers has been busy for the past two months searching available documents and records throughout the state, open hearings have been held in Albany, Buffalo, Nassau, Westchester and Queens counties and with the 4 day's hearings in New York City.

Chairman Harold P. Herman, Assemblyman from Nassau County, presided at the hearing assisted by the Vice Chairman, William T. Andrews, colored representative from the 21st Assembly District. Lester B. Granger is Executive Direct, Dr. Dean S. Yarbrough is Research Director and Professor Lewis Meyer of City College of New York is Legal Council.

## ITALIAN WOMEN FALL IN LOVE WITH ETHIOPIANS

### Fascists Raise Restrictions

Rome, Dec. 16 (ANP)—Because many of the Italian women who went to Ethiopia shortly after the official end of the war for secretarial and other duties have fallen in love with native youths, embarrassed Fascist officials have decided to establish a "training school" for others wishing to go to the African empire, it has been learned from official sources.

These sources stated that Mussolini himself called a halt to the sending to Africa of "unprepared" women and started organization of a special group to "prepare women for the battle of colonial life."

From now on, only women with "well formed colonial sense who will undertake not to associate themselves with colonial men"—that is, women with color prejudice—especially trained through membership and study in the "Group of Young Fascist Colonial Women," as the new organization will be called, "will be allowed to go to Abyssinia."

## MR. ALEXANDER MOORE PASSES

### Former ex-Slave and Civil War Veteran Dies

### Native Alabamian Fought in Ohio Company B in War of Rebellion

By Gene Ray

Cleveland, Ohio, Dec. (RSS)—The funeral of Alexander Moore, 95 ex-Georgia slave and Ohio Civil War veteran, was held here Friday at 1 p. m. in the radio chapel of the House of Wills funeral directors, 2340 East 55th street. Moore died at the residence of his daughter, Mrs. Molly Hill, 3324 East 126th street, Monday at 3:45 a. m. from old age and the ill effects of traveling. Four ministers including Rev. M. C. Pollard, pastor of Quinn's Chapel, A. M. E. Church, East 130th Street, Rev. J. C. Winbon, pastor of the First Mount Olive Baptist church. East 126th street, Rev. David W. Hill, pastor of the Second Mt. Sinai Baptist church, 2350 East 55th street, officiated. Marvin DuPree sang a solo, "I've done my work," accompanied by Junior Wills. A tribute from neighbors and friends was read.

#### Native of Alabama

Moore was born in Athens, Alabama, May 14th, 1842 on the Malone plantation. His father and mother were Billy and Louise Moore. He was raised in the family of his owners who were good to him, but to aid in obtaining freedom for himself and his people, he ran away to Cincinnati, Ohio where he was mustered out in the regular Federal Army at the age of 18. He told of having had his hat shot off while riding a horse; of fighting with corn stalks when he had no amunition, and of stealing over into the enemies camp to play cards with other Negro fighters when there was no battle. He saw service during the entire seige of the war. He fought under Sherman, Lee and Grant.

#### Settled in Georgia

After emancipation he settled in Cuthbert, Ga., where he worked as a share cropper farmer on Watson's plantation. Here he met and married Lydia Brumston who became the mother of his two sons and four daughters. Watson was fair to Moore in his dealings, but to better himself Moore worked on other plantations including that of Martin, who was unscrupulous in his accounting in order to hold the tenant by always counting him in debt.

#### Was a Deacon

Early in his manhood Moore was converted and accepted a post as a deacon in the Free Will Baptist church. He held this office the remaining seventy-five years of his life. He was identified with the New Providence Free Will Baptist church in Sylvester, Ga., for the past twenty years. He was employed there as a hack driver for the Sperling Undertakers until retired a few years ago. He was also a member of the United Brothers of Friendship.

#### Here Six Months

His daughter Mrs. Molly Hill and her brother Arthur Moore, a brick mason contractor, 3273 East 126th street, settled here nearly a quarter of a century ago. Six months ago in June shortly after his 95th birthday, Moore expressed a desire to visit them and was brought here by Mrs. Hill, who accompanied him after visiting in Sylvester, Ga. The civil war veteran's age was against him. He became ill on the train coming here and decided to remain here the rest of his life.

Mrs. Hill stated Moore would awake in the night and sing, "Nearer My God to Thee." This was used as the opening song Friday at the funeral. The pall bearers included, Dr. Frank Humphrey, Dan Pollard, Sam Purgin, J. P. Richardson, Frank Hawkins, Troy Hill. Interment was on the Soldier's Plot in Highland Park Cemetery.

#### Forty-seven Posterity

Moore is survived by a posterity of 47 including his son Arthur, 49, three daughters, Lela Holmes 65 and Essie Green, 47 of Sylvester, Ga., Mrs. Molly Hill, 61, Cleveland, twenty grand children the oldest 44 and the youngest 11 twenty-two great grand children, Mrs Parker, 22, oldest, Ben Hobbs 11, youngest; one great great grand child, Rennie Mitchell 2, son of the late Robert Parker who was the son of Lena Haley, daughter of Molly Hill.

## South African Sues Farmer For Oxen Loaned 44 Years Ago

**Dundee,** So. Africa, Dec.—(A. N. P.)—A suit which attracted considerable interest this week in legal circles was revealed when it was learned that Masytshane Kumalo, a native farmer has sued Tolani Ntumalo another farmer, for the return of two oxen loaned to Ntumalo 44 years ago.

A Maori village, complete in every respect, may be transported from New Zealand to San Francisco for the 1939 World's Fair.

# COLORED NEWSPAPERS WAGE BATTLE TO BREAK SHACKLES OF PREJUDICE

## Newsman Tells Mission of Colored Press and Urges Public to Support an "Appreciation Week"

Cleveland, O., Dec. 9—(ANP)—"Since the close of the Civil War Negro editors have striven to break the shackles from the minds of all races in this country," declared W. P. Bayless, circulation manager of the Pittsburgh Courier, in an address on "The Negro Press" before a capacity audience in St. James A. M. E. church here to members of the St. James Literary Forums last Sunday afternoon.

Continuing, the speaker said: "The chief and only reason for the existence of the Negro press is to tell of our people to the world. The Negro press is, therefore, urged to tell the most favorable and encouraging stories of our people, because white newspapers are always seemingly over-anxious to tell the vicious unfavorable side of a struggling people.

"I emphatically urge the Negro editor to bolster up our leaders, our business enterprises, institutions, society and achievement rather than to seek to scoop the so-called gossip and magnify the failures of those of our race who stand in the forefront. The Negro press should always strive to advocate progress and recognition of achievement of members of our race, in contrast to the subtle propaganda of dailies that ever seek to minimize Negro life and achievement.

"As a means of giving impetus to greater opportunities for Negro printers, editors, authors, cartoonists and skilled workers in the printing trade and its allied industries in this country, I suggest that we inaugurate a NATIONAL NEGRO LITERATURE WEEK. During this week ministers, clubs, schools and other organization leaders advocate more widespread reading of Negro literature."

The speaker was introduced by Attorney Norman McGhee, president of the forum. Harry E. Davis, former members of the Ohio State Legislature, commented very interestingly and instructively on world happenings and their relation to the welfare of the Negro Dr. Joseph Gomez, prominently mentioned for the bishopric in the A. M. E. Church, is pastor. He formerly pastored in Detroit, Kansas City and St Louis.

## Washington Writer Shows What May Be Found If Effort Is Made To Go To Bottom Of Evils

Washington, Dec. 9—(By Daniel W. Chase for ANP)—If the probe desired by Senator Ellender, Democrat, of Louisiana, will put an end to certain practices on the part of Department heads here, the Civil Service quiz will be welcomed by numbers of colored citizens.

It is generally known that for certain types of work the line is most rigidly drawn against colored citizens. They have a hard time entering the service in some lines and a much harder time to get promotions. Chiefs of divisions in various bureaus have been known to tell employes that they have reached the limit when they reach a certain grade. One very 'good' chief, now deceased, told a clerk whom he rated very high, that when you reach the $1,400 grade, you have finished. "A colored man usually dies in that class," he said.

Numbers of bright youths from Howard University and the high schools here not long since took the examination as apprentice in the government printing office. They passed with high ratings, but one by one they were "shelved". The same obtains in the matter of examinations for the position of clerk in the post office. One has not so much difficulty in getting in as a carrier, but the scene changes when one aspires to be a clerk.

One young man, graduate of Miner Teachers' College, passed with an average of 94,20 per cent, for position as clerk. His name was certified and sent in each time of course in connection with the names of two white applicants. After the third certification, the young man's name was dropped from the register.

It is known that those issuing blanks, etc., volunteer information to colored applicants as to possibility of being employed as messenger and laborers.

There comes to notice a man who took the examination for clerk-stenographer-typist in Philadelphia some time ago, and stood No. 1 in a group of 200. He was "certified and called for by actual count 24 times." After being told by the appointment clerk in one of the field officers in the City of Brotherly Love that "the position is in the office where money is paid to employes, I could not think of appointing a colored clerk," he gave up.

Of course in Washington there is the largest government-paid colored population in the country, yet it is a known fact that outside of possibly the Bureau of Engraving and Printing, where there are numbers of "operatives" or "printers' assistants" there is a vast difference in the pay received for similar duties, efficiently performed.

Senator Ellenders' questionnaire, unfortunately, will not reach those in the group who would be benefitted, as the number of those on the clerical payrolls is negligible. However, it is not definitely known whether Senator Bulow, of South Dakota, who is chairman of the Senate Civil Service Committee, to which committee the resolution was referred, will call a meeting or take action to bring the subject before the senators who will have to act on it if the resolution should be considered.

# CHICAGO HOUSING PROJECT MAY BE REVIVED SOON, SAY

Chicago, Dec. (ANP)—On his return this week from Washington, where he attended the U. S. Conference of Mayors and conferred with Government officials, Mayor Edward J. Kelly said he had endeavored to have the channels cleared so that the long-delayed South Park Gardens Housing Project, a WPA development, could be finished soon as possible.

Interviewed, the Mayor said: "During my stay in Washington, I spent considerable time confering with housing officials in reference to the above project. I had quite a discussion on the matter with Mr. Nathan Straus, the new head of the housing projects, and also spoke with the attorney for the Federal Housing Administration. From my conversation with the latter, I carried away the impression that this project would most probably be constructed as one already started, under the old law. This, of course, would make it possible for the government to complete the project. Putting it under the new law, would undoubtedly require considerable additional time and promote much discussion and probable controversy.

"As things stand now, the matter will probably be settled in the near future, so that arrangements can be made to go ahead with the work. I have used and shall continue to use every possible endeavor to assist in bringing the Southside housing project to a successful completion."

"Site of the proposed South Park Gardens is the area between 37th and 39th streets, and from South Parkway to Cottage Grove Avenue. Most of the buildings have been razed, but the work has been halted, pending allocation of additional WPA funds.

# AFRO-CUBAN DANCERS ARE INTERESTING TO MRS. F. D. ROOSEVELT

New York City, Dec. 9—(ANP)—An audience of more than 300 notables, including Mrs. Franklin D. Roosevelt, watched a two-hour program Monday in the Rainbow Room, Rockefeller Center and applauded heartily as nine Afro-Cuban dancers stole the show with a native, ritualistic dance that is banned in Cuba.

The Cubans, Negro descendants of slaves brought by Spaniards to Cuba, presented two Nyanligo tribal dances, which, because of the fervor and the general mass hysteria they excite among both participants and spectators, are banned by the Cuban Government. Their appearance on the program was made possible by President F. Laredo Bru of Cuba, who permitted selection of the dancers from interior settlements, gave them back their confiscated "devil drums," then sent them to New York, guarded by Special Commissioner Henry R. Yskuierdo, who was to see that no attempt was made to popularize the strange dances with American audiences.

The star performers, who speak only Spanish and have kept their native dances alive by practicing in secret since the Cuban ban, arrived in New York just a few hours before their scheduled appearance. After their final performance last Saturday they returned to Cuba. The big program was sponsored by Virginia Day Nursery, and other nationalities represented were Swedish, French, Ukranian, Siamese, Yugoslavian, Japanese and East Indian, all of whom presented native dances. Hostess for the afternoon was famed Ruth St. Denis, prominent teacher of the American dance.

A featured number on the Cubans' starred Miss Esther Cruz and Ariborio Sardinos, who depicted a colorful dance during which Chango, the thunder god, is driven from a man's body by a woman, to music provided by six natives, pounding on the "devil drums."

# GEORGIA BAPTISTS RAISE $20,000 AT STATE CONVENTION

Rome, Ga., Dec. 9—(By Page M Beverley for ANP)—The General Baptist Convention of Georgia met in Thankful Baptist Church here from Tuesday through Thursday and raised $20,000 for the work of the convention with $3,800 of the amount paid in at the convention.

After Dr. J. M. Nabritt declined to accept the presidency and was made president emeritus for life, the Rev. L. A. Pinkston of Augusta, was elected president in a three-cornered race in which the Revs W. W. Weatherspoon and T. J. Johnson took part. Mrs. Fluker of Valdosta was elected president of the women. An adiourned session will be held in Macon on January 11th to redeem Central City College. Every former Georgian has been asked to send a donation for that purpose to Dr. L. A. Pinkston Tabernacle Baptist Church, Augusta, before January 5.

# NEWSMAN GETS INTERESTING STORY OF LIFE DOWN IN SOUTH CAROLINA

## Pigeon Raising Found to be Profitable Business and There's no Law Against Putting a Bet on The Ponies

(By Charlie Spears for A. N. P.)

### WAY DOWN SOUTH

Chicago, Ill.—On Route 76 (The Dixie Highway) near Sumter, South Carolina, is located The Palmetto Carneau farm, largest pigeon plant in the world. The two owners are Captain Wendell M. Levi, a southern attorney, and world war veteran of considerable wealth, and Harold Moise, who lost his hearing while pilot of a combat plane in the air forces during the war.

With the exception of the clerks in the office, all employes are colored and they number from 30 to 50, according to the season. The foreman of the plant, a young colored man, is an expert, and is able to operate this vast plant alone when the owners are away for long periods of time on business or vacation.

Mr. Levi is recognized internationally as an authority on pigeon breeding, and has written many articles and books which are widely read. Here are to be found the Giant White Carneau and the birds of this plant have never been defeated in exhibitions open to the world. And here are to be found the world champion pens of show birds and breeders.

The foreman stated that the firm ships breeders all over the world and only recently sent a shipment of several thousands to a firm in Japan. The prices of the breeders are from $5 to $50 a pair, depending upon whether they are to be used for squab raising or show birds.

This plant was started shortly after the war with five pair of birds and the farm now covers many acres with over $50,000 worth of equipment.

The squabs cost about 10c a pound to produce on a large scale and sell from 50c to $1 a pound depending upon the season. They have a cold storage plant and equipment to manufacture Health Grit and pigeon feed which they have placed upon the market under their own brand

### Your Furniture

Being located near the mighty Santee and Wateree swamps with enough raw material to last for a hundred years, the Sumter Veneer Co., the Sumter Wood Products Co., and the Sumter Furniture, have plants which employ hundreds of men, 90 percent of them are colored.

### Sears & Roebuck and Montgomery & Ward

These firms do not sell furniture at retail, nor do they make shipments under any brand, but every piece of furniture sold by the large mail order houses is manufactured by these firms. They also ship the unbranded finished product to other factories all over the country, which in due course of time is retailed to the public under various names. (And I'll bet my last dollar that you did not know that, did you?)

### "Bookies" Can Operate Legally in Charlotte

Charlotte—The manner in which "bookies" operate in Charlotte is not a law violation, according to a statement by City Solicitor Fred Hasty, and a specific statute must be passed before the police can shut down the betting establishments patronized by thousands of Charlotte citizens.

The solicitor said that there was no violation of North Carolina gambling laws inasmuch as the bets are accepted by the "bookies" as representatives or agents, and telegraphed to the track. And that persons "playing the ponies" actually are paid off in a State where gambling is legal.

Mr. Hasty said, "As I see it the bookmakers are in about the same category as a person who wires a friend $50 and tells him to bet it on a horse. You certainly could not arrest that man." Detective Chief Littlejohn was frank and made it plain that he would do nothing until shown the law was violated.

Buy Christmas Seals and do your bit to aid in the annual crusade against tuberculosis.

# LEADING EDUCATORS GO TO NEW ORLEANS FOR BIG MEETING

## Heads of Colleges and High Schools in Two-Day Session at Dillard

New Orleans, Dec. 9—(ANP)—The local entertainment committee representing Dillard and Xavier universities is making preparations to receive a large number of delegates to the fourth annual session of the Association of Colleges and Secondary Schools for Negroes. According to Dean Vattel E. Daniel, Wiley College, president of the association, this is the first time that a national educational organization for Negroes has appropriated a definite sum for a year's research that will furnish the basis for the annual program which is concerned with moral, aesthetic, social and religious problems of Negro youth.

Administrators and teachers of colored schools and colleges have been asked to attend this meeting even if their institutions do not belong to the association. The Commission on Higher Education of which Dean T. E. McKinney, Johnson C. Smith university, is chairman has been making this study through a committee consisting of Dean A. A. Taylor of Fisk, Registrar John P. Whittaker of Atlanta and Dean Hardy Liston of Knoxville, chairman of the committee. This committee will make a report of its study of "The Community Life of Negro Youth," which will be discussed by Professor A. L. Turner, Tuskegee, Dr. George Kuyper, Hampton, and J. P. Whittake, Atlanta.

An entire session will be devoted to a consideration of "Graduate Study for Negroes." The keynote address will be made by Dr. Guy B. Johnson of the University of North Carolina who has made a special study of this subject. This will be followed by a panel discussion with Presidents Thomas E. Jones, Fisk; Mordecai W. Johnson, Howard; Rufus E. Clement, Atlanta; and John M. Gandy, Virginia State, speaking.

### FEDERATION OF FARMERS MEET IN FORSYTH, GA

Forsythe, Ga., Nov. 10—The National Federation of Colored Farmers which closed its 8th annual session here Saturday adopted resolutions pledging support to President Roosevelt, Secretary Wallace and to the congress which convened on Nov. 15 "in their joint effort to devise and enact necessary emergency legislation" to aid the farmer.

The resolution also commended the Farm Security administration for the "hope and promise" which it offers for farm ownership and asked for Negro representation in local administration of the problem.

## COTTON DELIVERIES HIGHEST IN YEARS

Actual deliveries of contract cotton in settlement of the October, 1937, future on the New York Cotton Exchange were 74,924 bales, the largest delivery since 1931, according to Dr. J. W. T. Duvel, chief of the Commodity Exchange Administration.

Deliveries of certificated cotton upon the New York Cotton Exchange in October indicate that out of eight official delivery points, 74,924 bales from certificated stocks of 82,003 bales on Oct. 14, 1937, were distributed between six delivery points; namely, 52,645 bales or 70.3 per cent, at Houston; 8,679 bales, or 11.6 per cent, at Galveston; 7,515 bales, or 10 per cent, at New Orleans; 3,593 bales or 4.8 per cent, at Mobile; 2,192 bales or 2:9 per cent, at Savannah; 300 bales or 0.4 per cent, at Charleston. No deliveries were made at Norfalk or New York, the other two delivery points under New York Cotton Exchange regulations.

Volume of training, Dr. Duvel said, for the life of the 1937 October future was 8,190,800 bales of cotton, whereas deliveries were 74,924 bales, or approximately 1 per cent of total trading in the October future.

## CORN ALONE DEPLETES SOIL, WALLACE SAYS

"Better modern methods of growing corn," said Secretary of Agriculture Wallace recently, may blind many people to the fact that loss of soil fertility is a real threat to the economic life of the corn belt. Some people in the towns whose incomes are most endangered by this threat seem least aware that it exists. They do not realize that corn, unless it is kept in its place by proper rotation, is one of the worst of all the soil destroyers. They do not realize that if the topsoil is washed away as a result of continuous corn growing, hundreds of small towns will also be washed away and the business men in these small towns will wonder why it was. The eroded fields of today may mean the ghost towns of tomorrow."

## STRAW, ALFALFA FOUND EXCELLENT CATTLE MIXTURE

It is not always the most expensive feed that puts the most pounds on cattle according to tests completed recently by the United States Bureau of Animal Industry.

W. H. Black, beef-cattle specialist of the bureau, reports that one group of heifers fed a mixture of oat straw and alfalfa hay during the wintering period came through in better shape and made much better all year gain than heifers fed a straight ration of alfalfa hay.

The wintering period lasted for 129 days with one group receiving an average of nine pounds of oat straw and eleven pounds of alfalfa day daily. The other group received twenty-two pounds of alfalfa hay daily.

While the group fed the straight alfalfa ration came through the winter period with an average gain of 133 pounds per animal compared fed the cheaper mixture, the group to again of 108 pounds for those fed the straw and alfalfa evidently came off the winter feeding period with better grass appetites since the summer gains for this group amounted to 225 pounds for each animal compared to 171 pounds for the other group.

This made a total net gain, for the group receiving the straw and alfalfa, winter and summer, amount to 333 pounds for each animal compared to a net gain of 304 pounds for those fed the straight alfalfa ration—an average of twenty-nine pounds in favor of the group receiving the less expensive feed during the winter months.

# ARKANSAS MAN TRIED AND CONVICTED WHILE ON STRETCHER IN COURT

Lonoke, Ark., Dec. 2 (ANP)—After telling how he was beaten and tortured three times by police following his arrest, Duncan Pigue, 24, from a stretcher in the courtroom Wednesday heard himself sentenced to the death penalty for the murder of a white man, J. Robert Bennett, night marshal of Lonoke.

Pigue, who was brought into court on a stretcher and was removed the same way, was injured in an attempt to escape from the county jail two months ago. In fighting with officers, he either jumped or was thrown from the roof 70 feet to the ground.

It was following robbery of a post office here in September by Pigue along with a white man that Bennett was killed. The night marshall stopped Pigue on the street for questioning but the latter got away. Bennett got a car to hunt for him and was not seen alive again. When arrested in Texarkana, the murder was pinned on Pigue.

Telling of his tortures, Pigue said he was beaten by arresting policemen, singed by fire from a hose, and beaten again. Taken to state police headquarters at Little Rock, he was beaten, forced to sit on a heated electric stove and when he got up was knocked back on the stove. Officers poured hot parrafin over his hands and his head, then took him to the Pulaski county jail for another beating. Again he was taken to state police headquarters, beaten, and then brought to the county jail here "where I was mighty glad to be," he said.

An all-white jury deliberated 55 minutes before bringing in a verdict carrying with it the death penalty.

## Dr. James H. Dillard Awarded Roosevelt Medal

New York City, Nov. 30—(ANP) Dr. James Hardy Dillard, longtime champion of higher education and leadership training for Negro youth and for whom New Orleans' Dillard University is named, was formally awarded the Roosevelt Medal for 1937, last Wednesday, at a ceremony in the old brownstone mansion where form President Theodore Roosevelt was born. The award was made by Herman Hagedorn, secretary and director of the Roosevelt Memorial Association, for Dr. Dillard's achievements in fostering a better understanding between the races. The medal shows on one side a likeness of the former president, on the other a flaming sword and this motto: "If I Must Choose Between Righteousness and Peace, I Choose Rightcousness."

## Has Taught For 65 Years And Will Get $600 Pension

**Little Rock,** Dec. 2—(ANP)—After teaching for 65 years in Little Rock schools, Mrs. Charlotte Elizabeth Stephens, 83, last week made application to C. S. Blackburn, white, secretary of the state teachers' retirement fund, for retirement and pension benefits. She is entitled to $600 yearly.

Blackburn said, however, action awaits a special appropriation by the state legislature and no money for payment of pensions will be available until January, 1939.

## Charges Hospital Patient With Robbing Sufferer

Memphis, Nov. 30—(ANP)—Police last Monday were confronted with one of the most unusual crimes in local police history. Admitted to John Gaston Hospital for treatment of a knife wound, Wauketaker Jamison is said by the officers to have robbed a fellow patient, Agia Walker, as he helped attendants prepare Walker for treatment.

Dressed only in a nightgown and with a broken knife blade in his arm, Jamison disappeared from the hospital, immediately after helping undress Walker who had been seriously injured in an auto accident outside the city limits. Police say Jamison "frisked" Walker's pockets, took $10. He is still at large. Walker lives in Covington, Tenn.

## Memphis Social Worker Awarded Loving Cup

Memphis, Dec. 2 (ANP)—A feature of last week's achievement project program sponsored by Epsilon Phi Chapter of Omega Psi Phi Fraternity was the award of a silver loving cup to Mrs. T. H. Hayes, Sr., in recognition of her work for more than 50 years here in the field of social service and community betterment.

An overflow audience attended the meeting, the guest speaker being Jesse O. Thomas, Atlanta, Ga., vice grand basileus of the fraternity, who spoke of the development of social service work among Negroes throughout the country.

## Capture Another Bogus Bill Passer In South

Elizabeth City, N. C., Nov. 30—(ANP)—Secret Service operatives last Tuesday arrested Clifton Knight of Camden County on a charge of passing counterfeit $10 bills, Knight's arrest being the second within one week for the same offense. He was jailed under a $1,000 bond. Also held, under $3,000 bond, is J. B. Reid of Winton, colored.

According to U. S. Commissioner J. A. Hooper, Knight, when arraigned at the hearing, admitted passing the bills, but denied knowing they were counterfeit. He got the bills, he said, from a man named "Burgess, who lives in New York," and whom he met in Elizabeth City. Knight said that he and Burgess drove through Camden County, that they stopped to make several purchases and paid for them with the bogus $10 bills.

## C. E. Hall Urges

**Washington**—(C)—Charles E. Hall, specialist in Negro statistics of the Department of Commerce, said on Friday: "The importance of the Census of Unemployment to our racial group should not be underestimated. The last United States Census of 1930 reported 5,503,535 gainfully employed Negroes in the various occupations, or 59.2 per cent of the total number of Negroes 10 years of age and over in the United States. Through this Census it is hoped to determine our losses or gains, if any, and it is vitally important for each unemployed member of our racial group to fill out the registration card and return it as directed."

## Poet-Lawyer Of Chicago Marries School Teacher

Chicago, Dec. 9—(ANP)—William Henry Huff, attorney and poet whose verse appears weekly in the Negro press, was married Wednesday at St. Louis to Miss Katherine R. Willams of Mitchell, South Dakota, it was revealed this week.

The former Miss Williams was graduated from Dakota Wesleyan university in June of this year and is now teaching English, French and Physical Education at Rust college, Holly Springs, Miss. She was the only Negro graduate in this year's Dakota Wesleyan class.

Attorney Huff practices in both Chicago and East Chicago, Ind. He was formerly well known as a chemist and a pharmacist before entering the field of law around 2 years ago.

## Chicago Democrat Wins High Post

Chicago, Dec. 2 (ANP)—Announcement was made this week by County Treasurer Horace G. Lindheimer of the appointment of Kenneth E. Campbell as assistant to the chief clerk of the treasurer's office. A well known business man and particularly active in Democratic circles, Campbell is a former member of the Robert-Campbell Motor Company, auto salesmen and in 1936 was campaign manager for Cong. Arthur W. Mitchell of the First District. The new appointee resigned recently from warehouse section of the Illinois Commerce Commission. He formerly attended the School of Commerce and Administration at the University of Chicago.

## Arkansan Seeks Pilot's License

**Blytheville,** Ark., Dec. 2—(ANP)—Eddie Washington, porter at a local barbershop which has given him the title of "The Flying Shine Boy," has 45 hours of solo flying to his credit since his first hop, Feb. 10, and and will get his private license when he has completed 50 hours to become the only licensed Negro aviator in this section.

Washington has wanted to fly since he was a child. Working at a barbershop frequented by local aviation enthusiasts, his desire was rekindled. He got a customer to take him up, and after that first ride he has worked with only one goal in mind—to become a licensed pilot.

## Prisoner Keeps Overdue Date With Federal Commissioner

Birmingham, Ala., Nov. 30—(ANP) Willie McAdory, according to police records, has been arraigned before U. S. Commissioner Louise O. Charlton at least once a year for the past 5 years, for liquor law violations. But McAdory's record for 1937 was clean, he had not once been arrested, and officials conclude he had stopped handling illicit liquor and was living within the law.

Last Tuesday, however, he made his annual appearance at the Commissioner's office. Federal agents had arrested him suspiciously near two whiskey still in the Irondale section.

## Seeking Facts

**Washington,** D. C., (ANP)—It was learned here Wednesday that the State Department is seeking to learn the facts in the dispute between Haiti and the Dominican Republic, to determine whether the help of the United States is needed to restore amicable relations between the two West Indies countries. Georges Leger, Foreign Minister of Haiti said that between 3,000 and 5,000 Haitians have been killled since Oct. 5, on Dominican territory. Dominican officials deny this, say that Haitian casualties have been few. U. S. Acting Secretary of State Sumner Welles said he hoped direct negotiations between the two nations would settle the difficulty.

## FARM EGG PRICES SHOW LITTLE GAIN

The largest fall egg production on record and a continued slow out-of-storage movement have made for a less than seasonal gain in egg prices, the Bureau of Agricultural Economics reported in its December report on the poultry and egg situation.

November 1 farm flocks were the smallest for that date on government record, but production per bird was the highest on record for the seventh successive month. The second largest storage stock of eggs, fresh and frozen combined., was reported as of August 1, and since then stocks have been reduced at a less than average rate.

Meanwhile, there has been a break in poultry prices, following a period of rising prices during the season of the year when prices usually decline. The farm price of chickens, however, is still 28 per cent above last year at this time, and 4 per cent above the 1925-34 average. Market receipts of poultry have been heavy despite the small hatch last spring. The bureau believes that the large market-a period of high chicken prices and ings reflect the sale of hens during low egg prices.

The feed situation, as represented by the feed-egg ratio at Chicago, became a little more favorable to poultrymen during November. With feed prices declining 8 per cent in the month, and egg prices rising 16 per cent, the relation between feed costs and egg returns has been closer to the 1925-34 average than at any time since the middle of 1936.

## South African Convict Labor Profitable

Johannesburg, S. Africa, (ANP)—Because the demand for penal labor is greater than the supply, the South African government is making $5,000 a month by hiring out the convicts to private industry. An average of 5,000 natives are admitted monthly to the prisons.

## Who's Surprised?

Atlanta, Dec. 9—(ANP)—The Georgia House of Representatives last week unanimously adopted a resolution declaring that strikes, rioting and similar disturbance in the industrial centers of the North and East cause more loss of life "than all the lynchings in the South."

The brochure also charged that the Anti-lynching Bill, now pending in the U. S. Senate, "is manifestly unfair and unjust and would work an oppressive burden upon the entire South." The resolution was sent to the Georgia Senate for approval.

## Bernice Calvin Wins High Scholarship

**New York**—(C)—Bernice Joyce Calvin, 13, elder daughter of Mr. and Mrs. Floyd J. Calvin, was the only colored child to be installed in the Walton high school Scholarship circle at the exercises on Friday evening. Bernice, who was skipped several times in public school, and entered junior high school rapid advancement classes at the age of 9, has kept her pace to the present, where she is a junior in senior high school. Her average is above 90. She also won a scholarship at the New York School of Music and Art last September and is pursuing advanced piano studies there.

Vol. X. NASHVILLE, TENN., JANUARY 15, 1938 No. 12

## Robert R. Church And Perry W. Howard Resent Attack On G. O. P. Leaders

### Republican Veterans Take Issue With Vermont Governor Who Wants Dixie Moguls Unhorsed

Washington, D. C., Dec. 23—(ANP)—With the eyes of the nation focused last week on the meeting at St. Louis' Hotel Coronado of the Executive Committee of the Republican National Committee, political observers of the nation were unanimous in declaring that Vermont Governor George D. Aiken's call for a purge of Southern committeeman was untimely and ill-advised and constituted a direct slur on the Negroes of the Republican party.

Among the first to answer the Governor were Perry W. Howard. G. O. P. National Committeeman from Mississippi and the only Negro member of the National committee and Robert R. Church, political big-wig of Tennessee, who has been a delegate to Republican National Conventions for 25 years.

Governor Aiken urged: "That at the earliest opportunity, the National Committee be purged of the baneful influence of the Southern Committeemen who represent no one except themselves and their allied officeholders, past and present—mostly past."

Viewing the Governor's remarks as a direct set-back to the Republican Party's reorganization plan and their program of enticing the faithful "back into the fold," in anticipation of the 1938 Congressional elections, Committeeman Howard struck out:

"Any statement or implication that Southern National Committeemen are more corrupt than those of other sections is willfully and deliberately false and the statement of Governor Aiken is nothing more than the continuation of efforts of the old crowd (Hoover, et al) to eliminate every colored man of any influence in the Republican Party.

"I lay down the proposition that while the methods of patronage of the South are different from those in other sections, they have been just as clean as those elsewhere. What is the difference in operating a Tammany Hall on a small scale in Vermont and taking a contribution in Mississippi? The only difference seems to be that those in the South are investigated and those in other sections are passed up.

"The backbone of the Republican Party in the South is the Negro and if the Governor and his kind had not aroused, then deserted and left disfranchised the Negro in Reconstruction Days, the vote would not be so small there as it is in Vermont. Does the Governor know that by reason of his cold-blooded indifference there are 600,000 disfranchised Negroes in Mississippi?"

Pointing out that the surest way to solve the difficulty is by passing Federal legislation giving the Government control of all elections for Federal offices, Robert R. Church addressed an open letter to Governor Aiken. Highlights of the letter:

"Your demand (the purge of Southern Committeemen) is subject to the unfair and unjust implication that the unfortunate, disfranchised colored American citizen of the South is in some way responsible for the condition of which you complain, and therefore the little he has left—representation in the Republican National Committee—should be taken from him.

"The Negro's discontent with his treatment at the hands of some of the leaders of the Republican Party has grown steadily for a generation.... The Negro's discontent was climaxed by the 'lily-white' program of President Hoover, in which he was aided and abetted by his Postmaster General, Hon. Walter F. Brown.

"It resulted in a great exodus from the Republican Party.... The most important task of the Republican National Committee whosoever con-

## INSTALL COLORED EDUCATOR AS NEW MORRIST'N PREXY

### Colorful Ceremony Marks Inauguration Of John W. Haywood, Dec. 17

By Webster L. Porter

Morristown, Tenn—With the inauguration of Doctor Wilfred Haywood, as president of Morristown College at colorful and highly impressive ceremonies last Friday, this fifty-year old institution for the training of Negro youths has at its head the first member of the Negro racial group. The college founded by Dr. Judson S. Hill has only one other president since the death of its founder.

The inaugural exercises attracted leading educators of both races from many section of the nation. Dean J. P. Brawley, of Clark university, Atlanta, presided at the symposium which began at 10 o'clock before a large audience that filled spacious Swift Memorial Chapel. The keynote of addresses dealt with church related colleges and brought interesting and helpful talks from Doctor George M. Bell, superintendent of the Wilkes-Barre District of the Wyoming Conference; Rev. W. L. Saunders, superintendent of the Bluefield District of the East Tennessee conference of the Methodist Episcopal Church, and Rev. W. A. C. Hughes, of Baltimore, of the Home Mission and Church Extension Board of the Methodist Episcopal church.

Following an elaborate dinner served in the college refectory when the many visitors were guests of the institution, the inaugural exercises began at 1:30 o'clock when the mammoth audience arose as the academic procession led by Bishop Wallace E. Brown and President-elect. J. W. Haywood, slowly wended its way to the rostrum. Following in line were President Willis J. King, of Gammon Theological Seminary, Atlanta; Rev. Thomas G. Howard, of Knoxville; Secretary Harry W. McPherson of the Methodist Episcopal Board of Education; President David D. Jones, of Bennett College, Greensboro, N. C.; President W. J. Hale of A. and I. State College, Nashville; Hon. W. E. Turner, of the State Department of Education, Nashville; Secretary Merrill J. Holmes and Dr. O. B. Cassell, of the Board of Education, Methodist Episcopal Church; Dean George S. Grant, of Morgan College; President W. C. Hargraves of Swift Memorial College, Rogersville, and Dean Miller W. Boyd of Morristown College.

President Willis King presided and introduced for extending greetings on behalf of Methodist Episcopal Colleges, President Jones of Bennett; other institutions of higher education, President Hale of A. and I State College, and on behalf of the state department of education. Hon. W. E. Turner of Nashville.

As the ceremony of induction proceeded, Secretary Merrill Holmes of Negro schools operated under the Methodist Episcopal Church, presented President-elect Haywood to Bishop Wallace E. Brown for the investiture and charge, and as the velvety silk cord at the end of which hung the massive gilded key was

(Continued on Page 13)

## EARN MORE! - SAVE MORE! - HAVE MORE! BE MORE!

Every colored farmer should be a member of the National Federation of Colored Farmers, Inc., organized June 5, 1922, incorporated November 19, 1930. Progressive, not radical! Sane, not visionary!

If a farm owner, tenant, sharecropper or farmhand, you should join this organization.

It is the only national organization of colored farmers in America.

Its growth has been steady and substantial.

Its officers and leaders are men of experience and foresight.

It is non-partisan and non-secret.

Its actions speak louder than its words.

Its policies are sane, sound and progressive.

It teaches co-operative buying, production and marketing.

It is a builder of Negro farm communities.

It promotes the general interest of all its members.

It studies and investigates all agricultural problems.

It fosters the improvement of rural home and rural life.

Its members work together to accomplish what cannot be done individually.

It makes farm business more profitable.

What the American Farm Bureau, the Grange and the Farmers' Union have done for the white farmers of this country, the National Federation of Colored Farmers can do for you. Your membership in the N. F. C. F. tells the world how good a farmer you really are. Join today! Join the local Unit in your community or organize one.

THE NATIONAL FEDERATION OF COLORED FARMERS, INC., founded by James P. Davis. Leon R. Harris, Acting President-Secretary; Maj. R. A. Byrd, Vice President; S. B. Wilson, Treasurer; C. R. Richardson, Chairman Board of Directors.

## NOTICE TO ALL MODERN FARMER READERS AND SUBSCRIBERS

We are calling upon the readers of The Modern Farmer and subscribers of this publication to pay their subscriptions between January 15th and February 15th. It is a violation of the postal laws and regulations, so we are informed, to send this paper to any person whose subscription is past due. The fact is that all subscriptions are payable in advance. The Modern Farmer has endeavored to present each issue a publication brim full of information for the farmer whether he is raising cotton or corn, whether he has a truck garden, whether he is a stock raiser, a fruit grower or any vocation connected with farm industry. It has endeavored to present a program for farm activities; it has espoused the cause of the farmer and has given them full information each month and each issue. This has been going on for ten years. A letter has been mailed to each subscriber and to each reader whose subscription has expired. It is not the intention of The Modern Farmer to collect from any whose subscription has been paid up to date, but we are calling upon those who have not paid to forward their subscription price either in cash by registered mail or send a money order or express money order or they may send their check if it is certified.

Please notice that on and after this issue, which is dated January 15th, that all subscriptions that are not paid will be discontinued. We are giving this special notice so that those who read it may act accordingly.

Respectfully,

THE MODERN FARMER,

447 4th Avenue, North,

Nashville, Tennessee.

## INVENTOR CLAIMS HIS NEW GIN WILL WHITEN POOREST COTTON

A new cotton gin, which its inventor claim will give the trashiest cotton a snowlike whitness and may solve some problems of the mechanical cotton pickers, will be introduced in the South in 1938, Frank H. Watson, 62-year-old farmer-inventor of Jonesboro, Ark., said last night.

Using centrifugal force as the base principal for cleaning and ginning the cotton, Mr. Watson, who has been working on the machine for 33 years, said that the new gin does not cut or damage the cotton and that it will increase the value of even the lowest grades and staples.

Mr. Watson will show the operation of the new gin at an execu-

(Continued on Page 15)

## HOW TO GET BENEFIT BY MORATORIUM ACT

Since the Supreme Court decision in favor of the Frazier-Lemke Moratorium Act farmers have wanted information on how to use it to advantage. The following methods of applying for its advantages are:

1. When foreclosure proceedings are started, the farmer may file a petition with the clerk of the federal district court, or conciliation commissioner of the county. It is best to hire a good friendly lawyer. Organizations should retain their own lawyer for mutual protection.

2. The petition should contain a schedule of property, and should ask for reduction or extension of debts, or both, if desired. If a majority of the creditors agree to compromise, the farmer proceeds according to the plans dawn up in the petition.

(Continued on Page 15)

# THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

### History

In 1922 this organization was founded by James P. Davis, the late Gilchrist Stewart, Cornelius R. Richardson and Leon R. Harris. Mr. Davis, a native of Georgia, had long been engaged in the commission business in his native state and was recognized as the leading authority of his race on the marketing of farm products. Mr. Stewart was a native of South Carolina, the son of a sharecropper, who had risen to eminence in his profession but had not forgotten the severe struggles of those who had nurtured him. Mr. Richardson, also a native son of Georgia, was and is a prominent lawyer. He has devoted much of his time and study to the legal phases of farm and co-operative organizations. Leon R. Harris, a native of Ohio, was reared on a hilly Kentucky farm eighteen miles from a railroad. And for six years he had been a North Carolina dirt farmer, rural school teacher and a leader in farm organization work in that state.

In 1929 Mr. Davis was chosen president and began devoting all his time and efforts for the welfare of the organization. Under his unselfish and inspiring leadership, growth was rapid and substantial.

The organization was incorporated under the laws of Illinois in 1930 and the national office was established in Chicago, the agricultural capital of the nation.

### Purpose And Aims

Quoting briefly from the "foreword" of the N. F. C. F., published in 1928, "It is the hope of the founders of the National Federation of Colored Farmers, to make life on the farm more attractive and more profitable, and to build up in this nation a Negro group of organized, influential and satisfied producers."

To accomplish this purpose the N. F. C. F. has advocated (1) co-operative buying, production and marketing. Local Units have purchased more than a quarter million dollars worth of farm and farm home supplies co-operatively during the past eight years. Local Units have produced and marketed co-operatively, hay, watermelons, string beans, peanuts, sweet potatoes and mixed cars of vegetables. The N. F. C. F. has advocated (2) land ownership. The Federation has assisted hundreds of its members in purchasing farms on reasonable terms. It has also been instrumental in securing better legal sharecrop contracts. It has helped its members by instruction and assistance to take advantage of farm relief legislation. The N. F. C. F. has advocated (3) better farming and better farm living, and through organization, assists in building better colored farm communities.

### Progress

The first local Unit of the N. F. C. F. was chartered at Howard, Miss., in 1929. Today it has a membership in 21 states. It admits to membership farmers, sharecroppers, tenants and farm hands, all members of the Race who are interested in any manner in the important business of farming. The organization has proven its worth. It has been a blessing to thousands of Negro farmers.

### HOW TO ORGANIZE A UNIT OF THE N. F. C. F. IN YOUR COMMUNITY

This is an age of GROUP ACTION. The INDIVIDUAL, working alone, can accomplish little. Colored farmers must ORGANIZE. Your organization is the N. F. C. F. YOU HAVE NO OTHER NATIONAL FARM ORGANIZATION. To organize a Unit of the N. F. C. F. in your community:

1. Make a list of the names of all who can and who should be members of your Unit. This list should include the names of farm owners, tenant farmers, sharecroppers, farm-hands, rural teachers, rural preachers, colored owners of farms in your community who live elsewhere, and all others of our Group who are interested in the business of farming.

2. Appoint a time and a place for a meeting and invite all whose names are on your list to attend it. The farmer's wife is an equal partner in his business and should also attend your organization meeting.

3. Elect the following officers: President, Vice President, Secretary, Treasurer, Market Agent, Chaplain, and Marshal. These and four others you elect constitute your Board of Directors.

4. Collect $3.00 annual dues from each member. Two dollars per member to be sent to the national office, one dollar per member to be put in the local Unit's treasury.

5. Appoint a standing Membership Committee of three members.

6. Appoint an Agent for "The Modern Farmer."

7. Name the time and place for your monthly or bi-monthly meetings.

8. Select a name for your local unit.

### WHAT YOU SHOULD DO AFTER YOU ORGANIZE

After your Unit has been organized and you have elected officers who are efficient and reliable, the first thing you should do is: MAKE A SURVEY OF YOUR COMMUNITY AND REPORT THE FOLLOWING FACTS TO YOUR NATIONAL OFFICE.

1. Number of colored farm owners in your community.
2. Number of colored tenant farmers and sharecroppers in your community.
3. Number of tenant farmers and sharecroppers who desire to purchase farms and who are able financially to make a down payment on a farm.
4. Number of farms or amount of farm acreage which can be purchased in your community.
5. Number of farmers in your community who desire to purchase farms in other communities.
6. Number of farm hands in your community and average daily, weekly monthly and annual wages they receive.
7. The money crops produced in your community and money crops which may be produced.
8. The money crops which may be produced co-operatively this season or next season.
9. The farm and home supplies used at which a saving may be made by cooperative buying.
10. Is your Unit prepared to engage in co-operative buying?
11. Home owner needs in your community—paint, fencing, household appliances, farm machinery, building, etc.
12. Government assistance desired, seed loans, farm loans, etc.
13. Does your county and community have, or does it need, the services of a Negro Farm Agent and a Negro Home Demonstration Agent.
14. Could a Farm Credit Union be organized in your community.

---

### General Information

After your Unit is organized a Colored Farm Women's Club and Colored Farm Boys' and Farm Girls' Club should be organized under competent leadership.

---

Your national office will send you a charter and individual membership cards when annual membership fees of two dollars per member is received.

---

Local Units can make and adopt by-laws to govern their local organizations. The national office will advise but will not interfere in the set-up or government of a Local Unit.

---

Local Units may assess and collect monthly payment of dues for the benefit of the Local Unit treasury. Local Units may also pay to the national office annual membership dues out of the local treasury. These dues may be raised by holding entertainments, picnics, or from crop or stock growing projects engaged in by the combined membership of the Local Unit.

---

The "Modern Farmer" is the official organ of the N. F. C. F. All members should read, subscribe for, and support this monthly farm paper. It is the only paper published for colored farmers.

---

All Units are required to report monthly to the national office.

# The DIGEST

BY FLOYD CALVIN

## YEAR ENDS

As the year draws to a close, stock-taking and evaluation are in order. As individuals, we find many things to be grateful for, and some to be sorry for. In the broad field of racial activity, we find, too, acts and events to commend, and some to lament. We wish to commend and congratulate.

President William Jennings Hale on the twenty-fifth anniversary of Tennessee Agricultural and Industrial State College, which he has guided from a $100,000 to a $2,500,000 institution; Bishop R. R. Wright, Jr., on his remarkable activity in the A. M. E. Church in South Africa, where he traveled over 30,000 miles ministering to the people; Past President Walter Spurgeon Hornsby of the National Negro Insurance Association, for constructive recommendations he made to the organization at the close of his administration; George K. Hunton, secretary of the Catholic Interracial Council of New York and editor of the Interracial Review, for his brilliant campaign within his church to bring greater recognition and appreciation of the Negro; Edgar G. Brown, for his strategie leadership of the United Government Employes in getting a $200,000 annual wage increase for low-paid government workers from the Congress; Dr. M. W. Dogan and Dr. H. L. McCrorey, who continue active college heads after 41 and 30 years of service, respectively; Jones Brothers of Chicago, for opening the Ben Franklin store; Dr. C. C. Spaulding, for developing such fine banking and insurance personnel that he can give more time to racial affairs; Hon. J. C. Napier and Major R. R. Wright, Sr., bankers, who are still active at 92 and 82, respectively; John D. Rockefeller, Jr., for maintaining an all-colored staff at the Paul Laurence Dunbar Apartments throughout his ten-year ownership, setting the pace for large private and Federal housing projects; the North Carolina Mutual Life Insurance Company, for launching a "Good Will" advertising campaign; Secretary of Agriculture, Henry A. Wallace, for inviting Negro editors to a conference on farm problems; Zora Neale Hurston and Dr. James Weldon Johnson, as speakers at the New York National Book Fair; National Association of Teachers in Colored Schools for changing its name to the American Teachers Association; Governor Lehman of New York for appointing Elmer A. Carter to the Unemployment Insurance Board of Appeals at a salary of $7,500 per year; the New York Legislature, on creating a Commission to probe prejudice against Negroes; American Press, on including colored papers in Half-Century Club; Max Yergan on teaching at the College of the City of New York; Charles E. Hall on being promoted to the highest ranking colored official in the Department of Commerce; Xavier University on erecting a beautiful new library.

### BEG PARDON

In a recent editorial on Catholics, we made the statement, inadvertently, that the Catholic religion is prejudiced. Of course we did not mean that. We do not feel that the tenets of any religion are prejudiced; it is the persons who profess the religion who show prejudice in their actions. As an illustration, the Constitution of the United States is perhaps the fairest guarantee of the rights of people as exists in the world today, but in the administration of the Constitution, grievances arise. We are sorry for this technical error, but we wish to state that we feel all who read the article in its entirety, and with an unbiased mind, could see that our charge was not against the Catholic religion, but against some (even many) who profess it. On that we will stand.

### "SOMETHING DONE"

In the current Talladegan, issued from Talladega College, Alabama, we find an article, "Something Is Being Done About It," by J. W. Nicholson, which strikes a new note in the attitude of Southern Negro leadership toward its environment. The article begins in an engagingly frank manner: "It is not much fun to be a Negro in most southern communities. Proscriptions, segregations, discriminations on every hand take much of the joy and zest out of life." Ordinarily, such plain speaking, and truthful speaking is not found in the more conservative publication of the South. But here we have an organ, issued by a great institution of liberal culture, which no longer winks at conditions at its very door.

The article goes on: "For example, Talladega is in many respects quite typical of most small southern communities of its size. Negroes live in shacks and very few representative houses. The streets in their neighborhoods are not paved, even with gravel. The people who have jobs get relatively low wages, and yet rents are high for their incomes. There are but few health and sanitary conveniences; children play in the street because there are practically no playgrounds. So far as community groups are concerned they lack vivid leadership and imagination. With one public school for Negro children in the whole town it may be pointed out that some children must walk over two miles across town to get to it. The result is that many children miss a large part of the school term. Young men particularly find themselves thwarted....."

The burden of the article is that Talladega is leading the college world in doing something about improving the local community. It is admitting the community public to all campus athletic and cultural programs free; and its library carries books devoted to the needs of the town people, with advantages of good art exhibits, and lectures.

Of course what Talladega is "doing about it" is good; but what Talladega has courageously exposed is even better, for many of our educators are prone to minimize social conditions in southern communities, for fear of offending some of the supporters of their programs.

## The College Professor

By Eugene Carothers

### Chapter 3
### The Keats On Their Vacation

Characters—Mr. Keats, father of William Keats and the husband of Miss Sarah Brunswick. Miss Brunswick the second wife of Mr. Keats and step-mother of William. Mrs. Palsie Sattlefield, the sister of Mr. Keats. Anne Sattlefield the 20 year old daughter of Mrs. Palsie Sattlefield. Brete Huggins the Lot Machine Man.

### Chapter 3

After graduation from Cohran High School William found himself still working at the Continental Portrait Co. He worked all the summer and he saved his money. This time he had the Spirit of beginning to College the following fall. Mrs. Sarah Brunswick, the new wife of Mr. Keats and the stepmother of William was very interested in her step son's career in a College Life. Mrs. Brunswick was an old school mistress and who taught school in Rollington Junior High School. Mr. Keats had planned to go for a trip and he had decided to carry the whole family. They had planned to go to Mississippi to visit his sister whose name was Mrs. Sattlefield. Mrs. Sattlefield ran a small cafe in the rear of her beautiful home. When they arrived to the Station the new Mountainous Diver was in and they were all astonished to the fact that they were to ride in this new Streamline Train. They left the station about dust dark that evening and when they reached the other station it was the morning of August 19. They all went over to the beautiful home of Mrs. Sattlefield. Upon entering the house it happened that William's heart grew weak and oh how this the beautiful home did excite William. He wished that they had that beautiful home and the new car of which was a gift from the mother of Anne to her. The people were this kind of wealthy people and had been running a restaurant for years. Mrs. Sattlefield a middle aged lady much younger than the wife of Mr. Keats was indeed glad to see them not knowing that they were to come. They spent an enjoyable summer there and William met more boys and girls. William and Anne went out nearly every afternoon in the new car. William fell in love with a very decisive young lady who was at that time a sophomore in Wilson's University. Anne was a very beautiful young lady which was of the type that read a lot of trash in the line of magazines but all of that she was a very very beautiful lady. Her golden curls clustered about her head and her tender lips and her rosk cheeks were the essential parts of the young lad. She really had the essential attributes of a lady. Her high veracity was the most striking characteristic of her. Every night she would get a call from one of the doctors or some big shot of that city to go to a show or to go to a Bridge Party. At this time it happened that she was in company with Brete Huggins, the Lot Machine Man (A kind of Gambling) who was also wealthy. The visitors left and were on their way home when William met an old school friend of his in the person of Percy Robinson who was the third assistant Manager of the Social Service Sacred Sorority Society, merely called (Five "S") Club. When William got to the Station he hated to go for all the friends that he had met were at the station to greet him farewell. They reached home on September the first, and he did not go to work until that Monday which was September the fourth. The University of which William was to enter opened for Registration on the morning of Sept. the 10th. at 9 o'clock. Mr. Keats made ready for the Registration day at Garland University. He went to the Southern Civilized Savings Bank and drew out $100.00 which was to take care of the tuition fee and to get some extra clothes for the son. The tuition was $40.00. The next day was Registration day at Garland University of which he was to enter the next day. When William dressed the next day he went to the office of the President and laid the dollars down in a Slow Moode and got his receipt.

# 50TH ANNIVERSARY Y. M. C. A. PROGRAM TO BE HELD IN 1938

## Branches Will Observe Appointment of First Secretary

**Philadelphia**, Pa., Dec. 23—(ANP) Over 75 prominent laymen from all parts of the country answered the call of Dr. Channing H. Tobias and assembled at the Philadelphia Young Men's Christian Association last Saturday to lay plans for the recognition in 1938 of the 50th Anniversary of the late William A. Hunton as the first colored secretary of the Young Men's Christian Association. From secretary Hunton's work, the present Negro Y. M. C. A. work sprang.

The Assemblage voted to hold a semi-centennial or Jubilee Celebration extending over the whole year 1938, including a National Conference in the Fall; that the program of the National Conference center itself upon discussion of Present-Day Socio-Religious Trends in order to determine as accurately as possible the direction the Association Program should take; that a member of the National Staff give a large part of his time, with such cooperation as he can get from local Associations, to a Study of the Present Program of Local Associations.

### Head to Raise $125,000

It was agreed to attempt the raising of a Semi-Centennial Expansion Fund for the National Services to Negro Associations in the City and Student Fields. The goal is to be $125,000, this amount to make available additional budget expenditures of $25,000 a year for the next five years. This sum will make possible an additional Secretary of Student Associations, which would still be one short of the number of student secretaries on the Staff 25 years ago; a Secretary for Boys' Work Groups in the Unorganized Southern Fields, and a Secretary for National Boys' Work and Services to Non-Equipment Community Organizations throughout the country.

Those in attendance were George W. Crawford, New Haven, Conn.; A. T. Walden, Atlanta, Ga.; Dr. B. E. Mays, Dr. Emmett J. Scott, Major Campbell C. Johnson, J. H. B. Evans, Washington, D. C.; William Anderson, Carrington L. Davis, S. R. Morsell, George B. Murphy, Baltimore, Md.; W. R. Valetine, Bordentown, C. M. Cain, Atlantic City, Ernest Dawson, Plainfield, Montgomery Gregory, Atlantic City, Hilmer Jensen, Trenton, F. S. A. Johnson, Summit, R. T. Lockett, Atlantic City, J. B. Redmond, Princeton, and Dr. J. O. Hill, Newark, N. J.; R. P. Hamlin and A. L. Somither, Brooklyn, William H. Jackson, Buffalo, Herbert King, William H. Wortham, R. W. Bullock, H. K. Craft, R. B. DeFrantz, Thomas B. Dyett, H. W. Pope, C. H. Tobias, Oliver D. Williams, Rev. William Lloyd Imes, Rev. Shelton Hale Bishop, Rev. Lorenzo H. King, Dr. E. P. Roberts, John Hailstock, Leviticus Lynn, and Max Yergan, all of New York.

Leo B. Marsh, Toledo, and B. W. Overton, Cincinnati, Ohio; E. D. Downing, Roanoke, J. T. Harris, Lynchburg, and J. W. Anderson, Norfolk, Va.; Henry C. Parker, Pittsburgh, Dr. Leslie Pickney Hill, Cheyney, H. H. Cain, Germantown, C. Sylvester Jackson, Harrisburg, Herbert T. Miller, J. H. McGrew, E. Washington Rhodes, Rev. Marshall L. Shepard, Dr. John P. Turner, Dr. Charles Lewis, A. H. Fauset, Atty. G. E. Dickerson, Atty. T. O. Spaulding, Julia P. Harris, Ralph Jones, James Reid, John A. Saunders, Levi Jolley, Rev. D. W. Henry, Dr. E. F. Thompson, Orrin C. Evans, Dr. Harry Green, James H. Young, Dr. Oscar J. Cooper, Dr. G. C. Brannon, Dr. T. S. Burwell, Theodore R. Penny, Harold L. Pilgrim, and E. L. Saunders, Philadelphia; Dr. Frank T. Wilson and Pres. W. L. Wright, of Lincoln University. Dr. W. R. Valetine, Bordentown Manual Training School, presided.

# PITTSBURGH COURIER SELECTS EDWARDS AS TOP "ALL-AMERICAN"

## Stars of Eight Colleges On Mythical Eleven for 1937

Pittsburgh, Pa., (Special)—Chester L. Washington, sports editor of the Pittsburgh Courier this week released his paper's selections of an All-American football team, composed of representatives of leading colored colleges.

As was expected, George ("Big Bertha") Edwards of Kentucky State was chosen captain of the mythical eleven. It was the second time Edwards got rating as All-American material, having achieved that distinction in 1934, when his team won the national championship.

The Courier selections in full are as follows:

Ends—Bates of West Virginia and Spearman of Lemoyne.

Tackler—Moseby of Florida A. and M. and Toomer of Ky. State.

Guards—McMeekins of Florida and Johnson of Morehouse.

Center—Sowell of Morgan College

Quarterback and captain—Edwards of Kentucky State.

Halfbacks—Bailey of Virginia State and Lampkin of Morgan.

Fullback—Girdy of Texas College.

Treasure Island, site of the Golden Gate International Exposition in 1939, will be eight minutes from San Francisco by ferry.

# ENROLLMENT AT STATE COLLEGE REACHES 1,200

## President Hale Receives More Congratulations On 25th Anniversary

The first third of the present academie year closed today at Tennessee A. and I. State College. The twelve hundred students registered in America's largest colored State institution of higher learning took examinations on Wednesday, Thursday and Friday. Current grades were submitted to the registrar's office today.

It has been announced that next quarter (beginning Monday, December 20) no Saturday classes will be held. For several years State College has held special group sessions on the final day of the week. The fact that no further Saturday classes will be held doubtless will be welcomed by students and faculty members alike.

New courses included in the curriculum for the next quarter include offerings in sociology, marketing, photography, journalism, English and home economics. Scores of new students are expected to be in attendance.

Dr. William H. Bell, president of Alcorn College, Mississippi's State institution for colored youth, was a recent visitor and guest speaker at A. and I. He brought an inspirational and stimulating message in which he emphasized the practicalities of life.

President William J. Hale continues to receive congratulations from various sections of the country upon the phenomenal success of the recent Silver Jubilee of the College. Outstanding leaders of American public life have felicitated him upon his brilliant leadership and achievements.

## Commissioner Of Labor Thanks Publishing Board

Washington, D. C., Dec. 15, 1937:—National Baptist Publishing Board, Henry A. Boyd, Secretary:—Gentlemen: I am writing this, at the close of another year, to thank you for your courteous attention to our inquiries, and also to ask for any suggestions you may have for the improvement of our statistical reports and services. The ability of this Bureau to perform its required duties at all adequately is dependent upon the cooperation of many thousands of business organizations and individuals in furnishing it with information. It is our earnest desire to compile and present this information in the form most useful to them as well as to the general public

During 1938, we shall hope for a continuance of your cordial courtesies of 1937. May we during the coming year reciprocate your kindnesses in furnishing to you any information that may be of value to your organization.

Sincerely,
Isador Lubin,
Commissioner of Labor Statistics

### STATUE TO COW

A statue to a cow named Springback Snow Countess is to be unveiled at Woodstock, Ont., Can., to commemorate the fact that on the completion of her tenth lactation the animal smashed all records of milk production.

Seattle, Wash., has a monument to Segis, another record-breaking cow. At Adamsville, R. I., here stands a monument to Rhode Island Reds.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per yer, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## NOTES ON NEGRO AGRICULTURAL PROGRESS

Tuskegee, Ala.,—Cooperative marketing and more cooperation with the Soil Conservation Program were given special emphasis at a recent meeting of Negro farmers and agricultural Extension workers held at Fessenden Academy, Fessenden, Florida. Twenty counties and twenty-four farm organizations were represented. Dr. H. G. Hamilton, Specialist in Cooperative Marketing of the University of Florida and James P. Davis, Field Officer, AAA were principal speakers and A. A. Turner, Negro Extension Leader for Florida was in charge of the meeting.

Negro farmers of Omigo Community, Smith County, Texas have recently erected a community canning plant. Fruit and vegetables are being canned for home use and for wholesale and retail trade.

The Dairy and Produce Association of Colored Farmers of Okfuskee County, Oklahoma reports an average daily milk sale in excess of 2000 pounds, most of which is sold to the branch office of a nationally known cheese corporation.

One of the prize-winning booths at the Louisiana State Fair, Shreveport, Louisiana, was an exhibit showing the importance of Soil Conservation. The exhibit was designed by E. F. Purvis, Negro County Agent, of Grambling, Louisiana.

Under the leadership of R. E. Wyer, Jr., Negro County Agent, the Leon County Negro Farmers Council has been organized. Better farm life, cooperative marketing and participation in Agricultural Conversation Programs are listed as main objectives. J. N. Nash is President of the Council and Matthew Rollins, Secretary. Both Mr. Nash and Mr. Rollins are ace-farmers.

Harold Thompson, successful Negro farmer, is manager of the Thompson family farm of 2000 acres, located near Augusta, Georgia. In addition to cultivating 1500 acres of the farm, Mr. Thompson specializes in beef cattle and hogs He recently sold 300 steers and 400 hogs. On the Thompson farm more than fifty hired persons are employed; they own twenty-two mules, three tractors and a modern threshing machine.

At a recent county canning exhibit held in Aberdeen, Mississippi, first, second and third prizes were awarded to Mrs. Yetta Ward of Gibson, Mississippi, and Mrs. Amanda Whitefield and Mrs. Mattie Walker of Aberdeen. The Exhibit was planned under the leadership of Miss Willie Mae Carroll, Negro Home Demonstration Agent.

An exhibit to demonstrate a home canning budget was awarded first prize at the Oklahoma State Fair in Muskogee. Miss Beulah Hicks, Negro Home Demonstration Agent designed the Exhibit.

Dr. I. A. Derbigney, Dean of Administration, Tuskegee Institute, was principal speaker at the recent 4-H Club Achievement Day program, held in the Court House at Union Springs, Alabama. Reports from thirty 4-H Club groups showed 4898 cans of fruits and vegetables as the year's total. Miss Elizabeth Ray is Negro Home Agent and E. B. Holloway, Negro County Agent.

Seven and a half tons of pork—enough for 25 families for one year—were produced this year through the activities of the Free Union Hog Improvement Association of Pickens, Mississippi. The association recently purchased a registered Poland China Boar. R. M. Mackey, Negro County Agent, helped to organize the Association.

Anne Sherman of Grady County, Georgia and Ruby Shadd of Sumter County were tied in the statewide contest held among Georgia 4-H Club Girls for the largest amount of fruit and vegetables canned. These girls report that lands diverted from cotton under the Agricultural Conservation Porgram were used in producing most of the vegetables' crops.

A Negro Cooperative Fruit and Vegetables Market has been opened in Tampa, Florida. Elliott Robbins, Negro County Agent and the Negro Chamber of Commerce of Tampa, cooperated in the establishment of the Market. More than seven hundred (700) customers were served on the opening day.

## NEGRO INVENTORS

Washington, D. C.—Requests for information about the contribution made by Negro inventors to the progress of the Nation in agriculture, mining, manufacturing, construction, transportation, communication, trade and in other fields of endeavor have encouraged Charles E. Hall, Specialist in Negro Statistics, Bureau of the Census, to attempt to compile a list of Negroes who have, since 1900, obtained patents from the United States Patent Office.

In 1900 H. E. Baker, a Negro—then Examiner in the Patent Office—made available a list of Negro inventors which caused attention to be focused no such men as J. H. Dickinson, Elijah McCoy, J. E. Matzeliger, W. B. Purvis, and Granville T. Woods and his brother, Lyates, as well as other Negroes who had to their credit inventions of worth but who had not been as prolific as the inventors named.

It was revealed that J. H. Dickinson had more than a dozen on musical instruments to his credit; Elijah McCoy, about 50 patents on a variety of subjects; and Granville T. Woods and his brother Lyates, about an equal number chiefly related to electricity and electrical appliances. The indebtedness of the shoe machinery industry to J. E. Matzeliger, and the paper bag industry to W. B. Purvis was also revealed. Undoubtedly, Mr. Baker's compilation caused recognition to be accorded these men and Negroes to feel justifiable pride in the accomplishments of members of their race

There has been a lack of available information since 1900 about Negroes who have obtained patents during the last 37 years, as the Patent Office does not classify patentees according to race. Negro inventors and those who know of Negro inventors are, therefore, asked to cooperate by sending in any information available to Charles E. Hall, Specialist in Negro Statistics, Bureau of the Census, Department of Commerce Washington, D. C. Information thus obtained will be of great help in bringing up to date the list of Negroes who have obtained patents.

## RESOLUTIONS OF THE 47TH ANNUAL NEGRO FARMERS CONFERENCE HELD AT TUSKEGEE INSTITUTE—DEC. 15, 1937

The Tuskegee Negro Farmers' Conference, in this its forty-seventh annual assembly, follows its usual policy of considering the welfare of rural Negro people of America.

Programs for human betterment are receiving serious consideration more than ever before in the history of our nation.

Thus, while the old world is confused and torn with conflict, America has the chance to show how one great nation can devote itself to higher ideas of service and ideals of right and justice.

In order to promote the best interests of the South and the Negro, we submit the following facts and recommendations:

1. Unemployment

There is a vast amount of unemployment in the country as well as in the towns and cities. We urge, therefore, the establishment of some broad-scale, rural works program which will afford employment for farm workers during off seasons. Such a program of work will greatly relieve the pressure of migration to the cities and tend to encourage self-help among rural people.

2. Farm Tenancy

At this time a year ago, the national conscience was aroused to the extent that the President appointed a Commission to study plans for improving tenant conditions. Since our last conference, the Bankhead-Jones Farm Tenancy Act has been passed by Congress. This act is designed to aid landless tenants to become home owners.

We rejoice in the fact that the Farm Security Administration has been charged with the administration of this law and that these tenants will have the benefit of trained supervision. We commend the type of supervision which has been developed by the Resettlement Administration.

With a knowledge of the vast number of hand-to-mouth tenants in the United States and the miserable lives they live, we urge large appropriations for carrying out the terms of the law and that provisions be made in the Wagner-Steagall Housing Act for improving housing conditions in rural areas as well. In the Southeast a farmer can be set up on a working farm unit with all equipment for about the same price a city dweller is provided a home.

3. Live-at-Home Program

We urge that the farmers continue the "Live-at-Home Program" and that the food and feed needs of the farm family and livestock be the first consideration in Farm Program Planning.

The decrease in the price of cotton which caused an increase of debts and cost of living to many farmers, makes it all the more important that agricultural leaders re-emphasize the live-at-home program to all the farm folk. The reduction of cotton acreage under the 1938 Agricultural Conservation Program should serve as stimulant to farmers to carry out a practical live-at-home program here in the South.

4. Farm Organization

Knowing the benefits to be derived from cooperative effort, Negro farmers are urged to secure representation in all local, county and state farm organizations and administrative agencies.

We earnestly recommend all Negro farmers to take part in community and county study and cooperative groups so that they may be fully informed and inspired for better farm life.

5. Soil Conservation

It has been estimated that 61 per cent of all eroded lands in the United States are located in the Southern States. This destruction of the productivity of our soil creates a serious problem which directly affects the farmers' income.

Therefore, we endorse the Agricultural Conservation Program which seeks to assist farmers to reclaim certain partially eroded lands, to conserve those already in use, and to stabilize the farmer's income through the adjustment of production to demand.

Negro farmers are urged to cooperate with this program to conserve our greatest natural resource—the soil—and, with the assistance of extension workers and specialists from Land Grant Colleges, to study the soil on their own farms for a closer check on crop adaptation and land use.

6. Federal Agencies

The present Administration of our national government has provided a number of agencies whose functions supplement the long established extension service and vocational education activities. Among these agencies now available to the farmer are the Agricultural Adjustment Administration which directs the Agricultural Conservation Program and the Farm Security Administration, through which loans to farmers under the Bankhead-Jones Act are made available and through which certain rural housing projects are developed and small loans for the purchase of tools and equipment provided.

The Farm Credit Administration also provides loans for farm purchases and through the Production Credit Corporation, loans for crops and fertilizer. Through the establishment of Credit Unions, it seeks to promote thrift and community self-help.

Information concerning these and other government agencies are presented to the farmers through competent representatives. We recommend that the Negro personnel of these agencies be increased in order to further expand and extend the work and we respectfully petition the administration of these agencies to provide Negro representation in local administrative offices, especially in those communities where Negroes represent the larger part of the community population.

7. The Pending Farm Bill

The Congress now in session, is attempting to enact legislation which will seek to keep production of farm products more nearly in balance with foreign and domestic needs; protect the interests of the consumer by maintaining some of an ever-normal granary and provide parity payments to insure parity income for all agricultural producers. This conference highly endorses these objectives.

In order, however, for these objectives to be attained, certain items in the bill provide for crop control, marketing quotas and other regulatory procedures. This Conference respectfully petitions the Congress to provide such safeguards in these regulations as will prevent unfair local interpretations of the law towards those small farmers who, through lack of education or local traditions, may not be able freely to speak in their own behalf.

8. Farm and Home Makers Short Course.

This Conference desires to express its thanks to Tuskegee Institute for providing a one-week short course for farm folk. The return of many this year who attended the school last year is indicative of a realization that the effort is worthwhile. We recommend that this farmers' school be continued and expanded.

9. Rural Leadership.

This Conference recognizes the great need for Negro rural leadership. It is felt that the best type of leadership is that which emerges from within the group. We recommend that rural leaders concentrate on training members of local groups to map and execute

(Continued on Page 15)

# Governor Chandler Would Close West State Institution

## Proposal Becomes Stirring Issue In Blue Grass State With Strong Leaders For And Against Plan

Louisville, Ky.—Whether the colored race in Kentucky is to have one or two state colleges is an issue that has taken on the significance of a heated political battle, such as regularly engrosses the minds of the people of this state.

The issue has come to the front in recent weeks as the result of a proposal by Gov. A. B. Chandler to discontinue the operation of West Kentucky Industrial College at Paducah, and operate only the Kentucky State Industrial College at Frankfort. This proposal, which it is claimed the Governor has made with the idea of giving Kentucky a colored college with an "A" rating, has precipitated a heated debate with regard to its feasability as well as to its justice to the colored race. The proposal has divided the citizens of the state with strong advocates both for and against it.

Friends of the proposal state that it is Governor Chandler's intention to give the colored race in Kentucky a college whose facilities will rival those of the Agricultural and Industrial College of Tennessee, in which state only one state college for Negroes is maintained.

Those who oppose closing the college at Paducah contend that hundreds of the young people in the western end of the state would be deprived of an education because they could not afford the expense of going to Frankfort to attend school. It is also pointed out that, even with two colored colleges being maintained, the state all along has been unfair in its attitude toward Negro education, and has maintained four teachers colleges for whites in addition to the great state university at Lexington.

In the battle over the Governor's proposal, rumors are flying thick and fast with regard to methods being used by some educators either to sabotage the Governor's proposal or to aid in getting it enacted into law. Those who favor Gov. Chandler's proposal ascribe "selfishness" to those who contend that the West Kentucky College should not be discontinued. On the other hand those who oppose the Governor state that he is being advised and supported by a group which wants all educational work centered in the "Blue Grass" section of the state.

A peculiar angle to the battle of East Kentucky against West Kentucky is that the state college in the Eastern part of the state is under the presidency of Prof. R. B. Atwood who is a native of Hickman, which is in Western Kentucky while at Paducah the president is Prof. Harvey C. Russell, of Bloomfield, in Eastern Kentucky. President Atwood is listed as strongly backing the proposal for the consolidation of the two colleges, while President Russell is understood to oppose the idea.

Gov. Chandler, it is stated, proposes to convert the plant at Paducah into a state welfare institution of some sort and to put it under the control of colored officials and workers. However, he is understood to be against consolidating the schools if it appears a majority of the colored citizens are opposed to the idea.

Gov. Chandler recently was visited by a delegation of the state's colored leaders, and it was following this visit that news of the plan to consolidate the colleges became public. In the delegation visiting the Governor was Prof. M. J. Sleet, business manager of the Paducah college, and Prof. Sleet has been forced to make a public statement denying that he had any part in the plan to do away with the college where he works. He was accused of being "in on the deal" by a white newspaper of Paducah.

Other Kentuckians who participated in the conference with the Governor were Dr. E. E. Underwood, noted physician and political leader of Frankfort; Rev. Luther Stewart, C. M. E. presiding elder of Hopkinsville; Prof. John B. Caulder, school principal of Lexington; Earl Pruitt and Dr. J. A. C. Lattimore of Louisville. President Atwood of Kentucky State College was also in the delegation, but President Russell of the West Kentucky College failed to attend the meeting, although he had been invited to take a part in it.

If the Governor puts his proposal before the legislature, which is to convene in January, it is believed Charles W. Anderson, lone colored member of the body will take a leading part in the discussion of the matter. Mr. Anderson, brilliant young lawyer, and first member of his race ever to hold a seat in the law-making body of Kentucky, is vitally interested in the educational advancement of his state. He put through the 1936 session of the legislature the bill providing scholarships for colored students who are denied entrance to the State University. Anderson is one of the best known graduates of Kentucky State College and resides in Louisville.

# ANNUAL MEETING OF FARMERS ENDORSES NEW LEGISLATION

## Many Attend 47th Convention Held at Tuskegee Institute

**Tuskegee Institute,** Ala., Dec. 23—(ANP) Features of the 47th annual Tuskegee Negro Farmers conference which closed here Wednesday included an address by R. J. Goode, Alabama Commissioner of Agriculture, the presentation of certificates of merit to four out-standing Negro farmers, and an address by President F. D. Patterson in which he said that "this nation cannot permanently prosper without the prosperity of the agricultural South and the South cannot prosper without the support and participation of the Negro farmer."

### Resolutions Adopted

Resolutions adopted by the conference endorsed the objectives of pending farm legislation in congress which seeks to balance production with demand, provide parity income for the farmer and establish some form of an ever-normal granary.

"In order, however, for these objectives to be attained," the resolutions said, "certain items in the bill provide for crop control, marketing quotas and other regulatory procedures. This conference respectfully petitions the congress to provide such safeguards in these regulations as will prevent unfair local interpretations of the law towards those small farmers who, through lack of education or local traditions, may not be able freely to speak in their own behalf.'

Federal programs to aid the farmer were commended and appreciation was expressed for the appointment of Negro field workers for such agencies as the Triple A, the Farm Security administration, and the Farm Credit administration. Following a recommendation that this Negro personnel be increased in order to reach more Negro farmers the resolutions "respectfully" petitioned the administrators of these agencies "to provide Negro representation in their local administrative offices. especially in those communities where Negroes comprise the larger part of the community population."

Other recommendations included 'some broad-scale, rural works program to provide employment for farm laborers during off-season" as a measure to reduce unemployment and "relieve the pressure of migation to the cities."

Negro farmers were urged to continue the "Live-at-Home Program," to join community study and cooperative groups and to support "local, county and state farm organizations." The agricultural conservation program was highly endorsed and Negro farmers urged "to cooperate with this program to conserve our greatest natural resource—the soil—and, with the assistance of extension workers and specialists from land grant colleges, to study the soil on their own farms for a closer check on crop adaptation and land use."

"Programs for human betterment," said the resolutions, "are receiving serious consideration more than ever before in the history of our nation. Thus, while the Old World is confused and torn with conflict, America has the chance to show how one great nation can devote itself to the higher ideas of service and ideals of right and justice."

The Committee on Resolutions included: Dr. George E. Haynes, New York; David Marlow, Butler County, Ala.; S. P. Ruffin, Choctow county, Ala.; E. D. Phinazee, Burke county, Ga.; Mrs. Nancy L. Doggins, Talladega County, Ala.; O. L. Walker, Lee county, Ala.; and Mrs. Bettie Foster, Clarke county, Ala.

### Certificates of Merit

Since 1916, Tuskegee has presented "certificates of merit" to selected Negro farmers in the Southern states. The bases of these awards are "operation and organization of their farms, business methods employed, appearance of the farm and home, their home life, civic pride and good citizenship."

The awards this year were made to D. A. Miles, Newberry, Fla.; R. L. Williams, Elloree, S. C.; Harold Thompson, Augusta, Ga., and Grant Moss, Notasulga, Ala.

### Commissioner Goods Speaks

J. B. Ivey, poultry specialist from Auburn, was principal speaker at the morning session in Logan hall. A lively discussion followed this address. In the absence of President Patterson at the afternoon session, Alvin J. Neely, dean of men, presided. T. M. Campbell, Negro Extension specialist, was asked to present Commissioner Goode.

"I honestly wish," said Mr. Goode, "that state lines in this Southeastern Section of the Country were not so rigidly drawn because our agricultural problems are almost the same." He likewise felt that the interests of industry and agriculture would be advanced if there were closer relations between the two.

"We cannot, in our agricultural programs, draw too sharply the color line," continued the Commissioner. "The white South cannot advance if the Negro's status is at a lower level because that will tend to pull us all down. We must all rise together."

At the close of Mr. Goode's address, a telegram from E. A. Miller, Assistant Director, Southern division, Agricultural Adjustment administration, was read in which greetings to the conference were sent in behalf of Triple A officials and thanks were extended "for the splendid cooperation given by colored farmers in connection with the agricultural conservation program."

The short course for adult farmers and farm women, which began on Dec. 8, also ended Wednesday. During the week's course such subjects as dairying, poultry raising, soil building and terracing, storing flowers for the winter, legumes and commercial fertilizers, farm records, home gardens, etc., were offered. This feature of the Farmers conference which was begun a year ago, brought together a large enrollment of farm people from all sections of the state.

# YOUTH PREFERS DEATH TO RETURN TO SOUTH CAROLINA CHAIN GANG

## White Employer Pledges Legal Fight to Finish in Behalf of Fleming Mix

Patterson, N. J., Dec. 23—(CNA)—"Don't send me back—put a bullet through my head first," Fleming Mix, 19-year-old youth facing extradition to a South Carolina chain gang, pleaded with the New Jersey officials this week.

"I was only 15 when they put me on that chain gang," Mix sobbed. "I was beaten, terribly beaten, twice and sometimes three times a week until I couldn't stand it. After seven months of those beatings and that hell on earth, I decided that death could not be as bad as ten years of that torture.

"I knew that if I tried to escape, I would be shot at. But I decided it was worth it. I made the break for freedom, the guards shot at me and missed."

Mix, a trusted employe of the Crown Motor Plate Co., of Patterson, his parents, two brothers and three sisters, live at 37 Bridge St., Patterson. His family is highly respected in the community.

Herbert Roessler, Mix's white employer, praised the youth's honesty and retained the law firm of Greenberg and Fineberg for his defense. "I'm going to fight to the limit for him," Roessler said. "He is honest. He has guarded silk worth up to $100,000. He has had access to our pay roll money. South Carolina will never get him back on that chain gang without a fight to the finish in New Jersey."

Arrangements have been made for a hearing before Governor Harold Hoffman by Oscar R. Wilnsky, majority leader of next year's General Assembly, and one of Mix's attorneys.

# DECRY FAILURE OF PHYSICIANS TO TAKE SPECIAL TRAINING COURSES

Washington, D. C., Dec. 13—(ANP)—Although the United States Public Health Service has set up a post-graduate course in veneral disease control at Howard University, manned by special teachers from the U. S. Public Health organization, the attendance has been extremely disappointing to those in charge of it. Despite the fact that grants have been made available by the government through the various state health departments whereby Negro physicians are given the opportunity of attending this school, without cost and with minimum expenses paid, there were only six physicians in attendance the first term of three months, one from Baltimore and five from Washington, and in the second term there are but five, one from California, one from Nebraska and the other three from the District of Columbia.

There are more than 4,000 colored physicians in the country and facilities have been provided for fifteen to attend each of the three terms per year, a total of forty-five but only 11 have registered thus far. While the grants were made available by the federal government, the state public health officers have the privilege of selecting the physicians who attend. The suggestion has been advanced that very few qualified Negro doctors have applied to their state health officers.

The courses cover all phases of diagnosis and treatment. Lectures and clinics in syphilology and urology are given under Doctors H. H. Hazen and R. F. Jones of U. S. P. H. S. and the university medical school staff. Intensive discussion of the problems of follow-up and case finding under the social service staff, clinical pathological conferences are included in the course. It is pointed out that information can be obtained by physicians through their state health officers or by writing Dean Numa P. G. Adams, Howard University or Dr. Roscoe Brown of the U. S. Public Health Service.

# STOCKHOLDERS OF CITIZENS BANK TO MEET JANUARY 10

## Members Will Hear Reports of Officers and Elect Board

According to notice sent out early this week, the annual stockholders meeting of the Citizens Saving Bank and Trust Company will be held in the bank building on Monday evening, Jan. 10, 1938, at 7:30. The official call was signed by Henry Allen Boyd, president and J. C. Napier, cashier.

At this annual meeting, which will be the thirty-fourth consecutive year of the bank, a board of directors for 1938 is to be chosen, the report of the president, cashier, assistant cashier, executive committee and board of directors will be made to the stockholders, and every stockholder of record is urged to attend the meeting at 7:30 Monday evening, Jan. 10.

### WRECKER IS USED TO LIFT BIG HOG ON CANNON FARM

Jeffersonville, Ga., Dec. 10—C. L. Cannon had to call the wrecker from a local garage recently to lift a hog he had butchered when eight men were unable to raise it. The wrecker was used while the hog was being disjointed and dressed.

The hog was estimated to weigh 500 pounds. Each of the hams weighed 40 pounds. The animal was a Hampshire breed that had been raised by Mr. Cannon. He took the sides, shoulders and hams to a meat curing house in Macon to be prepared for home consumption.

### 10,000 BUYING FARMS

Washington, Dec. 10—Nearly 10,000 requests have been received by the Federal land banks in the last 10 months for loans to be applied in the purchase of farms, according to a statement made by A. S. Goss, land bank commissioner of the Farm Credit Administration.

# ART KNOWS NO COLOR, EDITOR OF MAGAZINE TELLS MISSISSIPPIAN WHO HOLDS TO ANCIENT THEORIES

## Southerner Rebuffed for Trying to Dictate to Picture Firm the Kind of Films it Should Make

New York City, Dec. 30—(ANP)—The general reaction of the South to the appearance of white and colored actors in the same movie was made the subject of a letter sent recently to the editor of the Independent, publication of the Independent Theatre Owners Association, Inc., by W. A. Rush, manager of the Houston Theatre, Houston, Miss.

Mr. Rush's letter left no doubt as to the attitude of some Southerners on this "touchy" subject, cracked down in part, as follows:

"At the 31st semi-annual convention of the Motion Picture Theatre Owners Association of Arkansas, Mississippi and Tennessee, 'A warning to forestall censorship was sounded,' because of the "indiscriminate mingling of the white and black races in motion pictures intended for Southern exhibitors.

"For some time the producers have tempted fate but it remained for them to over-ride conventions and the insurmountable barrier of race distinction in 'One Mile from Heaven,' and 'Artists and Models.' The Hollywood Review commented: 'Undoubtedly the sequence in 'Artists and Models' with Martha Raye intermingling among the Negroes as a colored girl, brought forth sufficient complaints from patrons as to cause the above referred to action.'

"But here's what The Independent editor says: 'These Southern exhibitors object to indiscriminate mixing of blacks and whites in pictures, yet the romantic story the Southerners like to impress on 'those damnee Yankees' is that the slaves were loved by their masters and they raised the master's children as their own.'

"If the editor of the Independent want to be a real champion of the Negro, he can convince the world in the next issue of his paper that he is really honest in his professions by announcing the name of the darky he is willing to accept as a son-in-law, brother-in-law, or even as a campanion and social mentor of his women folks."

But the editor of the Independent "rang the bell" in his interesting, caustic and fact-revealing reply to the Mississippian. Declared the Editor:

"It is clear that Mr. Rush advocates Negro performers displaying their art only on company with other Negro performers on the assumption that the mixing of blacks and whites tends to degrade the white race. From the events taking plaee in the world today, Negroes could hardly degrade the white race more than they are degrading themselves —among those events being the rape of Ethiopia and the wanton slaughter of women and children at Guernica.

Mr. Rush brings up the subject of miscegenation when he asks the Editor to announce the name of a "darky he is willing to aceept as a son-in-law,' etc. Mr. Rush hardly sticks to the subject. Admiration of artistic or athletie endeavor knows no barrier, racial, religious of politieal. . . . Jesse Owens traveled with the American Olympie team to Germany last year and showed his heels to the athletes of the world, although his color is brown. . . . No resentment is shown Joe Louis because he has won the world's championship, unless by persons whose belief coneite with Mr. Rush's.

"Paul Robeson is aeeepted in white eireles throughout the world, as is Bill Robinson. . . . Artists who have anything to express or sell, always find a public waiting and ready to hire them. Their art is far more important than their eolor, raee, or creed. . . . Social equality among the peoples of the world is too high a goal to accomplish at the present, but eertainly no one will deny that it is a worthy goal."

# PROF. R. E. CLAY GETS NEW POST IN SCHOOL WORK

## Popular Leader Is Now "Developer Of Education," Pres. Hale Announces

By Charles Satchell Morris, II

Announcement was made here today by President William J. Hale of A. and I. State College that Mr. Robert E. Clay prominent for many years in Tennessee and Southern education cireles had just been appointed to the position of State Developer of Education. In 1918 Mr. Clay was appointed Rosenwald State Agent with headquarters at A. and I. College. With the closing of the Southern office under the directorship of the veteran promoter and builder, Dr. S. L. Smith, the personnel department of the State of Tennessee selected another title for Mr. Clay and made him State Developer.

Next to President Hale, no figure in public life in this region has enjoyed a more varied and distinguished career than Mr. Clay. He is the State Secretary of the Interracial League of Tennessee of whieh Dr. Hale is President and which is largely responsible for the fine feeling between the two groups. He is the assistant State Administrator of the NYA and the Executive Secretary of the Better Homes Movement of which Dr. Hale also is President. Congratulations have reached him from admining friends throughout the nation.

### Singers Honored

Monday night an elaborate reeeption was held at Volunteer Manor, palatian residence of President and Mrs. W. J. Hale, at whieh time members of the faculty, students and citizens of Nashville paid tribute to the magnificent accomplishments of Mrs. Marie Brooks-Strange and her celebrated choral group. Following a delieious repast in a brilliantly-lighted dining room of the mansion, pictures were taken of the famous aggregation and visitors. Brief speeches of felicitation were delivered by Dean George Gore, Jr., Robert E. Clay, President Hale and others following which Mrs. Hale in her singularly charming manner presented checks to the singers as a token of appreciation on behalf of the institution. The occasion was a most delightful one and signalized the important place that music occupies in the college program.

### Faculty Members Given Smoker

Professor Merl R. Eppse, chairman of the Division of History and Sociology, entertained in his attractive apartment on Thursday night the male members of the faculty honoring Prof. Alger V. Boswell who became a benedict at Chattanooga on Saturday at elevent o'clock. After amost appetizing buffet supper served by Mrs. Eppse and Mrs. R. A. Munday, Prof. Boswell was lauded by his colleagues of the faculty. The program was launched by Professor Charles Satchell Morris, II of the department of English and closed by President Hale. Many of his associates are in Chattanooga today for the wedding ceremony which will be performed by the Rev. Dr. Niehodemus Sehomburger.

# IMPROVEMENT IN NEGRO EDUCATION CITED IN SOUTH

## North Carolina Making Effort to Equalize Training For All

Raleigh, N. C., Dec. 30—(ANP)—In a recent address before the students and faculty of the North Carolina College for Negroes and speaking on "Education Moves Ahead," N. C. Newbold, (white), widely known educator and Superintendent of Public Instruction for the State of North Carolina, touched on the progress and needs of Negro educational institutions. He said:

"In discussing Negro schools we want to deal with them on a factual basis. We cannot measure our Negro schools by the schools in the rich states of Massachusetts and California or other similarly wealthy states. A sort of standard for education in North Carolina is found in the present status of schools for white children. Measured by this standard, we find some most interesting facts. In seven items Negro schools in this state are almost identical with the standards in the white schools. In 1935-36, these were: The length of the school term; The teacher-pupil load; Programs for training and certification of teachers are the same; Courses of study and accreditment of high schools—identical: Average daily membership—white, 92.4, Negro 89.2—difference, 3.2, and College curricula in minimum levels are the same.

"Therefore, you will observe that there are seven points in the public school system on whieh the two races have eqnal opportunities. On the other hand, there are six points on which there are differentials, in some cases wide differentials.

"If we have been able in recent years to bring the colored schools up to the level of the State's standard on seven points and considerable progress has been made on at least five of the points on which there are now differentials, it ought to be reasonable to expect that persistence in an intelligent policy and program, without any undue breaking of the friendship between the leaders of the two races, we ought in a few years have not seven points on which there is a balance, but on all thirteen.

"Four of the wide differentials between the two races are as follows:

**1. Transportation is picking up quite rapidly at the rate of about one-hundred busses a year and this number will be no doubt increased as we go on, certainly if economic conditions continue fairly favorable.**

**2. While the high school program is not complete for Negro children, it is true there are 133 four-year accredited high schools in this state with an enrollment in excess of 30,000 students.**

**3. Also, while buildings and equipment for Negro children are considerably below that for white children, it is true that public school property for Negroes, not including colleges, costs slightly in excess of $12,000,000.00.**

**4. In the matter of salaries of teachers, the differential is around 25 per cent. These differentials have been reduced in twenty years from a percentage ranging from 100 or more down to 50 and less. Now, as I have said, it is down to around 25 per cent.**

**"I need not say there is a strong sentiment among our people, those who are best informed, both white and colored that these differentials are in a way being progressively worked out."**

# ONE LOUISIANA FEE-GRABBER FINDS IT EASY TO TERRORIZE 1,200 MEN AND WOMEN AT CHURCH CONFERENCE

## White Officer Assaults Colored Minister, Curses and Calls Religious Gathering, "Dis Dive"

Oakdale, La., Dec. 30—(By Thos. J. Brown for A. N. P.)—This benighted little city was the scene of an outrage committed by a white city marshal upon a veteran minister and editor last Wednesday, when Roland Bass, marshal, assaulted Rev. J. H. Clayborn of Little Rock Rev. Clayborn who is editor of the Southern Christian Recorder and a candidate for high office in the church was struck by the hill-billy officer when the minister tried to protect the dignity of the church, during a session of the Central Louisiana Annual Conference held at Greater Hays Chapel.

The marshal entered the church and forcing his way through the 1200 churchmen women present, stepped authoritatively near the entrance of the crowded auditorium, defying Bishop S. L. Green who was the presiding prelate, the presiding elders, pastors and laymen, and yelled out without any previous warning."

"Hyah, if you all don't get dem kyars offen dis highway, I'm going to close dis dive."

"I beg your pardon sir. said Rev. Clayborn," but this is no dive.

"What de hell you got to do wid it," demanded the marshal?

"I am a general officer and would have you know that this is an annual conference of the AME church and not a dive," said Rev. Clayborn.

"I don't give a damn who you are" said the white marshall as he struck Rev. Clayborn over the head.

Pandemonium reigned for a few moments and racial feeling mounted almost to the point of mob violence as the ministers milled about seemingly eager to get their hands on the miscreant. The mayor of the city, Dr. D. B. Isles a white dentist rushed up. He assured the conference complete protection and expressed deep regret because of the incident. The mayor said that the races lived together in Oakdale in complete harmony and that nothing of the sort had ever happened here before.

# EGYPTIANS EXPEL ILL DUCE'S COPTIC CHURCH PRELATE

Cairo, Egypt, Dec. 30 (ANP)—The Coptie Synod last Monday excommunicated Abuna Abraham, 75 year old blind prelate, when Italy had designated patriareh of the Ethiopian Coptic church. Italy separated the Egyptian and Ethiopian churches in November, the churches having been united since the fourth century. The separation preeipitated a hot controversy and beeame the subject of diplomatic negotations between the two countries.

# F. D. PATTERSON TO SPEAK JAN. 12 TO CHICAGO GROUP

## Tuskegee President Will Stress Preparation of Colored Workers

Chicago, Dec. 30 (ANP)—Inaugurating their 1938 Civic Program, members of the Chicago Alumni club will hold an educational mass meeting on January 12, at Metropolitan Community church, Rev. Joseph M. Evans, pastor, the principal speaker being Dr. Frederick Douglas Patterson, president of Tuskegee Institute, who will make a special trip North for the occasion.

Dr. Patterson will talk on "America's Challenge to the Negro," and he will stress the necessity for all colored workers preparing themselves to be experts in their chosen fields and keeping pace with modern trends in business, commerce, industry and in the service occupations.

Headed by Claude A. Barnett, member of Tuskegee's board of directors, a special committee is arranging details of the big meeting. The musical program will be directed by Prof. J. Wesley Jones, former president of the National Association of Negro Musicians and directors of the famous Metropolitan Church Choir, featured annually in the big Chicagoland Musie Festival. The chorister will render a program specially arranged by Prof. Jones for the occasion.

Chicago's business and professional leaders are showing a marked interest in the meeting and in Dr. Patterson's planned message because one of the lessons brought home to them by the depression is that their prosperity depends upon keeping the great mass of workers occupied and in finding work for all employable persons.

Among the representatives of various important groups who are lending support to the Committee are: Milton P. Webster, president Chicago loeal, Brotherhood of Sleeping Car Porters; Willard S. Townsend, president International Brotherhood of Red Caps; Mrs. Neva P. Ryan, president Domestie Workers' Association; Joel Miles, president Roek Island Waiters and Cooks Association; Dr. Luther Peek, Alpha Phi Alpha Fraternity; Theodore T. Greene, and Percy R. Hines, president and historian, respeetively of the Chicago-Tuskegee Club; E. M. Graham, chairman Pullman Porters Benefit Association, and Headwaiters Irving Gray, Chylow H. Brown, W. H. Irwin, George Morgan, Norman Dunlap and William Grizzard.

# WHITE STUDENTS AT TEXAS UNIVERSITY FOR ANTI-LYNCH BILL

Austin, Texas, Dec. 30—(By John H. Thompson for ANP)—Joining the army of Southerners who ardently favor the passing of a federal anti-lynching bill, Texas University students, in a poll eonducted by the school's board of student opinion this past Saturday, showed 67.5 for sueh legislation.

Although some had no opinion on the subject, 21.7 were against sueh a law.

Texas University is the largest white university in Texas and their student body is generally aeeepted as refleeting the thought of the people of Texas. Senator Tom Connally of Texas led a fight against the anti-lynching bill last month.

The 400-foot Spire to the Sun of San Franciseo's 1939 World's Fair will be lighted with intense white on the outside, a rose red within.

To love life through labour is to be intimate with life's inmost secret.

Kahlil Gibrau.

## COWS OF GOOD TYPE VITAL TO DAIRY PROFITS

**Worth More on Market or Farm, Specialist Points Out.**

Good dairy cows are again at a premium over poor ones, points out V. L. Gregg, extension dairyman.

This emphasizes the profit from using well bred sires whose daughters will show high milk and butter production, the specialist said.

For several years, he continued, good and poor cows have sold in some localities for about the same price, which was their slaughter value for beef.

"But now," he added, "the poor to fair cows are still selling at about slaughter prices, while the good ones are bringing $20 to $40 more a head.

Prospects are that this difference will continue for several years, in view of the favorable outlook for dairying, the specialist observed. He said further:

**Dividends Every Year.**

"If your dairy cow is bred, raised, and kept for production, the difference between the yield of a good type animal and that of a poor type one, may be greater than the market recognizes.

"The cow that does not pay for her feed has no value as a producer, but the good cow may return $20 to $40 above feed cost and investment every year she is kept on the farm, as butterfat and feed are now selling.

"The difference between a good and a poor cow is certainly enough to justify the careful selection of a herd sire that will sire daughters of good type and production.

"Since type and production are, on the average, inherited equally from the sire and the dam, this means that a well-bred dairy bull, when bred to even fair type dairy cows, will sire good type daughters.

"A good dairy bull will maintain than they have received in the the best cows and will make a big improvement in type and production when bred to fair or even poor type dairy cows.

"Therefore, the good dairy bull will pay big dividends when used on any type of dairy cows.

## STRAWBERRY OUTLOOK GOOD

**Arkansas Producers to Fare Better, Says Economist.**

Arkansas strawberry growers have prospects of better returns than they have received in the past few seasons, thinks P. T. Eaton, extension horticulturist.

He summed up the situation and the outlook on the basis of information from the U. S. department of agriculture, as follows:

"The last two years have seen an improved price along with increased production.

"The 13 per cent increase in acreage in the second-early group of states is mostly due to the increase in Arkansas from 7,400 acres to about 12,000 acres, which will about restore it to its past acreage lost in the drouth.

"The early states, which ship ahead of Arkansas, have made only a slight increase of acreage. Late-producing states have expanded their acreage 16 per cent.

"All beds are reported to be in better condition.

## MAKES SPREADS FROM FARM-GROWN COTTON

From cotton grown on the farm, Mrs. Jannie Sission has spun the thread and made 26 candlewick bedspreads this year, and has sold all of them, with four others made from thread on hand, said Miss Dora S. Stubblefield, Faulkner county home demonstration agent.

Mrs. Sisson charges $2.50 each for her spreads, and her skill in this handicraft brings her a nice bit of spending money, the home demonstration agent observed.

It takes about one and one-half pounds of cotton to make enough thread for a spread, allowing for the waste, Miss Stubblefield related. Carding the cotton, spinning the thread and making it into a spread is two days' work for Mrs. Sisson's fingers.

Geometric and floral designs are used, being drawn on the material while it lies on the floor. Then it is put in a quilting frame, and finished. Most of Mrs. Sisson's spreads are made with fringed edges.

## COTTON YIELDS INCREASED BY GROWING VETCH

**Planter Tells of Getting 575 Pounds From His Poorest Land.**

Farmers in 19 southeastern counties of the state have planted 82,-554 acres of vetch, bur clover and Austrian winter peas, compared with 48,413 acres in 1936, according to L. A. Dhonau, district agent.

This fall's planting of these legumes in the southeastern counties is about half of the acreage for the entire state, the district agent added. Vetch makes up the larger portion of the planting, he observed.

Dr. Luther Davis, St. Francis county, told J. M. Thomason, county agent, that he has 275 acres of hairy vetch up to a fine stand. Discussing his experience with this crop since 1933, he said:

"Vetch invariably gives a better stand and better growth when planted on land that had vetch the previous year.

"I have used vetch on only the oldest and poorest land on the place, and, consequently, on lands that were giving my lowest yields.

**Doubled His Harvest.**

"The average cotton yield on this old land had been, before using vetch, about 250 to 300 pounds per acre. My yields following vetch on these same fields over a 3-year period have been from 500 to 650 pounds per acre, with a 3-year average of 575 pounds per acre.

No tenant's crop after vetch averaged less than a bale per acre any year, and the best tenant's crop was 18 bales to 12 acres in 1934. My cotton crops have always been better after vetch than those following an application of nitrogen fertilizer equivalent to 250 pounds of nitrate per acre."

R. L. Hopkins, Jr., declared vetch is one of the best soil building crops for the light soil of Calhoun county, according to W. H. Ballard, county agent

Last year Mr. Hopkins planted a little over three acres of cotton land to vetch, and due to its maturing early last spring he plowed it under and followed it with cotton again this year, the county agent related.

Although the cotton was a little later maturing than the rest of his crop, he made an average of 403 pounds per acre of lint cotton on this plot, which was about 100 pounds more than the other on his farm.

**All His Land in Vetch.**

H. G. Toler of Leola planted 50 acres to vetch in 1936. His results, G. K. Alford, county agent, reports, were so good and his cotton yield increased so much in spite of local drouth that this fall he has seeded his entire 65 acres of land in vetch, and 20 acres of corn and pea ground have also been seeded.

Farmers in the southwestern counties report a good growth from their fall-sown legumes, and expect a nice crop of green manure to plow under about the middle of April, where the legumes were planted in September or October, Mr. Dhonau said.

"This green material will rot rapidly, and a crop can be planted in two weeks," he added.

"A winter legume crop turned under as soon as it has made a fair growth in the spring, puts into the soil the equivalent of 300 to 600 pounds of nitrate of soda, along with valuable vegetable matter."

## NO FOOD, NOT ONE BALE OF HAY BOUGHT BY GLOVERS IN 40 YEARS OF FARMING

Forty years of farming without a grocery bill or buying a bale of hay is the record of Mr. and Mrs. J. L. Glover, Prattsville, in Grant county.

"Food and feed have always been grown on the Glover farm," Mr. Glover told his county extension agents, Mrs. Mauree E. Nance and G. K. Alford, "and it always will be. In 40 years I have never bought a bale of hay, and have had to buy feed only twice. That was in 1931 and in 1935 after severe drouths.

A diversified farming system is the secret of the successful program on the Glover farm, the extension agents explained. Although cotton is still the main cash crop, only 49 acres of the 342-acre farm were planted to cotton this year. About 177 acres of the farm are in cultivation.

Feed for the 13 dairy cows, the flock of 100 chickens, the few hogs which are raised for home use, and the work stock accounts for a large part of the acreage.

A three-acre Elberta peach orchard which was planted 10 years ago contributes a fair share of the family income.

**Garden Is Important**

A large family garden with its aftermath of canning is important in the live-at-home system. This year about 400 jars of canned fruit and vegetables were preserved for the family of three.

Eggs from the flock of White Leghorns, and cream from the dairy are marketed through the co-operative marketing route established out of Pine Bluff.

"If we expect the land to take care of us, we have to take care of the land," declared Mr. Glover when he was asked about his soil-building and soil-conserving crops.

"This agricultural conservation program is just the thing, except we need a definite crop control plan. But more farmers in this neighborhood have been taking care of their land and growing their own living at home than I ever saw before, and I've lived here all of my life."

Although Mr. Glover has increased his soil-conserving practices in the past few years in order to cooperate with the agricultural conservation program, he was carrying out a conservation plan himself long before the government became concerned with it. He said:

**Regards Lespedeza Highly.**

"Back in 1916, I bought a river bottom farm that was yielding only five bushels of corn to the acre. I planted lespedeza for three years and turned it under before I planted another row of corn. Now that land is producing 40 bushels to the acre, and I'm still carrying out a rotation with lespedeza."

Lespedeza is Mr. Glover's favorite crop for soil conservation and building. Generally it is turned under, although he sometimes cuts it for hay.

This year he has nine acres of vetch, two of bur clover, 15 of lespedeza, 23 acres of cow peas, six acres of soybeans, and an 18-acre lespedeza and carpet grass pasture.

The 49 acres of Rowden cotton produced 20 bales this fall, which is at least 50 pounds above the average for the county.

The cotton acreage has been reduced since the AAA programs, but Mr. Glover has never planted more than 75 or 100 acres of cotton.

Many demonstrations in soil-conservation, dairying and production practices have been carried on the farm in co-operation with the county extension agents. All five of the Glover children have been active 4-H Club members.

## CASTOR BEAN AIDS IN WAR ON GRASSHOPPERS

It was discovered last summer that grasshoppers have an appetite for death-dealing castor bean foliage and stalks, giving farmers a new weapon in their fight against the pest.

Dr. L. M. Christensen of the Chemical Foundation of Kansas, said today he saw thousands of grasshoppers go to their death because they ate castor bean vegetation. It seems possible a farmer may protect his crop by merely planting a barrier of castor beans around his field.

Last spring a 15-acre tract was planted to Jerusalem artichokes to make seed available locally for next year. One side of the tract was bounded by 20 acres of uncultivated land, an ideal breeding place for grasshoppers. Seeking to protect a plot of artichokes, 10 rows of grain sorghum, relatively immune to grasshopper attack, were planted between them and the uncultivated tract. When the sorghum and castor bean plants were about 10 inches high and the grasshoppers moved in, they did not bother the sorghum, but greedily attacked the castor bean plant. Many dead grasshoppers were found near the plants and those on the plants were dopey.

Dr. Christensen transplanted 10 castor bean plants in a heavily grasshopper infested field. They immediately started eating on the plants, eating them down to stumps within 24 hours, but many dead grasshoppers lay nearby.

Dr. Christensen placed the castor bean and corn foliage in a screened enclosure with 19 grasshoppers. Within 48 hours 16 hoppers were dead, he said, adding that the live hoppers apparently fed only on the corn. This experiment was repeated several times with similar results

Castor beans yield 47 to 55 per cent valuable oil which if properly treated is useful for engine lubrication, soap making, medicine and other purposes.

An International Mining Congress will be held in San Francisco in 1939 in conjunction with the 1939 World's Fair of the West.

He must not forget to keep
Worship at the heart of life.

# BUSINESS AND RELIGION GO HAND IN HAND IN NORTH CAROLINA CITY

**White Rock Baptist Church Hold 71st Anniversary.**

Durham, N. C., Dec. 23—(ANP)—Durham is perhaps best known throughout the country for its progressive business institutions operated by and serving Negroes, but to those who know the city best, the outstanding character of the churches of the community is equally striking. It is said that the business men of Durham believe that much of their success may be attributed to the fact that the men and women who manage the commercial organizations, are almost all actively identified with the religious, educational and civic organizations of the city.

**Miles Mark Fisher, Pastor**

White Rock Baptist Church, which recently celebrated its 71st anniversary by burnng a $4,000 mortgage held on its parsonage, is but an example of the vigorous church activity which is characteristic of the community. When the pastor, Rev. Miles Mark Fisher, a minister who has devoted as much time to the development of civic and recreational facilities for all of the people of the city as he has to his own denomination, initiated the campaign to raise the mortgage in one effort, few of the laymen imagined that a campaign of that magnitude would receive the endorsement of so large a percentage of the church membership.

**100 Per Cent Results**

With a membership of 1214, including approximately 225 children to draw on, Pastor Fisher asked the adults to subscribe from $10 to $100 each while the children and junior were asked to raise 71 cents each, a penny for each year of the church's history. Five hundred and twenty-one members gave $4,400. Churches and other welfare agencies usually anticipate collecting from seventy-five to ninety per cent of the amount pledged in special campaigns. The White Rock 71st anniversary campaign was an exception the rule for the aroused and enthusiastic membership, led by Rev. Miles Mark Fisher, one of the finest young ministers in the country, and best trained, paid in cash to Treasurer W. J. Kennedy, the sum of $4,680.00. This achievement was accomplished by 677 members of White Rock, 39 members of other churches and small contributions from three other churches.

**Burn Mortgage**

The celebration was concluded at a banquet when members and friends gathered to hear the final reports and to enjoy a repast of turkey, ham, salad and other delicacies. Appropriate exercises celebrated the burning of the mortgage.

During a period of some forty years White Rock Baptist Church has held the interest of a large number of the professional and business men of the community, who not only contribute cheerfully to the financial support of the institution but are active in the Sunday School, Community Center and other auxiliaries. Dr. James E. Shepard, president of North Carolina College and W. J. Kennedy, Jr., and C. C. Spaulding are among the outstanding laymen in the church.

## SENATOR GRAVES' MAIDEN SPEECH

The discredited "Old Guard" in Southern leadership, represented by those holding office in both houses of Congress must have felt quite proud of themselves when they induced the newly-appointed Senator Dixie Graves to make her maiden speech an echo of the flapdoodle long employed by them in their fight against the passage of a federal anti-lynching law. The men evidently felt it a great exploit to have the voice of "Southern Womanhood" raised in support of the status quo. They were quite sure her speech would be unanswered, if not unanswerable by the able Senators who are fighting for the passage of this vitally necessary piece of legislation. But what they failed to take into account was the fact that enlightened women in the South as well as the North are militantly supporting a federal anti-lynching bill, and that the most potent force from our section favorable to the passage of the bill is the Women's Council of the Methodist Church South, which represents nearly a quarter of a million Southern women.

How disappointing it must have been to Alabama's lady Senator, called upon to take the seat vacated by the Hon. Hugo Black, to find that her speech, opposing the passage of the Wagner-Van Nuys measure, called down upon her head the most vigorous protest that probably any senator's first speech ever received. Mrs. Graves got plenty of mail following her "Maiden effort" and most of it from enlightened women leaders of the nation. No man favoring the anti-lynching bill needs to take Mrs. Graves to task. The members of her own sex spanked her to their heart's content. The protest sent by 130 representative women of the nation in the form of an open letter which was released through the Federal Council of Churches delightfully debunked Mrs. Graves' senatorial speech. That splendid document was as follows:

Honorable Dixie Bibb Graves
Senate Office Building
Washington, D. C.
My Dear Senator Graves:

It is of vital interest to American women when one of their sex reaches high political office. They watch the statements of such women with eager concern that they shall measure up to the best that women can give to important issues. Because you are one of two women in the United States Senate we would like to feel that you have the interest of all American women on your heart and conscience. As women who have often suffered injustice we have a deep desire for the securing of justice to all people including the weakest element in our population.

For this reason we stand solidly back of the anti-lynching bill which is before Congress in this session. Your recent talk against this measure was a great disappointment to us. While we believe that you are entirely honest in your feelings, and while we recognize as gladly as do you the reduction in the total number of lynchings in the United States, we cannot agree with you in your prediction that law enforcement has become so effective that another five years will see the end of lynching. The Supreme Court of your own state this year refused the plea of your Governor and Attorney General to remove a sheriff who has made no resistance to the lynching of an innocent man.

In the next place you speak as though lynching was an entirely sectional evil. Do you know that all but five states of the union have been guilty of this crime and that one of the most lawless lynchings on record was of two white men in a western state a few years ago?

We agree that law enforcement and an aroused public opinion have reduced lynchings, but we submit that the most effective law enforcement has been in those states which have anti-lynching bills on their statute books. The states in which lynchings are most frequent have utterly refused to pass such laws and in no one of these states is there the effective law enforcement of which you speak. In fact in 99.2 per cent of lynchings, no lyncher has been convicted. The aroused public opinion to which you refer is due in largest measure to Southern church women whose unremitting efforts have convinced them of the need of the very legislation you have attacked. At their annual session in Birmingham, Alabama, in March, 1934, the Woman's Missionary Council of the Methodist Episcopal Church, South, representing nearly 250,000 Southern women, went on record in favor of a federal anti-lynching law.

We are greatly disturbed at what you say in regard to the injustice of taxing innocent people to pay damages in a county where a lynching occurs. Can you show us a place anywhere in the nation where innocent people do not pay the costs of crime? Moreover, it hurts us to have you talk of a small money fine as injustice and punishment of innocent men when in your own state nine undoubtedly innocent boys have for more than seven years suffered one of the greatest injustices known in modern legal history. We ask you to read the enclosed opinion of Judge Horton of your own state circuit court granting a motion for a new trial in the Scottsboro case on the ground that the conviction was against the weigh of evidence. This opinion was given in 1933. Four years later four of these innocent boys were released after seven years in prison because there was no case against them. Five equally innocent ones are still in jail, one under the death sentence.

We ask you, in your own words, to "seek the truth, know the truth and the truth will make and keep us free."

Gen. Hugh (Crackdown) Johnson deplores the appointment of Dr. Glenn Frank to a leadership among Republicans as the greatest of blunders. It disillusions us because we had scored that three-letter monstrosity of his as the "greatest."

Here's hoping that the city fathers will be as industrious next year in providing the colored youngsters good schools as they were in seeing to it that they got a good, strong jail this year.

Nashville should provide the necessary funds for further improvement of the city's airport just as soon as something has been done about schools and libraries.

It is now plain why Congress is opposed to passing a law which would interfere with fellows who enjoy indulging in a sit-down-strike. They wanted to use it on Mr. Roosevelt when he cuts short their recess period.

The one man among colored Republican leaders who can lay claim to having a following in city, state and nation is Oscar DePriest, and yet our white leaders continue to be intrigued by the fellows whom the Negro masses never nominated or elected to anything.

"As a civilized country, America, out of self-respect, must see that there are no more lynchings. If it takes a federal marshal or a deputy to prevent lynchings, I as a Mississippian advocate the use of these federal officials."

—Mark Ethridge,
Editor, Louisville Courier-Journal.

## BIG TOLL TAKEN BY FARM FIRES

Farm fires in the United States take about 3,500 lives and destroy $100,000,000 worth of property each year, says a recent United States Department of Agriculture publication "Fires on Farms."

Eighty-five percent of this loss is from such commonplace causes as defective chimneys and flues; sparks on combustible roofs; lightning; sponstaneous combustion; careless use of matches, smoking; careless use of gasoline and kerosene; defective and improperly installed stoves and furnaces; faulty wiring; and misuse of electric appliances.

Four simple precautions that the author, Harry E. Roethe, of the Bureau of Chemistry and Soils, gives to reduce needless waste caused by fire are:

Use fire-resistant roofing, dispose of waste and rubbish, never use gasoline or kerosene to start or revive a fire, and, guard against overheating of stoves and furnaces and clean smoke pipes at least once a year.

He also suggests that major buildings be equipped with lightning rods.

In addition to removing the fire hazards, Roethe suggests preparations to fight a fire should one occur, that is, fire-fighting equipment on every farm, kept in a handy place ready for instant use.

A copy of Leaflet 44, "Fire on Farms", may be obtained by writing to the United States Department of Agriculture, Washington, D. C.

## COLTS FULLY GROWN AT FOUR YEARS OLD

Horse colts reach their full height and nearly 99 per cent of their full weight at four years, the North Dakota agricultural station finds in a study of three draft breeds.

At six months, well-fed colts acquired 83 per cent of their height but not quite one-half of their maximum weight. Both increased only slightly at one year, but at two years 96 per cent of mature height and 83 per cent of maximum weight were reached.

At three years the height increased slightly, but weight reached a little over 94 per cent.

The colts were worked after they passed their third birthday, which slowed up their rate of weight increase somewhat, it was reported.

## LIVE WELL ON 25-ACRE FARM 100 YEARS OLD

A comfortable, attractive home and a high standard of rural living on a 25-acre farm, which has been in cultivation for 100 years, is the record of Mr. and Mrs. J. L. Stuckey in the Sweet Home community, Grant county. Mr. Stuckey has cultivated this farm for 50 years.

A live-at-home program and good farm and home management has been responsible for the Stuckeys' success, according to Mrs. Maurce E. Nance, and G. K. Alford, county extension agents.

This year Mr. Stuckey has grown three bales of cotton to four acres of land, an increase of 260 pounds per acre over the average for the county. He also grew 100 bushels of corn, field peas and sodded three acres to premanent pasture. He raises enough hogs for home meat supply.

Mrs. Stuckey does her part by growing 20 varieties of vegetables in her year-around garden. This year she has canned 320 quarts of food, dried 115 pounds of fruit and vegetables, and sold dairy and poultry products and surplus fruit.

Her dairy record from April, 1937, to November 15, 1937, shows a return of $47.85 from cream and $53 from milk and butter sold from her three cows. Her poultry record for the same period shows $108.60 worth of poultry products sold and 40 hens on hand.

My chickens have paid the living expenses, and I have my cream, butter and milk money for other purposes," Mrs. Stuckey told the agents.

Mr. and Mrs. Stuckey have five children in homes of their own.

## METHOD OF CURING BACON DESCRIBED BY EXPERT

Method of curing bacon to produce the best flavor was described yesterday for Tennessee farmers by J. C. Snow, University of Tennessee extension service meat specialist.

"Dont' use too much salt," Mr. Snow warns at the outset. "That will prevent the best flavor. The use of a small amount of salt, with some sugar and saltpeter, will produce a product that not only has a much improved taste over the old salt-alone method of curing, but one that will also keep longer without becoming rancid."

For each 100 pounds of bacon, according to the improved method, use four pounds of salt, one and three-quarters pounds of sugar and five ounces of saltpeter. Pulverize the saltpeter before mixing. Bacon of medium thickness should not stay in cure more than 14 to 18 days. After it is taken from the cure it can then be washed, smoked and wrapped.

To hold it in shape while smoking, take a piece of No. 9 galvanized wire and push it through the bacon cross-wise about an inch from the end, tie with a string at each end of the wire and the bacon is ready to hang up.

## Dr. Farrison Makes Interesting Report Of Tour Of Negro Schools

Greensboro, N. C.—Dr. W. Edward Farrison, head of the department of English at Bennett College, who recently returned from a tour of Negro colleges, made a very interesting and enlightening report of his findings at the regular chapel exercises on Wednesday morning.

The specific purpose of Dr. Farrison's visit to sister institutions was to observe class room work in English by way of comparrison, but incidentally, according to his report he gained some very interesting general impressions as well. "Negro education is making remarkable progress," Dr. Farrison said, speaking of several experimental theories that were being employed.

The institutions visited were Fisk University and Tennessee A. and I. College, Nashville; Talladega College, Talladega, Ala.; Spelman College, Morehouse College, Atlanta University and Clark University in Atlanta, Ga. Dr. Farrison also represented Bennett College at the Twenty-fifth Anniversary exercises of the A. and I. State College of Tennessee.

You cannot make Christ know you if you do not know him.—Bishop Johnson.

## Mrs. Bethune Guest At The White House

Washington, D. C., Dec. 16—(ANP)—Mrs. Mary McLeod Bethune, director of Negro Work in the NYA was a guest of Mrs. Eleanor Roosevelt, at the White House last Monday at five o'clock. Mrs. Roosevelt entertained for the women occupying administrative posts in the government departments.

## Christian Living Schools Get Ward And Eichelberger

Chicago, Nov. 18 (ANP)—Ten Schools of Christian Living were conducted in the metropolitan Chicago area during the week of Nov. 8-12. These schools included courses in "Home and Family Life," "A Church Program For Today," "Social Issues Calling for Christian Action," and "The World Outreach of the Church." There were more than 2,000 paid registrants in these schools aside from the culminating service in the Chicago Temple on the Sunday afternoon following.

There were 60 members of the faculty only two of whom were colored. A dean, a counselor, and four teachers were assigned each school. Dr. A. Wayman Ward, pastor of Greater Bethel A. M. E. church, was a counselor, and Dr. James W. Eichelberger, Jr., Secretary of Christian Education of the A. M. E. Zion church, was a teacher of a course in "Social Issues calling for Christian Action."

## High Court Denies Negro Right To Enter Missouri Univ. Law School

Jefferson City, Mo., Dec. 16—(ANP)—Refusing to issue a writ of mandamus against the board of curators of the University of Missouri, the state supreme court Thursday denied Lloyd Gaines of St. Louis the right to enter the law school.

The suit originally was filed in the Boone County circuit court in January, 1936. When this court decided against Gaines, he appealed to the state's highest tribunal and arguments were heard last May The youth contended he was rejected purely on grounds of race which deprived him of property without due process of law in violation of the 14th amendment, and that the university cannot operate for the sole good of white students to the exclusion of Negroes.

Attorneys for the university asserted state statutes prevented mixed attendance at Missouri schools and Lincoln university either provided the means for education of the state's Negroes made the necessary arrangements with surrounding states to teach them courses not offered at Lincoln.

## Mitchell Loses Supreme Court Appeal; Prosecutor Gets Death Threat

Jackson, Miss., Dec.—(A. N. P.)—In a one-word opinion, "Overruled," the Supreme Court of Mississippi last Monday tightened the hangman's noose about the neck of William Clark Mitchell, 54-year-old electrical contractor who is scheduled to be hanged at Coffeeville on Dec. 17, for the arson-murder of Lewis Bryant, aged Negro farmer and his son, Coot Bryant.

Refusing to reverse its decision of two weeks ago the Supreme Court refused Mitchell s attorneys an application for a suggestion of error. At the former hearing the tribunal for the second time, affirmed Mitchell's conviction in the Yalobusha county double murder and described it as "one of the most atrocious ever committed in the State."

Only two avenues of escape are now open to Mitchell. One is intervention by Governor White, who already has declined to interfere with the execution, the other an appeal to the United States Supreme Court.

Following the State Supreme Court's action Monday, District Attorney J. L. Whitten, in Water Valley, Miss., received anonymous letters threatening him if Mitchell is hanged. The letters were mailed from a Mobile and Ohio train and beside the threats contained newspaper photos depicting Negro trails at various places and newspaper headlines concerning acquittal of Negroes in certain sections.

Sheriff C. B. Busby of Yalobusha County was the first to receive threatening letters in connection with the case which has attracted wide attention because, if the death sentence is carried out, Mitchell will be the second white man in the history of the state to be executed for the murder of a Negro. It was thought here in Jackson that Mitchell's attorneys, H. K. Creekmore and Ross Barnett may again ask Governor White to commute Mitchell's sentence to life imprisonment.

## Boley Mayor Appointed On Board of Regents

Boley, Okla., Dec. 16—(ANP)—Governor Marland Friday appointed Letchen A. Hill, mayor of Boley, as chairman of the Negro board of regent to succeed or replace Editor Roscoe Dungee of the Black Dispatch, who resigned.

Mayor Hill, one of the foremost educator of Oklahoma, was unanimously endorsed by his many white and colored friends. He served as coach of the Boley high school, instructor, Phoenix, Ariz., city school, professor Langston university and superintendent of city schools of Boley and assistant superintendent of Oklahoma county.

## A. Philip Randolph To Aid Red Caps Brotherhood

Chicago, Dec 16 (ANP)—Determined to present a common front against the railway industry in their struggle for job legality, red cap organizations throughout the country have their eyes set on the national unification conference to be held in Chicago, January 14, 15, and 16, 1938.

This, next to the Interstate Commerce Commission's investigation of the employee status of red caps, is one of the outstanding recent developments in the railway labor movement. A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, has consented to act as co-ordinator at the unification conference.

Calling of this conference is the result of a recent meeting held at the Harlem Labor Center in New York City and attended by the following: A. Philip Randolph, Willard S. Townsend, President of the International Brotherhood of Red Caps; Frank Crosswaithe, General Organizer for the International Ladies' Garment Workers Union; John R. Lee, president of the Brotherhood of Red Caps of the New York Central; A. J. McGhee, President of the Pennsylvania System Brotherhood of Station Porters; T. M. Winchester and Harry I. Jones, Secretary and Educational Director respectively of the International Brotherhood of Red Caps. Conference headquarters in Chicago will be established in the new offices of the Red Caps Brotherhood in the Franklin Building, 35th Street and Michigan Boulevard.

On the Advisory Council of the International Brotherhood are: Dr. Paul H. Douglas of the University of Chicago, Philip Murray of the Steel Workers' Organizing Committee, Homer Martin, President of the United Automobile Workers' Union, Lester B. Granger of the National Urban League, Heywood Broun, newspaperman and President of the American Newspaper Guide.

## Oklahoma Teachers Hear Educators On Special Lecture Tour

Boley, Okla., Dec. 16—(By T. A. Douglass for ANP)—The entire force of Ofusgee county colored teachers, both non-active and active, attended the special teachers institute held at the Boley high school in which they heard Dr. W. T. B. Williams, vice president of Tuskegee Institute, field agent for the Southern Education, Inc., and Miss Shellie T. Northcutt, special Jeanes supervisor over 14 special lectures and general methods of teaching in Negro schools.

Dr. Williams greatly emphasized Teacher responsibility of schools. Along with these special guests were State Agent E. A. Duke, member of the State Board of Education, and Mrs. Viola Griffith, county superintendent of Public Instruction.

## Federal Investigator Held On Liquor Charge

New York City, Dec.—(A. N. P.)—Charged with conspiring to possess, transport and sell whiskey and alcohol upon which no tax had been paid, Theodore B. Turner, colored, a former prohibition agent and now an Investigator for the Federal alcohol tax unit, was held in $1,500 bail Monday when arraigned before United States Commissioner Garrett W. Cotter.

Operatives told the Commissioner that 5,000 gallons of illicit whiskey and alcohol had been distributed weekly in the Bronx, upper Manhattan and Brooklyn by Turner and alleged conspirators.

## Teachers Lead Landscape Work

Heidelberg, Miss., Dec. 16—(ANP)—With all the vocational agriculture teachers in Jasper, Wayne, Jones and Forrest counties participating, a landscaping demonstration was held last week in the Friendship school community. Grounds of a farm home were landscaped with use of native shrubs and trees at no cash cost whatever. Each of the nine teachers present was urged to carry out a home beautification program in his community.

A Maori village, complete in every respect, may be transported from New Zealand to San Francisco for the 1939 World's Fair.

What is the use of new inventions and new knowledge if they lead us only to a dark age?

—Admiral Byrd.

Army engineers are building highways across Yerba Buena Island to connect the 1939 Golden Gate International Exposition with the San Francisco-Oakland Bay Bridge.

# Citizens Rally Nobly In Drive To Lift Mortgage On Colored YMCA Building

## Leaders Report Money Being Received Daily By Mail And By Solicitors In House-to-House Visits: Expect All Nashvillians To Aid In Success Of Campaign

Money has already begun to come in on the mortgage fund of the Colored Young Men's Christian Association Drive. This statement was made by the leaders this week. A personal visitation, a house-to-house campaign is being conducted. It is expected that every one of the forty thousand citizens of Nashville will give something.

The workers in the campaign have beautiful chronium banks with a picture of the "Y" Building on it, and each bank is worded "Colored Y. M. C. A. Mortgage Fund, Nashville, Tennessee." The keys to these individual banks are held by the custodian and treasurer of the Colored Y.M.C.A.

The campaign committee is asking the citizens to cooperate, to contribute, to make donations. They are asking the solicitors when they feel that they have as much as one dollar in these individual banks, to turn them into the treasurer, J. C. Napier, or to the custodian, A. G. Price, at the Citizens Savings Bank and Trust Company. They will open these individual soliciting banks, give a receipt for the amount turned in, return it to the worker, who in turn is being asked to go right back on the field.

Another city-wide meeting is to be called immediately after the new year, to have the first report and to complete the organization. It is expected that six hundred people will be out in the streets of Nashville knocking upon every door, ringing every door bell, contacting every red-blooded citizen who has race and civic pride, calling upon them to "Let us finish what was begun years ago."

Up to the present the following persons have been assigned to solicit and have been given one of these securely locked banks:

Messrs Wm. Simpson, 1109 Summit St.
J. D. Minnis, Supreme Liberty Life Ins. Co.
T. S. Walker, Sec. Y. M. C. A.

## "Princes Awake" Anthem

**Biblical Piece of Music, Words By The Late Dr. E. W. D. Isaac and Music By The Late Wm. Roseborough Attracting Increased Attention.**

"PRINCES AWAKE" an Anthem of Biblical hope, written by the late Dr. E. W. D. Isaac and set to music by the late Wm. Roseborough, has attracted so much attention until an extra edition has been demanded. The Anthem was taken from that passage of scripture which says: "Princes shall come out of Egypt, and Ethiopia shall soon stretch forth her hand unto God." It has been pronounced as the most beautiful piece of music ever rendered by a church choir, a glee club or choirs. It has been sung by Baptists, Methodists, Congregationalists and all other denominations. "It is now available" said Secretary Boyd, "for ten cents a copy."

The song is copyrighted, and the National Baptist Publishing Board holds the copyright as well as the publishers right. Some of the leading citizens of this city said only recently that if the spirit of this song could be accepted by the members of the race here in the city, it alone would change conditions. It would inspire the young, soothe the old, and point the way to this present generation, so that posterity would be the recipients of a greater definite program along our religious and racial life.

"PRINCESS AWAKE" is unexcelled, unequalled, without a superior in the realms of religious Anthems, according to the statements of many of the best known musicians, directors, chorus leaders and choir leaders.

## College President Trusts Judgment Of Wife In Big Things

Prairie View, Texas, Dec. 30—(By Fritz Canslef for ANP)—Mrs. W. R. Banks, wife of the principal of Prairie View State Normal and Industrial College, would doubtless qualify in any review of the list of booklovers of the state as one of its leading authorities on current literature. Trained in Library Science at Hampton Institute and a teacher of English literature for a number of years, she has devoted much of her time to the study of the best of current literature including fiction, philosophy, economics and sociology.

Mrs. Banks studied at Atlanta University in her girlhood and there met her husband who was also a school mate at the University. Her ideal union with the distinguished Principal of the Texas State school has existed for more than twenty-five years and Principal Banks frankly states that much of the leadership which he has given to the work of the school and to education in the state has been the result of her council and guidance. "I am never quite satisfied with an important or far-reaching decision or declaration affecting policies in education or a public address on difficult or controversial topic until she has given it study and approval" is the statement of Mr. Banks in evaluating her record as a helpmeet for a quarter of a century.

## Blind Girl Wins

New York City—Last Wednesday a blind girl, slender, pleasant-faced Frances Berry, received the plaudits of several hundred students, parents and teachers as she was awarded first prize in the annual essay contest of the New York State Chamber of Commerce. Miss Berry is the first blind students and the first member of her race to win major honors in the competition. The heroic girl read her essay from a script in Braille. Her subject: "What Are My Responsibilities as a Citizen in the Occupation Which I May Choose?"

Possibility of the development of "metal lamps" through which "black light" will stream for fluorescnt lightng of San Francisco's 1939 Exposition, is being discussed in electrical laboratories.

## He Thought

**Memphis,** (ANP)—Because they mistook 15 10-gallon empty cans on a truck for whiskey containers, Patrolmen R. J. Newsome and Lee Quianthy, Jr., chased the truck and when the driver R. D. Banks, 21, failed to stop, shot both of the rear tires. Arrested with Banks was his companion, and Emmett Walton, 17. The charges: Reckless driving, resisting an officer and breach of the peace. Banks said he did not know the police were following him until they started shooting.

A little learning is a dangerous thing.—Pope.

## Eh! Goody!

Cincinnati, Dec. 30 (ANP)—Convicted on charges of pointing firearms and assault and battery, Robt. Moore, recently suspended patrolman, Friday was sentenced by Municipal Judge Samuel W. Bell to serve 13 months in the city work house. He awaits trial on charges of assault with intent to kill.

Samuel Montgomery is the accuser. He said the officer, after being suspended for misconduct, took him from the Laurel Homes housing project and beat him over the head and face with a revolver, and then forced him to go to the home of Elsie Jones where the policeman also beat the woman.

Jealousy was blamed for the attacks.

# VIOLETTE ANDERSON, CHICAGO LAWYER, ZETA HEAD, DIES

## Brilliant Woman Succumbs on Eve of Sorority's Annual Boule

Chicago, Dec. 30 (ANP)—Attorney Violet Anderson Johnson, one of the best known feminine lawyers in the country and Supreme Basileus of the Zeta Phi Beta Sorority, passed away here Tuesday. Her death, which resulted from an ailment from which she had long been suffering, was unexpected, because she had been so active during recent weeks in preparing for the annual boule of the sorority, which she headed and had planned to attend its sessions in Houston, Texas, during Christmas week.

Born in London, England, of a German mother and West Indian father, Mrs. Johnson came to Chicago as a child. She was educated in the public schools, finishing also the Chicago Anthaeneum and Chicago Seminar of Sciences. She became a court reporter in 1905 and finished the Chicago Law School in 1920, entering an extensive and successful practice the same year. She was legal advisor for the Northern District of Federated Women's clubs, served as vice president of the Cook County Bar Association, and was active in civic and social affairs in the city.

In 1933 she became Supreme Basileus of the Zeta Phi Beta Sorority, devoting her time, energy and unusual capabilities to the development of the organization which became one of the ruling interests in her life. As she lay on her sick bed, she kept papers beside her and continued to transact business relating to the sorority. As late as a week before her demise, she was busily planning her trip to Houston.

Mrs. Johnson's last words were, "Tell the girls to keep on going ahead. Put over the boule with a bang. Don't let my passing throw the slightest shadow of gloom. The organization has a grand mission before it."

She was buried in Lincoln cemetery after funeral ceremonies held at Jackson's Chapel, Thursday, Dec. 24. She is survived by her husband, Dr. Albert E. Johnson.

## French To Use "Big Money" In Ethiopian Trade

Rome, Italy, Dec. 30 (ANP)—An authenticated report was current here this week that 100,000 thalers have been coined in Brussels on order of certain French interests, for circulation in Ethiopia to compete with Italian coins and currency.

It was said that because of the present low price of silver, a large profit can be made by using the coins The silver thaler, or Maria Theresa dollar, is still held in great favor by the Ethiopians who have always been impressed by its tremendous, cartwheel size. It was hinted in some quarters in Rome that a move against Italy may be behind the shipments.

Approximately 1,400 men are now employed in construction of Treasure Island, site of the 1939 Golden Gate International Exposition on San Francisco Bay.

## Woman Killed By Hit-Run Car

Florence, S. C., Dec. 30 (ANP)—Mrs. Eugenie Rhodick, 67 years old, died here at McLeod's Infirmary Monday as the result of injuries received the day before when she was struck by a hit-run driver in the suburbs of th city. Police are holding two men, Joe Green and Roy Jones for questioning.

Mrs. Rhodick and her daughter were walking along together when the car, driven at terrific speed, hit the elder woman. Rushed to the Infirmary she was found to have a fractured skull, both legs broken and internal injuries.

A Fine Arts Committee under chairmanship of Herbert Fleishhacker, has been named for the 1939 Golden Gate International Exposition.

May we seize every opportunity of doing good, since "We shall not pass this way again."

A total of $1,000,000 is budgeted for illumination and electrical installation at the 1939 Golden Gate International Exposition.

# TWO HOURS IN THE STATE PENITENTIARY

### Globe-Independent Reporter Finds Many Improvements and Unique Features Among Colored Inmates

By LUTHER CARMICHAEL

The telephone call was from the office of Mr. C. C. Woods, deputy warden at the Tennessee State Penitentiary.

"Would I like to come out and get some data on the activities of the Negro inmates?_____"

Well, I did, and there was no month of Sundays doing something about it.

Forty minutes later I alighted from a Railway and Light Express. (West Nashville car to you) directly in front of the penitentiary for my first visit. After a few inquiries at the information desk, I was directed to the home of Mr. Woods, with whom I chatted for about twenty minutes.

The gist of his conversation concerned the Negro inmates' "Honor Club." From what the popular official told us, we gathered that the club was something on the order of a student council. But wait_____we were to get the privilege of seeing and talking with the leaders of this organization; reading their Constitution and By-laws; shaking hands with a number of the members in their meeting room after having rendered a short talk myself, and hearing a splendid quartet from the organization render a number of musical selections.

"The colored citizens have not been showing very much interest in their people out here," Mr. Woods said, "and I'm mighty glad to have someone come out and write about the good things which they are doing."

"It was through the courtesy of the deputy warden that I was assigned an escort through the buildings and grounds, and to the meeting place of the "Honor Club."

#### THEY ALL ARE HUMAN

If there is anyone who harbors a belief that folks who work out at the "pen" are a group of cruel, heartless and unsympathetic beings, they should take a trip out to the Westside institution and learn the real facts.

Those guards are courteous, though of necessity, they must be firm and business-like. My escort was composed of a guard and three members of the "Honor Club," Simon H. Glanton, president; James M. Tydus, general manager and A. C. "Kid' Rucks, secretary. Rucks is well-known throughout the south as a boxer.

Once inside the gates, I was conducted to the "Honor Club's" headquarters. There I found a group of energetic young men—men who were apparently undaunted, though incarcerated behind prison walls.

"We have the finest warden in the country," one trusty told me. "I'd be glad to see Warden Joe Pope, governer of the state or president of the United States.

#### CLUB ORGANIZED IN NOVEMBER

The Honor Club became an organization the past November 12 with E. L. Torrance as the first president. Just how popular the club has become since gaining official acquiescence may be gleaned from the fact that the membership has jumped to about 200 in a little more than a month.

The boys have a constitution that is full of common-sense. Lots of our outside organizations might try some of the rules which this club has dished out. Here are a few highlights:

**No bad language and gambling. Any member caught wilfully swearing or gambling will be handled by the board of the club. No loafing in the club room. Any member caught disobeying any official will be tried by the board and turned over to the deputy warden's office.**

According to officials at the prison, the club has proved a valuable asset in maintaining discipline. Take the case of Sam Johnson, the trusty who was arrested a few days ago after a "French leave." It was a jury from this club that recommended the ten days solitary confinement for the young man. A number of things were said anent the Johnson affair, but very little was publicized concerning the fact that Johnson was just one of many other trusties—trusties who have not betrayed the trust of prison officials.

In a statement read before the meeting of the club a few days ago, the members strongly condemned the actions of Johnson in telling newsmen that he was allowed to leave the grounds without a guard as escort.

"That is one of the rules and regulations here: that no trusty can leave the prison without a guard escort. This is carried out, regardless of race or politics. If Johnson lies about his own name, he is liable to lie about anything else out here_____

"We are very fortunate in having Messrs Joe Pope and C. C. Woods, as warden and deputy warden, respectively. This place was once overflooded with dirt, but it's a different story now. They have accomplished more in eight months than some other administration accomplished in an entire term."

The board of the club meets every Monday at 1 o'clock, while the membership meeting is held on Saturday afternoons. Sunday school is held each Sunday at 11 o'clock. Along with these activities, an average of one program per month is held in the prison chapel.

#### MUSIC HERE, TOO

Some has aptly remarked that wherever you find a bunch of our folks there you will find good music. The Tennessee State Prison is no exception to this rule. Fact about it, I discovered some voices of real promise out there under the direction of J. Williams.

They have a splendid quartet composed of Frank Branch, first tenor; J. Williams, second tenor; Jim Jones, baritone, and Paul Austin, bass. No doubt this group of young men have added numerous happy hours to the lives of their fellowmen.

Athletics also play an important part in the activities of our young men out at the prison. Baseball, football, basketball and boxing are among some of the sports conducted. The boys tell me that they have some real good performers in all of these sports. Kid Rucks says that he still gets a kick out of his favorite pastime. He looks just like he is in the pink of condition. They have a nice athletic field, which, by the way, is located just to the west of the death house.

#### CELLS IN GOOD CONDITION

The management of the prison is to be congratulated on the splendid manner in which the men's living quarters are now being kept. Every cell is immaculately clean, and the men are about as contented as you will find at any other prison. Simon H. Glanton, one of young men who escorted me through the place, has a very tempting library. Naturally, he spends quite a bit of his spare time reading.

All in all, from what we could glean, the prison is at last beginning to serve ALL of the purposes for which it was created. Our prisons have too often served as a place of punishment alone—a kind of Hades here on earth. While there is necessarily a certain amount of punishment in all penal institutions, the fact must be borne in mind that numerous inmates must sometime come out and enter society again. Have they been reformed? That's the question.

We saw and heard enough out at the Tennessee prison the other day to substantiate our contention that the spirit of reform, rather than the spirit of punishment, permeates the very atmosphere. There seems to be a feeling among officials that some day they will send back to society a group of persons who will become assets, and not liabilities.

Governor Browning, Commissioner Cate, Messrs Pope and Woods and their corp of prison workers are doing a commendable job in prison reform.

Here's a hope that neither ulterior motives nor "powers-that-be" will seek to impede the future progress of this work which thus far these men have so nobly advanced.

# Relief Clients Happy As Jobs Open To Help Dispell Their Gloom

**Cleveland,** Dec. 23—(By Clarence L. Simmons for A. N. P.)—A goodly number of Cleveland's 57,000 relief clients are happy for word from Washington and Columbus assures them that the WPA is sending more than 5,000 workers back to work, backed up by the word "immediately" from the authorities.

At the same time the Ohio Bell Telephone company announces that the company contemplates spending $7,000,000 here in 1938. This is good news to the residents of Ohio and Greater Cleveland in general, but it is non-effective to Negroes since the Bell Telephone company doesn't hire Negroes in Ohio state.

Announcement from Columbus notified local authorities to start making assignments of new workers "at once" to the WPA. So far no "quota" has been set for Cleveland. It also stated that the assignments would be flexible and that Clevelanders may be sure of getting their share of employment.

More than 3,246 men and women awaiting assignment on existing WPA projects were replaced Thursday. After this replacement there were about 2,600 others eligible for WPA work and will be given jobs as soon as possible.

A large number of Negro workers who have been on the "waiting" list have been placed and a number of them who had been employed and laid off some months ago, have new assignments. The first to go to work were those who were in immediate need.

It is also a blessing to the relief agencies who were being worked night and day in their effort to administer aid to new applicants.

Reports show that more than 1,000 persons were seeking relief who had been working in private industries and had been laid off with the new business slump in Cleveland. In an effort to meet the demands of the relief situation the mayor had ordered city service men from their jobs so as to make up the amount necessary to carry the relief load.

This move on the part of the local administration was not the wisest thing to do, for the city employes were barely getting their pay as it was and as soon as they were laid off, many of them rushed the relief windows seeking aid.

Colonel Joseph H. Alexander, county director of WPA, asserted that there are enough vacancies existing in projects already under way to absorb many workers, except for white collar workers who number about 20 percent of the total eligible. By the first of the year we expect to have ample new projects authorized."

An all-time record number of direct relief applications was received here Tuesday. The total was 356, according to reports. The number is rapidly increasing. A weekly record of 1,521 was set last week. About 37½ per-cent of these new applications were colored citizens.

# Ireland Recognizes Italy's Conquest of Ethiopia

Dublin, Ireland, Dec. 25 (ANP)—Following the decision of the Irish Free State to appoint a Minister to Rome, Italy, in return for that country's appointment last year of a Minister to Dublin, it was learned the Dail Eireann (Irish Legislature) had given de facto recognition of the conquest of Ethiopia by Italy.

At last Tuesday's meeting of the Dail President Eamon de Valera of the Irish Free State said that the new Irish Minister to Rome would be accredited to the King of Italy as King, and Emperor of Ethiopia. Questioned, President de Valera said it was necessary that if a Minister were sent to Rome that he should address the King of Italy by the title he had chosen, so "we are now recognizing the annexation of Abyssinia."

# Rural Californians Organize Against Racial Prejudice

Los Angeles, Dec. 23—(ANP)—At last steps are being taken that will have a favorable bearing on the employment situation in a district to which thousands of Filipinos, Mexicans are shipped each season. This is the rich agricultural district in the northern part of the state which should afford much better work opportunities for colored citizens. For the protection of the members of the race who are victims of discrimination and injustice, tentative plans are being formed at Visalia to organize a protective league in the San Joaquin Valley. An assemblage is scheduled to meet soon, at which time a constitution will be drawn up.

Those on the advisory board will be Rev. Roy Handy, Bakersfield; Mrs. Emma Drisdom, Bakersfield; Mr. Broom, Earlimart; Mr. and Mrs. Norman Young, Visalia; Mr. Frank Milner, Tulare; Mr. T. E. Crawford, Sr., Tulare; Rev. G. H. Maunder, Hanford.

# Former Slave Who Lived In One County 89 Years, Dies At 102

Helena, Ark., Dec. 23 (ANP)—Mrs. Henrietta Rice, 102-year-old farmer slave and known as the oldest resident of Phillip county where she had lived for 89 years, died here Monday a pneumonia victim. She came to Helena in 1848 from Alabama as the slave of Hopkins Rice.

When the Civil War ended, Aunt Fanny as she was familiarly called refused to take advantage of her freedom and stayed with the family that had owned her. She served four generations of the Rice family and took their name as her own.

# Wants "Crisis" Put In All Libraries

New York, Dec. 23 (ANP)—Enthused over an article by William Pickens in the December Crisis which the National refused to publish, Rosa M. Miller, of Lorain, O., has suggested that thinking Negroes for 1938 adopt the slogan. "The Crisis in every public library in the U. S." She is herself paying for a subscription for the Lorain Public Library.

# Secretary National Negro Congress, John P. Davis

### John P. Davis, in Radio Hookup From Moscow Radio Center Speak to Millions of Listeners Concerning His Impression of Socialist Society; Broadcasts Greetings of Negro People to Soviet Peoples

Moscow, Ussr. Dec 16 (ANP)—In the name of the American Negro, John P. Davis, secretary of the National Negro Congress, in a great broadcast from Radio Center greeted the peoples of the Soviet Union in connection with the 20th aniversary of the Great Socialist Revolution in Russia.

Mr. Davis is spending several weeks in Soviet Russia as secretary of the American workers delegation to the Soviet holidays in honor of two decades of worker rule in former Tsarist Russia. He is accompanied by his wife, Margaret Davis.

Prefacing his radio speech with words of "Greetings to the Soviet peoples from the masses of Negro people of America," Mr. Davis then spoke of the impression which the great demonstrations of Red Square made on him on Nov. 7. He said:

"As I stood on your great Red Square in Moscow a few days ago, standing for hours as hundreds of thousands of happy men, women and children rejoiced on the 20th anniversary of the Great October Revolution of 1917. I knew that no just person, no person who is honest and who loves democracy, no person who desires peace and prosperity for all the world could fail to realize that the Soviet Union stands today the greatest force for social good, for democracy and peace and progress that the world has ever known."

The military might of the Red Army protects and serves not only the Soviet peoples and the Socialist country, it is an army which safeguards the peace of the world, he added. Millions of toilers throughout the world who wish to live in peace, free from the treats of warmongering international fascism, take heart in the power of the Workers and Peasants Red Army of the Soviet Union, Mr. Davis said.

Concerning the new Soviet Constitution, which he has studied closely and seen in action, Mr. Davis declared to his radio audience:

"I have seen while I have been here the concrete proof that your constitution, the Constitution framed by Stalin and other leaders of the Soviet Union, is a constitution that expresses not things as you hope them to be, but things as they actually exist for every citizen in your great country. I am an American Negro. Unfortunately, some of my white fellow countrymen would deny us the privileges of citizenship given under our American Constitution. But in your country and under your Constitution such acts would constitute a criminal act. I refer to Article 123 of the Soviet Constitution which declares:

"The equality of the rights of citizens of the USSR, irrespective of their nationality or race, in all spheres of economic, state, cultural, social and political life, is an indefeasible law."

"Any direct or indirect restriction of the rights of, or, conversely, the establishment of direct or indirect privileges for citizens on account of their race or nationality, as well as the advocacy or racial or national exclusiveness or hatred and contempt, is punishable by law.

As further in support of the broad mass democracy and political equality guaranteed to all citizens of the Constitution of the Workers Republic, Mr. Davis pointed out the fact that a Negro sits as an elected member of the Moscow city government and the freedom in all walks of Soviet life of scores of minority nationalities and races of all colours.

Bringing to a close his speech, which was listened to by many millions of radio listeners, Mr. Davis emphasized that, following what he has seen and lived through during his sojourn in Soviet Russia, "I can understand now the deep feeling you have for the builders of your united Union of Soviet Socialist Republics. I can understand now the meaning of the admiration you have for your leaders. And with all my heart, I can say for my own people, for the Negro people of my country, Long live the Soviet Union! Long live the Memory of Lenin! Long live the Greatest of present-day Leaders of the Working Class, Joseph Stalin!"

#### INSTALL COLORED

placed about the shoulders of the first Negro to be honored with the presidency of this institution, the massive audience arose and applauded enthusiastically.

**Inaugural Address**

"I believe that the first concern of the educative process ought to be that of producing, as finished products, human beings who think and act and, therefore live on the highest spiritual levels," Dr. Haywood declared.

The newly elected president expressed as his aim stressing the need of hard, honest, productive work as one of life's supreme value.

Among the prominent out-of town visitors witnessing the inaugural exercises was Doctor W. L. Haywood, brother of the president and prominent surgeon of Oklahoma City, Okla.

Hundreds of messages in the form of telegrams and letters coming from educators and leaders of both racial groups in many parts of the nation, in which words of congratulation were extended, were referred to by President King.

### RESOLUTIONS OF THE 17TH ANNUAL

(Continued from Page 4)

programs of social bettement. We further recommend that rural leaders spend all available time in such professional improvement as will enable them better to execute a desirable type of guidance to Negro farmers in search of practical farming information.

We deplore the vast world expenditures for implements of war and other deadly means of destruction. We recommend a "rethinking" for American citizens a steady continuous development of programs of upbuilding for the homes and farms, the school and the church; a spirit of cooperation, good will and mutual understanding of all races; greater employment and economic opportunities and prosperity for all.

### ROBERT R. CHURCH

(Continued from Page 1)

stitutes it, is to stop the exodus of the colored voter from the ranks of the Republican party.

"If your program, as it appears to do—contemplates the further disfranchisement and proscription of the Negro in the South, you should state your position frankly and without veiled words, so that the American Negro will be put on notice and be able to govern himself accordingly—if your suggestion is adopted by the Republican Party."

### ASSOCIATED PRESS NEWS ITEM

### LINT LOAN PAPERS TO BE INVESTIGATED

Counsel for the Commodity Credit Corporation disclosed tonight that an investigation to uncover any fraudulent applications for government cotton loans would be extended into all of the cotton States.

John D. Goodloe, the corporation attorney, made this disclosure after recommending to the justice department that charges be filed against 25 or 30 growers and ginners in Arkansas.

He said one or two cases were under investigaton in Georgia, Virginia, Tennessee and North Carolina, and that a general check-up would be made in other cotton regions.

### INVENTOR CLAIMS

(Continued from Page 1)

tive meeting of officials of the Memphis Cotton Exchange today, he said.

A manufacturing plant will be established in Memphis and he expects to have at least 10 gins in operation next fall, Mr. Watson said. He pointed out that the machine gins wet as well as dry cotton.

He bases his estimate on the increased value of cotton on the fact that it will be cleaner and that the length of the fiber will not be cut by the new gin.

### HOW TO GET BENEFIT

(Continued from Page 1)

If the creditors are unwilling, the farmer may file under the bankruptcy subsection of the act, asking that he be allowed to remain in possession of his property for 3 years.

3. The property is appraised and the farmer proceeds to farm, paying rent as set by the court. The court supervises the farming, and may for cause remove the occupant.

4. At the end of 3 years, or before, the farmer may pay off the appraised debt. However, there is where the hitch comes in. The creditor has the power to demand a reappraisal, or force sale at public auction. Consequently, the act does not force an adjustment of debt, as provided in the original act, but merely for a breathing spell. The change was made after the court's invalidation of the original law.

## U. S. Grants $10,000,000 For Long Neglected Chicago Housing Project

Chicago, Dec. 23 (ANP)—The United States Housing authority Thursday informed John R. Fugard, chairman of the Chicago Housing authority, that $16,000 had been tentatively granted Chicago for its slum clearance program, of which $10,000,000 would be used immediately to construct the long delayed and bitterly fought Southside housing project to accomodate between 1,500 and 1,700 Negro families. Another 10 percent, or $1,000,000 must be defrayed by local interests.

"Our major consideration in view of the new allotment from Washington must be for residents in the distressed area of the Southside where insanitary, dilapidated buildings abound." Mr. Fugard said. "When we have cared for this slum condition, we shall employ the balance of the money on additional projects."

Ninety percent of the ground, which fronts for a quarter mile on South Parkway, the main Negro residential street, from 37th to 39th streets, and for a half mile from South Parkway to Cottage Grove, has been acquired, the tenants ousted and is about half cleared off by WPA workers. Legal obstacles exist in acquiring the remaining 10 per cent but they are not serious. Plans call for the construction of certain units of the project and acquisition of the rest of the property whenever available.

Money once before was appropriated in Washington for building the project, but powerful white realty interests bordering on the community waged a bitter legal fight and delayed construction so long that funds were shunted to other works. Southsiders have organized to combat this attitude. It was announced the original project will be restuddied in the light of the experience of the past two years.

## Southsiders Protest Chicago Syphilis Report As Unfair

Chicago, Dec. 23—(ANP) Protests against figures on syphilis among Chicago Negroes released last week by the United States Public Health Service, and charges that their release violated an agreement with colored physicians, have been sent to county and federal health departments by Southside doctors and social workers.

The statistics, based on a survey made last spring of the patient records of 1,510 private physicians and 34 clinics, were given out before the Chicago Medical society Tuesday night and before directors of clinics who met at the headquarters of the Council of Social Agencies in the afternoon, and heralded as "the most extensive study of syphilis prevalence ever made in an American city." They were then released to all of the daily papers in the nation.

The report pointed out, among other things, that "the Negro with syphilis is one of the biggest problems in Chicago, for while the diseas in general is more common in the Negro population than in the white, the ratio in Chicago is higher than for most communities in which treatment facilities are accessible." Only 7 percent of Chicago's population is Negro, the report added, yet there are eight colored syphilitic cases to every one among the whites.

These figures and their implications formed the basis of the Southside protest. When the survey was made, Negro doctors got white agencies to agree that no statistics would be released until they were first consulted. This agreement was violated.

Local colored doctors, when they made this request, pointed out that available figures would not give an accurate picture of conditions. Most sufferers in the lower income group attend clinics where treatment is either completely free or else given at a small, nominal cost. Since nearly all the Negroes are in this lower income group, they are forced to attend clinics where every case is reported to officials.

Whites, on the other hand, go in the main to private physicians since they are better able to pay these costs. Despite the recent campaign, few practicing doctors will report such cases although they have been asked to do so. They haven't relinquished the idea that it is a violation of professional ethics to make such reports on their clientele, although it is given in strictest confidence and a number may be given instead of a name.

## ANNOUNCE PROGRAM FOR OPERATION OF CCC CAMPS IN 1938

Washington, D. C.,—A program providing for the operation of 1,500 Civilian Conservation Corps camps, including 142 colored CCC companies during the January, February, March quarter of the current fiscal year was approved today by Robert Fechner, Director of the Civilian Conservation Corps. As 1,604 camps are now in operation throughout the country, 104 camps, ten of which are colored, will be closed prior to January 1, 1938. Vacancies in the enrolled strength of the CCC will be filled by a replacement enrollment program beginning January 1, 1938, and ending January 20.

While exact figures will not be available until later this month, preliminary estimates indicate that approximately 32,000 young men including 3,000 colored youth, between the ages of seventeen and twenty-four will be needed to bring the enrolled strength of the CCC to 280,000, of which number there are about 25,000 colored CCC enrollees. In addition to the men enrolled in the CCC proper, work will be provided for approviately 8,000 Indians on Indian reservations and 5,000 territorials enrolled in camps in Puerto Rico, the Virgin Islands and Hawaii.

Officials of the Department of Labor, which is responsible for the selection of junior applicants, advised Director Fechner today that a preliminary survey indicated there will be many more applicants for CCC work in January than will be needed to fill vacancies in the camps.

"The camp reductions are being made in conformance with plans prepared last year when the CCC appropriation for the current year was approved," Director Fechner said. "The funds appropriated were sufficient to maintain 1,849 camps during the first quarter of the current fiscal year, 1,604 during the second quarter and 1,500 during the final half of the year. Enrollees assigned to camps scheduled for closing will be transferred to other camps."

## New Jersey Conference Of Social Work Holds 36th Annual Meeting

Ashbury Park, N. J., Dec. 16—(ANP)—Having as its theme "Community Forces Making Democracy Effective," the 36th annual meeting of the New Jersey Conference of Social Work concluded its three-day session last Saturday at Hotel Berkeley-Carteret. David Fales, Jr., is the conference president; Robert C. Weaver, adviser on Negro Affairs, U. S. Department of Commerce of the Interior, addressed the delegates on Housing.

## PROPAGANDA GOES IN FOR NEWS

There is such a thing as overdoing even so worthy a thing as pitiless publicity. This is especially true when suspicion suggests an unfair motive behind the publicity.

Note how the press made a two-day sensation of some petty stealing upon the part of a colored inmate of the state prison. The fact that the man proved unfaithful and even dishonest was news, undoubtedly. But when one considers the amount of dishonesty going on in high places, in which thousands of dollars are being "pocketed" it is plain that our crusading press should go fishing in water where the "catch" would consist of "big fish" rather than a few minnows.

Suspicion suggests to fair-minded persons hereabouts that newspapers are determined to publish from the housetops every bad thing that happens under the administration of Gov. Gordon Browning and will merely "damn with faint praise" the many worthy reforms accomplished or attempted. Nevertheless, "truth is mighty and will prevail" and also it is pretty difficult to substitute propaganda for news and fool those citizens who do their own thinking.

Despite all that has been said and will be said about the Browning administration, the fact remains that he has attempted more courageously than any other Chief Executive to put an end to the most corrupt regime of vote-stealing and election frauds that ever got a strangle hold on the franchise of this state's citizens. It took courage to lay a dragnet which would catch the "big fish" in the crime of robbing the people of their birthright. Gov. Browning chose to be courageous rather than follow the formula of "grand-standing and four-flushing" as a response to public demand for a house-cleaning.

The gratitude of the honest people of this state, together with the enmity of scofflaws, should be, and doubtless will be accepted by Gov. Browning as the most prized Christmas gift he will receive at the end of his first year in office.

## LOGICAL LEADERS

Much has been said and much will be said as to the reason why "the old faithfuls"—the Negro contingent of the Republican party in recent years has gone Democratic in large numbers. Our white leaders continue to be informed by a group of our vocalists whose one song is that the sole reason for the desertion of Negro voters was President Hoover's attitude toward the race in the matter of political patronage.

Such a theory is based upon the belief that the masses of Negro voters need only to know that a few of their "big wigs" get a few big offices and a few others are called in to sit on committees to make them steadfast and immovable as adherents of the Grand Old Party. The sooner the white leaders of the party perish that thought and go out among the Negro masses and get their views on what it takes to make them and keep them Republicans the better able they will be to meet the current competition for colored votes.

The Negro masses long ago became convinced that a "strong, centralized" minority of their race were in politics solely for what would accrue to them personally. The zeal of these leaders for patronage completely sealed their mouths as far as making a fight for the enfranchisement of the Negro in the South, for the passage of a federal anti-lynching law and for the curtailment of discrimination toward young colored men and women who aspired to jobs in the Civil Service.

It should by now occur to the white leaders of the Republican party that there is a need to listen to some others than the men who were present and voting when the Negro masses got up and walked out of the G.O.P. wigwam.

In any plan to inspire and re-enlist colored voters for the Republican party, the white leaders should rely upon the advice of those colored leaders who can logically lay claim to a leadership among the Negro masses by proving that these masses have nominated and elected them to positions of responsibility In that group, first and foremost is the Hon. Oscar DePriest who stands head and shoulders above any other colored man claiming to represent the wishes of Negroes in American politics.

The Negro masses on three occasions sent Oscar DePriest to the United States Congress. His career in Congress was one in which he courageously espoused the cause of the Negro masses by fighting for the rights vouchsafed to them under the Constitution. His record of loyalty to his people and therefore of loyalty to the best traditions of the Republican party, makes him a logical man upon whom to rely for enlightened guidance in the matter of getting colored Republicans back into the fold.

In addition to Mr. DePriest, there are other men whose right to the title of "leader of the Negro masses" can be claimed on the strength of having been elected to positions as legislators, members of city councils and other positions in cities and states. Many of these are young men and thereby carry influence with the masses of our young people who are not particularly enthused over the way the "Old Guard" ran things.

The best assurance the Republican party can have for getting the necessary votes to make it a victorious party is that it will entrust the vote-getting to men and women whom the masses trust rather than those who boast of their leadership without ever having won honors by choice of the people.

Vol. XI NASHVILLE, TENN., FEBRUARY 15, 1938 No. 1

## SWEET POTATOES BEST CROP

### C. W. Dwiggins, Amity, Clark Co., Establishes Record

C. W. Dwiggins, Amity, Clark county, has found that sweet potatoes give better returns than cotton on his hill farm, he told Clifford Alston, county agent.

Last year Mr. Dwiggins produced 1,950 bushels of state certified Porto Rico potatoes on 75 acres, which he values at $2,350. They were produced on land that usually makes about 175 pounds of lint cotton per acre.

The potatoes were planted in May and June. Mr. Dwiggins used 200 pounds of 4-8-6 fertilizer per acre and cultivated them three times, the county agent related.

The corn is stored in a modern potato house recently built at a cost of $500. It is 20 feet wide, 30 feet long, and 19 feet high, with a concrete foundation five feet high.

Framing is of old rough lumber. On each side of a hallway extending the entire length of the building are three bins about four feet from the ground. The potatoes were placed in these bins and kept at a temperature of 85 degrees for 10 days by a heater at the rear of the hall. They are kept at a normal temperature now.

## GOT $625 FROM HER ROADSIDE STAND SALES

A roadside market stand operated by Mrs. George Banta, Green Forest, Carroll county, showed $625 receipts above the cost of containers from sales of fruits, vegetables, melons and eggs from early August to late November, reports Mrs. Carrie P. Taylor, home demonstration agent.

The market stand was blown away in the early summer by a cyclone, but Mrs. Banta had it rebuilt and open for business by August 9, when she began her sales record. She sold eggs from 30 hens, green corn, eggplant, tomatoes, melons, peaches, grapes, cider, apple butter, and apples, all from the farm.

"In addition to what would seem

## CATTLE, HOGS BEAT COTTON

### Lawrence Wolfe McGehee Nets $6,500 On Livestock

A net profit in 1937 of $6,500 on the sale of livestock by Lawrence Wolfe, McGehee, shows how important a part livestock may play in the profitable use of land, said J. J. Pickren, Desha county agent.

"Mr. Wolfe is a strong advocate of growing livestock in a cotton region, and has proved that it will pay both in cash returns and soil building," the county agent related.

"He began the year of 1937 with 225 cows, pasturing them through the winter on corn stalk and soybean fields. The corn stover and soybeans furnished the roughage and grain, and for their green feed the cows were pastured on a voluntary oat crop from which oats had been harvested the summer before. The oats were followed by lespedeza.

"With such pasture as this, Mr.

(Continued on page 16)

## SPREAD IN BREAD PRICES REACHES A 7-YEAR HIGH, CONSUMERS' COUNSEL ANNOUNCES

Washington, D. C.,—The spread between the retail price of white bread and typical bread ingredient costs reached a 7-year high at the end of 1937, D. E. Montgomery, Consumers' Counsel of the Agricultural Adjustment Administration, reported today.

"Not since December, 1930, has this bakers' and retailers' margin been as large as it was in November and December, 1937. The average retail price of a pound loaf of white bread for the country in December was 8.7 cents* and the average cost of ingredients in a typical pound loaf was 2.6 cents. This left an average gross margin of 6.1 cents for bakers and retailers.

"On few occasions during the past 24 years," Mr. Montgomery stated, "has the spread between ingredient costs and retail white bread prices

(Continued on page 16)

## AAA TO BUY CANNED PEAS

### Federal Surplus Commodities Corp. Makes Announcement

Washington, D. C.—The Agricultural Adjustment Administration announced today that the Federal Surplus Commodities Corporation will purchase canned peas for distribution by State agencies to persons on relief.

The Corporation will make offer forms available to canners, probably before the end of next week. The Corporation will consider offers received from canners throughout the country. Canners will be expected to specify prices, grades, can sizes, and quantities in the offers which they submit to the Corporation.

The purchase program is designed to remove part of this year's record supply of canned peas from the normal channels of trade. It is expected to reduce the carryover into the next season and encourage better demand for peas grown in 1938 than might otherwise be expected.

Prices of canned peas, No. 2 size cans, averaged approximately 91 cents per dozen in 1936-1937 and during the ten years 1925-1934 approximately $1.00. The industry reports that present prices are 20 to 25 cents below these averages.

The total supply of canned peas for 1937-1938 is slightly more than 26,300,000 cases. This is approximately 8 million cases above the 1930-1934 average and 5 million cases above the 1925-1929 average.

"Total disappearance for the current season is expected to approximate 21 million cases, leaving a carryover of something more than 5 million cases," F. R. Wilcox, Director of the Division of Marketing and Marketing Agreements, said today "The largest total disappearance to date occurred in 1935-1936 and amounted to 20,500,000 cases. The purchase program is expected to reduce the supplies carried into the 19'8-1939 season. Growers may thus expect better prices in 1938 than they might receive if purchases were not made."

## MELON TOOK TO MILK FEEDING, FLOURISHED ON IT, GROWER SAYS

Milk-fed chickens are old stuff. Now it's milk-fed watermelons.

Novel as the idea may sound, Frank Elkin, Kerrville, Texas, believes there is something in it, says the Farm Journal, for he grew a melon last summer that out-weighed any other on the vine by 10 pounds, tiping the scale at 44 pounds, in this manner:

Each week for a month, a saucer was filled with sweet milk and set under a curl, or runner, between the melon and the root of the vine. Mr. Elkin declares the curl absorbed most of the milk the first night. When any that was left became curdled, it was softened with a little water.

(Continued on page 16)

## 29,400,000 POUNDS OF RICE

### Surplus Bought for Relief Distribution Says Report

Washington, D. C.—The Agricultural Adjustment Administration announced today that approximately 29,400,000 pounds of surplus milled rice has been purchased by the Federal Surplus Commodities Corporation at a total cost of approximately $684,000. The program is designed to help the rice industry and persons on relief by using some of this season's large supplies of rice for distribution through State agencies to persons on relief rolls.

Purchases have been made in Arkansas, Louisiana and Texas.

Shipment for relief have gone into nearly every State.

The FSCC is buying the rice through open offers invited from all dealers in the rice producing area. Offers still are being received by the Corporation.

## HARLEM JEWELER GETS NAACP 200,000 BUTTON CONTRACT

New York (C)—The L'Ouverture company, manufacturing jewelers, 165 West 131st street, Kenneth Lloyd Bright, owner, has just received a contract from the National Association for the Advancement of Colored People, 69 Fifth avenue, for 200,000 new crusade buttons, it was announced by Mr. Bright, Wednesday. On Christmas eve the company delivered to the Afro-American in Baltimore, Md., a large batch of service pins which were designed for Afro employes. Mr. Bright's company is associated with the famous Thomas R. Lewis company, designers and decorators of jewelry, of Providence, R. I., and any order they get is designed, manufactured and delivered entirely by colored workmen. The N. A. A. C. P. changed from a white jeweler it has used for twenty years to give Mr. Bright its contract, it was revealed.

Bumboats, catamarans, sampans and other native craft will ply the lagoons of the Pacific Basin at the 1939 World's Fair on San Francisco Bay.

## TRUCK CROP PAYS MORE

### Riversified Farming Beats Planting of Cotton

Bill Nolen of the Massard community, North Sebastian county, who had been producing cotton for the past 15 years, has turned to truck farming. A few times he made money but most of the time he barely made a living from cotton, he told G. M. Measles, county agent.

He bought a small truck farm last year near Highway 22, set out a small home orchard, has three good milk cows, a flock of chickens, and a brood sow; and from these he plans to raise most of his living. On the small acreage he is cultivating he is growing truck crops for a Fort Smith canning factory.

Last year he planted one-tenth of an acre in early English peas and sold $24.50 worth of green peas. He set this back in sweet potatoes and produced 17 bushels of No. 1 sweet potatoes. On another acre patch he set out tomatoes, and from it he sold a little over $300 worth of tomatoes as green wraps and ripes.

Mr. Nolen made more clear money from those two patches of ground than he usually made on a pretty good cotton crop he told Mr. Measles.

## MORE LAYING FLOCKS URGED

### Net of $156 From 100 Hens Shown By Mississippi Records

Many a farm family could add several hundred dollars a year to its income with a flock of good hens, well fed and properly managed, declares F. J. Hurst, in the Progressive Farmer.

Citing as evidence the returns from demonstration flocks in Mississippi, kept by farm people under farm conditions, Mr. Hurst writes:

"Records on 182 poultry demonstration farms in 44 counties in Mississippi last year show that these flocks produced for their owners an average gross income of $346 for each 100 hens with a net return above feed cost of $156.

"The gross income was equivalent

(Continued on page 16)

## MAJOR WRIGHT GETS 1,000 CARDS, 7 CAKES FOR CHRISTMAS

Philadelphia (C)—Major R. R. Wright, Sr., president of the Citizens and Southern bank, 1849 South street, in an exclusive statement on Monday, January 3, said: "I am still receiving Christmas cards, and very beautiful ones. I have received over a thousand, and my house is literally packed with them. I never saw so many Christmas cards before in my life. I have received also seven large pound cakes, stockings, ties and other trinkets galore. I am so delighted to know that my friends have thought so well of me. I judge it is a good thing to have Christmas in order that you may find out how many of your friends remember you. I have directed that a list be made of all of the cards and other gifts that were sent to me, so that next year I shall attempt to answer them."

Major Wright, former college president in Georgia for thirty years, founded and has headed his bank for the past sixteen years. The bank has $700,000 in resources, and many white depositors with $10,000 and over. The Major is the father of Bishop R. R. Wright, Jr.

## FURTHER DROPS IN MEAT PRICES DUE CONSUMER SAYS CONSUMERS' COUNSEL

Washington, D. C.,—Consumers are not yet getting the full benefit of drops in prices of live meat animals, Consumers' Counsel D. E. Montgomery of the Agricultural Adjustment Administration, stated today.

"Prices paid at stockyards for cattle, hogs, and lambs have been falling rapidly to levels below those received a year ago," Mt. Montgomery reported. "While most prices to consumers have declined for 4 consecutive months, and are approaching a more normal relationship to other retail food prices, they have still some distance to go before they reflect the sizeable drops which have occurred in prices paid to farmers."

Beef cuts were priced to consumers at higher levels on December 14, 1937, than in mid-December a year ago, although cattle prices were lower, except in the heavyweight and top grades. By the end of December even the prices of top grade cattle dipped below their level a year ago.

# Mississippi Man Who Sold Couple Brought To Justice

## Decker, Cruel Planter, Had Chained Colored Man And Wife And Sought To Auction Them Off For $175.00

Clarksdale, Miss., Feb. 2 (CNA)—The trial of J. S. Docker, white cotton planter charged with peonage, opened this week in Federal District Court here. Prosecution witnesses accused him of having chained Negroes and forced them to hoe cotton at gun point.

The government called five witnesses, James W. Wiggins, share cropper, Ethel Lee Davis, his common-law wife, two white officers and Joe Hyde, a white planter to present its case against the Tallahatchie County farmer.

Wiggins testified that he was paid $12 a month to make a crop on Decker's 200-acre plantation. When he received his money on July 3, 1937, he said, he and the Davis woman fled to the home of a relative. Decker traced them, he testified, forced them to return at the point of a gun and chained them to a tree.

Later, Wiggins testified, Decker took them to Hyde's farm and attempted to "sell" them for $175, which he claimed they owed him. In his testimony, Hyde supported Wiggins' assertion.

Sheriff Henry Dogan testified that he went to Decker's farm and found the Davis woman chained to a bed. She told him, he said, that Decker had chained her five nights, had beaten her and that Decker's wife had forced her at gunpoint, to hoe cotton.

U. S. Deputy Marshal C. W. Whitehead, who arrested Decker, testified that the planter had admitted having chained the couple and attempted to "sell them for the $175 they owed me."

### EGGS AT LOWER COST FROM HEALTHY FLOCKS

Health means wealth in the poultry flock, points out Successful Farming.

University of Illinois cost studies on 63 farms in 1936 revealed that the healthiest flocks of the group produced eggs 11 cents a dozen cheaper than those having the highest mortality.

Where less than 15 per cent of the laying birds in a flock died, there was a profit of 88 cents a hen more than in 10 flocks where more than 35 per cent died.

### BUYING GUIDE FOR COSTUME SLIPS

There are no hard and fast rules for the purchaser to follow in buying slips, that essential part of every woman's annual clothing budget. But there are certain guides that can help in getting the qualities desired, and the Bureau of Home Economics has lined them up.

Trying on a slip is one of the most important things to do. This will assure accuracy of cut and fit. You will want to ask: Is it smooth fitting and will it allow sitting room without strain? Are there wrinkles and bulges about the waistline? Does it fit neatly over the bust and under the arms? What about the length? Does it hang evenly?

"It has adjustable straps," the sales person may assure you when you question length. But adjustable straps cannot be pulled up too far without destroying the fit. Once they are adjusted they can hardly be jerked up and down without spoiling the lines unless the slip is cut perfectly straight in the first place.

When selecting a costume slip, you should keep in mind the purpose for which it is to be worn. For example, a slip for wear under a tailored street dress should be extremely simple in cut and of sturdy practical material, while one to be worn with a transparent afternoon or evening frock needs lines and material in harmony with those of the dress.

Fabrics, then, should be considered with respect to types and quality. They may be made of silk or synthetics—French crepe, satin, crepe de chine, and taffeta; in cotton—nainsook and broadcloth.

Look under this surface "niceness" and see if the slip is firm and evenly woven rather than loose, filled with sizing, or pressed hard to spread the yarns to give a lustrous finish. Pull the fabric slightly between the thumb and finger to see if the yarns shift easily. If the weave is not properly balanced, the warp yarns may slide first this way and then that after a little wear. Then the fabrie takes on a blistered appearance which spoils the shape of the slip and eventually breaks through. This is very common, especially with French crepes. Price is no safeguard. In higher priced slips the yarns may shift as badly as in lower priced ones.

Insist on definite information, preferably printed on a manufacturer's slip or tag, about the weighting and loading of silks and synthetics. In accordance with a trade agreement drawn up under the auspices of the Federal Trade Commission "pure dye" means that the silk contains no more than 10 percent of any kind of weighting or substance other than silk, provided the silk is white or a light color. On blacks, the same statement can mean that 15 percent weighting may have been added.

If you are buying a cotton slip, beware of a fuzzy finish. The cotton may be a "sticky" one and will bunch uncomfortably under a dress. A mercerized cotton fabric is more likely to have a smooth, slick texture than an unmercerized one. You should insist both on color fastness to washing, and preshrinking. The labels should tell.

Good wormanship is as important as good material. Workmanship will lengthen or lessen the life of your slip. It will make ironing more or less difficult. They should be flat, smooth, and equal to the material in durability. Thread used for stitching should be strong neither too heavy nor too fine for the material. And close fine stitching, about 16 to 18 stitches per inch always holds better than the long, loose kind that may be found on lower grades.

Obviously, the best types of seams for a slip depend somewhat on the style and the material; that is whether the seam lines are on the straight or bias and whether the material tends to fray or is firm. Seams closely lockstitched with about 18 to 20 stitches per inch are strong and usually last as long as the slip itself.

Plain seams pinked and then stitched a second time from the right are flat and fairly serviceable on bias seam lines. But on lines that follow the lengthwise or crosswise threads they are very likely to pull out. Standing fell seams, which are narrow and have a hard cordlike feeling and appearance, are most commonly used in medium grade slips. Sometimes they hold, sometimes they do not, but at its best, a standing fell is thick, stiff, and somewhat difficult to iron.

When it comes to the trim on slips a most careful examination should be made. The best buys have simple insets of lace and no meaningless little spots of lace here and there. The lace itself will be uniform, not heavily corded and thick in one place, delicate in another. Lace on the hem of the slip is undesirable unless you are absolutely certain the length is right, and that the slip hangs evenly.

If lace is applied to the top of the slip it is usually by hockstitching. Material should not be trimmed off. If the trim is embroidery, drawn work, or applique, make certain that it does not weaken the fabric. Crisscross rows of hemstitching is an example of trim that weakens. To wear as well as the slip, the trim should be smooth and flat in keeping with the light weight of slip materials. If the trim is a bias binding the seam allowance should be wide enough so it can fold over with the bias to prevent pulling off.

A very satisfactory tailored slip has a double layer of fabric for the bodice and double stitching around the top edge.

Shoulder straps may be a source of endless annoyance. Examine them closely. If there is lace at the top edge, straps should be extend on down to the fabric. If straps are made to branch off and attach in two places rather than one, the strain is distributed so that the lace is not so likely to be torn.

Probably the most durable shoulder straps are on machinemade slips. Made of the same material as the garment, they are a double fold, cut either biaswise or lengthwise, and stitched on both sides.

Slips may be purchased from 39 cents up. Price is not always indicative of the fit or wearing qualities of the garment. Before you buy you should insist on definite information, preferably printed on the manufacturer's label or tag, but be sure not to read into labels more than they actually state.

## National Federation Of Colored Farmers Inc., Holds Meeting

**Organization Representing Tillers of the Soil Gather in Windy City for 1938 Program.**

Chicago—(Special)—With Leon R. Harris, acting president and secretary, members of the National Federation of Colored Farmers, incorporated, are holding their annual executive convention in this city. The Association was founded by James P. Davis in 1922, but it was incorporated in 1930. It has a membership in twenty-one states, and was organized for the purpose of representing nine hundred thousand farmers and farm operators in the United States.

Last year Mr. Davis stepped aside as president, asked for a leave of absence from the corporation so that he could devote his entire time to developing the farm end in a more tangible way throughout the nation. They are to remain here for two days.

It is said that they will support one hundred percent the Afro-American Exposition, and that they plan to work with the National Co-operative League of America, headed up by James W. Washington in this city, in their big effort to hold a successful exposition here in live stock, and the building of the coliseum during the month of August.

The purpose of the regular meeting was to outline the work of the Association for 1938 so as to render a greater service to the farmers in their various phases of activity. The Association's official heads are Leon R. Harris, acting president-secretary from Moline, Ill.; Major R. A. Byrd, vice president, Springfield, Ill.; Miss S. B. Wilson, treasurer, Nashville, Tenn.; Mr. L. B. Bowler, organizer, Mound Bayou, Miss.; C. R. Richardson, chairman board of directors, Richmond, Ind. In addition to these The Modern Farmer representatives were here in attendance, because this publication was issued by Henry Allen Boyd at Nashville, to assist the Federation as well as to be the mouthpiece and organ of the nine hundred Negro farmers throughout the United States.

## NEWSPAPER EXPOSE OF UNSAFE SCHOOL HOUSE GETS ACTION

**Los Angeles, Cal., Feb. 2—(ANP)**—Exposing in detailed information the fact that the Hooper Avenue school buildings are "wholly and dangerously unfit for use," the L. A. Sentinel last Thursday caused immediate steps to be taken to safeguard the hundreds of colored tots who predominate its crowded rooms A committee, composed of Dr. Eva Young, Mrs. Augusta Glover, and E. Winston Williams, from the school's Parent-Teacher organization this week, made the charges that after inspecting the old two-story building there that houses two-thirds of the school's pupils.

Leon Washington, militant publisher, took pictures of the falling ceiling plaster and unsanitary dining rooms and toilets.

## CATHOLICS STILL FAVOR PASSAGE OF ANTI-LYNCH BILL

### Leading Journal of Faith Refuses To Be "False Friend" Of Proposal

**New York**—(C)—While some white publications, once thought to be "friends," have ducked for cover in the anti-lynching bill fight, "America," the national Catholic weekly magazine of opinion, is standing by its guns in support of the bill. In its last issue, January 29, an editorial headed "The Anti-Lynching Bill" says:

"By this time, the whole country has heard of the anti-lynching bill. In the Senate one of the most elaborate filibusters of recent years has developed. Like most filibusters, it has been accompanied by much heat and little light.

"We are loath to believe that the Senators who assert that the filibuster will be continued until the bill is withdrawn, represent Southern public opinion. We are sure that they do not represent the opinion of the chief newspapers in the South, or of those men and women who have been laboring to put an end to lynching, or of the South's intellectual and religious leaders. Their filibuster is directed quite as much against the wishes of the enlightened South as it is against the bill.

"In our judgment, the Wagner-Van Nuys bill is wholly constitutional_____It is not our view that this bill will automatically end all lynching_____But we think that a Federal law can be used to make lynching considerably less common."

## Daughter of Editor I. Willis Cole In Brilliant Recital

**Louisville, Ky.**—(C)—Tella Marie Cole, 12, daughter of Editor I. Willis Cole of the Louisville Leader, who made a successful debut in New York last November, charmed Louisville in Broadway Temple on Wednesday evening, in a brilliant piano recital. In the audience were Dean David A. Lane of Louisville Municipal college, and Mrs. Lane; and Dr. M. B. Lanier, president of Simmons Theological seminary, and Mrs. Lanier. Among whites present were Miss Emily Dembitz, noted music teacher, and Miss Mary M. Wyman of the Board of Education.

**It is expected that an International Peace Congress will be held at San Francisco in connection with its 1939 World's Fair.**

## NOTICE TO ALL MODERN FARMER READERS AND SUBSCRIBERS

**We are calling upon the readers of The Modern Farmer and subscribers of this publication to pay their subscriptions between January 15th and February 15th. It is a violation of the postal laws and regulations, so we are informed, to send this paper to any person whose subscription is past due. The fact is that all subscriptions are payable in advance. The Modern Farmer has endeavored to present each issue a publication brim full of information for the farmer whether he is raising cotton or corn, whether he has a truck garden, whether he is a stock raiser, a fruit grower or any vocation connected with farm industry. It has endeavored to present a program for farm activities; it has espoused the cause of the farmer and has given them full information each month and each issue. This has been going on for ten years. A letter has been mailed to each subscriber and to each reader whose subscription has expired. It is not the intention of The Modern Farmer to collect from any whose subscription has been paid up to date, but we are calling upon those who have not paid to forward their subscription price either in cash by registered mail or send a money order or express money order or they may send their check if it is certified.**

**Please notice that on and after this issue, which is dated January 15th, that all subscriptions that are not paid will be discontinued. We are giving this special notice so that those who read it may act accordingly.**

**Respectfully,**

**THE MODERN FARMER,**

**447 4th Avenue, North,**

**Nashville, Tennessee.**

# THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

### History

In 1922 this organization was founded by James P. Davis, the late Gilchrist Stewart, Cornelius R. Richardson and Leon R. Harris. Mr. Davis, a native of Georgia, had long been engaged in the commission business in his native state and was recognized as the leading authority of his race on the marketing of farm products. Mr. Stewart was a native of South Carolina, the son of a sharecropper, who had risen to eminence in his profession but had not forgotten the severe struggles of those who had nurtured him. Mr. Richardson, also a native son of Georgia, was and is a prominent lawyer. He has devoted much of his time and study to the legal phases of farm and co-operative organizations. Leon R. Harris, a native of Ohio, was reared on a hilly Kentucky farm eighteen miles from a railroad. And for six years he had been a North Carolina dirt farmer, rural school teacher and a leader in farm organization work in that state.

In 1929 Mr. Davis was chosen president and began devoting all his time and efforts for the welfare of the organization. Under his unselfish and inspiring leadership, growth was rapid and substantial.

The organization was incorporated under the laws of Illinois in 1930 and the national office was established in Chicago, the agricultural capital of the nation.

### Purpose And Aims

Quoting briefly from the "foreword" of the N. F. C. F., published in 1928, "It is the hope of the founders of the National Federation of Colored Farmers, to make life on the farm more attractive and more profitable, and to build up in this nation a Negro group of organized, influential and satisfied producers."

To accomplish this purpose the N. F. C. F. has advocated (1) co-operative buying, production and marketing. Local Units have purchased more than a quarter million dollars worth of farm and farm home supplies co-operatively during the past eight years. Local Units have produced and marketed co-operatively, hay, watermelons, string beans, peanuts, sweet potatoes and mixed cars of vegetables. The N. F. C. F. has advocated (2) land ownership. The Federation has assisted hundreds of its members in purchasing farms on reasonable terms. It has also been instrumental in securing better legal sharecrop contracts. It has helped its members by instruction and assistance to take advantage of farm relief legislation. The N. F. C. F. has advocated (3) better farming and better farm living, and through organization, assists in building better colored farm communities.

### Progress

The first local Unit of the N. F. C. F. was chartered at Howard, Miss., in 1929. Today it has a membership in 21 states. It admits to membership farmers, sharecroppers, tenants and farm hands, all members of the Race who are interested in any manner in the important business of farming. The organization has proven its worth. It has been a blessing to thousands of Negro farmers.

### HOW TO ORGANIZE A UNIT OF THE N. F. C. F. IN YOUR COMMUNITY

This is an age of GROUP ACTION. The INDIVIDUAL, working alone, can accomplish little. Colored farmers must ORGANIZE. Your organization is the N. F. C. F. YOU HAVE NO OTHER NATIONAL FARM ORGANIZATION. To organize a Unit of the N. F. C. F. in your community:

1. Make a list of the names of all who can and who should be members of your Unit. This list should include the names of farm owners, tenant farmers, sharecroppers, farm-hands, rural teachers, rural preachers, colored owners of farms in your community who live elsewhere, and all others of our Group who are interested in the business of farming.

2. Appoint a time and a place for a meeting and invite all whose names are on your list to attend it. The farmer's wife is an equal partner in his business and should also attend your organization meeting.

3. Elect the following officers: President, Vice President, Secretary, Treasurer, Market Agent, Chaplain, and Marshal. These and four others you elect constitute your Board of Directors.

4. Collect $3.00 annual dues from each member. Two dollars per member to be sent to the national office, one dollar per member to be put in the local Unit's treasury.

5. Appoint a standing Membership Committee of three members.

6. Appoint an Agent for "The Modern Farmer."

7. Name the time and place for your monthly or bi-monthly meetings.

8. Select a name for your local unit.

### WHAT YOU SHOULD DO AFTER YOU ORGANIZE

After your Unit has been organized and you have elected officers who are efficient and reliable, the first thing you should do is: MAKE A SURVEY OF YOUR COMMUNITY AND REPORT THE FOLLOWING FACTS TO YOUR NATIONAL OFFICE.

1. Number of colored farm owners in your community.
2. Number of colored tenant farmers and sharecroppers in your community.
3. Number of tenant farmers and sharecroppers who desire to purchase farms and who are able financially to make a down payment on a farm.
4. Number of farms or amount of farm acreage which can be purchased in your community.
5. Number of farmers in your community who desire to purchase farms in other communities.
6. Number of farm hands in your community and average daily, weekly monthly and annual wages they receive.
7. The money crops produced in your community and money crops which may be produced.
8. The money crops which may be produced co-operatively this season or next season.
9. The farm and home supplies used at which a saving may be made by cooperative buying.
10. Is your Unit prepared to engage in co-operative buying?
11. Home owner needs in your community—paint, fencing, household appliances, farm machinery, building, etc.
12. Government assistance desired, seed loans, farm loans, etc.
13. Does your county and community have, or does it need, the services of a Negro Farm Agent and a Negro Home Demonstration Agent.
14. Could a Farm Credit Union be organized in your community.

---

### General Information

After your Unit is organized a Colored Farm Women's Club and Colored Farm Boys' and Farm Girls' Club should be organized under competent leadership.

---

Your national office will send you a charter and individual membership cards when annual membership fees of two dollars per member is received.

---

Local Units can make and adopt by-laws to govern their local organizations. The national office will advise but will not interfere in the set-up or government of a Local Unit.

---

Local Units may assess and collect monthly payment of dues for the benefit of the Local Unit treasury. Local Units may also pay to the national office annual membership dues out of the local treasury. These dues may be raised by holding entertainments, picnics, or from crop or stock growing projects engaged in by the combined membership of the Local Unit.

---

The "Modern Farmer" is the official organ of the N. F. C. F. All members should read, subscribe for, and support this monthly farm paper. It is the only paper published for colored farmers.

---

All Units are required to report monthly to the national office.

---

or

**The National Federation of Colored Farmers, Inc.**

**Care Modern Farmer Office, 447 4th Ave., N., Nashville,**

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

## ACRE OF CORN MAKING 75 BUSHELS NETS $12

Producing 76 bushels of corn per acre while the average yield in his county is 14, is the record of 11-year-old Van E. Britt, member of the Center 4-H Club, Howard county, and a beginner in 4-H Club work, reports Paul N. Eddlemon, county agent.

Van grew his corn, Neal's Paymaster, on sandy loam, breaking the ground about March 30, six inches deep, and giving his seed bed further preparation by harrowing and bedding, the county agent said. A good stand was given its first plowing when the corn was a few inches high. When about knee-high, it was thinned, plowed, and 200 pounds of nitrate fertilizer was applied.

For later cultivations, sweeps and light plows were sued. The last cultivation was on July 1, plowing out the middles.

Total costs including $5 for land rent, were $25.99, and the net return was $12.15. Van estimated that his net cost to produce one bushel of corn was 34 cents.

If you walk on snow you cannot hide your footprints.

# The DIGEST

BY FLOYD CALVIN

### Cotton Substitutes

A Rome report by the Associated Press says Mussolini is pinning faith to the mulberry tree to help reduce Italy's use of foreign cotton. With cotton grown in Ethiopia, substitutes made from the mulberry tree and the ramie perennial, he hopes to find a substitute for about 15 percent of needs. From ramie still more is expected. These two sources are in addition to substitutes made from cellulose. The new fibre made from mulberry bark is called "gelsofil." The economic self-sufficiency drive has also brought to light a new product known as sodelin—a chemical mechanical fusion of hemp and cotton. (Memphis Commercial Appeal, Jan. 16.)

### Potash Aids Corn Yield

"Potash fertilizer applied with cultivator attachments to northern Iowa soil last summer brought about corn yield increases averaging 20 bushels per acre, it is reported by Bruce Kilpatrick, Iowa Extension Service agronomist," says Wallaces' (January 15). "The fertilizer formula used was 0-0-50 and the application rate was 200 pounds per acre. The tests were made on experimental demonstration plots on farms in nine counties. 'The highest yield increases were recorded on two hot alkalia plots, where corn yield jumped 47 bushels per acre,' Kilpatrick said. In general, the net profit over cost of the fertilizer was $7.45 an acre, figuring marketable corn at 50 cents a bushel and unmarketable corn at 25 cents a bushel. The increase in net profit was not due to yield increase alone, Kilpatrick pointed out. Much of it was due to the improvement in grain quality and reduced moisture content___"

### ULTRAVIOLET SLOWS GROWTH

Ultraviolet light and blue violet light make plants grow more slowly by destroying part of the growth hormones, or growth promoting substances that stimulate their increase in length, Dr. H. W. Popp and H. R. C. McIlcaine of Pennsylvania State College reported to the American Association for the Anvancement of Science. They tested thousands of turnip seedlings under various colored light filters and found maximum growth-checking effect at the shortwave end of the spectrum. (Science Service, January 8.)

### GEORGIA STOCK LAW

An amendment to Georgia's 1937 livestock law to provide a check on sales was on the statute books recently, says a report in the Atlanta Constitution (December 31.) Passed by the special session of the legislature and signed by Governor Rivers, the amendment additionally defines a livestock dealer as one "buying livestock of any kind for slaughter." The new law requires: "(1) a livestock dealer to register with the county . . . and obtain a license. (2) make records of license numbers of sellers, trucks and animals purchased . . .. (3) have the dealer's license in his possession when driving or hauling livestock in Georgia . . ."

### LIGHTNING CODE ISSUED

Nine-tenths of the property damage caused by lightening occurs in rural areas, it is reported in the first sections of the "Code for Protection Against Lightning" issued by the National Bureau of Standards. Four hundred people on an average are killed each year in the United States by electric bolts from the sky, the handbook, which details methods of protecting buildings and other property from lightning, reports. Proper use of lightning rods sharply cuts damage to buildings struck by lightning, it is asserted on the basis of tables printed in the pamphlet. Users of lightning rods are cautioned to see that they are properly connected to the ground. or else they will not perform their function adequately. Placing lightning rods on small buildings in urban areas. particularly near large buildings, is uneconomical because of the protection afforded by the larger structures, it is stated. Large buildings should always, however, be rodded. Persons caught out in the open during an electrical storm are advised to seek shelter near a cliff or in a dense forest. The code was prepared under the joint sponsorship of the American Institute of Electrical Engineers and the National Bureau of Standards and has been approved by the American Standards Association. (Science Service.)

### ACREAGE FOR FOOD

Dr. B. W. Kunkel, professor of zoology, Lafayette College, writes on 'The Fat of the Land" in Scientific Monthly (January). He says in part: "Combining the areas required for the different items of the diet, we find that a total of a little less than 2.4 acres is necessary for the support of one man for a year if the highest yields known in the United States are obtained. Although the idea may be advanced that this does not allow sufficient margin of safety and that the figure is therefore misleading, it may be replied that the large area required for dairy products—2.09 acres—is obtained on the estimate that it requires 12 pounds of fodder to produce one pound of milk. This is simply an average and does not represent the maximum yields of selected herds. As a matter of fact the best milk and fat producers as a result of selection can produce about double the quantity of milk and fat so that dairy products would require only half the area allowed in the above calculation and the entire acreage would then come to one and a third acres. So, too, the best swine gain one pound for every three pounds of food eaten, and as the dressed pork with the lard is approximately 60 per cent of the live weight, it would take only five pounds of fodder to produce one pound of human food. The social and economic consequences of this shrinkage of farm land are extremely far reaching. Part of the present plight of the famer whose skill is insufficient to achieve the best results and whose products can not be economically distributed is tied up with the increasing efficiency of no farms and the increasing capacity of man to produce food from the ground."

### WAGES AND PRICES

"A general reduction in prices to expand demand and a similar reduction in wages of skilled workers as measures to stimulate recovery were advocated by O. M. W. Sprague, Harvard economist and president of the American Economic Association, in an address recently," reports Joseph Shaplen, in an Atlantic City report to the New York Times. 'Professor Sprague, former adviser to the Treasury Department and the Bank of England, spoke at a joint session of the American Economic Association and the American Statistical Association, meeting in conjunction with a group of learned societies forming the Allied Social Science Associations. Holding mistaken policies of business, labor and government responsible for the economic recession and the country's failure to match other nations in the extent of recovery attained, Professor Sprague stressed the determining role of the capital goods industries in economic rehabilitation and declared that the policies for the last four years had obstructed the recovery of these industries. A general reduction in prices to expand demand in these industries, coupled with a corresponding curtailment of wages, he declared, would have a beneficial effect on construction and expansion of utility and railroad equipment and serve as a powerful stimulus to nation-wide construction of housing . . ."

### GRASS SILAGE

More than 1,000 tons of silage produced from grass and from grass clover mixtures by the use of from 40 to 75 pounds of molasses per ton of silage were made by the New Jersey Experiment Station the past year under the direct supervision of Prof. C. B. Bender. This process is also being adopted by a considerable number of dairy farmers in the Northeastern states according to reports made at the Fourth International Grassland Congress, recently held in Wales. Dr. S. J. Watson, a British chemist, reported that this method of conserving green feed, made possible with modern grass cutting and silo filling equipment, retained the maximum food value of the crop so that it was similar to concentrated feeds in composition and nutritive value. He has also found that the carotene is retained by this method of processing. (Farm Implement News, December 30.)

### VITAL FORCE IN PLANT ROOTS

"Experiments which reveal that the force within the roots of living plants, hitherto believed to be very small, is actually of a gigantic nature, capable of overcoming with ease counterpressures of 125 pounds to the square inch, the equivalent of a pressure of eight atmospheres, was reported to the American Association for the Advancement of Science by Dr. Philip R. White of the Rockefeller Institute for Medical Research," reports William L. Laurence in the New York Times. "The discovery, it was stated, 'revolutionizes botanical theory, overturning one of the most widely accepted hypotheses in the whole field of plant science.' For the first time science has a satisfactory explanation as to how the sap can reach the top of tall trees, reaching as high as 350 feet. The root force was discovered in a series of experiments . . . made possible by the development of a new technique in the Rockefeller Institute's Princeton station. The technique enables roots to be kept alive indefinitely after being detached from the parent plant, somewhat after the manner of the tissue culture method for keeping alive the 'immortal' embryo chicken heart at the Rockefeller Laboratories in New York. Dr. White used the 'orphan' roots of tomato plants in his experiments. When the apparatus broke, the tomato root had displayed a force strong enough to send sap up to a height of 200 feet, about 25 times higher than the average tomato plant . . ."

# HIGH SCHOOL AND COLLEGE STUDENTS TO WRITE ESSAYS

New York, Feb. 2 (ANP)—Nearly 100,000 Negro college and high school students throughout the country are expected to participate this Winter and Spring in the Fifth Annual Essay Contest of the National Tuberculosis Association. The subject is "Why I Should Know About Tuberculosis and What I Should Know."

State organizations, which are cooperating with the National Tuberculosis Association, plan to hold statewide competition and will then submit the winning papers for the national prize.

The length of the essay is limited to not more than 3,000 words. Cash prizes in the National competition will be increased this year over the 1937 awards. The first prize will be $50.00, the second $25.00 and there will be five prizes of $5.00 each.

Last year more than 50,000 papers from 28 states were submitted in the national competition. The winner among college students was Miss Jessie Duplantier, Prairie View State college, Texas, and the winning high school essay was that of E. Burleigh Jones of Arcadia, Okla.

Negro students in high schools will compete for national prizes to totaling $100,000. The first prize will be $25.00, the second $20.00, the third $15.00, the fourth $10.00 and there will be six prizes of $5.00 each.

# N.A.A.C.P. BRANCH IN PHILADELPHIA, PA., HAS GREAT YEAR

Philadelphia, Feb 2, (ANP)—The Philadelphia Branch N. A. A. C. P. reports total receipts of $3,055.79 for 1937, of which sum nearly two thousand dollars was sent to the National Office and a donation was made to the Scottsboro defense. Philadelphia conducts its own campaigns by use of local leadership.

The Branch re-elected Dr. Harry J. Greene as president and Mrs. A. L. McDougald was elected secretary. The outgoing secretary is Mr. I. Maximilian Martin.

The Philadelphia Branch sold nearly 4,000 "Stop Lynching" buttons in a campaign under direction of Mrs. McDougald, to help pay the expenses of the fight for a federal anti-lynching law. They also took part in the sale of N. A. A. C. P. Christmas seals and protested and fought many local cases in defense of colored people's civil and legal rights.

Other officers and executive committee members of the Philadelphia Branch are: Dr. T. A. Williams, Herbert T. Miller, Miss Helen Bryan Jacob Billikpof, Dr. T. S. Burwell, Dr. Charles W. Dorsey, Miss Hattie Conway, Miss Susan Masseaux, Henry C. Patterson, Miss Florine Brown, Mrs. Susie Washington and Aloysius Guyjet.

## PEA THRASHER PAYING GOOD RETURNS ON COST

Heber Springs—Typical of the benefits of cooperative activities sponsored by the Farm Security Administration for farmers of limited means is the record made by Luther Beasley. Cleburn county farmer.

Mr. Beasley is making remarkable progress with a pea thrasher he bought as an FSA cooperative project at a cost of $175. He has worked 15 days this fall and has thrashed 810 bushels of peas for neighbors. He has collected $16 in cash and 81 bushels of peas for toll, which at $1.50 per bushel, represents $121.50 in cash.

His total operating expenses have been $3.47, leaving a net income of $134, or an average net income of $8.93 a day for the 15 days he thrashed. He expects to thrash at least 500 more bushels.

The pea thrasher project was set up to render a needed service to FSA farmers and others of limited means in the community, it was explained. While the loan was to be retired from tolls in four years, every indication points to its retirement in two.

## STATUE TO COW

A statue to a cow named Springback Snow Countess is to be unveiled at Woodstock, Ont., Can., to commemoriate the fact that on the completion of her tenth lactation the animal smashed all records for milk production.

Seattle, Wash., has a monument to Segis, another record-breaking cow. At Adamsville, R. I., there stands a monument to Rhode Island Reds.

# Post Columnist Sees Emergence Of Colored Voters With Trouble Brewing For Politicians

By Franklyn Waltman

Washington Post

Washington, D. C.—Entirely aside from the merits of the pending bill, the Senate debate over anti-lynching legislation, which apparently will reach a climax today, presents one of the most interesting political developments of recent years. Very definitely it marks the emergence of the Negro as a great political force in his own right.

That contention is true irrespective of whether the anti-lynching bill is passed or fails of enactment in the next few days. It is true because the advocates of this legislation have fought persistently for this measure, in the face of a stubborn opposition, for almost one month now, counting the days devoted to the bill last summer.

It is true because if this legislation could be brought to a vote it would receive the approval of approximately 70 members of the Senate, having already been passed by a two-thirds vote in the House. Moreover, the national leaders of the Democratic Party either favor this legislation or are reluctant to raise their voices against it.

* * *

Behind this anti-lynching bill there is chiefly one man, who has fought, maneuvered and schemed for it for a decade or more and now because of it has at least one-half of the august Senate in an uncomfortable sweat. He is Walter White, the dapper, shrewd secretary of the National Association for the Advancement of Colored People.

Behind Walter White, as he sits in the Senate gallery and peers down with his alert but kindly blue eyes, on a squirming Senate, are several million Negro voters who might easily hold the balance of power between political parties in more than a dozen Northern and Middle Western States.

This explains in large part why Democrats are fighting for the passage of the anti-lynching bill, instead of Republicans, as would be traditional. The Democratic Party has smashed the Republican hold on the Negro vote and it wants to keep those voters behind the party of Jefferson and Jackson, even if it means a devastating split among the white members of the party.

Walter White, indeed, will have a great deal to say whether the Negroes of New York, Illinois, Indiana, Pennsylvania, Ohio, New Jersey, Michigan, Maryland and a number of other pivotal States will vote for a Democrat or a Republican for the Senate this year or two years hence. What he will say depends on how the Senators from those States react to the anti-lyching legislation.

And the members of the Senate know that Walter White has the influence to exercise this power. They know it, not because Walter White blusters or threatens—he is a very modest and unassuming person—but because several years ago he gave a demonstration that he can rally the Negro vote against those members of the Senate that buck the will of his organization.

It will be recalled that the opposition of the Negroes and railroad labor organizations, combined, prevented the confirmation by the Senate of Judge John J. Parker for the Supreme Court. Walter White did not sit back content with his laurels after that victory. He went out to defeat those Republican Senators who voted to confirm Judge Parker. Let this Negro leader himself tell what happened, as he subsequently recorded it in Harper's Magazine:

"In Kansas for example, when Senator Henry J. Allen ran in the Republican primaries for re-election during the summer of 1930, he polled in the Negro districts of Kansas City, Kansas, only 27 per cent of the Negro vote, where normally he would have received not less than 75 per cent of that vote, and probably a good deal more.

"In Ohio, where Senator Roscoe C. McCulloch stood in 1930 for election to fill the unexpired term of the late Senator Theodore E. Burton, Negro voters of the State, without regard to political affiliation or other circumstance, united against Senator McCulloch because of his vote and speech for confirmation of Judge Parker.

"Ohio is normally a Republican State by a margin of 400,000 to 500,000. Nomination by the Democrats of Robert Johns Bulkley, a distinguished lawyer, personally popular and a "wet," together with the inevitable reaction against the Administration because of unemployment, cut down the normal Republican majority to the point where the 170,000 Negro voters of Ohio practically held the balance of power.

"In Cleveland in the election districts predominantly peopled by Negroes, considerably more than half of the voters either supported McCulloch's Democratic opponent or refrained altogether from voting for a United States Senator.....In Negro precincts of Toledo Bulkley polled more than three times more votes than McCulloch. In Columbus the colored wards went to Bulkley by large majorities. In Akron two-thirds and more of the Negro voters supported McCulloch's opponent. In Canton 866 per cent of the Negro vote went to the Democratic senatorial nominee."

Similar recitals are possible regarding other Senate contests as a result of the Parker roll call. Thus is explained the reason why Walter White is regarded as so influential on Capitol Hill, why those Democratic Senators outside of the South have committed themselves to vote for his bill, although many of them do not like it, and why the Senate Republicans last night were wavering in their first intention not to vote for imposition of cloture on the anti-lynching debate.

Strangely enough, the Senate Republicans do not want the bill to pass, although in the past it has been their party that fought for the Negro. In the first place, they do not want the Democrats to get credit for passing such legislation. Secondly, they do not wish cloture imposed because they wish to keep the Democrats embroiled in an intra-party conflict.

You may approve or disapprove of the anti-lynching bill; you may believe it is a good thing or a dangerous thing that the Negro has become a political power. But it is no use blinking the fact and it is a fact which will be felt in subsequent elections.

## CANNED FOOD FOR DOGS

"What constitutes a good dog food?" inquires a Massachusetts reader who reports the recent loss of a Great Dane. "Nowhere can I obtain any information on these foods. To many people, as well as to me, a dog means a great deal . . . . . but I feel helpless as regards its food. This somewhat in the nature of an appeal. Can't we take the time to investigate the foods being fed daily to man's best friend?"

Reporting on nutrition for 130 million American men, women and children, and on the best and least expensive ways to satisfy those requirements, naturally comes first with the CONSUMERS' GUIDE as our reader agrees it should. But millions of dogs deserve one day every few years, if the letters we have received asking for information on canned dog food mean anything.

Canned dog food represents one of our newest industries. Nicholas Appert discovered how to can food for Napoleno's army back in 1810. Since our own Civil War, canning food for humans has been an increasingly important American industry. Dog food did not make its appearance in cans until a short 15 years ago; and did not acquire commercial significance till about 10 years ago.

First to put Fido's dinner into cans were packers of horse meat. Next in the business were the meat packers who found in the sale of dog food a new outlet for scraps and by-products—such as muscle scrap, blood, bones, udders, lungs, livers, lips, pancreas, kidneys, spleens—of the animals slaughtered for human consumption. Finally, as the trade boomed, enterprising people went into the canned dog food business for its own sake.

New firms entered the business faster, perhaps, than the growing market could absorb their production. Resulting conditions were described, thus, at the time of the hearing on a proposed N. R. A. code for canned dog food, by the executive officer of the then existing trade association: "The canned dog food industry is a completely new industry which has quickly developed into a large national business. Because of its youth and amazing success, the industry has become involved in practices as to competition, labeling and advertising, which require due correction to protect the purchasing public and to assure fair competition." There was some demand at the time of the code hearing for A-B-C grading of canned dog food products. Although this demand was pressed by veterinarians and dog owners' clubs, and some producers, it got no further than did the demands for grading of canned foodstuffs for human consumption.

More recently, declared a representative of the Dog Food Division of the Institute of American Meat Packers, "It is believed by those who have made a study of this question that conditions are not improving as they should—in fact, that they are getting worse all the time—and that the only way to correct these objectionable conditions is, for those officials who are in a position to do so, to adopt and enforce regulations, including adequate standards."

Retail volume of the industry is now variously estimated at anywhere from 24 to 1000 million dollars a year. Sales are chiefly through regular grocery channels. So young is the industry that the other wise comprehensive U. S. Census of Manufacturers does not separate canned dog food from other forms of commercial dog food; and does not completely distinguish the volume in dog food from hte packers' other figures Exact size of the industry is therefore impossible to determine.

The total number of potential ultimate consumers is about 13 million dogs. Among these potential consumers however, are some seldom found to be actual consumers, such as working dogs, those used for sheep herding or rounding up cattle, for hunting, for police purposes, or those who play in a new and dramatic role as "seeing eyes" for the blind. These and country dogs live chiefly on raw meat, also cooked meat and table scraps. City pets are usually the consumers of canned dog food. It is the growth of dog ownership in the cities which has made possible this growing industry.

Nutrition requirements of the canine family have been the subject of considerable scientific research and writing in recent years. No Federal Agency, however, is empowered to set standards of adequacy or purity for dog food. Scientists agree, as **Veterinary Medicine** says, that "the amount of food, the ingredients of the ration, and the hour of feeding must conform to the age, size, and purpose of the dog," and that "dogs like a variety in food." The dog is naturally carnivorous, and even in the city, say the experts, Fido's diet should be based on meat. "Nutritive value must be shown by biological test," says **Veterinary Medicine.** "There is now nearly universal agreement that biological value is the only standard by which the adequacy of dog food may be judged."

All the armies of Europe could stand at attention on Treasure Island, site of the 1939 World's Fair on San Francisco Bay.

# THOROBRED CAGE QUINT LOSES TO MORGAN COLLEGE

## Patton of Kentucky is Star Player of Hectic Game

Baltimore, Md.—After winning a neck and neck basketball thriller from Miner Teachers College last Tuesday night at the Pride of Baltimore Elks Hall, the Morgan College Bears returned Friday night to claw the Kentucky States Galloping Thorobreds into submission by a score of 43 to 38, at the Richmond Market Armory.

In the Miner game, Morgan was held to two overtime periods before winning the game 39 to 35. At the half time the score was Morgan 13, Miner 12, indicating that the teams were closely matched. "Deuce" Gibson of Morgan, former Douglas High School luminary, was the high point scorer of the game.

During the first half of the Morgan-Kentucky State game, State's flashy floor work and accurate passwork had the Bears somewhat bewildered. State's zone defense had been developed to a fine art and Morgan's offense was held to a standstill. The score at half-time was Kentucky State 20, Morgan 16.

Patton, Kentucky State's fast breaking forward, broke the ice with a shot from mid-floor. Scoring clean baskets which did not even touch the rim, Patton gunned in 12 of the Thorobreds 20 points. At the end of the game, Patton had accounted for 20 of the 38 points.

A different story was presented during the second half for, from the toss-up, Morgan began a sustained rally that lasted until the end of the game. The team seemed at last to have found the answer to State's zone defense. The second half was replete with Morgan scores.

Patton's offensive work and Edward's defensive tactics shone brightest for the visitors while Holley, Lampkins, Gibson and Watkins starred for Morgan.

San Francisco, Feb. 2—(A. N. P.)—A scheduled 10 round fight between Featherweight Champion Henry Armstrong and Al Cetrino, scheduled here for Wednesday night, was postponed until Feb. 12 after Armstrong notified promoters he had suffered an attack of food poisoning earlier in the week.

## HEAVEN HELP THE CONSUMER!

Heaven help the consumer if the present legislative trend continues!

A number of states have passed laws which punitively tax economical, mass-merchandising systems—thus boosting prices.

Forty-three states have passed so-called Fair Trade Acts which make price fixing by manufacturer legal—thus boosting prices.

Twenty-four states have enacted so called Anti-Discrimination Laws, which outlaw various low-cost selling methods—thus boosting prices.

In this legislative orgy, everyone has been given consideration, apparently—except the consumer. The inefficient and lazy merchant is protected—and the consumer pays the bill. Unnecessary middlemen are protected—and the consumer pays the bill. The progressive and efficient retailer is curbed—and the consumer pays the bill.

How long the consumer will remain supine under this kind of treatment remains to be seen. If he doesn't make an effort to help himself soon, he will have to rely on divine providence for aid.

### BROODER HOUSE BUILT OF FARM MATERIALS

Using farm materials, V. J. Cameron of Eaton township, Lawrence county, has put up poultry buildings at little cash cost, said Lowell A. Goforth, assistant county agent.

Last spring Mr. Cameron built a 12 by 16 brooder house with almost no cash outlay, the assistant county agent related.

Walls were built of oak logs. Ceiling, loft and rafters were made of rough oak lumber, with a sheet metal roof. Cement for the foundation and floor was mixed with sand and gravel from a creek bottom on the farm.

An oil drum supplied a stove, by cutting a door in it, sinking it two feet in the ground, and attaching a pipe running through the roof.

Mr. Cameron raised about 200 White Leghorns this year, and is well satisfied with his brooder house.

## World Sunday School Review For 1937

**World's Sunday School Association**
**51 Madison Avenue, New York, N. Y.**

The Sunday School—and indeed the whole cause of religious education—is passing through a crucial period around the world. This is revealed in the reports filed for 1937 with the World's Sunday School Association by its fifty-one constituent national units representing a total enrollment of forty million people. Pertinent paragraphs from these reports indicate the world-wide outreach of this movement for Christian education that seeks to make a 'world safe for little children."

#### AFRICA

**Union of South Africa**—Arrangements were completed in 1937 to hold in the port city of Durban, the next World's Sunday School Convention, July 22-28, 1940. This is largely due to the activities of the National Sunday School Association of South Africa whose general secretary, Mr. John G. Birch, was recently awarded a coronation medal by His Majesty, George VI. South Africa has almost one-third the total Sunday school enrollment for the continent. Its growth has been rapid and the quality of the work done is improving. This is particularly true among the Bantu whose second Bantu Sunday School Convention was held at Joannesburg as the year drew to a close. Afrikaans speaking, English speaking and Bantu dialect speaking Sunday Schools are all uniting in the preparations for the coming of the World's Sunday School Convention.

**Egypt**—An encouraging year is reported by Egypt's veteran Sheikh Metry S. Dewairy. A visit made in April by general secretary Robt. M. Hopkins and the Armenian secretary Levon N. Zenian encouraged the Egyptian Sunday school workers both among the evangelical churches and in the ancient Coptic Church. The annual rally held in Assiut which these visitors attended registered a deepening interest among Coptic leaders both in the extension of their Sunday school work and in their fellowship with other Sunday school workers around the world. One of the bishops in the ancient Coptic Church during the past year persuaded about 150 young men and women to give volunteer service in the towns and villages of his dioces where they gathered the Christian children together on Sunday morning and taught them the Bible. Other bishops are following his example and there is hope that the movement may eventually become general. Sheikh Metry has had a large part in giving publicity to this new undertaking and of stressing the importance of established Sunday school work throughout the country. Street Sunday schools have been growing year by year in Cairo and some of the larger cities, and there is great need for more picture cads.

**Belgian Congo**—The Belgian Congo in the very heart of Afica with more than 200,000 Sunday school pupils has witnessed gratifying growth during the year. The Sunday School Committee for the colony is under the leadership of Rev. Newell S. Booth of Elizabethville and is an affilited committee of the Congo Protestant Council. In spite of long distance and difficulties of communication, each mission is choosing a correspondent for Sunday school work which will keep in touch with Mr. Booth. The daily vacation Bible school work is making its way to augment the work done by the Sunday schools. Mr. and Mrs. Booth are preparing a series of lesson helps of which three units have been completed and a fourth is in process.

**Angola**—The general secretary visited briefly with the workers in Lobito as he returned from South Africa. Great interest is manifested among the workers in Angola in the approaching World's Sunday School Convention to be held in South Africa.

**Mozambique**—At Beira, Rev. Pierre Loze and Mrs. Loze are the sole missionary representatives. Mr. Loze does his work among the native people and Mrs. Loze has charge of the only Sunday school for white children. In spite of many difficulties the work moves slowly forward.

**Cameroon**—In the French Cameroon there is a total Sunday school enrollment of more than one hundred thousand. Some of the largest and and most rapidly growing Sunday Schools of the world are found in Cameroons.

**Madagascar**—In Madagascar reports indicate steady development, the growth of the Sunday school keeping pace with the growth of the Christian community Sunday school work covers roughly one-third of the area of the Island, and regular visits by the two Malagasy secretaries maintained by the WSSA are of great service.

**Algeria**—Alegeria perseveres with an enriching fellowship through the newly formed North Africa Council of Religious Education. While the Christian population in this Moslem land is comparatively small, the Sunday school has been found to exceed in number the Christian constituency.

#### ASIA

**China**—The invasion of China has brought about a national consciousness which China has never had before in her history. The National Committee for Christian Religious Education, under the leadership of Dr. Chester S. Miao, has sought to utilize this growing spirit of unity to offset the interference with military operations have brought in many parts of the land. As a result there is an increasing sale of Christian literature. The NCCRE has completed several series of Sunday school lessons both for children and youth. Materials for parent education including "Standards for Christian Homes" were published and two additional units are in course of publication. The work of national lay training was active during the year along three lines; namely, promotion work, strengthening of regional committees and production of text books. It is the conviction of the NCCRE that the lay training program will be needed more sorely after military operations cease than even now since the churches will be so improved that no other leaders may be anticipated for years to come. The NCCRE points with special pride to the Religious Education Quarterly, four numbers of which have now been published. Its nature is somewhat like the International Journal of Religious Education published in the United States. It is sent to every member of the Religious Education Fellowship, of which there are several hundred, and perhaps as many other subscribers are receiving the magazine. There has been among the churches an awakening interest in the vital necessity for Christian education and this new quarterly has been seized upon as the best medium of communication. Ending it difficult to convey remittances to Dr. Miao, arrangements were made with the Department of State at Washington to tansmit the necessay funds through the American Consul at Shanghai. Thus even during the days when Shanghai was practically cut off from the world the support that Dr. Miao depended upon from America went forward regularly.

**Japan**—The educational department of the government has recently recognized the necessity for religious education in the common schools and has sent out instructions to all principals to adopt some spiritual drill. As a feature in this drill most principals take the pupils to some nearby shrine once a month and make them bow before it. The National Sunday School Association is seeking to counteract this influence in the lives of Christian pupils and is endeavoring to make special plans to come in touch with these pupils in some active way. The Sunday school statistics indicate there has been a falling off in the number of Sunday schools and in the number of pupils. The NSSA feels that the loss in enrollment is due to two causes—first, the growing spirit of militarism within the country, and second, to the inactivity within the churches, especially as shown in the indifference among members and the difficulty of securing Sunday school teachers. In spite of these growing difficulties good evangelistic results are reported in many Sunday Schools, and every effort is being made to awaken the church members to a realization of their duties in connection with this importnat aspect of their work.

**Korea**—Korea has experienced unusual difficulties during the year due largely to military operations in the Far East. Many of the religious leaders in Korea have been imprisoned because of the persecutions which the authorities have instituted. Serious difficulties have arisen over the compulsory attendance upon state shrines. The biggest problem that is faced grows out of the required attendance of the scholars in Christian schools at the Shintu shrine center. Teart-breaking experiences are reported from many quarters, but in spite of all these difficulties, the daily vacation Bible school work during the year was one of the most encouraging in the history of the KSSA.

**India**—It is becoming abundantly evident that there is a growing tendency on the part of educated young Indians to turn to Christ. The India Sunday School Union is enlarging its quarters to cope with the new situation and is pushing particularly its teacher training program. The value of this teacher training work is demonstrated by the fact that 110 applications were received for accommodations at St. Andrews Teacher Training Institute during the summer. The fact that almost fifty million people are breaking away from Hinduism is a great challenge to the forces in India.

# SCANDANAVIAN COUNTRIES TO PLAY BIG PART IN SOLUTION OF BIG COLONIAL PROBLEMS

## Colored Writer In Oslo To Plead For Peace Cites Need For Better Understanding

Oslo, Norway, Feb. 2, (ANP)—'The Scandinavian countries may play a significant role in solving the colonial problem which has such enormous influence upon the question of war or peace,' was a statement made by the Negro writer, Mr. George Padmore, who arrived here to speak at the Student Meeting tonight in an interview with the representative of the "Arbediderbladet."

George Padmore is the chairman of the Negro organiztaion, the international African Service Bureau, which is working to further the interests of the colored people. It also has the support of many distinguished Europeans who take interest in the fate of colonial peoples. Among htem are the Noble Prize winner, Mr. Noel Baker, M. P., the Rev. R. Sorensen, M. P., and other members of the British Parliament, such as George Jagger and Morgan Jones, the barrister D. N. Pritt, K. C., Miss Ellen Wilkinson and the well-known novelist, Ethel Mannin.

The major purpose of this organization is to keep European public opinion informed of what is happening in the colonies. It also seeks to help Negro workers and peasants to form trade unions and cooperative societies. On being asked why he thinks the Northern lands can be of any importance to the colonial peoples, Mr. Padmore stated that since the Scandinavian countries are not colonial powers, they are in a better position to view the problems of subject peoples without prejudice. Countries like England and France have their financial stakes in the game, and thus look more emotionally on the problem. After the rape of Abyssinia and what has since transpired, Mr. Padmore asserted that the colored peoples had learned to respect the Scandinavian countries more so than ever. The blacks have long memories and never forget either their friends or enemies. Among one of their best friends was a Swedish general, Vargin, who acted as the military advisor to the Ethiopian Emperor, and it was the Scandinavian countries that rendered the greatest assistance to the Abyssinians in the way of Red Cross and hospital services at a time when Geneva did not raise a finger.

# CALIFORNIA GOVERNOR ANXIOUS TO HAVE A. M. E. CONFERENCE IN STATE

**Los Angeles**, Cal., Feb. 2—(A. N. P.)—With many enthusiastic citizens present, a big mass meeting at historic Eighth and Towne A. M. E. church, was held last Sunday afternoon, Bishop Noah Williams received from Governor Frank L. Merriam, on behalf of California, an invitation to bring the next General Conference of the African Methodist Church to Los Angeles. Outstanding leaders of the connection, of other religious bodies, of civic organizations, the American Legion and city and county officials are joining the big drive to bring the quadrennial meeting of this great international religious body to this city.

# PRESIDENT OF DELTAS ASSISTING IN EFFORT TO PASS ANTI-LYNCHING BILL

**Washington**, D. C., Feb. 2—(A. N. P.)—For the past two years the local chapters as well as the grand chapter of Delta Sigma Theta Sorority have been actively associated with the work of the N. A. A. C. P. During their recent Convention in Cleveland in December the sorority voted funds for this work. Due to the fight of the South against the anti-lynching bill, Delta last week sent to Washington its national president, Mrs. Vivian Osborne Marsh, of Oakland, California, to contact senators and aid in the fight for the passage of this bill.

Mrs. Marsh is working side by side with Mr. Walter White, secretary of the N. A. A. C. P. Daily attending sessions and contacting senators. attempting to refute the charges hurled by southern senators who are leading the filibuster.

## Ask For Work

**Jefferson City**, Mo.. Feb. 2—(A. N. P.)—Duke Diggs, business man and leader here and the Rev. L. D. Hardiman who represented the Ministerial Alliance appeared before the School Board of Jefferson City, Friday, and made an appeal for colored labor on all school projects. James T. Blair, Attorney and member of the School Board assured the Committee that on all projects that when contracts are given that Negroes will be given a proportionate share of the labor.

### BETTER COTTON BY NARROW SPACING

By B. N. Timmons

Washington, D. C.—Department of Agriculture agencies continued their search for improved methods of farming during the past fiscal year, annual reports of the Bureau of Chemistry and Soils and the Bureau of Plant Industry reveal.

One of the developments found was that cotton planted closely produced more and better fiber than when spaced further apart.

"At Greenville, Texas, during 1936—the hottest and driest season on record—it was observed that close spacing of cotton plants favored both production and quality fiber," the Bureau of Plant Industry reported.

"A count of prematurely opened bolls made on August 13, showed that the injury was proportionately increased with the thinner spacing of the plants in the row. The percentage of prematurely opened bolls for the several spacings are as follows: Unthinned, 112 per cent; three plants every 12 inches, 13.3 per cent; two plants every 12 inches, 26 per cent; one plant every 12 inches, 40 per cent; one plant every 18 inches, 47 per cent.

"These differences may be attributed either to earlier fruiting induced by close spacing (the bolls being farther advanced and the hulls tougher and consequently less susceptible to burning injury) or to the greater shading effects of the more abundant foilage having a tendency to protect the green bolls from the direct sun rays."

## The Association For The Study of Negro Life And History, Inc.

### NATION-WIDE HISTORY MEMBERSHIP CAMPAIGN

Washington, D. C.—Dr. Charles H. Wesley, chairman of the committee for the Nation-wide One Dollar Sustaining Membership Drive of the Association for the Study of Negro Life and History, announces the beginning of the 1938 campaign to secure material support for this work. Miss Susie R. Quander of Washington, D. C., is the secretary of this committee. The appeal goes today throughout the country where friends have been enlisted to carry it to the public. The campaign will formally close at the end of February, but workers will be permitted to carry out their plans according to local needs.

Each sustaining member paying one dollar will receive for one year **The Negro History Bulletin,** and active members paying three dollars a year will receive **The Journal of Negro Hstory.** The children in the schools are being called upon to give their support with penny collections, and teachers are asked to contribute at least twenty-five cents each along with these juvenile co-workers.

Dr. Wesley bases the claims of the Association for public support on the achievements of the organization during the last twenty-three years. The Association for the Study of Negro Life and History publishes two magazines, researches in Negro history, directs studies in clubs and schools, promotes the home study of the Negro by mail, and produces texts on the Negro for schools and colleges. This organization also collects and preserves the valuable documents of Negro history, supplies libraries with special collections of rare books on the Negro, and educates promising young men for service in historical research. These efforts, however, are not self-supporting They do not yield sufficient revenue to pay expenses.

The following persons at various points in the United States are serving as state chairmen of this nation-wide effort: President H. C. Trenholm,of the Alabama State Teachers College; Professor William Townsend, of the Merrill High School in Pine Bluff, Arkansas; Professor George A. Johnson, of the Howard High School in Wilmington, Delaware; Dr. John C. Bruce, of the Washington, D. C. Public Schools; Dean E. P. Southall, of Florida A. and M. College; Mr. A. L. Jackson, of Chicago, Illinois; Professor R. E. Cureton, of the Booker Washington High School in Atlanta, Georgia; Mrs. Jane D. Shackletord, of the Terre Haute Public Schools; Professor A. S. Wilson, of the Central Colored High School in Louisville, Kentucky; Miss Gertrude Green, of the John W. Hoffman Junior High School in New Orleans; Professor L. S. James, of the Maryland State Normal School; Mr. Julian D. Steele, of the Robert Gould Shaw House in Boston; Professor Laurence C. Jones, of Piney Woods, Mississippi; Miss Sylvia M. Tucker, of Detroit, Michigan; Mr. L. J. Greene, of Lincoln University in Missouri; Miss Evelyn Echols, of the Bordentown Industrial School in New Jersey; Mr. H. A. Tynes, of the New York City Public Schools; Dean James T. Taylor, of North Carolina State College; Mr. W. F. Savoy, of Columbus, Ohio; Mr. Roscoe Dunjee, of the **Black Dispatch** in Oklahoma City; Dr. T. J. King, of Pittsburgh, Pennsylvania; Professor K. W. Green, of the South Carolina State College at Orangeburg; Dr. A. A. Taylor, of Fisk University; President J. J. Rhoads, of Bishop College; Dr. L. P. Jackson, of Virginia State College; and President John W. Davis, of West Virginia State College.

Some if these coworkers have already begun their tasks. Mr. H. A. Tynes of New York City reports that even in December plans were being made for reaching a large constituency in that metropolitan atmosphere, and in order that every one intelligently interested in the Negro may have an opportunity to help, a "Tag Day" will be set for a city-wide appeal. Dr. L. P. Jackson, of Virginia State College, also began before the close of the year to effect the necessary set-up for reaching a still larger constituency in the "Old Dominion" Under his direction Viriginia raised more funds for the Association last year than any other state with the exception of the District of Columbia, and he says that this record must be lifted to the highest mark. Dean E. P. Southall, of Florida A. and M. College in Tallahassee, manifested likewise even as early as November much interest in better planning and a more carefully conducted campaign in that state. He believes that with an extensive use of **The Negro History Bulletin,** which is now filling a long-felt want in the public schools, a much larger number of teachers will rally to the support of the work. Mrs. Jane D. Shackleford. of the Terre Haute Public Schools, manifesting the same interest which she did last year, has so greatly increased the number of co-workers to assist in the campaign in that state that she has had to call for equipment for as many as two hundred. Maryland, stimulated greatly by its State Chairman, Mr. L. S. James, with the support of Mr. Doswell Brooks, Dr. F. M. Wood and Professor H. T. Pratt, has made an early start, and funds as a result of such efforts have already begun to reach the national office in Washington.

Similar interest has been observed in other parts of the country, which will doubtless show equal enthusiasm, although what they plan to do has not yet been carefully worked out at this early date. Such indications appear in correspondence coming from North Carolina, Missouri, Kentucky, West Virginia, Tennessee, Texas, Louisiana, Mississippi, and Alabama.

A 3,000,000 gallon reservoir to supply the 1939 Golden Gate International Exposition on San Francisco Bay is nearing completion.

## Fisk University

Cedric Dover, brilliant Eurasian biologist visiting America and author of "Half-Caste," while on a recent visit to Fisk University campus, expressed himself fully on Negro institutions. He says, "I think children and young students, at least, should attend those schools, insofar as they are available, which give them the maximum opportunity for expressing and developing their personalities, and acquiring high standards of integrity, intellectual honesty and service."

His further observation led him to conclude, "All this cannot be done in unfamiliar and restrictive surroundings such as an average white school would provide to ra colored pupil in the present scheme of things. Split personalities are common enough among colored people throughout the world. Why increase them by sending our children to white schools"?

Mr. Dover observed that the American Negro student possesses great vitality and potentiality often obscured or given a wrong direction by a cramping educational system which does not create a proper sense of social values.

The opinions of Mr. Dover are significant because he first entered the fields of zoology and biolgy and from that background approached the problems of race and culture. Being a Eurasian from Calcutta, India, he is particularly interested in mixed bloods, and during the past six years in England has studied the field extensively. A treatment of this theme has been published by him under the title, Half-Caste." In this work he shows that the status, problems and patterns of behaviour of colored groups of mixed ancestry are everywhere remarkably similar because of similar influencing factors. Because of this, he has been able to identify himself easily and naturally with Negro life here in the United States.

One of Mr. Dover's most interesting commentaries was on the mixed bloods who seek to identify themselves with the dominant group. Of these he said, "The person who passes, or tries to pass is a victim of a system which lacks the right values, and conditions him into it on a personal advantage basis. He is to be pitied rather than despised. While the color bar exists, he must be conscious of it. He therefore develops a growing guilt sense in addition to the fear of being found out, and inevitably becomes an unhappy, uncreative and. disintegrated person."

Mr. Dover's study in America has been devoted largely to contact with Negro students, scholars and literary personalities. He has projected a new book provisionally entitled "Brown Phoenix." It will be a book of "two worlds, the white and the colored in both of which a transitional generation is struggling to integrate." While in the country, Mr. Dover is dividing his time principally between Harlem, Howard University, Fisk University and Tuskegee Institute. At Fisk he was a guest of the Social Science Department.

## Sec. Urban League

**New York City,** Feb. 3—(A. N. P.)—In order to gain first-hand information on industrial conditions as they affect Negro workers in strategic industrial centers in the South and Middle West, T. Arnold Hill, Director of the National Urban League's Dartment of Industrial Relations, is making a three-weeks' tour which began with a visit to the Tennessee Valley. Mr. Hill visited Knoxville and Chattanooga, Tenn.; Huntsville, Alabama; and the Muscle Shoals District at Wilson Dam, Alabama; in order to observe conditions at the center of the Federal Government's TVA immense power program.

Other cities to be visited include Little Rock, Arkansas; Memphis, Tennessee; Louisville, Kentucky; Columbus, Toledo, Cincinnati, Akron and Cleveland, Ohio.

Licker talks mighty loud w'en it git loose from de jug.—Joel Chandler Harris.

# ESTIMATED VALUE OF COLORED "Y" MORE THAN THREE HUNDRED FIFTY THOUSAND DOLLARS, LATEST REPORT

## FIRST MORTGAGE ON PROPERTY LESS THAN ONE-FOURTH OF VALUE—LOYAL CITIZENS URGED TO CONTRIBUTE IN LIQUIDATING THIS DEBT

## Only Association of Any Size With Building and Property, Working Under their Local and State Charter that Has Not Received Donations from The Rosenwald Fund Offer Nor Any Help on Buildings and Equipments from Central Association Branch

Momentum is being put behind the Colored Y. Mortgage Fund Drive which was started in the Christmas holidays, to help pay off the debt on the Colored Y. M. C. A. Building at Fourth Avenue and Cedar Street. Citizens are being solicited, letters are being sent out, workers are in the field and individuals are urging, requesting, pleading and importuning their friends to give to the Colored Y Mortgage Fund. The little buttons are being passed out to those whose liberality is demonstrated by their generous contributions.

The head of the campaign says, "Small favors are thankfully received, large ones in proportion." When this property is relieved of its indebtedness, when the mortgage is retired, when the membership reaches the required or desired numerical strength permanent improvements will be started, because the Colored Y will then be in a position to finance through various activities, the proper program. Not in the twenty odd years of its existence, from the beginning as a Colored Branch until now when it is a chartered concern, a state institution, have the Nashville citizens been called upon to pay one dime on the mortgage indebtedness. Few people realize, however, that when this building was taken over there were two mortgages on the property, which totaled one hundred thousand dollars, and to this should be added twenty-three thousand dollars of floating indebtedness, more than fifteen thousand of improvements and repairs, such as the installing of a new boiler and heating plant, tearing down the tower of the building, removing and repairing the roof over the front entrance, putting in the plate glass that was blown out by the recent cyclone, painting the building, renovating it on the inside and other repairs, which altogether have cost the Colored Young Men's Christian Association approximately twenty thousand dollars more. The twenty-three thousand dollar debt left and the twenty thousand estimated improvements make forty-three thousand dollars paid out by the board of trustees, and at the same time, the operating expenses have been kept going, adjusted and creditors satisfied.

The Y. M. C. A. Secretary and custodian's report shows that it costs between thirteen and fourteen hundred dollars every month for operating expenses. In spite of thousands of dollars that have been expended on the building, the board of directors and trustees have refrained until now from calling upon the citizens to do their duty, to make contributions.

It was also pointed out that for the past three years that the Colored Y. M. C. A. has been in the Community Chest the first year it received twelve hundred dollars, and this year the budget or allowance has been increased, not one dime of the Community Chest's money has been given on the Y Mortgage, or for light, fuel, interest or maintenance. The Community Chest strictly specifices in its agreement when the Colored Y was allowed to enter, that their contribution or donation was to go for salaries and activities. The managers of the Y, therefore, are going to the people, the loyal citizens, asking that they now come forward and pay off the mortgage, so that more activities, such as the religious work program, the Bible classes, the weekly prayer meetings, the noon-day services can continue, together with the athletics, social, physical and other features as pushed by the Y. M. C. A. program, can be enlarged.

"Give to the Mortgage Fund." "Contribute to the retirement of the debt"; "Put your shoulder to the wheel"; "Make a personal sacrifice"; "Colored Citizens of Nashville, do your duty." These slogans will put the Drive over.

# EXECUTIVE BOARD OF STATE MEDICS TO MEET FEB. 15

## Session Of Council And Program Committee To Convene Jointly In Memphis

The mid-winter meeting of the Executive Council of the Volunteer Medical Association is to be held in Memphis on February 15, according to an announcement sent out this week by Dr. R. B. Jackson, the executive secretary. Preparations are to be made for the annual convention of the body which will be held this year in Clarksville.

The program committee for the annual convention is to meet with the executive board and plans will be fully discussed for making the association's annual meeting bigger and better than ever.

Other discussions, it is announced will center around State Medicine and the establishment of a clinic here in Nashville, somewhere near Meharry Medical College.

Dr. F. McClenton of this city who heads **the program committee** will give an outline of what the program will be. Dr. B. F. McCleave will be host to the meeting. The annual convention will be held on June 9 and 10. It is announced that the Clarksville physicians, including Drs. Burt, Pannell, Terrell and Kelly are making preparations to highly entertain the state convention.

The Memphis meeting of the Executive Council, it is announced, will convene in Terrell Memorial Hospital promptly at 10 o'clock, the morning of Tuesday, February 15 and all members are urged to be present.

# Failure To Invoke Cloture Rule Halts Law's Enactment

## Northern Republicans And Democrats Alike Shown As Insincere When Opportunity Came To Pass Wagner-Van Nuys Measure Against Mob Rule

Washington. Feb. 3—(ANP) Failure of its supporters to force a vote on the Wagner-Van Nuys anti-lynching bill despite an admitted majority in favor of the measure's passage, and inability to invoke cloture or the "gag rule" and thus break the three week filibuster of Southern senators was blamed by observers on the tricks of politics used by both Northern and Southern Democrats and Republicans.

At the same time, these observers said that had a lynching occurred while the filibuster was in progress as was the case in the lower house last spring when the blow torch lynchings at Duck Hill, Miss., took place, it would probably have resulted in overwhelming sentiment favoring the measure and probably forced a vote.

Politics were played by Southern senators who were almost unanimous in their opposition. Dixie is traditionally opposed to such laws, and while the senators themselves might not be sincere in their opposition, it was expedient that they do what they could to block the bill or face the prospect of defeat next election. Many state legislatures went on record as opposing the statute. In their speeches, these senators spoke very little on the merits or demerits of the bill itself, preferring instead to fan the flames of race prejudice, knowing this was a sure selling point to their constituency.

Northern Democrats, on the other hand, have found support of the measure to their advantage because of Negro voters who held the balance of power in many states. Their party has decimated Republican ranks and Democrats would like to keep this new support. If these senators could force passage of the measure, they could return to their states and point to it as evidence of something no Republican ever obtained for the Negro: Passage of a federal anti-lynching law.

National Democratic leaders not concerned with the peculiar political situation of say Mississippi or Ohio have walked uneasily. President Roosevelt maintained complete silence. If they advocated the measure, it would antagonize the Southern stronghold of the party, and indeed some Southern solons who are opposed to the New Deal were privately hoping it would pass and get the signature of Roosevelt so they could tell their constituents the present party heads were pro-Negro and thus stave off added ambitions of New Dealers in 1940.

If national party heads opposed the measure, they would automatically call down on their brows the wrath of Northern Negro voters who helped put them in office in both 1932 and 1936, and whom they hope to retain. Thus it was a ticklish situation either way.

For the first time, the Republicans have been observers in the battle for anti-lynching legislation. Democrats advocated the bill, and if it passed, it would be a blow to vanishing Republican prestige and make more difficult the task of returning defected colored voters to the fold. So many of them sided, either silently

SUNDAY SCHOOL CONGRESS

523 2nd Avenue, North -:- Nashville, Tennessee

# RAILROADS TO GIVE LIBERAL ROUND TRIP FARES TO SUNDAY SCHOOL CONGRESS

## Chairman W. J. Rogers of Passenger Association Sends Letter to Secretary Boyd Explaining How Rates to Kansas City May be Obtained

Mart Building, 401 South Twelfth Blvd., St. Louis, Mo., January 27, 1938—Rev. Henry A. Boyd, Secretary, Sunday School Congress of the National Baptist Convention, Nashville, Tenn.—Dear Sir: Referring to your letter of January 18th with reference to the thirty-fourth annual session of the Sunday School Congress in Kansas City, Mo., June 8 to 12, 1938.

Southwestern carriers now have in effect round-trip fares as outlined below, which offer practically the same reduction as previously made for conventions on the Receipt Certificate and Round-Trip Identification Plan. These tickets are on sale daily, and may be obtained without the necessity of presenting Identification Certificate.

For passengers desiring to travel in sleeping and parlor cars there are available round-tip tickets on the basis of fare and one-half of the regular one-way first-class fare. These fares carry a limit of 30 days in addition to date of sale. The usual charge is made for sleeping and parlor car space occupied.

In addition, passengers intending to use coach service only can purchase round-trip tickets on the basis of five percent less than double the one-way two cent per mile coach fares. These tickets also offer a limit of thirty days in addition to date of sale.

It is suggested that you inform your members of these low round-trip fares and that you instruct them to consult local ticket agents for details of the arrangements applying from starting point. It will not be necessary for you to make any further application for special convention arrangements. We have sent a copy of this letter to chairmen of the other Passenger Associations in order that they may inform you of the arrangements applying from their respective territories.

We are confident that the substantial reduction and convenient arrangements offered by the above round-trip fares will prove attractive to your members in southwesten territory.

Yours truly,
W. J. Rogers,
Chairman.

## Kentucky State Industrial College

### KENTUCKY STATE WINS 2, LOSES 1 OVER WEEK-END

Frankfort, Ky., Jan. 30—The Kentucky State College "Thorobreds" retained their clean slate in the Mid-Western Conference by winning two games against conference teams this week. On Thursday, the "Thorobreds" journeyed to Louisville, where they administered a 58-25 defeat on Louisville Municipal College. Assuming command after Louisville momentarily led 6-3, the "Thorobreds" won going away. Louisville was not mach for the Kentuckians. Sleet, freshman forward from Danville, Kentucky, accounted for 21 points, almost as many as the entire Louisville team gathered.

On Saturday afternoon, the "Thorobreds" were extended to the limit before they weer able to overcome the "Yellow Jackets" of West Virginia State 52-49. The game was nip and tuck all the way, with neither team having any commanding lead after the first five minutes. West Virginia led at half time 22-20, but the rejuvenated "Thorobreds" pulled up on even terms, soon after the second half began, then forged ahead by two points, which lead (with one or two exceptions) they retained for the remainder of the game. The "Thorobreds" seemed a bit "tired" and "dead" during the first part of the game, this being due probably to the terrific struggle that they had with the Renaissance Five the night before. Patton and Moore, with 17 and 14 points respectively, led the Kentuckians in scoring. "Freak" Wilson, who was the first player to cross the Kentucky goal in football during the past season, garnered 17 points for the "Yellow Jackets." These two victories coupled with a previous victory over Wilberforce, gave the Kentuckians a record of three victories and no defeats in the conference.

Sandwiched between the two conference victories already recounted was a Kentucky defeat at the hands of the world famous Rens by a 47-34 count. The Gentuckians played the Rens off their feet for three quarters, but in the final ten minutes the Rens assumed a commanding lead, never to be threatened. The "Thorobreds" played their best game of the year against the Rens. Edwards led his teammates with 11 points. Smith accounted for 13 for the Rens.

### ADVISES IN WAR ON COCKROACHES

The key to winning a fight against cockroaches is the hiding place of the pests advises the U. S. Bureau of Entomology.

Cockroaches are night prowlers, the bureau explains. Mostly, they hide during the day, near kitchen sinks, around cabinets, behind radiators, and under baseboards and the frames of doors and windows.

"If a light is turned on suddenly at night, the cockroaches will run for their hiding places and reveal where they are," says the bureau, adding:

"These are the places to treat by dusting with sodium fluoride powder or pyrethrum powder. Before applying the powder, as many openings as possible should be closed with a crack filler, such as putty, plastic wood or plaster of paris.

"Sodium fluoride powder, the best all-around cockroach remedy, is poisonous to man if taken internally, and should be kept away from food, children and pets.

It is blown into the hiding places with a small duster or with a modern electric powder duster, or it can be sprinkled by hand where roaches run most frequently.

"Cockroaches develop slowly and can exist for some time with little or no food."

Army engineers are building highways across Yerba Buena Island to connect the 1939 Golden Gate International Exposition with the San Francisco-Oakland Bay Bridge.

What is the use of new inventions and new knowledge if they ead us only to a dark age?
—Admiral Byrd.

War is but an organized barbarism,
And an inheritance of the savage state,
However disguised or ornamented.
—Louis Bonaparte

### NO MORE SHORT COTTON FOR HIM AFTER THAT SHOWING, HE DECLARES

Judie Bearden, of Scotland community, Van Buren county, a client of the Farm Security Administration, is forever through with the short staple variety of cotton, he told County Agent Carroll S. Morrow.

In 1937 Mr. Bearden tried out both Rowden and Harper's cotton, using certified seed of each variety, and in September any person could walk around the field and without any difficulty tell each variety to the row, he related.

The harvest showed 54 pounds of seed cotton to the row from Harpers's cotton, he said. Rows were the same length, 735 feet.

The 7 1-2 acres of Rowden produced 3 1-4 bales of lint cotton and the 7 acres of Harper's produced 1 3-4 bales, Mr. Bearden added.

## N. Y. Times Writer Says Only About Half Dozen Solons Sincere Bill Advocates

By Arthur Krock

New York Times

Washington, D. C.—Well-informed opinion in Washington is that only about half a dozen Senators are sincere, convinced advocates of the antilynching bill. This leaves ninety who are bitterly opposed to it either for political or constitutional reasons, or have no faith in it as a curative of lynching. Yet since well-informed Washington opinion does not doubt that, on a show-down, the Wagner-Van Nuys bill would attract a majority vote, the filibuster represents the effort of a minority to prevent a majority from registering legislative assent.

The expression "legislative assent" is used to differentiate it from "legislative will," for the attitude of the majority toward the anti-lynching bill is certainly not that. Among those pledged to vote for it if it ever is put on passage are many who thoroughly agree with Senator Borah's constitutional exceptions. Others think it a mistake to extend Federal power at a time when decentralization impresses them as the best possible New Deal. Still others consider it bad public policy to impose Washington power on a whole section of country against its bitter opposition. And there are some Senators, including Republicans and one or two disaffected Northern Democrats, whose decision to vote for the measure was made partly because they think its submission for signature will politically embarrass the President.

In such circumstances a filibuster takes on respectability and popularity; the obstruction of the minority is welcomed privately by many who publicly deplore it. Among these are probably both the President and the Senate majority leader—Mr. Roosevelt because he has revealed no conviction in favor of this approach to the lynching problem and is aware how his signing would be resented in the South; Senator Barkley because he will be politically better off in his contest for re-election this year if he is not obliged to vote for or against the measure. These are some of the unusual aspects in the situation and help to explain the steam behind the filibuster, the ineffectiveness of the effort to suppress it and the absence of strong orations in favor of the bill.

**The Vote on Cloture**

These factors also have something to do with the size of the vote against invoking yesterday the mild form of regulation which is known to the Senate as cloture. To impose the rule that would have limited each Senator to one hour's speech on the bill and all amendments, considered as a whole, required a two-thirds majority. But there was actually a majority against it, 51 to 37. Among the fifty-one are Senators who would really be glad to tighten the rules of the Senate and limit the now almost limitless privileges of speech. On some other issue they will probably vote for it, even Republicans who, because of their present scareity in membership, fear that cloture will hamper some future resistance of their own. Certain Democrats were also in the group who, disliking the anti-lynching bill but fearful of voting against it, took this means of obstructing it.

But the Southerners who voted against cloture did so with whole hearts. They were killing two birds with one stone. They well remember the long years when they were in the minority, the narrow squeak by which Southern Senators defeated by filibuster the Force Bill advocated years ago by the late Henry Cabot Lodge. Noting the leftward swing of their own party, and conscious of the fact that political party preferences change quickly in the United States, they conceive it possible that one day they may again be a minority bloc. They oppose cloture because in that day it would cripple their power of resistance. They opposed it doubly yesterday because it was proposed in the interest of a vote on the anti-lynching bill.

**Checks on the Majority**

The President has often denounced those who obstruct the registry of the will of the majority. Many Democrats who are fighting the anti-lynching bill have, on other occasions, echoed him. But he and they have not done so in this case for the reasons given above. As always in every human concern, circumstances alter cases. They certainly alter them, so far as this correspondent is concerned, in this particular instance. He shares the views of many that an increase of Federal interference with the police powers of the States is undesirable; that the South is itself disposing of the stigma of lynch law, and that no majority will is frustrated by the filibuster because a majority of the Senate is actually against the measure.

But there are two other points to consider in viewing the filibuster as an attempt to deny the majority its right to prevail: (1) Neither major political party pledged its candidates to support a Federal anti-lynching bill in the 1936 platforms; (2) the very concept of the make-up of the Senate by those who wrote the Constitution was a device to check the prevalence of the majority of the moment. For this reason it was arranged that a small State population like that of Rhode Island would have the same Senate representation as the millions of New York, Pennsylvania or Illinois. Thus a Senate minority can represent a large popular majority.

These facts have all joined to make the present filibuster actually popular in the senate at least so far.

## Failure To Invoke

(Continued from Page 10)

or actively, with the filibustering solons, hoping it would not pass. Most of them voted against cloture in order to further embarrass their political opponents and prevent passage of legislation their party was never able to enact.

In fact, it was Senator William Borah of Idaho, a Republican, who set the stage for the prolonged filibuster by delivering one of his greatest orations in opposition to the measure and inspiring Southerners to follow in his footsteps. Many observers believe that had Borah, with his prestige and following spoken in favor of the proposed statute, he would have so weakened the opposition as to bring the matter to an early vote.

## Market Sassafras Tea

**Atlanta,** Ga., Feb. 3—(By J. C. Thomas for A. N. P.)—A flaked and shredded Sassafras tea product which is being manufactured at Tuskegee by Harry Simms and sons has been given considerable impetus and wide spread publicity through the Barrett Food Produets Company, Inc., of Atlanta, Georgia, which has taken over the agency for its distribution.

There is no new discovery in the Sassafras Tea itself. What is new, however, is the method of processing it which was discovered by Harry Simms, graduate of Tuskegee Institute.

Incidentally, this new enterprise adds another industry to the Tuskegee Institute community and is a by-product of the information and inspiration received upon its campus by one of its graduates.

A trial package was sent to a business man in Mississippi who responded with a request for a hundred thousand packages and exclusive right to handle the product in the entire state of Mississippi.

The Barrett Food Products Company has branch stores in the cities of Nashville, Memphis, Knoxville, Tennessee; Louisville, Kentucky; Jacksonville, Florida and Birmingham, Alabama.

This new Sassafras Tea is not only being served in leading hotels, white and colored in Alabama and Georgia, but is rapidly spreading in its distribution to prominent eating places in all parts of the nation.

## Bermudian Governor Honors A. M. E. Bishops

**Hamilton, Bermuda,** Feb.—(ANP)—The Governor of Bermuda, Sir Reginald J. T. Hildyard, K. C. B., C. M. G., D. S. O., and Lady Hildyard were among the large and distinguished gathering which greeted Bishops David H. Simms and J. A. Gregg and their wives at a reception held in their honor Tuesday night at beautiful St. Paul s A. M. E. church here. The church was packed and throngs of people were denied admittance because of lack of room.

Bishop Simms is the presiding prelate of the 1st District in which Bermuda is included and sailed here to hold the Bermuda Conference. In his party were Mrs. Simms and Bishop and Mrs. Gregg, Rev. D. Ward Nichols, pastor of Emanuel church, New York, and Mrs. Nichols, Dr. George E. Curry, manager of the Book Concern, Philadelphia and Miss Lucy Brown, president of the New England Conference Branch. Rev. J. A. Stevenson, Rev. B. A. Galloway, and Dr. L. J. Williams and E. T. Furbert, M. C. P. were local members of the group.

It was the first time the present governor had attended a function at St. Paul's and he made an excellent impression as he exhorted the people, "to be loyal—to be loyal to Christ, to themselves and to their government."

Bishop Simms enhanced his reputation as a brilliant speaker as he discussed the world problems of the day; Secularism, Moral Confusion, Economic perils, Rise of Tyranny in Fascist States and Radicalism and War.

Bishop Simms recalled that he had heard both Africans and Japanese say, "We like your church but we do not like your Christianity." The Bishop said he did not believe in a God which catered to any particular race, be it white, black, brown or yellow.

Bishop Gregg, remembered here particularly as the former president of Wilberforce university, spoke and exhorted his hearers "to remember that of Faith, Hope and Love, the greatest of these is Love." Mr. George A. Williams and Mrs. Ida Smith were in charge of the program.

The Golden Gate International Exposition will be the greatest single factor to further the cause of commercial aviation in 1939.

The trouble is not that people are merely good in spots, it is that they don't take time to think.

A clear and upright conscience is something to be prized.

### SAYS HOGS DO WELL ON HIS LESPEDEZA

"Hogs make good gains on lespedeza pasture," Homer Bennett, Randolph county farmer, told Jack Carter, county agent.

Mr. Bennett depended almost entirely upon cotton for his cash income until the AAA program came into effect. Then, in cooperation with this program, he planted his diverted acres to lespedeza and soy beans. But he said he has never cut an acre of lespedeza hay. His hogs and cows cut it more cheaply.

Last spring, Mr. Bennett bought 27 pigs for $85 and put them on lespedeza pasture with one ear of corn for each pig per day. When the pigs were put on full feed in the fall they averaged 125 pounds, a gain of over 75 pounds each.

They were kept on a full corn ration for a short time, and 23 of them sold for $465, representing a net profit of over $300 with four hogs still on hand.

### THEIR 10 COWS PAID THEM $1,272 In 1937

Mr. and Mrs. H. S. Smith, Royal, received $1,272 from the sale of 3,640 pounds of butter from an average of 10 1-2 cows during 1937, reports Mrs. Sarah J. Trussell, home demonstration agent in Garland county.

Churning got to be so heavy that Mr. Smith bought an electric churn. He made two trips each week to Hot Springs with the butter and other products, sometimes a hog, a veal, pork sausage, one or three cases of fresh infertile eggs, fryers, or culled hens.

Mrs. Smith community poultry leader for Clover Valley home demonstration club, is a good homemaker, the demonstration agent said. She canned 789 containers of fruits and vegetables and meats, has a beautiful rose garden and does her own sewing.

## Federal Council of Churches Opposes Entrance On Armaments

New York City

The Executive Committee of the Federal Council of the Churches of Christ in America registered yesterday its disapproval of the proposed armament program as submitted to Congress on Friday.

Any further increase of naval and military expenditures beyond the budget already submitted for the current fiscal year was described by the Federal Council's Committee "as unwarranted by any evidence thus far presented and calculated in the present world situation to stimulate the spiritl of fear and unrest which is the parent of war."

The statement of the inter-church body was made public by Roswell P. Barnes, Associate Secretary of the Council's Department of International Justice and Goodwill. The President of the Council who presided at the meeting at which this action was taken is Dr. Edgar DeWitt Jones, prominent Detroit pastor.

In commenting on the action taken by the Federal Council, Dr. Barnes explained that the members of the Council's committee had pointed to the fact that there had not been forthcoming from government sources an adequate explanation of the need for additional naval and air forces. The full text of the Council's statement follows:

"The Executive Committee of the Federal Council of Churches of Christ in America registers its disapproval of the proposed increase of naval and military expenditures beyond the budget already submitted for the fiscal year 1938-1939, as unwarranted by any evidence thus far presented and calculated in the present world situation to stimulate the spirit of fear and unrest which is the parent of war."

## President Roosevelt Has A New Job

If the President follows through the policy he sought to inject in his fight on the Supreme Court, he has a new fight on his hands. In his fight on the court, he sought to inoculate new blood and his personal ideas into the judicial branch of the Government by displacing age and experience, with youth and expermentation; at the expense of efficiency of the American court of last esort. His purpose was to convert the Supreme Court into a cooperative machine that would validate whatever laws, he wrote and crammed through his rubber stamp Congress. And the only reason he did not effect his scheme, the Senate objected and defeated his plan, and there is the rub.

The Constitution of the United States of America, divides our Government into three, separate and distinct coordinate branches, with well defined functions and limitations; but prohibited from invading the domain, or jurisdiction of one another, namely, Executive, Legislative and Judicial. These branches are equal in rank and power, but their authority, is strictly confined by the Constitution, to their respective departments. These branches are coordinate and not cooperative, as the President seems to understand. Their functions are so definitely different, they cannot cooperate, and if cooperation was undertaken, it would vitally threaten the perpetuity of Constitutional Government, as the framers of the Constitution understood it.

The President is announced in the press as saying, the Senate is not a cooperative branch of the Government, that statement is true; it is not a cooperative branch of the Government, but a coordinate branch of the Government, and the President destroys our system of government, and meddles with the power and authority of the Legislative branch of the Government, when he prepares bills and sends them to Congress with a mandate to enact them into law. The Constitution provides that all legislation shall originate in Congress, and neither the Executive or Judicial branches of the Government has anything to do with Legislation; until it becomes law and reaches them in the Constitutional way. And the President's effort to dictate legislation and interpret laws, is an assumption of authority not warranted by the Constitution.

Under our scheme of Government, the Executive branch's duty and authority are limited to advising the Legislative branch of the state of the country, enforcing the law and performing other functions set out in the Constitution. He has no right to criticise, or reprimand the Legislative branch or the Judicial branch for any action either may take, because they are coordinate branches equal in authority and rank with the Executive branch, and it is ugly sportsmanship for the President to lecture or criticise his equal. He certainly has no right to dictate to his equals what they shall do.

The President's new job, is to infuse youth and new blood into the Senate Chamber. Unless he undertakes to do the joy by methods of reprisals, he had better wait on fate to help him, as he has been forced to do, in the case of the Supreme Court fight. He made a bad start with Black, but greatly improved his beginning with the appointment of Stanley Reed to the Supreme Court bench. Mr. Roosevelt's attitude before his press conference were, every time he tried to accomplish something useful, he found the U. S. Senate standing in his path, ready to sabotage his program. So it is plain, that if he hopes to inoculate new blood and youth in the Senate, he will have to operate through the people at the polls, and he will meet more opposition than he did in the Supreme Court fight, according to the poll of the American Institute of Public Opinion.

## Fisk Loses To Talladega

Talladega College, Talladega, Ala., Jan. 22—Talladega College basketball team defeated a fighting Fisk University five 36-35 in a thrilling overtime game. With five seconds of the extra period left to play, Sidney, right guard, tossed a long shot from mid-court to give the Tornado quintet its first victory of the season.

Fisk made the first basket of the game but the Tornadoes jumped into the lead early and stayed out in front. Talladega led 25-17 at the half as Captain Toliver and Johnson set the pace for the Tornadoes. Weaver was the visitors' key man.

Early in the second half Fisk checked the Tornadoes' first period advantage by chalking up 10 points to Talladega's 2. Both teams then fought neck and neck. Talladega gained a slight margin on a free throw but Weaver's stringer from mid-court gave the Nashville team the edge 29-28. Baskets by both teams kept the score in Fisk's favor. Brown's basket from the floor gave 'Dega the edge 32-31. Harris missed his foul throw while Stark's free toss was good, tying the score 32-all, with one minute to play. Neither team could register and the game went into overtime.

'Dega went ahead as Tolliver popped one from mid-court. Weaver evened the score with a long angle shot. Murphy and Johnson double-fouled. Johnson missed. Murphy's toss was good and Fisk went ahead again 35-34, with a minute and a half to play. Then came Johnson's long shot in the closing seconds of the game to cinch Talladega's first victory o the season. Lineup:

Talladega

| | G | F | P |
|---|---|---|---|
| Toliver—RF | 5 | 1 | 11 |
| Brown—LF | 3 | 0 | 6 |
| Tyler—LF | 1 | 0 | 2 |
| Kindle—C | 1 | 3 | 5 |
| Woods—C | 1 | 0 | 2 |
| Johnson—RG | 4 | 0 | 8 |
| Harris—LG | 1 | 0 | 2 |

Fisk

| | G | F | P |
|---|---|---|---|
| Weaver—RF | 6 | 0 | 12 |
| Murphy—RF | 2 | 1 | 5 |
| Ousley—LF | 2 | 0 | 4 |

| Stark—C | 0 | 4 | 4 |
| Cornett—RG | 0 | 1 | 1 |
| Knox—LG | 1 | 1 | 3 |
| Adams—LG | 0 | 0 | 0 |

May we seize every opportunity of doing good, since "We shall not pass this way again."

## EARN MORE! - SAVE MORE! - HAVE MORE! BE MORE!

Every colored farmer should be a member of the National Federation of Colored Farmers, Inc., organized June 5, 1922, incorporated November 19, 1930. Progressive, not radical! Sane, not visionary!

If a farm owner, tenant, sharecropper or farmhand, you should join this organization.

It is the only national organization of colored farmers in America.

Its growth has been steady and substantial.

Its officers and leaders are men of experience and foresight.

It is non-partisan and non-secret.

Its actions speak louder than its words.

Its policies are sane, sound and progressive.

It teaches co-operative buying, production and marketing.

It is a builder of Negro farm communities.

It promotes the general interest of all its members.

It studies and investigates all agricultural problems.

It fosters the improvement of rural home and rural life.

Its members work together to accomplish what cannot be done individually.

It makes farm business more profitable.

What the American Farm Bureau, the Grange and the Farmers' Union have done for the white farmers of this country, the National Federation of Colored Farmers can do for you. Your membership in the N. F. C. F. tells the world how good a farmer you really are. Join today! Join the local Unit in your community or organize one.

THE NATIONAL FEDERATION OF COLORED FARMERS, INC., founded by James P. Davis. Leon R. Harris, Acting President-Secretary; Maj. R. A. Byrd, Vice President; S. B. Wilson, Treasurer; C. R. Richardson, Chairman Board of Directors.

## THE ESSENTIALS OF U. S. DEMOCRACY

A short time ago, a number of Senators, principally members of the majority party, conferred with a view to creating a definite program for promoting recovery. Their conclusions, embraced in ten proposals, were presented to the Senate by Josiah Bailey of North Carolina. A digest of these ten vitally important points follows:

1. The capital gains tax and the undistributed profits tax should be thoroughly revised at once, so as to encourage the normal flow of savings into productive enterprise.

2. A start should be made toward balancing the Federal budget, in order that public credit may be preserved and fears which deter investment, ended.

3. The constitutional guarantees of the right of the worker to work, and of the owner of property to its possession, must be preserved and enforced.

4. Government should stay out of fields which belong in the realm of private industry—and if the government does propose to compete in any field, due notice should be given so that private investment may avoid it.

5. The competitive system must be maintained—as against either private or government monopoly, and business' right to a reasonable profit must be guaranteed.

6. Private credit must be preserved—and that means that the nation's collateral on which all credit depends, must be preserved.

7. There must be an assurance that taxes will not be further increased, and that they will be reduced at the earliest possible time.

8. States' rights, home rule and local self-government must be vigorously maintained, unless proven definitely inadequate.

9. The needy must be aided under a system which is non-political and non-partisan.

10. Lastly, the nation should rely, in the future, as in the past, upon the American system of private initiative and enterprise.

This program needs no comment. It is a real prosperity program. It is based upon the principles that have made America great. If Congress will adopt it, it will make a magnificent contribution not only to recovery but to the maintenance of U. S. democracy.

## WE ARE DISAPPOINTED

The colored people of Tennessee as well as many liberal-minded white citizens deeply regret that Senator George L. Berry has decided to go into the reactionary camp of Senator K. D. McKellar and stand as an opponent of the Wagner-Van Nuys Anti-Lynching Bill.

We are confident that Senator Berry is as positive now as he was several months ago that lynchers never will he held accountable for their fiendish deeds while they have nothing to fear but the "law" of their own communities.

Senator Berry is a progressive while Senator McKellar is a stand-patter, incapable of giving his constituents enlightened representation. It is our hope that Senator Berry's period of backsliding will be brief and that soon he will return to a position which he can take with a clear conscience that he is serving the best interests of his country.

# THE TENNESSEE NEGRO AND THE SOCIAL SECURITY PROGRAM

## By Ira T. Bryant

Wouldn't it bring a grand and glorious feeling to every race-loving Negro if just about one-third of the members of our group could qualify to vote, with both their registration and poll-tax receipt tucked away somewhere in their old clothes? If ever there was a time when the Negro should be able to see the potent reason and the benefits of his suffrage it is now when so many groups of white folks, politically inclined, are grabbing at one another's throat and doing everything they are big enough to do to get control of the machinery of the city and state governments.

In all the political history of Tennessee we doubt that there ever was a time when the citizens were surrounded with more political anonalies and more silly buncombe than now.

Think of a candidate out of the Nashville political organization, where machine tactics have operated 100 per cent ever since Mayor Howse came into office, running for the office of Mayor on a law and order program. Think of these candidates of the Nashville machine, clean as they may be personally as a hounds tooth, denouncing the corruption and the strong arm methods of the handy boys of the police department that have all these years constituted the right arm of Nashville's machine set-up.

Think of the Nashville machine and the Shelby machine, that reliable arm of the corrupt politician that has always stood ready to furnish the necessary number of votes to "put over" the choice of the machine, waging a fight against the Browning unit program on the ground that it disfranchises honest and law-abiding citizens of the state without rhyme or reason.

Of course there is another group of political leaders who claim that the hope of the city rests in the election of another candidate who is and always has been the spokesman at court of the dive keeper, the bootlegger and the racketeer and other groups that make their living by exploiting the poor and the ignorant, both white and black. If law and order is to be given a chance under such a group as this pray tell us by what peculiar legerdemain act are these mysterious leopards to change their spots?

But we started out to discuss the great fight now in progress between Senator McKeller and the Governor of Tennessee. We started out to remind our groups of what a great thing it would be if we were qualified by just a one-third voting strength in Tennessee to take a part, an active part, in settling this controversy between Mr. McKeller and Governor Browning. Mr. McKeller says there is something radically wrong with the Federal-State set-up of the unemployment program in Tennessee. Governor Browning fires back that Senator McKeller is more interested in his return to the senate than he really is in the Social Security program of the government and that what worries McKeller most is that unit system of voting that is to take from the corrupt political city organization the right to name the state representative in the upper house of congress.

Willingly or unwillingly the Negroes have played a part in all of these fights these white folks have carried on and are now carrying on, and the Negro knows better than anybody else that to a large extent Mr. McKeller is right in what he says about the Social Security setup and Governor Browning is practically correct in what he says about Mr. McKeller and the city machine that backs Mr. McKeller.

But the Negroes ought to be able to realize now better than ever the importance of having an organization of their own to vote in any election that has to do with municipal and state offices, to the end that he might have a hand in the "saving" of things after the election is over and be something more than a mere black Lazarus to sit at the gate of his master and take such crumbs and such wads of nothingness as may perchance fall from the table of his master the machine bosses.

Much progress has been made, we are informed, in setting up the machinery for Social Security in Tennessee. Thousands of clerks and officers of various kinds have been appointed but so far as we have been able to learn not a single job of any kind in this great set-up has gone to a Negro, although he does constitute a very important part of the citizenry of the state and although his vote has played a part in making it possible to create these thousands of jobs.

Senator McKeller says that Governor Browning is making appointments and otherwise running this department in such a way as to make votes for himself regardless of efficiency and the rights of all citizens, and it is true that Governor Browning, who has always been known to be a man of broad and liberal ideas, has not seen fit to give proper recognition to all groups in the inauguration of this humane and brother's keeper program sponsored by that great President, Franklin D. Roosevelt. Mr. McKeller says also that the lieutenant of Commissioner Gore, in recognizing claims of individuals against the department are more concerned about the strengthening of their political organization than they are about doing good to the poor and helpless who stand in such need as the department is supposed to furnish. The pity is that Negroes have not a city organization as well as a state organization to act as a kind of intermediary between the helpless members of our group and the Browning set-up on Capitol Hill, that is supposed to pass upon the merit or the lack of merit of thousands of applications that are presented to them. It comes to us that just the other day in Shelbyville, a poor helpless individual applied to the agent for help of some kind in the form of Old Age Pension, only to be informed that they had better get out of there and go and find a job of work. Is it true, as commonly reported that in some sections of Tennessee when a poor individual makes an application for help under the Old Age Pension program they are given to understand that if they have a little home that home must be conveyed to the state and various other requirements met before they can get properly enrolled.

If these are legitimate requirements under the law, and if these injustices to which we have referred are actually occuring, the Negroes themselves ought to have a set-up of some kind that might furnish a lead to the helpless people of our group by bringing the matter squarely before the officials of the State of Tennessee, and in the event justice is not to be gotten there then carried on to the Federal Government for a final adjudication.

But in returning to this matter of Mr. Bill James, the so-called numbers writer and racketeer. If he and his crowd, acting upon the feeling that their rights are involved and that their interests might be best conserved by the election of a certain candidate, get actually into politics and use every legitimate means to get their friends to the polls and to vote, why all this great hue and cry, especially by members of an organization that has been guilty itself of things far worse than dispensing of a little bootleg whisky or operating the numbers program as bad as the both are.

—A Methodist Layman.

# BELOW THE CREAM LINE

### Dried Skim Milk Works Its Way Into Favor

One school cafeteria director is not going to have to guess any more about the quality of the bread she serves children in school. She has found, tested, and proved the superiority of a loaf made according to a formula by the Bureau of Home Economics. Now the bread served in the cafeterias under her direction is made by this rule, and do they like it!

For many years, contracts for supplying bread to schools in this city were awarded on the basis of competitive bidding by a cafeteria committee of the Board of Education. Before bids were asked the cafeteria director would get the help of a committee of home economists in testing samples of bread submitted by the bakers of the city in drawing up specifications. On the basis of these specifications, bakers then submitted their bids, the lowest bidder got the business, and the children ate the results. Often neither dealers nor schools were any too satisfied with this way of doing business in an essential food.

Starting the other way around with the formula for a school lunch loaf that experts in Agriculture's Bureau of Home Economics had prepared—every ingredient of which was known and measured—the school authorities proposed to the bakers that they try competing for their business on the basis of this defined loaf of bread. The bakers fell to with a will, and now at competitive cost, which assures all bidders of fair and equal treatment, the school cafeteria director receives a dependable, nutritious product made from a formula that permits analysis. Not only that, but the loaf that has won such favor in the schools has found its way to the markets and families can now buy it for use at home as well.

No puff for the Bureau of Home Economics, which needs no puff from us, this story is important for the news it brings that in one city, at least, school children are getting bread 12 percent of which is milk. Starred in the list of ingredients in the Bureau's school lunch loaf formula is powdered skim milk. In every 100 pounds of raw materials, 12 of them are this important milk product.

Skim milk, as all nutritionists but too few consumers know, contains almost everything there is in whole milk except the fat. It has calcium, and phosphorous—nutrients that help in building strong bones and teeth. It is high in body-building protein. It is rich in Vitamin G which some experts believe is the best enemy of pellagra. Because it lacks the butterfat, its fuel value is not high, nor is a good source of Vitamin A, as is whole milk. But these missing values can be got from other foods, while calcium phosphorous, and Vitamin G come cheapest and best in milk, and are all found in skim milk.

Little skim milk, liquid or dry, ever finds its way to consumer markets. Wasted by many farmers, thrown away by many dairies, its virtues little known by consumers, the praises of this food are seldom sung, its promotion by industry languishes. Now and then, a baker or ice cream manufacturer will sell a little dry skim milk to persistent consumers, but for those whose milk budgets are small and whose nutrition needs are usually most neglected, this product is practically beyond their reach, except for the help that government has been giving.

Government for most of 3 years has been turning its hand to pushing the consumption of dry skim milk. Close to 41 million pounds have been distributed between February 1935, and November 1937. With funds from AAA, these mountains of milk have been bought and turned over to the Federal Surplus Commodities Corporation for distribution to relief agencies in 39 States, in the District of Columbia, and in Puerto Rico. There the relief agencies assign PWA workers to open the big drums in which the dry powder is shipped, and to repackage it in pound bags for delivery to households whose diets border along the danger line, and whose earners must depend on relief agencies for their income.

Three-way benefits come from this dry milk distribution: First, to the families who receive the milk; second, to dairy farmers whose raw product is used in making the milk; third, to industry, in developing a demand which it can, if it wishes, use to advantage in making dry skim milk regularly available on markets at economical prices.

One stumbling block to the development of such a commercial business, it used to be claimed, was the difficulty of finding a package in which small quantities could be put up and kept dry. Dry skim milk must be kept dry, or else it cakes and becomes difficult to use. When this problem was put to the Bureau of Dairy Industry in the Department of Agriculture, its experts got to work and presently evolved a glassine-lined paper bag, moisture proof, and economical to produce. This is the bag which the relief agencies all over the country have used in repackaging the milk that goes into the homes of relief families.

Education in the food values of this nutritious product, in how to use it for drinks, in soups, in sauces, in gravies, in baking, goes along with every package of dry skim milk which the Government has distributed. More than a gift of food, this little bag carried along with it a practical example of how families with small purses can work milk into their diets at the lowest possible cost. One pound of dry skim milk is the equivalent in food value of 4 3-4 quarts of fresh skim milk. Bought at 15 cents a pound it would provide, when mixed with water, fluid skim milk at 3 cents or less a quart. By combining three-quarters of a cup of dry milk and 1 1-2 ounces of butter, the equivalent in food value of a quart of whole milk is obtained.

Already results show in the records of the relief workers who have been handling the distribution of dry skim milk, in the letters which the Federal Surplus Commodities Corporation receives from the families who have used it and from dealers whose customers ask for it. Writes one large firm of grocers in the middle west:

"We have received some inquiries from the South for one-pound and 30-pound packages of skim milk powder and are told that they are coming from consumers who formerly were served by the Government by relief clients. We do not pack anything of this nature at the present time.....We wish to inquire if you could tell us in just what districts the distribution of this product was made, so that we might investigate as to whether there is a market . . ."

A Southern consumer writes to Washington: "Will you kindly advise me if possible where I can procure the skimmed milk that the Welfare agents dispense to the needy—I've tried all the grocery stores and no one can tell me where to get it . . . . several people have asked me to find out where it could be bought cheap. Thank you very much."

From across the country, comes another report. The leader of a home economics project in Texas writes: "More homemakers are becoming interested in the dry skim milk each week. Every dish contains it in some form. Many of our guests are receiving it from the Relief Commission; others are buying it from the bakery at 15 cents a pound which mixes up one gallon of skimmed milk. We believe many mothers are beginning to accept the truth of our teaching that at less than 4 cents per quart anyone can afford to have milk . . . . Each week we learn of new customers of the dry skim milk."

Slowly but surely, out of this

## FURTHER DROPS IN MEAT

(Continued from Page 1)

Retail prices of fresh pork cuts were only 2 to 3 percent lower this mid-December than last, while live hogs in mid-December, 1937, were selling at Chicago at almost 29 percent under their mid-December, 1936 prices.

Consumers buying lamb paid from 14 to 20 percent more in December, 1937, than they paid a year earlier. Prices of live lambs in mid-December were about the same as a year ago, but since that date they have moved down and are now below their level at the beginning of 1937.

## CATTLE, HOGS BEAT COTTON

(Continued from Page 1)

Wolfe was able to winter his cattle at $2.50 a head, and this cost was repaid by his sales of lespedeza last summer from a crop larger than his needs.

"He has 50 head of calves and 200 head of cows now on hand, and has netted $4,500 from his sale of calves during the summer.

"The hogs on his farm were handled in much the same manner as his cattle. They were fed home-grown corn, and pastured on a bean and oat field in the winter, and lespedeza in the summer. The necessary amount of tankage and other feeds was paid for by the sale of lespedeza hay. Mr. Wolfe netted $2,000 on the sale of his hogs during the summer."

Netting as much from his livestock as from 900 acres of cotton that made 900 bales, Mr. Wolfe is setting a leading example in a combination of livestock and cotton, the county agent said.

## SPREAD IN BREAD PRICES

(Continued from page 1)

topped the figures of November and December of the year just past."

For 7 months, from June through December, 1937, the average cost of white bread per pound for the country stayed at 8.7 cents.

During this same period the wholesale cost of the most important bread ingredients dropped off sharply. Flour of the kind generally used in commercial bread baking was quoted in December at from 75 cents to $1.25 a barrel below prices prevailing in June, or an average of almost a third of a cent a pound loaf less. Lard and lard substitutes fell off more than 3 cents a pound. Yeast and malt costs remained steady throughout the 7 months. Sugar, salt, and milk costs shaded off, but only slightly.

*Because of changes in their method of reporting retail bread prices, the Bureau of Labor Statistics gives the December, 1937, average as 8.9 cents. On a comparable basis, the average price both for June and December, 1937, was 8.7 cents.

On the basis of a typical formula for commercial bread, total ingredient costs in a pound loaf of white bread would add up to 2.62 cents in December, as against 2.96 cents in June, 1937, representing an increase in the gross margin of bakers and retailers of one-third cent on the average pound loaf of white bread sold in the country.

Bread prices are reported by the Bureau of Labor Statistics for each of 60 cities. Average prices in 24 cities were higher in December than in June; in 23 cities, they were the same in both months; and in 13 cities, December prices were lower than in the middle of the year.

Contrasted to the steady price of bread, wheat flour sold to consumers at an average of 4.3 cents per pound on December 14, as compared with 5 cents in June. Soda crackers also sold well below the June average. Wheat cereal was down slightly. Whole-wheat bread and rye bread, like white bread, remained unchanged at average of 9.8 cents and 10 cents per pound, respectively. Pound cake in December sold at more than a half-cent a pound above its June average of 24.8 cents.

## MORE LAYING

(Continued from page 1)

to the value of eight and one-half bales of cotton at eight cents a pound, the net return equal to that of about four bales at prevailing prices.

"On most of these farms poultry was a sideline and did not interfere with the production of regular field crops and of other livestock. A few of the farms kept about 1,000 hens, which required more time and labor, and the income from chickens and eggs was second only to that from cotton.

"High egg production per hen and good feeding accounted in the main for the profit on these demonstration farms. The hens averaged 155 eggs for the year, while the average farm hen of the state produced only 60.

"Most of the producers bought baby chicks from reliable breeders as the surest and cheapest way of getting well-bred hens. Most of these farmers do not have the facilities or the experience to breed chickens successfully, but they can buy the best at reasonable prices.

"One of the striking facts revealed by the records is that high egg production was more important in determining net income than egg prices.

"In April when eggs sold for an average of 22 cents a dozen the labor income was $17.38 per 100 birds; in November when they brought 35 cents it was only $9.61. The difference was in the rate of production per hen. The hens laid an average of 18.2 eggs during April and 6.9 eggs in November.

"The records also reveal that the demonstration poultrymen fed their flocks more liberally and used better-balanced rations than are used on most farms. Feed cost varied little from month to month.

"Obtaining higher egg production during the months when eggs bring higher prices seems to be the farmers biggest problem."

## GOT $625 FROM HER ROADSIDE STAND SALES

(Continued from page 1)

like full-time duty as a saleswoman, Mrs. Banta served as president of her home demonstration club, took part in county chorus activities and filled her cellar with canned foods for the winter," said the demonstration agent.

## MELON TOOK TO MILK

(Continued from page 1)

The milk-fed melon not only put on 10 pounds more weight than any of its vine mates, but the meat was noticibly rich and red, and the rind thin, Mr. Elkin said.

## Delta Sigma Theta Sorority's Roster

Greetings: Friends, Readers, and Sorors:

Alpha Chi chapter of Delta Sigma Theta Sorority at A. and I. State College began the New Year resolving to do even greater things than in 1937, and promising a banner year.

The 1938 chapter roster began with the following sorors: Anethia Barksdale, Baltimore, Maryland.; Mildred Falls, Memphis, Tenn.; Thelma Lytle, Murfreesboro, Tenn.; Ethylene Maxeye, Memphis, Tenn.; Addie McEvans, Shaw, Mississippi; Blondella Moreland, Clarksville, Tenn; Ernestine Moreland, Clarksville, Tenn; Olga Northcutt, Chattanooga, Tenn.; Myrian Richardson, Johnson City, Tenn.; Hazel Rogers, Earlington, Ky.; Evelyn Robinson, Chattanooga, Tenn.; Bernice Spigner, Nashville, Tenn.: Rose Thomas, Georgetown, Ky.; Bobbie White, Pueblo, Colorado.

The Neophytes of Alpha Chi Chapter: Sorors—Hazel Giles, St. Louis, Missouri; Dora Farrington, St. Louis, Missouri; Josephine Thomas, Earlington, Kentucky; Margarett Bayes, Nashville, Tenn.; Marjorie Smith, Rockwood, Tenn.; Maxine Davis, Springfield, Tenn.

The Pyramid Pledge Club: Pledges—Walker F. Chavis, Nashville, Tenn.; Ozella Chavis, Urbana, Illinois; Pauline Dumas, St. Louis, Missouri; Francis Wilkins, Chattanooga; Evelyn Crawley, Nashville, Tenn.; Frances Butler, Louisville, Kentucky; French Henderson, Knoxville, Tenn.; Gladys Wells, Jackson, Mississippi; Mildred Palmer, Paris, Tenn.; Elma Mitchell Murfreesboro, Tenn.; Stella Rucker, Gallatin, Tenn.; Helena Anderson, Buffalo, N. Y.; Marion Robinson, Chattanooga, Tenn

**Facts About Alpha Chi Chapter**

1938 marks the second years of the existence of this chapter.

Miss "Junior Class" is a member of Delta Sigma Theta Sorority.

Miss "Sophomore Class" was a member of the Pyramid Club.

There are three members of the Sorority and two members of the Pledge Club who are pledges for Phi Beta Tau, the Honorary Scholarship Fraternity of Tennesse State College.

The Southern Regional Director, Soror Sue Cowan Morris, was a recent visitor to this city.

Soror Vivian Osborne-Marsh, Grand President, Visited Nashville Chapters during the week of January 31, and was the recipient of many affairs. She was scheduled to be guest speaker at the chapel exercises the following Wednesday morning.

French Henderson, of Knoxville, Tenn., a member of the Pyramid Club, has written the Chapter Song —"Delta We Cherish Thee."

Founders Day was celebrated by the three chapters. The lovely home of Soror Joe Brown Washington was opened to all Sorors, as the guest of Pi Sigma Chapter.

Soror Florence Cole Tolbert-McCleaves, who wrote the music of the National Delta Hymn, was a recent visitor and rendered several vocal selections during one of the school programs.

Soror Rachel Taylor, head of the Y. W. C. A. of this city, was the guest speaker at the Sunday School hour, sponsored by the Pyramid Club.

Francis Chavers, a member of the Pyramid Club, had the highest scholastic average of any member of the Sophomore Class for the Fall Quarter.

Alpha Chi Chapter sponsored the show (picture) "Breakfast for Two" at the Ritz Theater just before the holidays.

Miss Josephine Douglas, of Chattanooga, was presented a scholarship by this chapter for having received the highest scholastic average of any Freshman.

Soror Em Tecumseh Burt, only daughter of Dr. and Mrs. Robert Burt, of Clarksville, Tenn., and a member of the faculty of Tennessee A. and I. State College, is the advisor of the Sorority

The election of officers for the year 1938 resulted as follows: president, Olga Northcutt; vice president, Hazel Rogers; secretary, Myrian Richardson; assistant secretary, Addie McEvans; corresponding secretary, Earnestine Moreland; treasurer, Mildred Falls; assistant treasurer, Dora Farrington; chaplain, Maxine Davis; parliamentarian, Margaret Bayes; journalist, Thelma Lytle; dean of pledges..... .....; Advisor, Em T. Burt.

Thelma Lytle, journalist

# ANDERSON GETS INTO CHICAGO G.O.P. PRIMARY

Chicago, Jan. 2—(ANP)—The rather mixed up political situation in Chicago's congressional primaries was stirred anew with the endorsement of former Alderman Louis B. Anderson for the Republican congressional nomination in the 1st Illinois District by the Regular Republican Organization of the 2nd Ward headed by State Senator Wm. E. King, last Monday night. With the endorsement of Anderson, Alderman R. R. Jackson, who had hoped to have the backing of the King organization, withdrew. He left Alderman Wm. L. Dawson, Colonel Roscoe Simmons, and former Congressman Oscar DePriest contenders for the Republican nomination.

On the Democratic side thus far Congressman Mitchell is the only candidate to officially announce. There are several dark horses which may try to wrest the laurels from Mr. Mitchell. however.

Republicans will try for a number of state and local offices. Judge Albert B. George has been suggested to the Cook County Republican Committee as a candidate for municipal judge, Jacop R. Tipper, editor of The Chicago World, wishes to run for County Commissioner, Aaron Payne has announced that he will run against King for the state senatorial nomination with the backing of Alderman Dawson's organization and Congresman DePriest has proposed the name of his son, Stanton. for the county commissioner nomination.

## COLTS FULLY GROWN AT FOUR YEARS OLD

Horse colts reach their full height and nearly 99 per cent of their full weight at four years, the North Dakota agricultural station finds in a study of three draft breeds.

At six months, well-fed colts acquired 83 per cent of their height but not quite one-half of their maximum weight. Both increased only slightly at one year, but at two years 96 per cent of mature height and 83 per cent of maximum weight were reached.

At three years the height increased slightly, but weight reached a little over 94 per cent.

The colts were worked after they passed their third birthday, which slowed up their rate of weight increase somewhat, it was reported.

## BELOW THE CREAM LINE

(Continued from Page 14)

emergency work of the Government, the almost forgotten milk product is gaining a recognition long deserved but much neglected. If you want to know how to work dry skim milk into your baking, write to the Bureau of Home Economics. Pass along to your baker their formula for the school lunch loaf, if you buy your bread. Ask your grocer for dry skim milk. It should be on the shelves of every grocery store. If it is not, keep on asking for it.

# THE MODERN FARMER

Vol. XI. NASHVILLE, TENN., MARCH 15, 1938 No. 2.

# Important Features of New Farm Law Are Here Enumerated

## General Principles of 1938 Act Given; Details of Corn Program Discussed

Preparations are being made by the United States department of agriculture to put into effect the new farm act enacted last week. The new law supplements the existing soil conservation act.

Viewed in a broad way, the act supplies the basis for a 6-point program designed to provide farmers with adequate facilities and with the stability of income needed to enable them to go on producing abundantly and to maintain ample reserves of farm commodities for use of the nation. The six points are as follows:

One—Continuance of the AAA soil conservation program and establishment of its objectives as a part of permanent farm policy represents a national investment in soil fertility and insurance for the nation of future abundance of food and fiber.

Two—National acreage allotments are established at levels designed to give production ample for domestic consumption, exports and reserve supplies, and payments are made to encourage farmers to produce up to these national allotments.

Three—Loan provisions in the law encourage systematic storage

(Continued on page 16)

## Holtzclaw Elected Head Of Miss. Farmers 35th Time

**Utica,** Miss.—William H. Holtzclaw, Sr., president of Utica institute, here, was re-elected president of the Utica Negro Farmers' conference for the thirty-fifth consecutive time last week at the annual meeting of the organization on the school's campus.

Other officers elected were: Prof. G. W. Williams, vice president; John Lee, Indianola; E. C. Booze, Mound Bayou; Mrs. Alice Oliver, Clarksdale; Mrs. T. Nichols, Biloxi; Prof. Edward Parish, Hazlehurst, and D. L. Lovelady, Georgetown, regional vice presidents, and G. R. Brown, Jr., treasurer.

Agricultural experts from all parts of the country attended the sessions and discussed various phases of farm life with the large number of delegates present.

Among the speakers were: J. E. Johnson, B. J. Cooper, R. E. Lee, Rankins county agent; William H. Holtzclaw, Jr., vocational agriculturist of Copiah county; Mrs. Oliver, Mrs. J. E. Johnson, of Prentiss; Mrs. Winnie Anderson of Mound Bayou, T. M. Campbell of Washington, D. C. and others.

The conference has been instrumental in encouraging Race farmers to purchase farms. Already over 30,000 acres of farm land have been purchased by members of the organization. The goal is the ownership of 100,000 acres.

# Interesting Happenings To Farmers Throughout the Nation

## 3 R'S TO BE MAJOR IN RURAL SCHOOL

### Council Also Plans to Emphasize Training Of Teachers

Washington, D. C., Jan. 14—The Council on Rural Education, under whose guidance the Julius Rosenwald Fund has set aside $1,000,000 to be expended, chiefly for the purpose of building up important teachers' colleges in the South, held its annual meeting here January 2 and January 3.

Southern and national educators, officials and representatives of foundations were in attendance, and their discussions were devoted to two elementary essentials of good rural teaching—the three R's, especially reading, with a view to building up something more than census "literacy," and the education of teachers to meet the conditions which they will find when they get out to rural schools and communities.

The rural education staff of the Julius Rosenwald Fund has constituted the direct staff of the Council together with explorers and research workers appointed from time to time for special tasks. The Council on Rural Education is concerned with improving rural schools for both races, in the southern states. The General Education board, the Southern Education foundation, and the Carnegie corporation are represented on the council and use it as an advisory body.

Appropriations totaling $100,000 have been made by the fund to special courses for the preparation of rural teachers at the white state normal colleges at Statesboro and Carrollton, Ga., and the Race state normal college at Grambling, La.

Among those in attendance at the sessions were W. W. Alexander, ad-

## WHITE PAPER CITES SERVICE OF RACE MAN

### Wm. Cooper of Hampton, Among Distinguished Virginians of Year

Hampton Institute—In its first annual honor roll for 1937 the Richmond (Va.) Times-Dispatch has included one member of the race, William Mason Cooper, director of extension, Hampton Institute.

Explaining the meaning, purpose and scope of this honor roll, the newspaper, under the caption, "Leaders of Virginia," said:

"In compiling the list of 12 person who comprise this newspapers first annual roll of honor, we believe we have chosen citizens who have rendered distinguished service to Virgina during 1937. Service to Virgina is the criterion by which they have been judged, and by which candidates for future Times-Dispatch honor rolls will be judged hereafter."

Printing Mr. Cooper's picture with the others of the group, the Times-Dispatch cited him as follows:

"William M. Cooper is director of the extension division of Hampton Institute. His routine duties cover a large part of the educational field among Negroes in Virginia and extend to other states where graduates of Hampton live and work. He is also executive secretary of the Negro Organization society of Virginia, which concerns itself with the organization and development of community efforts for better schools, better homes, better farms and better business for Negroes.

"The society celebrated its 25th anniversary in 1937 with a silver jubilee meeting. In an address at the meeting, Dr. Robert R. Moton, former president of Tuskegee insti-

(Continued on page 16)

## HUNT TALKS TO FARMERS IN FLORIDA

### Assistant In Farm Credit Administration Speaks

Marianna, Fla.—The Negro farmers of Jackson and adjoining counties approximately 200 in number, received important information and helpful suggestions on their farm work today from H. A. Hunt, assistant in the Farm Credit Administration, and Jos. H. B. Evans of the Farm Security Administration, both of Washington, D. C., working among the Negro farm population in the Southern Region.

These men were met by T. M. Campbell, field agent, representing the Negro Agricultural Extension Service from Tuskegee Institute at a similar meeting at Jacksonville on January 28th. Between these dates nine other meetings were held at Sanford, Plant City, Bradenton, Wildwood, at Fessenden near Ocala, Live Oak, Madison, Tallahassee and Quincy. These meetings included a cross section of the Negro farming area of the State through which approximately 1,400 "dirt farmers" representing 29 counties received instruction vital to the solution of their economic and other farm problems. The importance of saving a part of the earnings from the farm each year was the keynote of the advice given. More than 1,400 students in the various educational institutions visited were addressed by the speakers on this tour.

The speakers were accompanied by A. A. Turner, Negro district agent of the Agricultural Extension service of the A. & M. College, Talalhassee and J. E. Granberry, Farm Agent of Marianna, Jackson county.

## TRENCH SILO FILLED IN 1936 COMES IN HANDY

Stigler, Okla., Feb. 22—A trench silo filled with green matured corn in 1936 and opened last month in Haskell county was found to contain a silage in excellent condition according to D. C. Bryant, county agent.

The silo is on the farm of Mrs. T. A. Falconer. Because of the plentiful supply of oats and wheat for pasturage during the winter of 1936, the silage was not used or opened. But this year Mrs. Falconer opened it and found that the feed was in good condition for live stock consumption.

This year the wheat and oat pasturage has not done so well, so Mrs. Falconer is saving money by using the inexpensive feed already put up.

## What the Tillers of the Soil and Other Agencies Are Doing Everywhere

Two Wilson, N. C. schools have been given the names of prominent members of the group who lived in that city and aided in its progress and welfare. The Negro high school has been re-named the "Charles H. Darden High School" and a graded school has been re-named the 'Sallie Barbour School." Wilson has started something other cities might well follow.

In his annual report, Pres. F. D. Patterson says that Tuskegee Institute is operating on a balanced budget. For the first time in twenty years the farm produced enough to supply the farm stock. The farm also supplied 36,000 pounds of meat for the school's boarding department.

Joseph Shelly Decker, a Mississippi planter, was sentenced to serve three years in the penitentiary and fined $3,000 for violation of the peonage laws. The sheriff of Tallahatchie county verified the statements of the prosecution that Decker held a Negro family in servitude for debt.

(Continued on page 16)

## Alabama's New Movable School Truck For Negro Farmers

Tuskegee, Ala.—The purchase and sending into the field of the fourth Movable School Truck today, marks an important milestone in the development of the Alabama Movable School work. For thirty years there has been going out from Tuskegee Institute, Alabama, under the auspices of the Federal and State governments, a vehicle or truck, to all parts of the countryside, for the purpose of teaching better methods of living on the farm and in the homes of Negro farmers.

Since the Negro farmer was suddenly thrown upon his own resources by the emancipation proclamation, there has been a need for some plan of adult education. As it was necessary for these people to earn their livelihood, attendance at any school was impossible. The only feasible plan then was "to take the school to the farm—to the seat of the trouble."

Booker T. Washington was perhaps the first Negro to seriously advocate teaching the masses of rural people outside of class rooms. He sought to improve conditions under which the majority of Negroes lived rather than to instruct according to academic methods.

Some thirty years ago Morris K. Jesup, a New York philanthropist

## Annual Meeting of Directors of the National Federation of Colored Farmers Called

**Moline, Ill., (Secial)—This is to notify all the directors** and officers of the National Federation of Colored Farmers, incorporated, that the annual meeting of the board of directors will be held in Room 215-610 Thirty-sixth Street, (Vincennes Hotel) Chicago at noon Saturday, April 9th. All directors are requested to either be present in person or to forward their proxy.

The purpose of this annual meeting is to elect the board of directors, to amend the by-laws and to fill the vacancies on the board of directors and any officials that may exist. This notice therefore, is given in keeping with the law, and is regarded as official notice, as provided by the state of Illinois, and in keeping with the corporation which was chartered under the state of Illinois, and which charter was granted on the 29th day of October, 1930.

LEON HARRIS, ACTING PRESIDENT-SECRETARY
NATIONAL FEDERATION OF COLORED FARMERS, INC.

## GENERAL PRINCIPLES OF 1938

(Continued from page 1)

of surpluses of big crop years for use in years of shortage. The government is authorized to advance money as loans to enable farmers to hold surpluses until needed.

Four—Marketing quotas backed by penalties on sales in excess of the quotas ean be used, subject to approval of a two-thirds vote of the producers voting, to secure general participation of farmers in a program designed to hold surpluses off the market until they are needed.

Five—Release of corn supplies from storage under marketing quotas is provided to meet any shortage that develops either on the farm, in the county or in the case of national need.

Six—Crop insurance for wheat, starting with the 1939 crop, will give the wheat producers and the bread supplies of the nation better protection against drought. Gradual accumulations of wheat paid in by farmers as insurance premiums will contribute a major part of the "ever normal granary" supplies for wheat.

**Vote on Quotas.**

"In providing the plan of marketing quotas, congress has created the means for stabilizing marketings but this means could not be nsed if more than one-third of the farmers voting in a referendum opposed it. A referendum of producers must be held before quotas go into effect.

H. R. Tolley, administrator of the agricultural adjustment administration which will administer the principal provisions of the new act, says that the present conservation and marketing program and the program developed under the new act would combine to form one program—the AAA farm program.

"The new act," he said, "amends the Soil Conservation and Domestic Allotment aet and hence will require some changes in the conservation program announced earlier for 1938, but in the main the conservation features of the AAA Farm Program will be similar to those in effect in the past. Farmers will continue to be paid for adopting soil-building practices and for devoting more land to soil-conserving crops and uses. In addition, the new act authorizes parity payments but the funds for these are not available.

**More Formulas.**

"The act provides formulas for a good many matters which have in the past been left to administrative discretion. For example, the act specifies how the funds are to be allocated among the various commodities; how acreages of the various commodities will be apportioned to the states, counties and farms; provides regulations for increases in payments to small producers and fixes the point at which marketing quotas for the commodities go into effect.

**Some Provisions.**

Some of the principal provisions of the Agricultural Adjustment Act of 1938 are:

The act declares the policy of congress to be the conservation and improvement of our soil resources; the regulation of interstate and foreign eommerce in cotton, wheat, corn, tobaeco and rice to the extent necessary to provide an "orderly, adequate, and balanced flow" of these commodities and to bring about, insofar as is practicable parity prices and parity income for the producers of wheat, cotton, corn, tobacco and rice.

The secretary is directed to protect consumers by the maintenance of a "continuous and stable supply of agricultural commodities from domestic production adequate to meet consumer demand at prices fair to both producers and consumers."

The act continues and supplements the AAA Soil Conservation program by providing that payments to farmers be made for practices which conserve and build the soil.

In addition, parity payments may also be made to the producers of wheat, corn, cotton, tobacco and rice if, and when, congress provides the funds.

**More for Small Grower.**

The act contains special provisions for small growers, including increases in all soil conservation payments less than $200. Beginning in 1939, a limit of $10,000 will be placed on individual payments.

Payments are to be divided between landlord and tenant in proportion as they share in the crop except that payments for soil-building practices are divided in the proportion that landlord and tenant contribute to the carrying out of the practices.

The act provides authority for the storage of additional reserve supplies of the corn, wheat and rice as a protection for both farmer and consumer. The act authorizes loans upon agricultural commodities. The loans on cotton, corn, and wheat range from 52 to 75 percent of parity and no loans will be made on these commodities, or rice, for a year in which the producers have rejected marketing quotas.

Marketing quotas on wheat, cotton, corn, tobacco and rice go into effect—when the supplies reach certain levels. Sales in excess of marketing quotas will be penalized. The quotas may be increased or suspended altogether if a decrease in the supply situation makes changes advisable. Before marketing quotas for any commodity become operative they must be approved by two-thirds of the producers voting on the quotas. If more than one-third vote against quotas, they will not be effective.

**Right of Appeal**

Any farmer who is dissatisfied with his farm marketing quota may appeal within 15 days to a local review committee named by the secretary.

The act gives the secretary of agriculture authority to prosecute rate cases affecting farm products before the Interstate Commerce Commission.

The act provides that not more than $4,000,000 annually shall be used for the establishment and maintenance of four regional laboratories—one in each major farm area—to develop new uses and markets for farm products.

## SAYS LACK OF RACIAL UNITY NOT UNUSUAL

**No Race, Not Even the Jews, Presents a United Front**

Washington, Feb. 25—The inability of the Race to achieve complete unanimity of thought or action is no phenomenon, aecording to Dr. Carter G. Woodson, researeh director of the Assoeiation for the Study of Negro Life and History.

In a statement issued this week, the historian said that no race has ever presented a united front, and that the disorganization of the Race should not be cited as an excuse for lack of group accomplishment.

Said he:

"The Negro race united as a solid phalanx moving toward its goal is an impossibility. We often complain that certain things cannot be accomplished because of the diverging interests and movements frittering away the energy of the Race which should be expended in attaining definite objectives.

**No Race United**

"We shall never find a way out of our difficulties if we postpone the effort until our people manifest such unanimity. The great task of regeneration and reconstruction must be undertaken in the midst of conflicting forces as they now operate.

"History does not show that any race as a whole has ever been united on anything. There is no race in America, Europe or Asia which is united on any great proposal. Not even when suffering from the same oppressor have any of these people been known to present a solid front to the enemy.

"The Jews are often referred to as a striking example of people standing together when under fire. A study of the inner life of the Hebrews, however, will show that their situation is everything else but that of a united people cooperating for their common good."

## SURVEY SHOWS YOUTH PROBLEM IN RURAL AREA

**Missouri Young People Need Better Recreational, Social Programs**

A need for more and better recreational and social programs for rural Missouri youth was disclosed by the results of a survey of 2,297 high school students announced last month by the University of Missouri college of agriculture.

The survey, conducted under direction of Melvin W. Sneed, head of the rural sociology department, in cooperation with the WPA, was made in twelve representative Missouri counties.

The survey showed that rural young people were seriously concerned about something to do and interested in improving community organizations, Sneed said. Most of them mentioned sueh social needs as an enlarged school curricula, better social organizations, opportunities for employment and improvements in church and religion.

Other results of the survey included:

Organizations sponsored by the church were the ones attended by the greatest number, and more than one-half of the youths were church members.

One-half thought that local organizations were uninteresting as measured by the programs they offered.

About one out of five were or had been members of 4-H elubs. Boy Scouts and Future Farmers of America were also popular organizations.

Most of those studied had regular home responsibilities but only 5.4 per cent indicated they directly received pay for their activities. However, many were earning their own spending money.

Reading was one of the principal activities partieipated in. A fairly large percentage found reading matter of an informative nature available at home. Only 7.6 per cent had no newspapers, but one-third had no daily paper.

Approximately four out of ten who were to be graduated from high school planned to continue their formal education.

Only about one-fifth of the farm boys intended to continue in farming after graduation, while more than one-fourth planned to attend college. Approximately 16.7 per cent of the total had no special plans.

The occupations preferred by most boys were farming, aviation, and engineering and most girls have preference to stenography, teaching, nursing and beauty culture.

**An elaborate display of dictionaries will be included in the World's Fair exhibit planned on Treasure Island in San Francisco Bay in 1939 by G. and C. Merriam Co.**

## COOPERATION

(After Kipling's "If")

If we can change the lives of those around us
By getting folks to think and act aright;
If we can bring the rays of God's own sunshine
Into the gloomy darkness of their night;
If we can feed the flames of their ambition,
If we can still the envy and the strife,
Until we lead them from their stunted stature,
Unto the measure of a larger life.

If we can look upon all men as brothers,
And get a thrill from smoothing out their cares,
If we can lose ourselves in work for others,
And only see our happiness in theirs;
Then we shall feel the mighty joy of living,
The love that does not seek or ask for gains,
And we shall climb the mountain walls of Knowledge
Until we reach the heights where Freedom reigns.

If we can pause to take a look behind us,
And see with wistful eyes upon Time's screen,
Ghosts of the misty past who will remind us
Of what we might have done and might have been;
If we can start afresh with faith unshaken
In human nature, and with hope redeemed,
To struggle on and make this home of nations
A little like the one of which we dreamed. ____

Some kindly voice must still our infant pleading;
Another wipes the death damp from our brow.
Why do we tread life's pathway all unheeding?
Some weaker brother needs assistance now.
We must cooperate with man as brothers,
We may not go our selfish ways alone,
And what we put into the lives of others
Flows baek to beautify and graee our own.

The above poem on "Copoeration" was written by A. R. Seammell, a Short Course student at St. Francois Xavier University Antigonish, N. S., spring term, 1933.

## STORY BEHIND COOPERATIVE DETROIT GROCERY REVEALED

Detroit.—Behind the recently opened Consumers Co-operative Grocery at 1559 La Belle avenue on the northwest side of this city is an interesting story.

Conservation among members of the Social Smokers, a club with no purpose other than to get together and 'talk things over' turned one night in 1935 to the subject of co-operatives and out of this came the nucleus for the organization which resulted in the Consumers Co-operative grocery here which is now doing a monthly business in excess of $1,450.

As a result of the discussion, Homer Turner, president of the club, invited Leslie V. Holmes and Atty. R. M. Golightly, representatives of the Consumers Co-operative League of Self-Help Inc., to speak at a meeting held in December of 1935.

**STUDY CLUB ORGANIZED**

Members developed an interest in the cooperative plan as presented to them and immediately made plans to organize a study club.

Mr. Holmes was made president; Mr. Turner, vice president; Charles M. Hodge, secretary; P. Jones, treasurer and Charles Haskins, assistant secretary. George Hoagland, local undertaker, permitted the club to meet in his funeral parlors.

Having absorbed the principles of the cooperative plan, the group, which by this time had increased to more than twice its original membership, formed a co-operative buying club in April 1936, Fifty-nine dollars and 29 cents worth of commodities were purchased and sold for $71.96.

This was re-invested in more commodities and the basement of P. Jones untilized as a store. The business grew with such rapidity that soon larger quarters were needed. In three months $520.38 worth of business sad been transacted and a net profit of $35.46 realized.

**$1,450 Business Monthly**

The January 1, 1938 report revealed the assets of the cooperative as $1,633.97 with liabilities at $1,290.25. Most of this represents payments due on the fixtures in the newly opened store. Monthly sales average in excess of $1,450 and present stoek is valued at $495.65. The first purchase rebate will be paid this year.

Much of the experience for operating the cooperative was gained from J. L. Reddix of Gary, Ind., who organized a very successful co-operative in that city.

Milton Hodge, secretary of the co-operative, stated this week that just as his organization had been assisted by Mr. Reddix and others familiar with the movement, just so members of his organization are willing to cooperate with others interested in organizing eo-operatives.

—From Chicago Defender

## CAT HAS LONG VOYAGE

After sailing a distanee equal to one and one-half times around the world, the Angora cat of Mrs. R. J. Brandes of Sydney, New South Wales, has been allowed to land. It was taken from England to Australia, but on arrival there was not allowed to land. It had either to be killed or sent back to England and put in quarantine. Baek it went and after being quarantined six months again sailed 10,000 miles home to Sydney.

# EDITORIALS

FROM THE BIBLE—

"Keep yourselves in the love of God, looking for the mercy of our Lord Jesus Christ unto eternal life." Jude 21.

### MARCH

I blow and arouse,
Through the world's wide house,
To quicken the torpid earth:
Grappling I fling
Each feeble thing,
But bring strong life to birth.
I wrestle and frown,
And topple down;
I wrench, I rend, I uproot;
Yet the violet
Is born where I set
The sole of my flying foot.

### TIME TO THINK

Now, as planting time draws near, is a good time TO THINK. Today colored farmers have more to think about than ever before. So let's do some hard thinking and see if we cannot plan and prepare to make the year 1938 the best year of our lives.

First, think about yourself. Ask yourself the question, "What sort of a man am I?" Have I a healthy body? Should I free myself of some bad habits which I know are injuring my health? Am I living a temperate life and obeying the wise laws of Nature? A strong, healthy body is something worth thinking about. It is something we should try earnestly to have and to keep.

Think, too, about your mind. Do you know enough? It is impossible to know too much. All have so much to learn. The wise man will read and study and seek information that he may become wiser. He will endeavor to improve his mind. Get down the old Bible and read the entire book of the Proverbs of Solomon and you will discover how important it is to be WISE.

Think a little also about your WAY OF LIVING. People don't have to wait till they die to lose their souls. You have already lost your soul if you are mean and disagreeable, if you mistreat your wife, if you neglect your children, if you are selfish, if you are lazy, if you will not love and help your fellowman. Think about your WAY OF LIVING and try to live better every day. It is a sign of strength to try to be as good a man as you can be.

Yes, this is a good time of the year to THINK. Farmers, let's do some good, old-fashioned thinking, hard thinking.

### WE CAN DESTROY ILLITERACY

The National Federation of Colored Farmers is calling upon its local Units to back up every effort of the national and state government and educational institutions are making to reduce illiteracy among the Negro farm population of the nation. If we all go after this thing as we should we can almost eliminate this evil during the next five years.

Negro farm illiterates have plenty of "mother wit" and commonsense and will take advantage of the opportunity to learn to read and write if encouraged to do so by those who know and understand them. Fellow-members of the Units, relatives, friends and neighbors should go to these people and persuade them to attend the adult school if there is one in the community. If there is no adult school, then it is the duty of the community to provide one. This may well be done by the local Unit of the N. F. C. F., cooperating with the community churches. In most all communities teachers and instructors may be found who will gladly donate their services.

We trust local Units of the N. F. C. F. and rural church organizations will make a sincere effort to provide facilities for the education of those who have not had the opportunity to attend school.

### TUSKEGEE FARMERS' CONFERENCE RESOLUTIONS

The resolutions adopted by the forty-seventh annual Tuskegee Negro Farmers Conference should be read and re-read by farmers and farm leaders, especially of the South, for they unfold a practical, sensible and courageous program which, if followed, is bound to result in satisfaction, prosperity and peace. Colored farmers need just such a program as the Conference has outlined, and more, colored farmers need teachers and leaders who understand this program and can influence their followers to adopt it.

Among those best acquainted with the average colored farmer, the opinion prevails quite generally that the Brother just does not know what is good for himself. A few years ago this opinion was well founded, for then, no one else seemed to know what was best for him either. Between the instructor who was advising him to produce more, and the landlord, merchant or banker who was taking from him a bigger percentage of the more he produced, the average colored farmer found himself between the devil and the deep, blue sea. He couldn't progress because he couldn't move in any direction without running into something worse than the something he was running from.

Today the Agricultural Conservation Program and the facilities of the Farm Credit Administration and the Farm Security Administration provide for him a way out of his difficulties. And he will get out if he receives the right kind of instruction and guidance, and enough of it. The Tuskegee Conference wisely recommended that Negro personnel of the farm extension agencies be increased and that all Negro rural leaders endeavor to improve themselves that they may be able to impart to those they serve the information sought and needed.

The farmers of the Race have been given a good program and also, those in authority, who have helped make a large part of such a program possible, have been given plenty in that program to keep them thinking.

### THE WINDS OF THE WEST

(The Council Bluffs Nonpariel, a daily paper published in Council Bluffs, Iowa, tried to start something a few weeks ago by publishing a senstational editorial criticising the Agricultural Adjustment Administration and the Farm Security Administration for calling a conference of colored editors of the country in the national capital. The purpose of the conference was to acquaint newspapermen with the program and activities of the two bureaus insofar as they affect Negro farmers. The Chicago Tribune reprinted the Iowa paper's comment under the title: "Editorial of the Day.")

The Winds of the West are sometimes ill winds. They are often uncomfortable but seldom dangerours.

A Little Breeze that wanted very badly to develop into a cyclone, dressed itself up in a little city on the Missouri river in western Iowa and started gallivanting eastward across the country. It stopped awhile in Chicago, where it was joined by a few of the "Bigger Breezes," and then it took out again and . . . . .

Well, the Little Breeze carried some shocking news. Yassah! A few hundred dollars of the "deer peepul's" money had been spent unwisely. Yassah! Why it had been spent to bring some editors,—some "cullud editors," mind you, to the big city of Washington. Yassah! To confer with officials of the Department of Agriculture! What fur? A big few hundred dollars of the little billion of dollars of the "deer peepul's" tax money had been thrown away! Shocking! Disgraceful! O My!

But, to the surprise of the Little Breeze, the "deer peepul" went about their business as usual and paid slight attention to the story. The "deer peepul's" country hadn't been a "few hundred dollars'" country for many a year, so, thought the "deer peepul," why worry? They told the Little Breeze to "Scat!"

But while the Little Breeze was "scatun" the "deer peepul" started thinking. They thought of the few millions of dollars of their money the old Farm Board threw away a few years ago in the Little Breeze's own country, what for, nobody knew. They thought too, of the many folks, even dumber than "cullud editors," whose expenses to and from Washington were paid at that time by the same old Farm Board, and they wondered why the Little Breeze had not tried to raise a cyclone about that. They thought, too, about the thousands of dollars of their money which was supposed to be used to bu something to kill hoppergrasses with in the Little Breeze's own country, but which had mysteriously disappeared before the hoppergrasses arrived. O, they thought about a lot of their money which had been handed out in the Little Breeze's country, out their in the West near the Missouri river.

But then they thought, too, maybe the Little Breeze himself had not gotten any of that old money. Maybe he had not been as fortunate even as the "cullud editors." Maybe he hadn't gotten any of the hoppergrass advertising money or hadn't gotten to go to Washington either. Maybe he had a kick coming. Yes, he might have had.

Well, to make a long story short, the Little Breeze tucked his tail down where it belonged and went back to his little city,—not as a cyclone, but as a littler breeze than he was when he started. And the "cullud editors", each one in his own home town, started telling the real Americans who read what they write, all about the benefits of Soil Conservation and Farm Security and Farm Program Planning and Farm Extension Work and Farm Credit and Credit Unions, etc. And the "deer peepul" were glad the "cullud editors" had been to Washington for they knew so much more than they knew before. Yassah!

And all Washington was glad too because they had been there. Yassah! Why don't yuh know, (just between you and me) some of them "cullud editors" were so ignorant before they went that they thought they were going to see old George Washington himself, not a city named "Washington." Yassah, that's a fact. They had never heard of George Washington being sick, so, of course, they didn't know he was dead. One of them even had a chicken cooked up and was going to give that to Massah Washington!

O well! The Secretary of Agriculture and the Administrator of the Agricultural Adjustment Administration are both westerners. They are well acquainted with the Winds of the West. They can take it. And the "deer peepul" and likewise, the "cullud editors,"—about the Little Breeze and those Chicago Bigger Breezes too,—they don't give a tinker's you know what.

### A BIG JOB FOR OUR CHURCHES

In the superior court of a certain southern county the other week, twenty-seven Negroes, most of them under thirty years of age, were sentenced to serve terms ranging from six months to two years on the county roads. All were sentenced in one day and the huge court docket was barely scratched. The crimes charged were petty ones, to which most of the prisoners pleaded guilty.

Whether Negro crime is increasing or not, there is still enough of it to cause much trouble and many heartaches and we should do something about it. Prevention of crime is one big job our church organizations should tackle. Young people of the churches should do more home missionary work. They should make friends with other young people, their neighbors, and invite them to church and Sunday School. Churches should plan, and invite them to church and Sunday School. Churches should plan recreational programs of interest to their young people, and keep them busy during their leisure time.

And last, but not least, sixty per cent of our ministers should get up off their "do-nothing-seats" and take a more lively interest in the fate of those for whose welfare they are responsible. They should think less about making livings and more about making lives. They should think a little about saving young bodies and minds as well as young souls. Our old ministers were past-masters of the art of giving advice to young people. And most of them, in spite of the white folks' wisecracks, lived exemplary lives and set good examples.

Tackling our crime problems is something for our churches to think about and to destroy Race crime is something our churches should attempt to do.

### WE WANT YOUR NEWS

The Modern Farmer is the official organ of the National Federation of Colored Farmers, but we would like to know something about the programs and activities of Negro farm groups, whether connected with the N. F. C. F. or not. We want to publish your news. You may be doing something in your community that will be beneficial in other communities. Don't keep your good works to yourselves.

Farm Clubs, women's clubs, farm boys and girls' clubs all of you everywhere who are doing something worthwhile and unusual for your own welfare and for the welfare of our group, let The Modern Farmer know what you are doing that we may tell it to the world.

Send your news and communications to The Modern Farmer, 447 Fourth Avenue, Nashville, Tenn., or to the editor, Leon R. Harris, Box 285, Moline, Illinois.

Get acquainted with the Soil Conservation Program as soon as possible so you will know how to plan your farming operations for this year. See your county agent or write to the nearest representative of Agricultural Adjustment Administration.

And don't forget the chickens this year. Poultry prices are due to hold up well and you may be able to increase your farm income substantially if you will plan to raise more and better poultry.

Keep the table in the center of your living room piled up high with books and papers. Take time and read a little each day. You can't keep up unless you read and know what is going on in the world.

# JOE LOUIS SIGNS TO DEFEND TITLE IN CHICAGO AGAINST HARRY THOMAS

New York, March 2 (ANP)—Joe Louis, busiest heavyweight champion in modern boxing history, will stage his third title defense at the Chicago Stadium on Friday night, April 1, with Harry Thomas as his opponent, it was announced Thursday just one day after the fighter had disposed of Nathan Mann in three rounds.

Louis left Thursday night for Chicago, accompanied by his wife, the former Marva Trotter, who came here to see the bout, after attending a testimonial dinner given for James J. Braddock from whom he won the championship and who is a personal friend.

The Thomas fight will be his third defense since winning the crown at Chicago on June 22, and is expected to be interesting mainly because the white boy has a powerful right hand punch and was given a technical kayo by Max Schmeling a few weeks ago in eight rounds. Critics are interested in seeing how long it will take Louis to defeat Thomas. In addition to the knockout by Max, Thomas has taken the count on only one other occasion and that was while fighting Unknown Winston in Chicago, during 1935.

The match between the champion and the tough white boy is scheduled for 15 rounds and will be the first indoor heavyweight championship ever held in Chicago. Joe will receive 40 per cent of the gate and Harry 12 1-4. The price will be $10 including tax. Louis expects also to defend his title again in Detroit later in April, meeting the winner of the Buddy Baer-Gunnar Barlund bout, before his match with Max Schmeling scheduled for next June, probably in Chicago.

The Brown Bomber's meeting with Mann was the first indoor heavyweight championship fight since 1920, when Dempsey kayoed Bill Brennan in 12 rounds. A capacity Madison Square Garden crowd, saw it, paying Joe slightly over $40,000 for less than eight minutes actual work.

So impressive was the champion in defeating Mann that critics called him the Detroit Dynamiter of old who knocked out Carnera, Baer and Levinsky in decisive fashion, and it was indicated he may rule the favorite in the return contest with Schmeling.

Louis took it comparatively easy the first round, being content to score with the finest and hardest left jab in the business, but in the second he started to work after Mann got in a couple of hard ones. Nathan was knocked down three times before the kayo after 1 minute and 56 seconds of the third round, and said afterward he was hit so hard in the second frame he never knew what happened from then until the fight was over.

## THE COUNTY AGENT

The county agricultural agent is rounding out 23 years of service as a national institution. The law which made him a federal official was passed in 1914, and the county agent's job has been steadily becoming more and more important ever since. But more significant than his growing importance in the Department of Agriculture is his growing importance to the average farm family. Once regarded by many men as a preacher of unnecessary notions, he has become a trusted advisor, a respected leader, and a personal friend of most of the farmers in his county.

Their field of work, is as broad as the interests of rural life. It includes the farm as a business, the farm home, the farm youth, and the rural community.

He came into being in answer to a common plea from farm people who could not go to college, asking that someone bring the college to them. And the county agent will enjoy the cooperation of rural people only so long as he talks their language and deals with their problems. His job is a symbol of American interest in education. His life is a symbol of unselfish service.—H. Umberger, Diretor of Extension, Kansas State College, Manhattan.

## SLOGAN THAT NEVER GROWS OLD

(California Eagle)

"Back to the soil" started with the beginning of the Negro's migration to the great urban centers of the country.

When he left the farm bottle for bread in mill, factory, ditch-digging, lackey boy or what not, he started a stroll down "Poverty Lane"—a road crowded with Italians, Jews, Slavs, and others of these mingling white races who are waging a dogged, modern sanguinary struggle to keep him back from the "feed box".

Last hired on any kind of job and the first discharged, the American black finds himself in a precarious condition. His plight is pitiful. On the farm he was a king. Had plenty of the best that nature produces for the joy and comfort of mankind. His fowls' sheep, cattle, hogs and vegetables were legion. Besides, woods and streams contributed bounteously to his food supply as well as furnishing sport and enjoyment the year 'round.

Why not hit the trail down the "Lane to Home Sweet Home"? The blessings found only in the cultivation of the rich soil beckon and await your coming.

## EX-PRESIDENT'S SLAVE ON "WE, THE PEOPLE" RADIO PROGRAM

New York — William Andrew Johnson, 93 years old, Knoxville, who is believed to be the only living ex-slave of an ex-president of the United States, arrived here Tuesday to appear on the "We, The People" radio program Thursday evening Dec. 30th at 7:30 over the WABC-Columbia network. William Andrew was first the slave, and later the personal servant of Andrew Johnson, post Civil War president.

"Coming to New York and going on the radio is one of the most exciting experiences of my whole life," William Andrews said, "since it illustrates in striking fashion the tremendous advancement made by our race. As a boy I was a slave; Thursday night, a free and equal man, I shall broadcast over the radio to millions of people from coast to coast."

"I was born in 1844, when Mr. Johnson was lieutenant-governor of Tennessee," William Andrew related. "Some years before that he had bought my mother and her brother for $1,040 at a Tennessee slave market, and that made me his slave too when I was born.

William Andrew's most vivid remembrance of the Civil War period is when "Massa Johnson" called him in and told him that he was free, that President Lincoln had signed the Emancipation Proclamation. "Now you are free, and you can eat white bread too," he remembers the president-to-be saying to him.

William Andrew remained with President Johnson as his personal servant, however, and remembers well the storm and stress of the impeachment proceeding. "I never understood it very well at the time," he says. "All I know is that Mistah Johnson was a mighty fine man, the finest man I ever knew."

The faithful retainer remained with Johnson until the latter's death in 1875. During the ex-president's fatal illness, Johnson slept in the same room with Johnson, and for six days and six nights never left his side.

The president left William Andrew some land in Tennessee where he lived for many years. He is working now, however, as a pastry cook for Weaver's Grill in Knoxville. He explains that Mrs. Johnson—"the old missus"—taught him how to cook. "And I've still got a whole lot of the recipes that old Missus used to have."

William Andrew and the other celebrities who appeared on "We, The People" Thursday night were introduced by Gabriel Heatter noted radio personality.

## CAROLINA FARMERS ORGANIZE

### Piedmont Association Elects Officers For Year—Advantages Stressed.

Greensboro, N. C.—At a meeting attended by more than a 100 representative North Carolina farmers and teachers of vocational agriculture, that has just closed at the A. and T. College, here, the Piedmont Farmers' Association was organized, and officers elected for the ensuing year.

The Association is headed by Gus Jeffries of Alamance county, as president. Other officers elected are: Reuben White of Wilkes county, vice-president; E. C. Jones of Caswell county, secretary; and P. W. Wallington of Caswell county, treasurer.

Speakers who delivered addresses at the organization meeting included C. R. Lamb of the U. S. Soil Conservation Service who reviewed the work the service is doing, and whose inquiries brought ont the fact that more than 90 per cent of the farmers in attendance are already practicing the most approved soil saving methods of their farms.

The need of organizing among farmers, was stressed in a speech by Prof. F. A. Williams, former teacher of vocational agriculture in Vance county who is now Professor of Agricultural Economics at A. and T. College. Among the advantages to be gained by organization he cited the increase that can be effected in the value of land, betterment of the community as a whole, raising the standard of living, lowering the death rate among farm families, increasing the farm income and lowering the cost of marketing which is an important factor in such increase.

## INCREASE IN PAY

Delhi, La.—(ANP)—A minimum salary schedule for Negro teachers in Louisiana has been prepared by the state department of education and recommended to Parish superintendents for use throughout the State.

The schedule has been adopted by many school boards and as a consequence the level of teachers has been raised in those parishes.

# PRESIDENT HALE ANNOUNCES GIFT OF $150,000 FOR STATE COLLEGE

By Charles Satchell Morris, II.

President William J. Hale announced today at Washington, D. C. —where he stopped over on his eastern trip—that the Federal Government had just allocated to Tennessee State College, Nashville, a grant of approximately one hundred and fifty thousand dollars. The great plant here, already valued at more than three million dollars, will be beautified and much additional equipment will be provided. Since the State will furnish much of the material used the whole appropriation will amount to almost a quarter-million dollars.

New teachers' residences to cost approximately $75,000 will be erected garages will be constructed; a reservoir will be provided for the institution; several greenhouses will dot the campus; poultry houses are to be constructed; large orchards are to be laid out on the sloping hillsides, while several tennis courts playgrounds, lakes and sidewalks complete the intensive new project.

President Hale, while in the national capitol, expressed his deep gratification for the consideration and generosity of the Federal Government toward the institution, of which he is the executive head. Both President and Mrs. Roosevelt sent him messages during the Silver Jubilee last November.

### Art Department to Have Display in Prominent White Store

Professor Vernon Winslow head of the department of Art at Tennessee State College, announced today that a special exhibition is to be held in the display windows of Dury's, one of Nashville's most exclusive downtown stores. This exhibition, the first of its kind in this ciyt, will display project, which, although made from such articles as tin cans, egg shells, and old bottles will stand comparison with commercial articles of a similar nature. Two novel features of the exhibition will be modernistic book-ends made from tin cans, and college notebooks made from cardboard.

Shortly following the exhibit in Nashville, the College expects to offer similar displays at Howard, Atlanta, and Dillard universities. Wide recognition has come to Prof Winslow because of the uniform excellence of his creative work in art.

### Collegiate Deans and Registrars to Assemble in Annual Meeting at Little Rock, Arkansas

The twelfth annual session of the National Association of Collegiate Deans and Registrars in Negro Schools will be held in Little Rock, Ark. March 30 through April 1, with Philander Smith College as host. "Professional Problems of the Dean and of the Registrar" will be the theme of the meeting. Among the topics to be discussed are trends in admission, the evaluation of credits, personality development of students, extra-class relations of teachers and students, trends in higher education among Negroes. A special feature is a question box period which will afford members the opportunity of having their problems discussed by the Association.

Delegates are expected from the sixty-five colleges and universities holding membership in the organization. There has been a steady increase in the number of institutions affiliated with the association since its organization in 1926.

Officers for 1937-38 are: Dean George W. Gore, Jr., Tennessee State College, Pres.; Dean J. P. Brawley Clark University, 1st Vice Pres.; Registrar A. L. Kidd, Florida State College, 2nd vice Pres.; Registrar S. H. Adams, Johnson C. Smith University, Sec.; Dean J. H. Taylor, Alabama State Teachers College Asst. Sec.; Registrar J. H. Gilchrist, Alabama State Teachers College, Treas.

### Pres. and Mrs. William J. Hale Accorded Fine Reception Through out Mid-West and East

Word has been received here that President and Mrs. William J. Hale are being warmly received on their three thousand mile trip through the Mid-west and East. They attended Founder's Day exercises and the symposium on higher education at Wilberforce University. From that point, they visited cities throughout Ohio and then went to Pittsburgh, Pa. to be the guest of Mr. and Mrs. Robert L. Vann. Successively, they were feted by alumni groups at Washington, D. C.; Baltimore Md.; Philadelphia, Pa.; New York City, and other eastern centers. They are attending the annual sessions of the National Educational Association at Atlantic City, New Jersey this week. Mrs. Hale, head of the Commercial Department at Tennessee State College, is widely celebrated for the general excellence of her division and her unusual charm and graciousness.

### Oratorical Contest to be Staged in Auditorium Thursday Night

Prof. William H. Fort stated today that an oratorical contest will be staged in the College Auditorium Thursday evening. A brilliant musical program will be presented under the supervision of Mrs. Marie Brooks Strange.

### Faculty Member Delivers Annual Religious Message at Alabama A. and M. College

Prof. Charles Satchell Morris, II of the department of English, delived the annual religious message at Alabama A. and M. College, Huntsville, Sunday morning, Feb. 27. He was heard by a capacity throng of students, faculty members and local citizens when he spoke from the theme: "The Spirit of God in Action," in which he maintained that benevolence, sympathy charity and good will were but expressions of the type of brotherhood which Jesus strove to promote.

## THEIR 1,000 CHICKENS PAY $70 A WEEK

From his flock of 1,000 White Leghorn hens, Oliver Sherrill of Abbott, Scott county, makes $60 a week on egg sales, reports Miss Euna Harrell, home demonstration agent. This flock has averaged $70 worth of eggs a week, with only $10 feed expenses per week since October, she explained.

The secret is in the care, management, sanitary practices, and proper feeding, Mr. Sherell believes. He mixes his own laying mash and feeds a large quantity of home-grown grain, such as corn, sorghum tops, wheat and sunflower heads.

A new 120 by 44-foot two-story laying house has replaced the two mud houses that Mr. Sherrill had used for the past few years. By using some old material, the total cost was only $450.

The installation of electric lights in this house has increased egg production enough to more than pay for the $6 a month expense. The lights are left on all night.

In December Mr. Sherrill was selling a case of eggs a day at $8 per case most of the eggs being sold to grocery stores in Fort Smith.

These 1,000 birds not only make the Sherrills a living, but they have paid for building the laying house, a new brooder house, a storage building and the Sherrill's new six-room home. There is a profit in poultry and a good living if one will only manage and care for his flock properly, Mr. Sherrill told Miss Harrell.

# THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

### History

In 1922 this organization was founded by James P. Davis, the late Gilchrist Stewart, Cornelius R. Richardson and Leon R. Harris. Mr. Davis, a native of Georgia, had long been engaged in the commission business in his native state and was recognized as the leading authority of his race on the marketing of farm products. Mr. Stewart was a native of South Carolina, the son of a sharecropper, who had risen to eminence in his profession but had not forgotten the severe struggles of those who had nurtured him. Mr. Richardson, also a native son of Georgia, was and is a prominent lawyer. He has devoted much of his time and study to the legal phases of farm and co-operative organizations. Leon R. Harris, a native of Ohio, was reared on a hilly Kentucky farm eighteen miles from a railroad. And for six years he had been a North Carolina dirt farmer, rural school teacher and a leader in farm organization work in that state.

In 1929 Mr. Davis was chosen president and began devoting all his time and efforts for the welfare of the organization. Under his unselfish and inspiring leadership, growth was rapid and substantial.

The organization was incorporated under the laws of Illinois in 1930 and the national office was established in Chicago, the agricultural capital of the nation.

### Purpose And Aims

Quoting briefly from the "foreword" of the N. F. C. F., published in 1928, "It is the hope of the founders of the National Federation of Colored Farmers, to make life on the farm more attractive and more profitable, and to build up in this nation a Negro group of organized, influential and satisfied producers."

To accomplish this purpose the N. F. C. F. has advocated (1) co-operative buying, production and marketing. Local Units have purchased more than a quarter million dollars worth of farm and farm home supplies co-operatively during the past eight years. Local Units have produced and marketed co-operatively, hay, watermelons, string beans, peanuts, sweet potatoes and mixed cars of vegetables. The N. F. C. F. has advocated (2) land ownership. The Federation has assisted hundreds of its members in purchasing farms on reasonable terms. It has also been instrumental in securing better legal sharecrop contracts. It has helped its members by instruction and assistance to take advantage of farm relief legislation. The N. F. C. F. has advocated (3) better farming and better farm living, and through organization, assists in building better colored farm communities.

### Progress

The first local Unit of the N. F. C. F. was chartered at Howard, Miss., in 1929. Today it has a membership in 21 states. It admits to membership farmers, sharecroppers, tenants and farm hands, all members of the Race who are interested in any manner in the important business of farming. The organization has proven its worth. It has been a blessing to thousands of Negro farmers.

### HOW TO ORGANIZE A UNIT OF THE N. F. C. F. IN YOUR COMMUNITY

This is an age of GROUP ACTION. The INDIVIDUAL, working alone, can accomplish little. Colored farmers must ORGANIZE. Your organization is the N. F. C. F. YOU HAVE NO OTHER NATIONAL FARM ORGANIZATION. To organize a Unit of the N. F. C. F. in your community:

1. Make a list of the names of all who can and who should be members of your Unit. This list should include the names of farm owners, tenant farmers, sharecroppers, farm-hands, rural teachers, rural preachers, colored owners of farms in your community who live elsewhere, and all others of our Group who are interested in the business of farming.

2. Appoint a time and a place for a meeting and invite all whose names are on your list to attend it. The farmer's wife is an equal partner in his business and should also attend your organization meeting.

3. Elect the following officers: President, Vice President, Secretary, Treasurer, Market Agent, Chaplain, and Marshal. These and four others you elect constitute your Board of Directors.

4. Collect $3.00 annual dues from each member. Two dollars per member to be sent to the national office, one dollar per member to be put in the local Unit's treasury.

5. Appoint a standing Membership Committee of three members.

6. Appoint an Agent for "The Modern Farmer."

7. Name the time and place for your monthly or bi-monthly meetings.

8. Select a name for your local unit.

### WHAT YOU SHOULD DO AFTER YOU ORGANIZE

After your Unit has been organized and you have elected officers who are efficient and reliable, the first thing you should do is: MAKE A SURVEY OF YOUR COMMUNITY AND REPORT THE FOLLOWING FACTS TO YOUR NATIONAL OFFICE.

1. Number of colored farm owners in your community.

2. Number of colored tenant farmers and sharecroppers in your community.

3. Number of tenant farmers and sharecroppers who desire to purchase farms and who are able financially to make a down payment on a farm.

4. Number of farms or amount of farm acreage which can be purchased in your community.

5. Number of farmers in your community who desire to purchase farms in other communities.

6. Number of farm hands in your community and average daily, weekly monthly and annual wages they receive.

7. The money crops produced in your community and money crops which may be produced.

8. The money crops which may be produced co-operatively this season or next season.

9. The farm and home supplies used at which a saving may be made by cooperative buying.

10. Is your Unit prepared to engage in co-operative buying?

11. Home owner needs in your community—paint, fencing, household appliances, farm machinery, building, etc.

12. Government assistance desired, seed loans, farm loans, etc.

13. Does your county and community have, or does it need, the services of a Negro Farm Agent and a Negro Home Demonstration Agent.

14. Could a Farm Credit Union be organized in your community.

---

### General Information

After your Unit is organized a Colored Farm Women's Club and Colored Farm Boys' and Farm Girls' Club should be organized under competent leadership.

---

Your national office will send you a charter and individual membership cards when annual membership fees of two dollars per member is received.

---

Local Units can make and adopt by-laws to govern their local organizations. The national office will advise but will not interfere in the set-up or government of a Local Unit.

---

Local Units may assess and collect monthly payment of dues for the benefit of the Local Unit treasury. Local Units may also pay to the national office annual membership dues out of the local treasury. These dues may be raised by holding entertainments, picnics, or from crop or stock growing projects engaged in by the combined membership of the Local Unit.

---

The "Modern Farmer" is the official organ of the N. F. C. F. All members should read, subscribe for, and support this monthly farm paper. It is the only paper published for colored farmers.

---

All Units are required to report monthly to the national office.

Editorials—

Here comes Spring. Plant some flowers. Repair your screens. Try to have and to keep a beautiful home this year. No matter how humble it is you can make it beautiful if you try hard enough.

## FACTS ABOUT WILD GEESE

By L. D. Chapman

Very few persons, who see the wild geese winging their way regularly across the continent every spring and fall, have a very clear idea of how they really live in their natural invironment.

With its dark gray body, black neck and white patch under its jaw, the wild goose is a picturesque character along the shore of any woodland lake or river.

The wild goose is a true weather prophet, and it is very seldom that it makes a mistake and is caught in a snow storm of any consequence. When the frosty nights of early fall appear on its nothern range, the geese gather in bands of from 30 to 100 or more and, led by an old gander, line up in a V-shaped formation to begin their annual migration.

During the flight, the geese stop from time to time to feed, but always when the flight is resumed, the old gander is in the lead, with the lesser geese strung out in the characteristic formation. Occasionally the birds in the two lines change places but the leader gander never gives up his position unless he is killed or wounded. If the leader is killed, the whole flock is thrown into turmoil, often losing their bearings entirely and flying aimlessly around for several days, before another leader takes his place and once more leads the flock on its migratory course.

Wild geese nest in our most northerly states and Canada, and winter in our warm southern states. As the snow disappears from their northern nesting grounds, the migratory instinct warns them that it is time for them to commence their flight north and they travel in the picturesque V-shaped manner, with an old gander always leading the way.

The flight to the northward is usually the most leisurely, as the birds are thin and make their way slowly as the spring opens up.

When protecting their young or nests, wild geese are exceedingly vicious and can inflict a very painful blow with their wings, but at other times they will take immediate flight at the first approach of man. The diet of wild geese is a varied one, comprising various grains and fish as well as all sorts of vegetation.

They are among the cleanest of all birds, and one curious characteristic that has been noted and much commented on is that in their wild state, as well as in the domesticated, all grass roots that are pulled up are carefully washed before being eaten. In that respect, more than any other, geese differ greatly from all other wild fowl.

—Our Dumb Animals.

# MARKETING QUOTAS FOR COTTON?

38-Cotton-2

U. S. DEPARTMENT OF AGRICULTURE
Agricultural Adjustment Administration
February, 1938

### Facts Cotton Producers Should Keep in Mind as They Vote in the March 12 Referendum:

**The Cotton Situation—**

1. The 1937-38 world supply of all cotton was 50,600,000 bales, the largest on record.

2. The 1937 American cotton crop was 18,700,000 bales, the largest on record.

3. This year's supply of American cotton, which is almost 35 percent above normal, has been exceeded only twice in history.

4. The carry-over of American cotton on next August 1, is expected to be the second largest on record.

5. A 1938 cotton crop, even 4,000,000 bales less than the 1937 crop, would result in the greatest supply of American cotton on record.

**How Cotton Marketing Quotas Would Operate—**

1. Each cotton farm would have a cotton-acreage allotment.

2. Marketing quotas in 1938 would neither increase nor decrease the cotton acreage allotment of a farm.

3. The marketing quotas would be either the actual or normal production of the acreage allotment, whichever is greater.

4. No matter how high the yield, all cotton produced on the acreage allotment could be sold without penalty.

5. Marketing quotas will become effective only if approved by two-thirds of the cotton producers voting in the referendum on March 12.

Marketing quotas would bring the supply of American cotton to a more reasonable level, but the supply next season would still be far above normal.

### Cotton Marketing Quotas, if in Effect, Will Mean:

**If You Plant Within Your Acreage Allotment—**

1. You will be eligible to receive agricultural-conservation payments.

2. You will be eligible to receive cotton-price-adjustment payment on 1937 cotton.

3. You will be eligible for a loan on all cotton you produce in 1938.

4. You and other coperating producers will be protected in your effort to adjust supplies.

**If You Should Overplant Your Allotment—**

1. You would not receive any agricultural-conservation payments.

2. You would not receive any cotton-price-adjustment payments on 1937 cotton.

3. You would not be eligible for a loan on the cotton produced on your acreage allotment. (Loans on excess cotton would be at 60 percent of the rate to cooperators.)

4. You would have to pay a penalty of about $10 a bale on cotton marketed in excess of your quota.

Every 1937 cotton producer should express himself by voting "Yes" or "No," whichever he wishes, on the question, "Do you favor cotton-marketing quotas for the 1938 crop?"

**Voting Date—March 12, 1938**

# SOUTHERN YOUTH PICK CHATTANOOGA FOR BIG MEETING

## Prominent Men And Women Endorse Conference For April 1-3

**Richmond,** Va., February 24—Mrs Ora Stokes, president of the South Eastern Section of the National Association of Colored Women, joined today the growing number of prominent Southern leaders who have endorsed the Second All-Southern Negro Youth Conference. In her announcement Mrs. Stokes emphasized the need of young Negro women coming forward as leaders in the defense of Negro rights. The statement of Mrs. Stokes said in part:

"The forthcoming All Southern Negro Youth Conference, which will be held in Chattanooga, Tenn., April 1, 2, 3, 1938, will be, to my mind, one of the most significant gatherings ever held anywhere in the South. It has for its purpose the study of the major problems confronting the Negro people of this country as well as of the South. The problems to be discussed by the various experts in the fields that they represent—Marriage and Home Life; Education; Job Security; Religion, etc.—will certainly be thought-provoking and challenging for Negro young people. It is necessary that young people avail themselves of the opportunity to attend this conference, for the present leaders of the race are passing away and the young people, in order to assume an effective leadership, must begin now to learn about these problems.

"Young women should be particularly interested in the Conference. Those sections of the program dealing with the home, health and children are of special concern to our women. If the youth movement is to ever win its proper recognition, a major part of the leadership must come from our young women.

"The leaders of this Conference are to be congratulated upon the fine program that they have prepared—and not only for the program to be presented in Chattanooga, but for the continuous campaign that they have kept up during the year. I hope that the federated club women throughout the South Eastern Section of the National Association of Colored Women Incorporated will give their hearty support to this Conference."

In addition to Mrs. Stokes, enthusiastic endorsement of the Conference by outstanding national leaders continued to pour into the Richmond Office of the Southern Negro Youth Congress. Among the latest endorsers of the Conference are Pres. Robert P. Daniel, pres. of Shaw University; George Murray Branch, national chairman of the Intercollegiate Christian Student Council; C. C. Spaulding, president of the North Carolina Mutual Life Insurance Company; Mrs. Lizize B. Burns, president of the Virginia State Federation of Colored Women's Clubs; William C. Craver, executive secretary of the Houston Y. M. C. A.; Rev. Vernon Johns, minister of the First Baptist Church in Charleston, West Virginia; Edward S. Lewis, executive secretary of the Baltimore Urban League; Dr. J. M. Tinsley, Virginia State president of the N. A. A. C. P.; Rev. Herbert King, national student secretary of the Y. M. C. A.; W. A. Robinson, principal of the Atlanta Laboratory High School; Montell C. Parks, executive secretary of the Tulsa, Oklahoma, Memorial Y. M. C. A.; Miss Celestine Smith, regional secretary of Southern Negro Colleges of the Y. W. C. A.; Dr. John Jacob Starks, president of Benedict College; Jesse O. Thomas, Southern director of the National Urban League; President John Trenholm, president of Alabama State College.

Mr. William F. Richardson, chairman of the Southern Negro Youth Congress has stated that every possible effort is being made to establish the Second All-Southern Negro Youth Conference as a new milestone in the building of the Negro youth movement. The offices of the Congress are located at 327 North First Street, Richmond, Virginia, Phone 2-4635.

## SOCIETY, LABOR IN SILK BATTLE

**Boycott of Japanese Goods Brings Conflict With Mill Workers.**

The nation's capital recently was invaed in a far-flung skirmish of the Sino-Japanese conflict—skirmishers being mainly women in what might be called the Battle of the Boycott. Advocating a boycott of Japanese silk, Washington debutantes staged a teatime style show entitled Life Without Silk, demonstrating fashions in cotton and rayon. On the same day, an anti-boycott delegation of Philadelphia silk mill workers paraded in the capital, pleading "Buy silk and save our jobs."

Whichever view the public holds on the boycott, it has suddenly realized that silk, even in the typically American manufacturers of sheer hose or pink and lacy underwear, has an exotic international background, says a bulletin from the Washington, D. C., headquarters of the National Geographic society.

**From Many Countries**

In a representative year, 1935, to keep American silk mills rolling and American shoppers silken-clad, the United States imported raw silk, in skeins reeled from the silkworm's cocoon, from five countries: Japan, China, Italy, Switzerland and Palestine. Other silk producing countries are France, Hungary, Greece, Turkey, Spain, India and Syria. The United States is the world's largest silk importer.

This vast international commerce is supported by a thread—a gossamer filament of super-spiderweb fragility, so light-as-air that one pound of it would reach 900 miles. It is obtained by undressing the dead silkworm—unraveling the cocoon which he has patiently spun in a dressing gown to lounge in until the worm turns into a moth and his wings are ready for public appearance. For the silkworm isn't really a worm at all, but a baby moth, a scion of the ancient and honorable family of Insects.

To mistake his identity is natural, for the silkworm comes from a long line of insect magicians. As a climax to his silk-spinning stunt—which is far more astounding than lifting rabbits out of a h at—he can perform the famous hidden wing trick which is a specialty of his family: as a mere hairless cream-colored caterpillar he enters a cocoon with nothing up his sleeve, then emerges as an ashy white moth with a pair of antennas, two pairs of wings, and three pairs of legs.

**Drowned in Boiling Water**

Secret of success in the silk industry is to stop his stunt midway. If the silkworm moth is allowed to escape from his cocoon, the thread is broken and the silk is almost useless. So he is drowned in boiling water as soon as his silk is spun.

To most insects man's reactions are mainly on the angry side, ranging from irritation to murder. Only the bee and silkworm have been domesticated, and it is hardly his tender bond of friendship with the human race for which the bee is famous. The silk-worm on the other hand, is an honored guest in the home of man, born and bred under the same roof, fed by human hands on his favorite food, and finally he monopolizes his host's attention for constant feeding during twenty hours a day. Then he rewards this hospitality by giving away the very shirt off his back—in other words, his cocoon.

In Japan, where three-fourths of the world's raw silk is produced, the silkworm is the most valuable livestock. The honorable little gentleman is chief breadwinner for about 2 million households. Until the last couple of years, raw silk was also the most valuable item of all the products, both raw and manufactured, which that nation exported.

Silkworm culture was kidnapped from China many centuries ago, according to tradition. Each cocoon is about the size and shape of a big peanut shell. It may be taffy-yellow, light green, or biege, but is usually a shade of white. It consists of a single continuous thread of silk from 500 to 1300 yards long. Any seamstress will admire the instinctive skill which handles a half-mile of silk in giddy intricacy without a single knot. If startled while spinning, the silkworm may jerk a knot in his delicate strand; so quiet is maintained around him during the process, and any conversation is kept low-voiced and kindly.

The one-worm-power silk mill whose output surprises man's cleverest imitations starts life in a pink egg which turns gray before it hatches and is so small that it needs the added weight of about 39,999 brother eggs to tip the scales at one ounce. The worm is hatched in an incubator, appearing as a tiny larva no fatter than hairs. Immediately a banquet of mulberry leaves is spread over the wicker tray in which the tiny forms wiggle, and the ravenous munching of invisible jaws is audible.

After five days of continuous nibbling, the silkworm finds his interior a little too large for his exterior, and seeks the anaesthesia of sleep for his growing pains. During the nap his skin cracks neatly down the back, and he backs out of his discarded jacket and orders a double portion of mulberry leaves. On the sixth, twelfth, eighteenth and twenty-sixth days of his existence he brings out a new edition of himself. For a final snack before he begins spinning, he devours twenty times his own weight in mulberry leaves."

## $70,000 FUN AIDS STUDENTS OF RACE

Washington—More than 350 Race students are receiving assistance to pursue graduate and special studies through the graduate aid fund of the National Youth Administration, according to Mrs. Mary McLeod Bethune, director of the NYA's division of Negro affairs.

The students are enrolled in 35 colleges and universities. They are in addition to the 6,000 college and graduate students who are receiving aid from the regular NYA student-aid allottments in schools all over the nation, and the 30,000 high school students who hold NYA part time jobs.

The graduate aid fund of approximately $70,000 was set up to make it possible for the National Youth Administration to offer graduate aid to students in states which offer them no graduate study facilities. A portion of this fund has been used to develop special training projects.

# Famed Group Of Liberals Reveals Frame-up Secured Kentucky Man's Execution

## Civil Liberties Union Raps Gov. "Happy" Chandler For Letting Montjoy Go to His Death on Perjured Testimony

New York, March 3—That a 25-year-old Negro hanged last December at Covington, Ky., just across the river from Cincinnati, was innocent of the charge of rape against him, was asserted by the American Civil Liberties Union in a statement on "The Frame-Up of John Montjoy," issued from New York headquarters today.

The Cincinnati branch of the A. C. L. U. had interested itself in the case almost from its inception in 1935, and had formed the Montjoy Defense Committee to aid him.

Montjoy's execution was four times postponed through court proceedings and appeals for executive clemency. Governor Albert B. Chandler of Kentucky, who has consistently refused to issue a single pardon, declined to act in his case, despite the recommendation of the Attorney General and the Lieutenant Governor. One unsuccessful attempt was made to get the United States Supreme Court to review the conviction, which rested upon the sole word of a white woman and the repudiated confession of a companion of Montjoy. At the original trial Montjoy was represented by counsel who failed to make a record on which an appeal could be fairly based.

The story in essence, according to the Union, involves the "assumption, common in the South, that any white woman's word is to be taken against a Negro's. The white woman who alleged she was raped by a Negro whom she had never seen and whom she identified from pictures in the possession of the police, was later shown to have been on friendly, if not intimate terms with Montjoy for three years."

The story, as it came out at the original trial, was that on the night of March 22, 1935, Mrs. Irene Cummings, wife of a postal clerk, rushed into a cafe on the most popular street of Covington in an hysterical state and screamed that she had been attacked and robbed. Her clothing was not disordered and her appearance gave no signs of struggle. Two Negroes, she said, had accosted her but one had fled prior to the crime. Later in the evening she was able to identify the assailant from a rogues' gallery of several thousand Negro faces.

When John Montjoy was arrested, he denied the attack but after several days of grilling, police reported that Montjoy confessed. He was indicted on charges of rape and armed robbery, both capital offenses in Kentucky. At the trial, Montjoy declared that he was returning after an evening in Cincinnati with his companion, Willie Black, when police arrested him. Charges of robbery and rape against Black were withdrawn after he testified against Montjoy for the prosecution.

In the nine days between Montjoy's arrest and indictment, his first attorney, Bert King, failed to conduct a genuine investigation of the charges. King, who openly declared he did not believe the Negro's story, did not permit Montjoy to take the stand at the original trial; only the prosecution had witnesses. No Negroes were on the jury; in fact there never have been any in Kenton county trials. The prosecuting attorney was allowed to use language designed to arouse race prejudice, calling Montjoy "a black slimy ape."

Montjoy's "confession," submitted by the prosecution, was couched in language which an ignorant Negro could not have used, and in typewritten form of which the original was never produced by the police. Details of the "confession" did not coincide with the story told by the woman.

The judge warned members of the jury, which had taken some time in deliberation, that if they did not reach a verdict within ten minutes, they would be locked up for the night! Montjoy was promptly found guilty.

Later evidence destroyed the prosecutor's case by showing that Black had perjured his "eyewitness" testimony, that he had memorized and signed a statement submitted to him by police after he had been beaten and abused. Mrs. Cummings, it was shown, had been friendly with Montjoy for three years prior to the incident, although she had testified she had never seen him before that night. Mrs. Cummings' testimony that she had been attacked in a standing position was refuted by prominnet gynecologists who contended that cooperation of the woman was essential to "rape" under these circumstances. It was also revealed that no physical examination of the woman was made until three weeks after the incident, although preliminary examination by a police matron is the usual procedure.

Four times Montjoy's hanging was postponed and the case followed a tangled path through the courts. The Kentucky Court of Appeals denied a motion for a new trial, rejecting new evidence on the ground that "with proper diligence" it could have been secured in the first instance. The U. S. Supreme Court refused to review the case, on the ground that there was no federal question involved in the original record. Governor Chandler, who had publicly stated that he would grant no pardons or commutations during his administration, set the date for execution in 1936 and left the state on vacation. A hearing was held before Lieutenant-Governor Keen Johnson, however, and he joined the Attorney-General in the opinion that Montjoy deserved clemency. But no action was taken by the Governor, although he was showered with letters and petitions by indignant citizens of Kentucky. Political expediency, clearly, shut the governor's eyes, corked his ears and restrained him from correcting an outrageous injustice of the courts.

### FARMERS' CONFERENCE HELD IN CARROLL COUNTY; FINE EXHIBITS.

Carrollton, Ga.—The Farmers' Conference of Carrol County was held Saturday, February 12th at the Carroll County Training School.

Outstanding among the many participants were the very interesting and informational addresses given by the following: Supt. M. C. Wiley, Supt. of Carrollton Schools; Mr. A. Tabor, Supervisor of the Negro Department of Agriculture; Miss Camilla Weems, State Home Demonstration Agent; Mr. Hurse, State Agent for Boys; C. M. Hinesman, J. H. Luke, T. Shivers, Scott Center, T. Camp, Industrial College; Roosevelt Smith; Miledge Mitchell, Miles Hackney, Union Point, Georgia, and Spence Woods, president of Carroll Farmers' Conference.

A very colorful and interesting touch was added to the program when representatives from the different 4-H clubs presented a fashion revue, displaying beautiful cotton dresses, that were made under the capable supervision of Mrs. M. A. Brown, H. E. instructor and Mrs. Tammy Thomas, Home Demonstration Agent of the County.

Our deep appreciation is again extended to the merchants who proved their interest by donating the material for these dresses. Those giving material were: Griffin's Store, Moore and Clein, . H. Merrell, The Globe, Robinson and Walker, The Hub, Ben Franklin's Store, Weiss Brothers, The Leader, Powell's, W. W. Mac and Stein's, J. L. Doyal and Son of Villa Rica Dry Goods.

The dresses were judged as to style, workmanship and the art of selecting the colors, and style in keeping with the personality and color of the skin.

The winner of first prize was Geneva Clopton, Clem Club; second, Mary Wilson, Carrollton Club; third, Margaret Woods, Carrollton Club; fourth, Jimmie Mitchell, Hillside Club. Others participating were: Angie L Hall, Artie M. Barber, Opal Alexander, Elma Wiler, Clyde Walker, Ezell Tatum, Henrietta Houston, Thelma Crowder, Pauline Heard, Corrie Shack, Bertha Henry and Mable Thomas.

A very creditable exhibit of clothing, home furnishings, caned products and cured meat was displayed. An exhibit of cured meat of the N. F. A. boys was displayed under the supervision of J. T. McMillan, Vocational Teacher of Carroll County Training School.

Additional spice was again furnished in the afternoon when basketball teams from the CCC Camp, Waco, Ga., and Winston, Ga., combatted the Carrolton team. The Carrollton team won both games.

Fanny Thomas, Home Demonstration Agent and Ellen Shirley, reporter.

### SEA CHANGE

From the Dayton (Ohio) Journal

In Europe, a man in riding pants surrounded by yes-men is called a dictator. Over here he is called a director.

### TEXAS NEGRO PRESS ASSOCIATION MET MARCH 4TH.

Fort Worth, Feb. 24—Featuring a number of interesting discussions, among them "How the Negro Press May Promote Interracial Goodwill," "Job, Cost and Profit Finding," "Headlines and Headline Writing," and "Why Have a Woman's Page?" the Texas Negro Press Association held its annual meeting here afternoon sessions were held at on March 4th. The morning and afternoon sessions will be held at Chump Street Y. M. C. A. and the night session at Mt. Gilead Baptist Church, Dr. R. T. Andrews

### OHIO FARMER HOLDS SOW SALE

Sunbury, Ohio—Perry Blakeman, one of the country's leading hog raisers, is conducting a sow sale on his farm February 19th. Mr. Blakeman has billed the sale as the "five star event of the east."

He visited in Georgia recently, attending the National Farmers' Convention held at Forsythe.

This event will mark Blakeman's initial sale and he says he is determined that no one shall excel him.

Many of his grand sow herd of 140 head have won first prize in state exhibitions.

## THEY LET THE PEOPLE DOWN

(Nashville Globe-Independent)

Whether or not a different fate would have marked the latest effort to pass a federal law against lynching had a different strategy been employed by Walter White of the National Association for the Advancement of Colored People is wholly debatable. Nevertheless it must be conceded that the defeat of the bill can not help but disillusion Secretary White in his belief that the New Deal has such a high regard for its Negro supporters in Northern states that it will dare to crack down on Southern Senators who are opposed to Negroes having any of the blessings of American citizenship. The New Deal chiefs are, above everything else, politically-minded and the rights of even its valiant Negro supporters do not rate as high as the matter of controlling a majority of delegates to the next Democratic National Convention.

New Dealers are determined to control the next Democratic Convention. They are not certain they could do this if Southern politicians who are opposed to the New Deal were given a chance to raise the Negro issue by viewing with alarm the passage of a law by Northern Democrats which deprived them of the right to go on lynching sprees with nothing to hinder them except their own consciences.

Secretary White and his fellow-lobbyists for the anti-lynching bill sought to make passage a big accomplishment of the New Deal. The bill was put in charge of New Deal Senators and Senator Alben W. Barkley, who it can be believed, is no more sincere in desiring such a bill passed than Senator Tom Connally, made many impressive gestures of trying to bring the bill to a vote. Failing to do so, Senator Barkley sought to lay the blame for the failure to get the bill passed to the refusal of a majority of the Republicans in the Senate to vote for the cloture rule.

While we hold no brief for the indifferent attitude Republican Senators manifested toward the Wagner-Van Nuys measure, the record shows that even had all of the Republicans in the Senate voted for the cloture rule that number would not have been enough to bring the measure to a vote. The failure to employ the cloture rule came about because there were not enough New Dealers for it to make its passage possible.

To make a long and sad story short, the New Dealers first took full sponsorship for the passage of a federal anti-lynching bill,, left the impression that President Roosevelt had made it an administration measure, and then when the Old Guard turned on the heat, they let the bill die. In its dying hour, only 22 Senators were at its bedside still trying to save its life. Of those 22 senators, ten were Republicans.

It would have been easy to have passed the anti-lynching bill had Mr. Roosevelt, for instance, called in the Hon. Jim Farley and told him to apply the proper pressure to those Senators who, though ever so strong against catering to the desires of the Negroes for constitutional rights, are nevertheless quite tractable if a suggestion is made that political patronage for their baliwicks depends on them voting for the good of the party. Many of such Senators had no conscientious scruples against voting for those measures which were later declared unconstitutional by unaimous decision of the Supreme Court. They had no scruples against voting to pack the Supreme Court. How easy, under the circumstances, it would have been for them to vote for anything else Mr. Farley might suggest was wanted by the White House.

Of course those who have fought for the passage of an anti-lynching bill will not give up the fight to put this needed legislation upon the statute books. Lynchers and their apologists are on the run and despite what may be said to the contrary, the incessant pressure for the passage of an anti-lynching bill, more than any thing else, is the cause of the temporary recession of this barbarous pastime. Passage of the federal law will practically wipe out lynching, and this without having to invoke the law after it is passed.

However, in the next drive for the passage of the bill we should have less of publicity-seeking by those who go to Washington to influence the legislators. Less write-ups about the lobbyists having been honored by being invited to tea at the White House. Certainly, we should never again have a sponsor for the bill embarrass the whole Negro race by endorsing for appointment to the Supreme Court of the United States another such pseudo-liberal as Hugo L. Black.

### PUT GALOSHES ON LIVESTOCK

**Czechoslovakia Hopes Thus to Prevent Foot and Mouth Ill.**

Farm animals are wearing rubber overshoes in Czechoslovakia, a country of Europe, east of Germany.

This isn't to keep the animals from getting cold feet, or anything like that, but on the theory that it may prevent them from catching foot and mouth disease.

An epidemic of foot and mouth disease is reported to be sweeping across Europe. Apparently, it started in England, spreading to Germany and Belgium, and now threatens the herds of Czechoslovakia have fitted their stock with a kind of galoshes, thinking that perhaps the disease may be caught from contact with the ground.

Foot and mouth disease is highly contagious, and, as the Livestock

## PUT GALOSHES ON LIVESTOCK

(CONTINUED FROM PAGE 9)

Reporter expresses it, about the only thing to do for a four-footed victim "is to dig a grave, shoot the animal, and bury it in the hole, taking all precautions against contracting infection."

The disease is, among animals, something like scarlet fever among human beings. It attacks not only cattle, but hogs, sheep, goats, horses and even dogs, cats, poultry and deer.

### Milk Carries Disease

Human beings can get the malady from drinking the milk of affected cows, or handling diseased carcasses.

While the death rate is low, there is a heavy loss of milk for months among dairy animals, and other stock which recovers is severely injured by loss of vitality and flesh.

There have been a number of outbreaks of foot and mouth disease in the United States. It hit several sections hard in 1914, and a great deal of stock had to be slaughtered, while quarantines were enforced, and stockyards were closed and disinfected.

Foot and mouth disease has long been prevalent in South America, and for that reason the livestock associations of the United States stood out against a proposed trade treaty with a South American country, more than a year ago, under which meat from that country would have been freely admitted to this country's markets.

Of the European outbreak, the Livestock Reporter says:

"Origin of the European scourge has not been placed, except that it was introduced with imports. Since the United States stepped out of the exporting business, South America has furnished the bulk of the meats imported into Europe."

## MET ALL BILLS WITHOUT USING COTTON MÒNEY

"We just don't put all our eggs in one basket," said W. A. Robinson of Leachville, in explaining how he met all his last year's obligations without using any money from the sale of his cotton.

This record, made possible by what Mr. Robinson called a "perfect balance" of the enterprises on his 90-acre farm, is responsible for his family's being awarded one of the state live-at-home certificates, said D. V. Maloch, assistant county agent in north Mississippi county.

Mr. Robinson's livestock consists of eight milch cows, five brood sows, 50 hogs, 250 hens and four head of work stock. His cash crops included eight acres of watermelons and 34 acres of cotton.

From the 34 acres of cotton he harvested 35 bales, all of which was clear, since the other items paid the operating expenses of the year, and a $184 Federal Land Bank payment besides.

From the melons he got a gross return of $630.

From October 9 to January 9, Mr. Robinson sold $215.40 worth of cream from his cows. His hens returned $189. Sale of hogs brought $396.

Mr. Robinson produces enough hay for his needs. From 20 acres he produced slightly more than 700 bushels of corn, and his pastures of wheat and lespedeza cut his feed fill nearly one-third.

His two-acre home orchard has just come into bearing, and from it he expects to sell $75 worth of peaches this year.

He has bought no feed except a few sacks of bran and shorts to start off the brood sows and fresh cows.

The smoke-house is filled with sugar-cured meat, all raised on the farm. More than 500 quarts of canned fruit and vegetables were filled for the family of four.

In addition to these cash returns, Mr. Robinson estimates that he will receive $575 from the agricultural conservation program in benefits and subsidies.

## COUNTY FARMERS IN SESSION AT LOUISVILLE, GA.

Louisville, Ga.—Saturday, February 12th, The Negro farmers of Jefferson county met in their annual conference at Jefferson County Training School, Louisville, Ga., Saturday, February 12th.

The audience of eighty farmers and other rural workers, listened with rapt attention to the inspiring address, "The Way to a Better Farm Life," of Prof. O. S. Beasley, principal and teacher of vocational agriculture at Wrens High School. Mr. T. W. Brown, county agent, gave the "Agricultural Outlook of 1938." In addition, he conducted interesting demonstrations on pruning fruit trees, planting white potatoes, and treating and planting sweet potatoes.

After the meeting, the farmers unanimously agreed to organize the Jefferson County Colored Farmers' Association and elected the following officers: Mr. Jessie Hudson, president; Mr. L. A. Allen, vice-president, and Mr. F. D. Lockhart, secretary.

—J. E. Whitlow.

## HOME DEMONSTRATION IN RAPID GROWTH IN GEORGIA

### Force of 1937 Totalled 22 Full-Year Workers; Farm Program "Clicks"

The 1937 annual reports of the home demonstration agents in Georgia show that very excellent results were obtained last year in the home demonstration work for colored women and girls as well as in the farm demonstration work for men and boys.

The force of home demonstration agents increased to 22, all of whom are employed for twelve months in the year. These agents were:

Mrs. Mayme Wesley, Bibb County.

Miss Lottie O. Harris, Camden County.

Mrs. Tammy Thomas, Carroll County.

Mrs. Mary H. Jones, Chatham County.

Miss Lillain E. Williams, Decatur County.

Miss Pauline Riggs, Dodge County.

The number of women enrolled in home demonstration work has increased from 1200 in 1924 to more than 8100 in 1937. During the year home demonstration agents made 18,576 visits to the farms and homes of 6326 different club women and 4-H club girls.

Club women and girls existed with displaying 146 extension exhibits at various events; 2347 club women attended 146 leaders training meetings and 3520 club girls attended 257 leaders training meetings for 4-H club members; 78,174 women and girls attended 4631 method demonstration meetings; 7783 attended 679 meetings held at result demonstrations; 1186 adults took part in 39 countywide and community tours and 2422 Four-H club members took part in 63 tours conducted for them; 79 achievement days were held and 10,964 adults and 4-H club members attended them. Local leader club women and club girls hel da total of 1287 club mects themselves
club meeting themselves and these meetings were attended by 20,704 adults and 4-H club members. There were 20 county-wide Home Demonstration Council organizations for club women and 65 council meetings were held during 1937.

### Home Gardens

Each year farm families seem to realize more and more that fresh vegetables the year round are essential to a strong, healthy body, and there has been a remarkable increase in the number of home gardens planted. In 1930 club women reported 7072 home gardens and in 1937 they reported 18,996. Here is a letter written by Mrs. Edith Ragins, a Peach county club woman, to her home demonstration agent, Mrs. Margaret Toomer: "I just thought that I would write you about my demonstration garden. I had the best garden this year that I have ever had. I planted the vegetables you wrote to us about and I found that by following your letter I had vegetables in my garden every day this year. Just now I have 27 different vegetables growing in my garden. I cook at least three vegetable every day for my family.

"My garden certainly saved me money this year. I sold $42.25 worth of squash, string beans, butter beans, okra, cabbages, beets and tomatoes from my garden besides what we ate and canned."

This letter is typical of hundreds of other letters written to the home demonstration agents.

### Other Extension Work

275 farm families established lawns around the homes; farm familes erected 275 new buildings and remodeled 522 buildings, practically three-fourths of which were dwelling houses; hundreds of homes and out-buildings were painted; 57 homes installed better water systems, 50 installed improved heating systems, 156 installed lighting systems, 327 installed home appliances and machines and approximately 50 farms and homes of varying sizes were purchased by farm families. The federal aid has helped the farm families to accomplish much of this.

### Human Interest Story

Mrs. Nettie Smith who lives miles from Tennille on the Ball Ferry road, was influenced by her agents to remodel her home which was a small dilapidated building very close to the highway. The house was rolled back 300 feet, two rooms and two porches were added; new ceiling, flooring, doors and windows were put in; brick columns and steps were built and the home was screened and painted a lovely color. All lumber for this house was cut from Mrs. Smith's wood lot and the carpentry work was done by Mrs. Smith and her two sons with the aid of one first class carpenter. As a result of the improvement made on this home 65 other Washington county homes have been improved.

### Poultry

Poultry raising was very profitable to both club women and club girls and helped out in many ways both for food for the family and as means of increasing the family income. Women sold a total of $11,265.76 and girls sold a total of $12,879.49 made from poultry and egg sales in 1937.

### Home Dairying

Great progress was made in home dairying. Hundreds of families who never owned cows and who do not drink milk now own cows and are using milk in their daily diet. A few of these cows are pure bred. In addition to the dairy products used in the daily diet of the farm families, a total of $6,746.09 was reported by club women and girls from the sales of home dairy products.

### Home Marketing

In home marketing club women and girls reported a grand total of $33,686.86 as having been made from sales of vegetables, fruits, canned products, poultry products, dairy products, handicraft and other miscellaneous sales and from swing for others.

### Clothing

Ten years ago the great majority of rural women with whom we work had to pay others to sew for them. In 1937 ninety per cent of the 8128 women enrolled in home demonstration club work could make at least their common wearing apparel and the common house furnishings for their homes. Some do all of the sewing for their own families and sew for others.

### Child Development, Parent Education.

This work was conducted in 318 rural communities with 486 local leaders assisting; 1562 result demstrations were conducted; 3638 familes made efforts to improve the habits of their children; 1100 familes substituted positive methods for negative ones in disciplining their children; 550 families provided play equipment for their children and 940 attempted to supply furnishings adapted to children's needs. 10,087 children were involved in this program.

### Conserve Food Products

209,840 containers of food were saved and 14,128 pounds of fruits and vegetables were dried or stored.

### 4-H Club Work For Girls

14,136 girls enrolled in 763 Four-H clubs and 9661 girls completed the work they set out to do. 825 club girls attended 125 camps; 12,034 girls planted vegetable gardens and 8125 girls kept planted flowers and others beautified the home grounds. 955 girls took part in wild life activities; 4932 carried poultry products; 9996 girls enrolled in health projects and 6959 completed health projects. Mattie Sue Peace of Sumter county won the highest score in the health contest.

### Promotions, Certificates.

5000 club girls received promotion cards and 29 club girls were awarded 4-H club certificates of honor. These were the first certicates ever awarded to colored 4-H club members by the State Extension Service cooperating with the United States Department of Agriculture.

## CAMPUS CREDIT UNION DECLARES .05 DIVIDEND

Tallahassee, Florida.—The Florida Agricultural and Mechanical Employees Credit union, which is the first Federal Credit union organized in a Race school, made its annual reports as of December 31, 1937, this week. The organization declared a five per cent dividend on investments of the members who are participating in the organization at the present time of 81 members.

The organization loaned to the faculty members of the college the sum of $9,381.00. The board of directors is headed by J. R. E. Lee, Jr., business manager.

## FARM PROGRAM INCLUDES CITY MAN AS WELL

### Secretary Wallace Would Build Security for Both Groups

In his annual report to the President, issued November 15, Secretary Wallace outlines a program for agriculture designed "to promote security for both farmer and consumer," and to encourage "balanced increasing production on farms and in factories." The report analyzes the community of interest that exists between farmers and city dwellers and declares that "on this foundation, with the tools of group unity used in truly democratic processes, we can begin to build security for farmer and consumer."

Secretary Wallace observes that the agricultural supply situation is very different now from what it was four or five years ago and declares the continued assent of consumers to farm programs designed to give farmers a fair and stable income will depend on the willingness of the farmers to keep the granaries full.

Maintenance of an ever-normal granary is the farmer's duty to the consumer, the report says. It adds that the consumer may repay the farmer "by helping to safeguard farmers from bad results when the granary overflows."

Secretary Wallace says the ever-normal granary will be most useful with corn and wheat, and that in a different way it may be applied also to cotton. Economic adjustment in the future, says the report, should promote "balanced expansion so that labor, capital, and natural resources can be employed and at the same time conserved."

## DOG SPORTS GOLD TOOTH

### ASIA

Australia's proudest dog is the pet of a dentist of Bendigo. He sports a gold tooth. Recently the animal, a trusty watch dog, developed toothache. His master took him to his surgery, drilled the tooth and capped it with gold. The pet accepted the treatment without a murmur.

Missing for three months, and given up for lost, a calf has been found roaming the hills with a herd of deer near Caithness, Scotland. How it had survived recent severe storms and how the deer had tolerated the presence of the stranger can not be explained by naturalists. The calf shows many wild tendencies of the deer.

## RACE RELATIONS SUNDAY IS OBSERVED

New York, Feb. 24—More than 4,000 meetings in hundreds of communities observed Race Relations Sunday with interracial meetings and church services stressing interracial brotherhood according to reports reaching the Federal Council of Churches, which established the day's observance sixteen years ago, Dr. George E. Haynes, said Monday. It now has the cooperative support of national boards and missionary societies of eight of the principal national denominational bodies, the National Y. M. C. A.'s the Y. W. C. A.'s in cities and colleges, and has grown to such an extent that this year the Day introduced a national interracial week.

In many cities pastors exchanged pulpits, choirs of one race visited churches of another race. Some of the distinctive features in several cities were as follows: At Hartford, Conn., meeting at Asylum Hall Congregational church heard the Reverend William Lloyd Imes, noted colored minister of New York. In Greater New York, the Madison Avenue Presbysterian church held its sixth annual interracial music festival with a choir of about 1,000 young people's voices from colored, Chinese, white and other groups throughout Manhattan. A celebration was held at St. Mark's Methodist Episcopal church with Lyman Beecher Stowe as principal speaker. The First Presbyterian church, Henry Street, in Brooklyn, conducted an afternoon musical program. Patterson, N. J., held its eighth annual meeting with an audience of more than six hundred people of both races at the First Baptist church with a choir of twenty male voices from a leading white church and two colored choirs of nearly one hundred voices from two of the leading colored churches.

In Illinois proclamations for interracial week were issued by Chicago's Mayor Kelly and Governor Horner, and nearly forty pastors exchanged pulpits. In Texas, Dr. Edward A. Steiner, sociologist, of Grinnell College, Iowa, gave the principal address at a Goodwill Assembly in Dallas, which is the first of a series of meeting to continue throughout interracial week, and mixed meetings were held at Fort Worth and Houston. In Hot Springs, Ark., several of the leading white ministers of that city, including the Rabbi of the House of Israel, gave special sermons and addresses on the topic of better race relations. Los Angeles, Cal., held a "race rally" of racial and national groups.

One of the striking features of the observance this year was the special program at the white and colored colleges in the North, West and South. Many of these colleges' exercises were carried out under the leadership of the presidents of the institutions. At Wilberforce University, Ohio, over 300 white and colored students from Ohio, Indiana, Kentucky and West Virginia met Saturday for International Day.

## CLEAN PLANT LEAVES

Since plant pores perform much the same function for the house plant as skin pores do for the human body, it is important to keep the leaves clean. Water is harmful to leaves of certain plants. But these are exceptions. Ordinarily wide-leafed plants may be wiped gently off with a damp cloth or sponge taking special care not to bruise the leaves, and smaller leafed plants may be rinsed with a fine spray.

Inflammations caused by insect bites may be removed by covering the inflamed area with a paste made of equal parts of soda and salt, moistened with warm water. The paste should be held in place with a tight bandage.

## CONDITION OF FARM HOMES

Bulletin No. 3 by the housing division of PWA, entitled "Homes for Workers," shows that five out of six have no running water; six out of seven have no electric lights; one-half of our farm houses need major repairs; only one out of 20 comes up to the American standard.

## DIXIE COTTON SALES ABROAD SHOWING GAIN

### Ahead of Rival Staples in Past Five Months, Records Reveal.

By B. N. Timmons

Washington, D. C.—Experts of American cotton have been increased this season, although total world cotton exports have been in a decline, it is revealed in "Foreign Crops and Markets" weekly publication of the U. S. Bureau of Agricultural Economics

For the five months ending with December, exports from the United States increased 13 per cent. For the same period, exports from the six leading exporting countries as a whole fell four per cent below the figure for the corresponding five months of last season.

Exports of American lint totaled 3,416.000 bales the last five months of 1937 and 3,305,000 bales for the months in 1936. However, this was slightly below the figure of 3,650,000 bales for 1935 but above the 2,517,000 of 1934. The 1923-32 average of exports for those months is 4,471,000 bales.

Exports of the leading countries, including the United States, British India, Egypt, Brazil, Peru and Argentine, amounted to 5,298,000 bales this season and 5,510,000 last, American cotton amounting to 64 per cent and 55 per cent, respectively, of the totals.

The decline in world exports is attributed entirely to decrease purchases by Japan, according to the publication.

All other leading importers increased their purchases. Germany's increase was the largest, both in percentage and in absolute size."

Total German takings from the countries rose by 306,000 bales, or 54 per cent, between the periods compared.

"The rise in the United States share of world cotton exports was due mainly to a shift from Indian and Argentine cotton to American. The United Kingdom, especially, favored United States cotton in this season's purchases."

Europe as a whole took 3,002,000 bales of American cotton, a gain of a million bales over the volume purchased in the August-December period of 1936. Japan purchased 126,000 bales, falling from first place to seventh place among our foreign markets. In 1936, Japan took 814,000 bales during the five months.

England returned to her position as greatest purchaser of American cotton, taking 1,052,000 bales, or 31 per cent of our total exports.

## PURE BRED HOGS ADD TO HIS FARM INCOME

R. C. Krislor, Saline county farmer, sold five registered gilts from his herd of purebred Poland Chinas for $137.50, for breeding stock, and he told County Agent Kit Smith that the hogs would have brought only about $75 for pork.

"Mr. Krislor has a nice herd, which adds considerably to his farm income," the county agent said.

"He increases his hog profits by growing corn and oats for feed, and grinding these grains for their rations."

**Trees weighing as much as 20 tons each will be transplanted on Treasure Island as a part of the $1,500,000 horticultural beautification that will make the 1939 Golden Gate International Exposition a 400-acre garden.**

## HOME

Home is one of the most sacred words in the English language, and it is the one spot on earth nearest the heart of any rational human being, regardless of his nationality and regardless of whether or not his language contains an exact equivalent of the English word. The family is the unit upon which our civilization is built and home is the center of family life. It is the one place where a man may retreat from the work and worry of the world in the evening and refresh himself, mentally and physically, for the task of tomorrow. Home is the harbor, the family, the anchor.

What is more fitting then, than that a man should own his own home? No matter how humble, no matter how grand, the effect is the same. Home ownership brings a sense of deep contentment, a feeling of security, civic consciousness, and a stability of mind and character that can be acquired in no other way.

---

More than 300,000 bulbs, 450 perennials and 500,000 annuals will be planted on Treasure Island for the 1939 World's Fair of the West to make the most beautiful gardens in the world.

## VANDENBERG ON LINCOLN

(Nashville Globe-Independent)

If he could save the American System by changing all, some or none of the Republican Party's principles he would do either.

The above is in effect, if not the exact words, the central thought of the Lincoln Day address delivered by Senator Arthur H. Vandenberg of Michigan, rated by many as the probable nominee of the Republican party for President in 1940.

Students of the addresses of Abraham Lincoln will recognize in the Vandenberg statement with regard to his preference for the maintenance of the American System, even to the extent that he will compromise the principles of the Republican party, a sort of parody on what Lincoln said with respect to his desire to make the saving of the Union paramount to the fate of Negro emancipation.

Senator Vandenberg, we are certain, realizes that Abraham Lincoln, in all his career never showed himself less of a statesman than in his expressed belief that the question of human slavery could be dismissed as of minor importance to saving the Union. Slavery, more than any other one thing, was the cause of the Civil War. The fate of this new nation, dedicated, as Lincoln later said, "to the proposition that all men are created equal," was to be determined upon whether or not it would chart its course toward the freedom and equality of all of its people. Incidentally, it is stated, with regard to the apparent compromising position which Lincoln took in the speech here referred to, that at the very time he uttered the words indicating that the emancipation of the slaves was a matter of minor importance with him, he already had prepared the draft of the Emancipation Proclamation which he issued September 22, 1862.

The point we are trying to make is that no great statesmanship was shown by Abraham Lincoln in trying to conceal the zeal for the emancipation of slavery he had possessed for a lifetime. Likewise, it can be believed that Senator Vandenberg is not likely to add to his unquestioned prestige as a statesman by the constant employment of words and phrases, calculated to make disgruntled Democrats see in him a man who is not so strongly wedded to the Republican Party but that he could be weened away from it in order to "save the American System."

Even though Senator Vandenberg does have such a passion for "saving the American System" as to believe that it is time to think less in terms of success of the Republican party than of saving the system, he will doubtless find that a great majority of those who favor him for the Presidency are men and women who look upon the Republican party as being an instrument fully capable of doing so. Merely because the Republican party has suffered reverses should not be considered a reflection upon the party's historic principles. The party's illness can be traced to another source.

That source, in the opinion of the party's followers, is in the kind of wobbly and faithless leaders who have maneuvered themselves into the control of this great organization and have proceeded to forget the interests of the masses of Americans to become the servants of special privilege. The party undoubtedly has been able to command the favor of the nation's wealth but this has been achieved while neglecting the welfare of the masses.

The indifference of latter day leaders of the Republican party caused it to lose a majority of its Negro supporters, the most loyal allies any political party has ever had. The party leadership was faithless in the matter of pressing for the passage of a federal law to curb lynching, notwithstanding they knew that lynching had become a brazen violation of Constitutional guarantees which the Republican party originated and enacted. The party leaders had every opportunity of knowing of the virtual conditions of slavery existing in the form of landlord oppression of sharecroppers of both races. That oppression was and is in direct violation of Constitutional guarantees which the early leaders of the Republican party sponsored.

As if these and other acts of faithlessness toward the historic principles of the party were not enough, we now find many of the present day leaders professing a fascination for States' Rights, and seeking to pretend that States' Rights is a tenet of Republicanism. Plainly this strategy is adopted with the belief that it will rally thousands of Democrats to the Republican fold. It will do no such thing.

The theory of Republicanism is that the Federal Government is the supreme authority in this nation. The party, when true to its professions, has held that the Federal Government was established to correct the national weakness which existed under the supremacy of states as vouchsafed under the Articles of Confederation. The theory of Republicanism is that rather than the states condescending to establish a Federal Union in order to be obliging to those who contended for it, the Union was established to insure the preservation of the states themselves.

President Roosevelt and the "New Deal" party which he has established have as their greatest asset their fervor for a "broad nationalism" in handling matters affecting the national welfare. This all along, supposedly, has been a Republican doctrine. Any attempt to deny it and to seek the defeat of the New Deal by professing that the Republican Party has gone States' Rights is too transparent a form of opportunism to win many Democratic supporters, while at the same time it disgusts all honest and enlightened Republicans. It would behoove Republicans to pledge their party to an increased devotion to nationalism with the assurance that such a course will find more support from progressive Democrats than any pretense of fealty for States' Rights will win from the ranks of the reactionaries.

If present day leaders of the Republican party will concentrate more upon rendering faithful service to the great masses of Americans than upon forms of strategy calculated to win a few disgruntled Democrats such a course will show that the party deserves the favor of American voters and soon or late victories in states and in the nation will be achieved. If these leaders will but ponder their sins of omission and commission and seek to profit by them they will find it timely to get "back to normalcy" with regard to the party's attitude toward the welfare of the masses and toward seeing the United States as a great Federal Union, rather than a cluster of states, any of which are free to do as they please, regardless of how it retards national progress.

---

Maybe Joe Louis is a sucker for a right hand punch but we still contend that it is best to follow in the footsteps of Bob Pastor in order to go any distance with the Brown Bomber and not land in the hospital.

---

The Adam's Apple of every lyncher in the Differential Belt got plenty of exercise during the hectic 47 days when there was a threat that G-men would replace the home boys as the investigators of mob rule.

# Young Colored Woman Stirs Program Committee With Recital Of Leadership's Betrayal Of Masses

Chicago, Mar 4 (ANP)—All nine Committee, Republican National colored members of the Program Committee, were present at the two-day conference called to order Monday by chairman Glenn Frank (dailies will give details). The members are Frdeerick M. Roberts, editor New Age Dispatch, Los Angeles, Calif.; William E. King, State Senator, Chicago; Mrs. S. Joe Brown, Des Moines, Ia.; Atty. Joseph S. Mitchell, Boston, Mass.; John O. Hopkins, Jr., theatrical producer, Detroit, Mich.; Atty. Francis E. Rivers, N. Y. C.; Atty Sara Pelham Speaks, N. Y. C.; Bishop David H. Sims, Philadelphia, and Atty. Thomas G. Nutter, Charleston, W. Va., who was made a member of the organization committee.

At the banquet Monday night in an address which epitomized the combined views of the colored committee members and which brought tremendous applause from the numerous delegates, Mrs. Sara Pelham Speaker said in part:

"What caused the disaffection of Negro voters? Well, after the Republican party had an illustrious record as regards the Negro; won freedom for him, built for him the War amendments to secure that freedom, and recognized him as entitled to equality in American life, it began to worship strange gods; to play with that idea which now again rears its evil head; of merging the Bourbon Democrats of the South with intolerant Republicans in the North. They gained the general impression that the Republican party was concerned with property rights. With the advent of the New Deal, so suspicious had the Negro become of this unholy alliance that, as a protest, he supported the New Deal even though this Democratic Party introduced the principle of government-fostered segregation, and in its wage differentials and relief policies made of the Negro an indigent ward of the Nation.

"It has been erroneously stated by certain persons that the Negro vote is lost to the Republican party forever. That idea is shared by many of you present. That is definitely untrue. The Negro, like other disaffected Republican gronps, will readily return to the party the moment the party shows an understanding of the needs of his people.

"The idea that the Negro has become enslaved by the Franklin Roosevelt myth is wrong. Negro citizens are aware that the greatest betrayal perpetrated upon them in connection with the defeat of the Anti-lynching bill was the complete silence of Franklin Roosevelt. Also, they are aware that the New Deal seeks to perpetuate for them an inferior status in American life. Negroes would gladly abandon their historic enemy, the Democratic Party. But if we would have them return to the Republican Party which they once supported so loyally, the Republican party must make radical changes wherever needed to meet the desperate present day necessities of the Ngro.

"This Committe will have an opportunity to say whether the Republican party will correct this injustice and return to its historic and famed championship of the Negro's right to equal opportunity in American life.

"It is one of the great opportunities, I believe, of our Committee on Program to evolve the answers for our Party to these pressing problems. The Committee can make fateful recommendations as to these questions of grave import to the Negro:

(1) Isn't it the proper function of the United States government to prevent segregation and elimination of any minority race either by governmental or private agencies?

(2) Isn't it the proper function of the United States government to aid the integration of a minority race into all phases?

(3) Shouldn't the Republican party do all within its power to protect the life of the Negro against mob violence even at the cost of limiting debate in the United States Senate?

(4) If business leaders are going to substitute intelligent self-regulation for ignorant governmental regulation, shouldn't they hire Negroes as a means of correcting the present virtual barring of Negroes to careers in productive occupations?

"The Negro wants for himself and his family the very same thing that the other citizens of America want for themselves and their families. The burden of ill-health, old age and unemployment weigh as heavily upon him as upon the other working people of America. They want a safeguard from these dangers, and are unwilling to be satisfied with the present legislation in this direction as long as it excludes from its benefits those tremendously large groups of workers—the farmer and the worker in domestic and personal service.

"The Negro wants jobs and is not willing to accept the dole as synonomous with prosperity. He wants child labor to be abolished; an anti-lynching law enacted; discriminatory practices incivil service done away with. He wants an opportunity to live in decent quarters away from the disease infested slums.

"It is important that the Republican party recognize the fact that because of his most distressing social and economic situation, the Negro will no longer accept the sentimental appeal to reconstruction days as the basis for supporting a party. Negro Republicans urge the party to re-establish ideals that have made the Republican Party a great party in the past—to unequivocably and with complete courage dedicate itself to those principles. If the Republican party deserves to win, it will Win—with the Negro voters of America helping."

The planning committee divided the country into nine regions, and the colored representatives will serve with each of the regional organizations.

## THE ULTIMATE DEMOCRACY

**By Joy Elmer Morgan, Editor The Journal of the National Education Association**

1. Next to the free public schools, the consumers' cooperative movement is the greatest social invention of modern times; it is of the people, by the people, and for the people.

2. The cooperative movement serves every type of human need, both economic and cultural.

3. The cooperative movement thrives in every country where freedom is not entirely destroyed.

4. The cooperative movement removes the causes of war and of internal strife between classes.

5. To a world disheartened by unemployment and torn by war, the cooperative movement offers a peaceful pathway toward a better civilization.

6. As United States Supreme Court Justice Louis D. Brandeis points out in "Other People's Money," the cooperative movement overcomes corporation privilege, domination, monopoly, and excessive concentration of wealth by establishing a motive higher than greed and by performing a superior service.

8. For the development of the cooperative movement, conditions in the United States are especially favorable—abundant resources, a democratic tradiiton, a high level of general education, and a great area free from tariff barriers.

9. When studied and practiced in the school, the cooperative movement gives young people a new life and a sense of responsibility for their own destinies.

10. The cooperative movement is the most powerful form of education for both children and adults; people learn by doing; they develop faith in themselves and in each other.

11. When fostered by the church—as Kagawa has pointed out—the cooperative movement is an instrument of self-help to the impoverished and the desperate.

12. The cooperative movement is the practical application of the golden rule; it is the ultimate democracy.

## SCHOOL HEAD QUITS FOR U. S. POSITION

Millen, Ga.—Prof. Robert T. Church, since 1936 principal of Jenkins County Training school here began his duties as farm agent for the United States department of Africulture here Ferbuary 1.

The announcement of Prof. Church's resignation from the school staff on Friday, January 28 was received with regret because of the work he had done at the institution since his coming here.

A native Georgian, Prof. Church is a graduate of Hampton institute and before entering upon his duties as principal of the school here he taught at Washington high school, Washington, and at the colored high school in Athens.

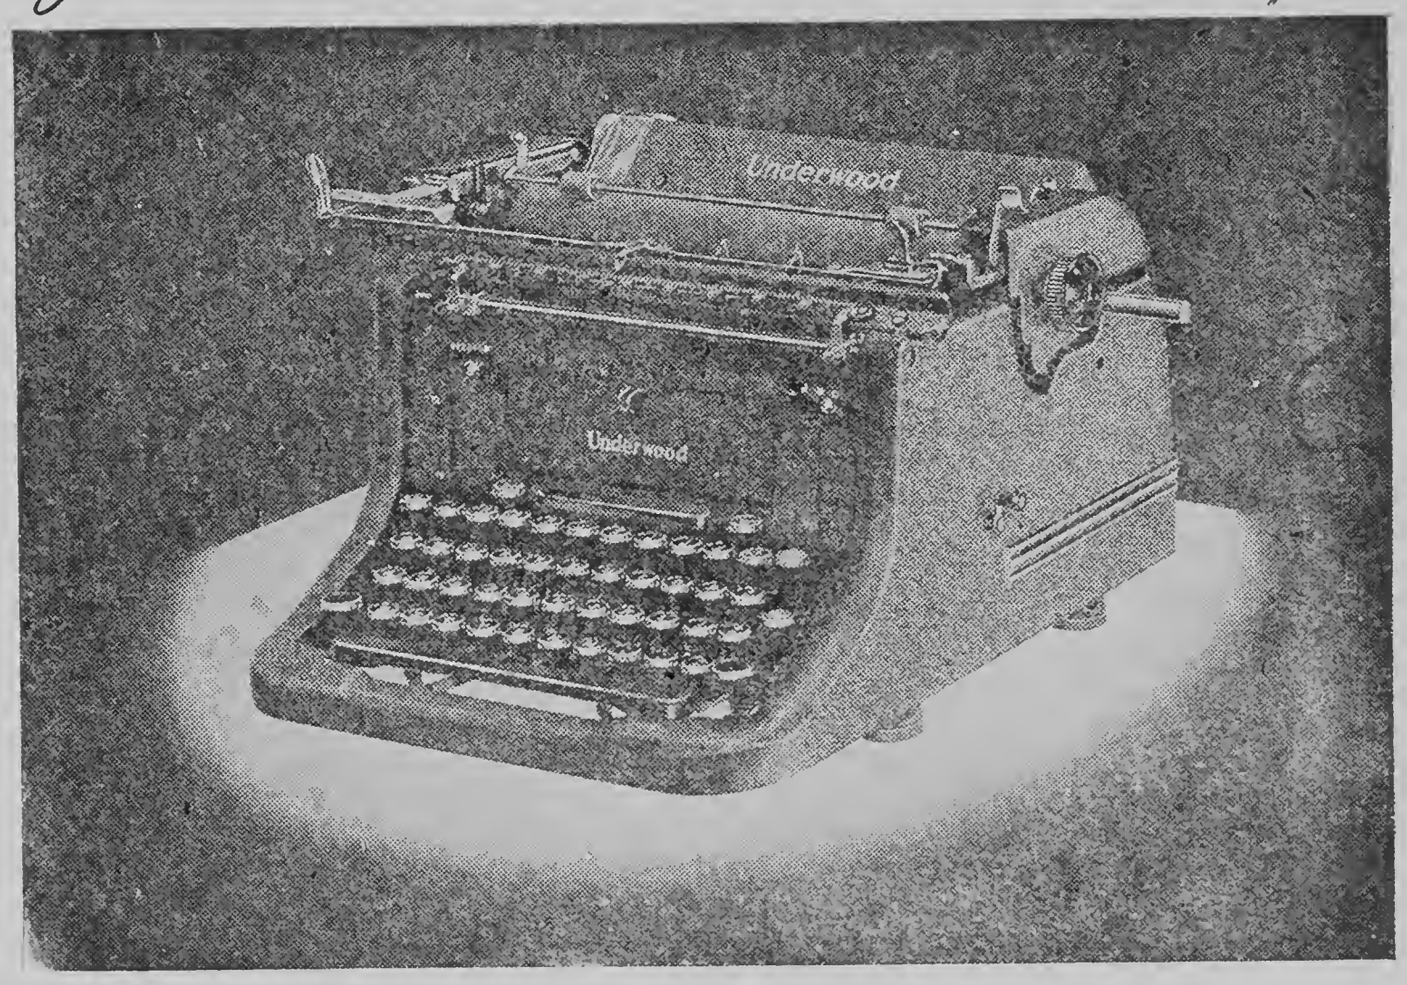
Though his new duties are expected to carry him to all parts of the country, Prof. Church stated in making public his resignation from the school staff that he will maintain headquarters here. He promised also to cooperate as far as possible with the program of the school in which he expressed a deep interest.

## PAYS TAXES WITH 46,750 PENNIES

Birmingham, Alabama.—(ANP)—As the final payment of his public improvement assessment, Alex Fairley, owner of a Lomb avenue grocery store, went to the city hall last Tuesday, planked down a sack containing 4,675 pennies before George Tidwell, public ibprovement assessment clerk in the city comptroller's office. Aided by several fellow clerks, Tidwell finally completed the count of the coppers, found them all there, to the last penny. He then called a police squad car to transport them to the bank.

Each year for the past ten, Fairley has paid his annual installment in pennies, a total of 46,750. His payment last week was the last due on his assessment. He gave no reason for his unusual method of paying his taxexs.

Another Triumph of Underwood Leadership



...the New

UNDERWOOD MASTER

Typewriter

AGAIN Underwood leads the field . . . with an entirely new business typewriter that defies tradition in its design and challenges all machines to match its performance. It's the new Underwood Master!

*Note completely sealed back—exclusively Underwood*

The new Underwood Master gives you Dual Touch Tuning. Instead of a single adjustment for touch, the Master offers two... one that permits individual tuning of each key to the finger tips; the other, keyboard controlled, varies the tension of all keys at the will of the operator.

The new Underwood Master offers a completely sealed back, providing maximum protection against dust and assuring even quieter operation.

See the new Underwood Master. Check its exclusive features point by point. Note how its general performance has been placed on a new and higher standard. Typing visibility is 100 per cent complete. Then remember that the Master is one of three office models that Underwood offers to American business. Telephone for a free demonstration on your own work in your own office.

Every Underwood Typewriter is backed by nation-wide, company-owned service facilities.

## WHAT THE TILLERS OF THE

(Continued from page 1)

Georgia has passed a law allowing counties to decide against or for establishment of places in which intoxicants may be sold.

Atlanta University and affiliated colleges will join with friends all over the country and celebrate the seventieth anniversary of the birth of Dr. W. E. B. Dubois, internationally known Negro scholar, writer and speaker.

A mail order catalog advertises a wind-driven electric generator with a capacity to furnish all the 32-volt direct current electricity needed by the average farm family, which it claims will operate at a cost of less than fifty cents a year. The cost of the generator, tower and adequate storage batteries will be approximately $275. If this contraption proves of value the farmer may now obtain plenty of electricity cheaper than the city resident can get it.

In a speech against the anti-lynching measure in Congress, Senator James F. Byrnes of South Carolina, stated that the South has been deserted by northern Democrats and that southerners could not depend on them for support when problems effecting the Negro arose. Said Sen. Burns, "The Negro not only has come into the Democratic party, but the Negro has come into control of the Democratic party."

Statistics relative to the ownership of automobiles in the United States declare that there is no country in the world in which the ownership of autos compares with that in our own country. Car ownership of native white families, excluding those on relief, ranged as high as 97 per cent in California, to sixty per cent among the white planters of the Southeast. Only among the colored sharecroppers of the South was the population left "afoot." Ownership of automobiles by our sharecroppers ran as low as fifteen per cent. It was also discovered that a majority of farmers purchase good used cars.

A cooperative of farmers have purchased a mill near Kansas City which they will run for their own benefit. The mill will make flour, meal, dairy and poultry feeds and breakfast foods. It will have a bakery in connection with it to bake bread for members and for sale.

Delegates representing the four Negro Methodist connections discussed merger plans at the meeting of the A. M. E. Bishops' Council in Montgomery, Ala., recently.

Georgia has taken steps looking toward abolition of the "chain gang" system of imprisonment.

Congressman Arthur W. Mitchell, Chicago's colored member of the House, asserted in an address delivered in Atlanta, Ga., that colored citizens of the South should pay poll tax, qualify and vote in all elections.

Lester J. Walton, U. S. Minister to Liberia, returned to the States recently for a visit with his family. Mr. Walton conferred with Pres. Roosevelt on conditions in the African Republic.

G. Candace, a black man representing Guadeloupe in the French Chamber of Deputies, presided over that body during the week of Feb. 11th. He was given the greatest ovation of his life. Candace has been a member of the French parliament for twenty-six years.

## WHITE PAPER CITES

ministrator, Farm Security Administration, Washington, D. C.; W. R. Banks, president, Prairie View State college, Texas; Williard W. Beatty, director of education, Office of Indian Affairs, Washington, D. C.; Horace Mann Bond, Fisk university, Nashville; J. E. Brewton, George Peabody College for Teachers, Nashville; Doak S. Campbell, director of Surveys and Field Studies, George Peabody College for Teachers, at Nashville.

## WORK CAMPS REPLACE GEORGIA CHAIN GANGS

Atlanta, Georgia, Feb. 25 (CNA)—Georgia's infamous chain gangs supposedly became a thing of the past this week under legislative action which will convert them into "public works camps" for "honor" prisoners with a promise that there will be "no more shackles, whipping or sweat boxes."

The name chain gang was changed to public works camp in a bill sent to the Governor for signature. Actual revision of the old chain gang set-up is promised under other parts of the eight measures comprising the reform plan.

These reforms include classification and segregation of prisoners with the new State penitentiary at Reidsville serving as a general clearing house, provision for rehabiliation through educational and vocational training, and employment of an adequate staff to make thorough physical and mental examination of prisoners.

Those designed as "honor" prisoners will go to the public works camps, while "incorrigibles" in which class Race prisoners usually are listed will be sent to the stone quarries at Elberton.

## ALABAMA'S NEW MOVABLE SCHOOL TRUCK FOR NEGRO FARMERS

(Continued from page 1)

donated money to put into operation the first "Movable School." This was known as the "Jesup Agricultural Wagon." Later on, the "movable school" idea, as projected by Tuskegee Institute, was found to be in harmony with those advocated by the Extension Service under the United States Dept. of Agriculture. The work of the Movable School is vividly described in a book recently published at Tuskegee Institute entitled, "The Movable School Goes to the Negro Farmer," by T. M. Campbell, Field Agent.

Funds for the present truck, as well as for the three previous trucks, were raised by the Alabama Negro Extension Agents from the Negro farmers and their friends, white and colored, in honor of Booker T. Washington.

**Operation of the Truck**

This motorized school on wheels, now financed by the Alabama Extension Service carries a complete stock of farm implements and home conveniences, such as the average farmer will be able to purchase or construct and operate. The personnel of the school consists of four trained workers, a home demonstration agent, a farm demonstration agent, a trained nurse and a registered architect (part time).

The farm demonstration agent takes the boys and men of the community, organizes them into groups, and gives them practical instruction in certain designated demonstrations in season, and an effort is made also to give various groups as nearly as possible instruction in any other subject in which they are interested.

Simultaneously, the women and girls are organized into groups by the home demonstration agent and given instruction in renovating the house and its surroundings. Joint instruction is given to all in poultry raising, gardening and home dairying.

The architect inspects the homes in the community, gives advice as to remodeling where necessary, and draws plans for new homes for those who wish them, as well as making periodic visits to oversee the construction.

The rural nurse studies the community to be worked, looking into the various homes and gives first hand information on home sanitation. She gives special attention to child welfare, screening the homes, caring for the patient in the home, the eradication of vermin, and directing severe cases of illness to the community physician.

**Poor Housing**

In recent years there have been many studies of rural housing made by governmental agencies, manufacturers of building materials, architectural magazines, and individuals interested in the problem. In almost every case, however, these proposals did not provide for improving the homes of the vast southern rural population whose annual net income is less than three hundred dollars per family.

At the present time a large majority of these people are housed in dwellings that are unsafe, inconvenient, overcrowded and unsanitary. Such conditions foster immorality, lessen self-respect and menace the health of the community. It is believed that with the combination of intelligent planning, local materials and the farmers' own labor, better houses can be constructed than the ones in which they now live.

The country is becoming "building conscious" now, spurred on by the efforts of State and Federal governments, but this is largely in the urban areas. The rural people are still poorly housed, and as long as this situation exists, other efforts to rehabilitate the farmers will be hampered.

Probably no factor contributes more to the unrest of the average Negro family than unsightly, poorly arranged and uncomfortable farm homes. The housewife cannot be happy in such a home, and the children cannot be expected to develop normal bodies and minds under such environment. Many older boys and girls leave their homes because they become tired and ashamed of such conditions.

It is hoped through the system of Movable Schools to remedy this situation. L. E. Fry, Registered Architect, who is now making a study of rural housing on a General Education Board Fellowship, is attached to the Movable School during the period of his study. He has found a number of interesting situations, and has had varied success in his efforts to better the quality of the housing facilities of those rural people with whom he comes in contact.

For a long time to come it is going to be necessary to teach the average rural Negro the fundamentals of living in the matter not only of producing necessary food and feed for the family and livestock, but the "ABC" of the care of the family and livestock; (a) disease among the family; (b) disease among the livestock; (c) simple laws of sanitation and (d) the isolation of the sick from the well, etc.

The best way to do this, is to, wherever possible, give visual demonstrations. This is extremely necessary because of the high rate of illiteracy among the rural population. Especially is this true of the Negro. The majority of them cannot even read, and yet many of them under Extension practices have imitated demonstrations which they have seen with their own eyes and have therefore become very proficient and successful. Hence, the Movable School is a unique system of carrying education to a comparatively large group of the South's rural population who otherwise would not receive any educational benefits from the State and Federal governments.

L. A. Green.

## WPA EMPLOYS OVER 5,000 RACE WORKERS IN INDIANA

**Washington,** D. C—More than 5,000 Race members are now employed by the Works Progress Administration in Indiana, according to a report sent to Washington officials recently by John K. Jennings, state administrator. In addition, Mr. Jennings said, over 250 Race youths are being aided in their efforts to go to school by NYA part-time jobs.

The largest number of Race workers is employed in Indianapolis and Marion county. Here 2,011 men and 272 women are working on WPA projects, according to Mr. Jennings' report. Those represent 24 per cent of the total employment of 6,952 workers in this district.

# 900,000 Farmers Called to Prayer May 29th

# THE MODERN FARMER

Vol. XI. NASHVILLE, TENN., APRIL 15, 1938 No. 3.

APR 23 1938

## National Farm Sunday Is May Twenty=ninth

## PRES. AND SEC'Y OF FEDERATION URGE OBSERVANCE

### Nearly One Million Tillers Of the Soil to Worship Under Own Vine and Fig Tree

Moline, Ill., (Special)— Sunday, May 29th has been named as National Farm Sunday by Mr. Leon Harris, the acting president and secretary of the National Federation of Colored Farmers. He has asked that on that day the nine hundred thousand colored farmers of the United States with their families and friends, gather at some church of their choice for the purpose of giving thanks to their Heavenly Father for the manifold blessings that He has bestowed upon them, and for guiding them in these days following the depression and in the present recession.

Mr. Harris says he is urging every farmer, every farm family, with their friends to ask some minister of their choice to bring them a gospel message, and to simplify the truths in this message as they have to do with their particular life and work.

This annual occasion was begun more than eight years ago when the former president of the Association felt that there should be a day set apart for farmers as well as any other group of red-blooded Americans who believe in a real Saviour, and who serve God according to the dictates of their own conscience. He therefore believes, and is so urging and requesting that these farmers continue these praise services where they can worship God at a time, in a place of their choice, under their own vine and fig tree. Whether it be in sunshine or rain, whether it is hot or cold, he urges that they go to church and that they report these services to him at his headquarters here in this city.

Mr. Harris further recommends that the Saturday preceding the fifth Sunday in May, which will be the 28th of the month, that day be given over to the young people for recreation, for outing, for enjoyment, and for innocent pasttimes, so that there will be two days where the farmers of the nation can not only show that they are the recipients of the many blessings of the Lord, but that they are not discouraged, in spite of many conditions existing in farm sections that they are not responsible for and have not been able to change.

## POVERTY IN SOUTH EXPLAINED

### South Carolina Farm Followers Hear Official

Orangeburg, S. C.—(ANP)—Fifteen hundred Negro farmers, agricultural leaders and rural school teachers from thirty counties in the state filled White Hall of the South Carolina State College to overflowing Thursday to hear I. W. Duggan, Acting Director Southern Division, Agricultnral Adjustment Administration, Washington, D. C., outline a program for the cotton states and explain the marketing quotas feature of the new Farm Bill.

According to Dr. Duggan, one reason for extreme poverty of the rural South is that although one-third of the nation's farm population is in the South they receive only one-tenth of the national farm income.

Citing the unprecedented 18,700,000 bale cotton crop for 1937 as an added reason for a crop control program. Dr. Duggan emphasized the fact that "our cotton programs must be on a sensible basis." "We cannot," he said, "adjust our cotton excess in one year or two years. We would have to cut acreage so much that it would upset our entire economy and drive thousands of farmers off the land. Nor can we continue to grow more cotton than can be sold at reasonable prices. That would only add to the difficulties of our present situation."

In support of his plea for more food and feed crops grown on

(Continued on page 16)

## FARM-TO-MARKET HIGHWAYS

"The future of the Missouri highways for many years to come is now being considered by the Citizen's Road Association," says an editorial in the Kansas City Star (Feb. 26). "A plan and, probably, a new constitutional amendment should be offered the voters next November along with the 3-cent gasoline tax proposition. Some 6,500 miles of farm-to-market roads have been constructed, with nearly a year to go for the completion of the plan.---- There are still gaps in the farm-to-market system that should be eliminated. A survey now completed by the Bureau of Public Roads is expected to show the need for additional building. However, the time seems to have come for considering the needs of the state in terms of travel instead of counties.----"

## 47TH ANNUAL CONFERENCE

### Held at Tuskegee—Farmers Pass Resolutions

The Tuskegee Negro Farmers' Conference, in this its forty-seventh annual assembly, follows its usual policy of considering the welfare of rural Negro people of America.

Programs for human betterment are receiving serious consideration more than ever before in the history of our nation.

Thus, while the old world is confused and torn with conflict, America has the chance to show how one great nation can devote itself to higher ideas of service and ideals of right and justice.

In order to promote the best interests of the South and the Negro, we submit the following facts and recommendations:

1 **Unemployment**

There is a vast amount of unemployment in the country as well as in the towns and cities. We urge, therefore, the establishment of some broad-scale, rural works program which will afford employment for farm workers during off seasons. Such a program of work will greatly relieve the pressure of migration to the cities and tend to encourage self-help among rural people.

2. **Farm Tenacy**

At this time a year ago, the national conscience was aroused to the extent that the President appointed a Commission to study plans for improving tenant conditions. Since our last conference, the Bankhead-Jones Farm Tenancy Act has been passed by Congress. This act is designed to aid landless tenants to become home owners.

We rejoice in the fact that the Farm Security Administration has been charged with the administration of this law and that these tenants will have the benefit of trained supervision. We commend the type of supervision which has been developed by the Resettlement Administration.

With a knowledge of the vast number of hand-to-mouth tenants in the United States and the miserable lives they live, we urge larger appropriations for carrying out the terms of this law and that provisions be made in the Wagner-Steagall Housing Act for improving housing conditions in rural areas as well. In the Southeast a farmer can be set up on a working farm unit with all equipment for about the same price a city dweller is provided a home.

3. **Live-at-Home Program**

We urge that the farmers continue the "Live-at-Home Program" and that the food and feed needs of the farm family and livestock be the

(Continued on page 16)

## Agricultural Adjustment Administration

## BUILT BARN FOR $60.00 CASH

### Wm. Donald of Perry Co., Shows What can be Done

By using pine logs and pine slabs. William McDonald of the Sweet Home community, Perry county, has built a barn valued at $300 for only $60, reports Price J. Young, county agent.

His neighbors helped place the logs at an old-fashioned raising, and Mr. McDonald did all the other work himself, spending the money for shingles, nails, hinges and a small amount of lumber, the county agent said, adding:

"The walls of the barn are 12-inch pine logs, and the open spaces between are filled with small pine poles. The rafters are pine poles, and one by four-inch lumber was used for laths. The shingles are cypress.

"The 22 by 24-foot barn has an 11-foot shed on one side with four six-foot stalls. The shed sidings are of pine slabs, the stall petitions of pine poles. The barn itself has a six by 12 foot crip, and the remainder of the building is used for storing hay. Around the barn is a pine pole fence enclosing a half-acre lot.

"Mr. McDonald is now planning to build a home of native materials."

## LIKES SWEET CLOVER FOR OVERFLOW LAND

J. D. McGehee, who operates the Co-al-co plantation near Reydell, in Jefferson county, likes biennial sweet clover as a hay crop, according to County Agent Arthur F. Lee.

While Mr. McGehee, is an enthusiastic alialfa grower, he found that certain of the poorer-drained parts of his farm would not successfully produce this crop. He was persuaded to try sweet clover there, and is well pleased with results, the county agent related.

Mr. McGehee said that even though the sweet clover at times is covered with water from Bayou Meto, or from heavy rainfall, it does not seem to damage his stand.

The clover is not allowed to get too rank and coarse before it is cut, but is made into hay while it is yet fairly fine-stemmed. Mowing it three or four times a year, Mr. McGehee told the county agent that his tonnage compares favorable with the yield of alfalfa.

**Some of the world's most distinguished women will be brought to the 1939 World's Fair of the West by the Exposition Women's Board.**

## ACT OF 1938 IN RELATION TO TOBACCO

### Flue-Cured Growers May Produce Nine Hundred Fifty Pounds

**The New Act And The Present Situation**

The Agricultural Adjustment Act of 1938 is intended to aid farmers in adjusting their marketings of tobacco so as to protect their income from tobacco and provide adequate supplies in line with demand.

Flue-cured tobacco growers in the United States are now equipped to produce about 950 million pounds of flue-cured tobacco annually. They appear to be inclined to make even further increases as a result of the favorable prices in recent years. The level of consumption is now slightly above 700 million pounds. Domestic consumption is increasing, but the rate of increase has slowed down. Exports still are affected unfavorably by tariffs and other trade handicaps built up since the world war, and by increased production of flue-cured tobacco in foreign countries.

Over a period of years farmers can expect to receive a smaller total income for crops in excess of demand than they would receive for crops adjusted so as to keep supplies in line with demand. The past four crops of flue-cured tobacco have brought an average price of 23.1 cents per pound and an average total income to farmers of 165.5 million dollars. These incomes were realized while programs were in effect, or in prospect, which would tend to avoid production in future years in excess of market needs.

It is unlikely that any material increase in consumption of United States flue-cured tobacco would result from lower farm prices. The consumer pays about the same price for tobacco products regardless of the farm price. Taxes, tariff duties, manufacturing costs, and selling charges are relatively fixed and make up so large a part of the total cost that changes in prices paid to farmers generally do not cause changes in the prices for tobacco products.

**QUESTIONS AND ANSWERS**

**General Features of the Act**

1. Q. What is the Agricultural Adjustment Act of 1938?

A. An act of Congress approved by the President on February 16, 1938, which, among other things, continues, amends, and strengthens the Soil Conservation and Domestic Al-

(CONTINUED ON PAGE 6)

## ATLANTA CONSTITUTION WILL BE FAIR

In a letter addressed to Mr. Jesse O. Thomas, Clark Howell of the Atlanta Constitution says that Georgia Colored farmers will receive ample recognition in the LIVE-AT-HOME program fostered by his paper. The letter follows:

January 24, 1938

"Major Clark Howell,
Publisher Atlanta Constitution,
Atlanta, Georgia.
Dear Major Howell:

In the Sunday edition of the ATLANTA CONSTITUTION considerable space in the news section, and editorial page was given to the CONSTITUTION'S "Plant-to-Prosper" competitive program for farmers. A summary of the regulations and awards accompany the announcement that $3,500 would be awarded to the successful competitors in the LIVE-AT-HOME program fostered by the CONSTITUTION.

Tenants, sharecroppers, landowners, farm operators, home demonstration agents and persons engaged in agricultural extention service were among those who qualify for entering the contest.

Governor E. D. Rivers was joined by leading educators in the state in generous expressions of commendation for this praise-worthy enterprise.

No elcment in our population received the news with more joyousness than was true of the Negro citizens, of Georgia, especially those who fall in the category of those eligible to enter the contest. This enthusiasm of Negroes was dampened considerably when the following paragraph appearing on the front page of the CONSTITUTION, under the by line of Mr. Herman Hancock, was read:

"The Atlanta Constitution today launches a Plant-to-Prosper competition for Georgia's 200,000 white farmers, offering 32 cash awards totaling $3,500 and six silver loving cups and other honors, for the state's most progressive planters in 1938. The competition is basically a Live-At-Home Program.

The editorial in the CONSTITUTION makes it appear that you as publisher of the CONSTITUTION intend to limit the benefits of this "Plant-to-Prosper" campaign to white farmers. I am sure that both the CONSTITUTION and its publishers have been misunderstood and misrepresented in this publicity.

Of the 250,000 farm operators in the state, 73,285 are Negroes. These 73,285 farm operators cultivate more than five million acres of ground in the state of Georgia valued at $74,000,000.

As a journalistic descendant of the immortal Henry Grady and one who is thoroughly conversant with the Negro's contribution to the agricultural as well as industrial development of the commonwealth of Georgia, I am very sure it is not your wish or desire that so large an element of our agricultural population shall be denied the opportunity of participating in such an epoch-making institution.

On behalf of these 73,285 farm operators and the more than a million Negro citizens of the State of Georgia, a large percentage of whom are daily readers of the ATLANTA CONSTITUTION, we are appealing to you to correct what we are sure is an erroneous impression which has done a very great injury to the liberty-loving and justice-seeking Negro citizens of our state."

Very truly yours,
Jesse O. Thomas,
Southern Field Director.

January 26, 1938.

Jesse O. Thomas,
Southern Field Director
National Urban League,
250 Auburn Avenue,
Atlanta, Georgia.
My dear Thomas:

You should by now know THE CONSTITUTION better than to think that we would put on a contest of this nature and not include the Negroes.

In planning our "Plant-to-Prosper" campaign, prizes were set up for the colored farmers, and these will be announced very shortly. We believe that, from your standpoint and from THE CONSTITUTION's, it would be better to make this announcement after the contest gets started.

Of course we appreciate what the Negro farmer means to this section, and THE CONSTITUTION has at all times had the interests of your people in mind. There is no exception in this case.

Thank you for your letter bringing this matter before us. You may rest assured that there will be no discrimination against the Negro farmer.

With best wishes."

Very truly yours,
Clark Howell.

We will have more to say relative to the project when the details of the plan have been formulated.

## VICTOR SIMON HAS OUTSTANDING NAME AS STOCK DEALER

Baton Rouge, La. (By James F. Bozeman for ANP)—Victor Simon was born June 28, 1874 at Pine Bluff, Ark., the son of an ex-slave. Eudora Vaughn, and Charles M. Simon, a Jew. Victor entered school at six years of age but was forced to come out when he was 10 and find bread for himself following a band of Gypsy horse traders over the country. He learned the art in horse trading and went in business for himself at 18 years of age. opening stables at Pine Bluff.

During the World War, Victor Simon was forced to sell his business and enlisted for service as a horse trader—only to be denied that position when authorities in Washington leadner of his racial identities. Nevertheless, the British government capitalized on his ability by appointing him to the same duties as those which the United States had refused.

After the war Mr. Simon reopened his stables at Pine Bluff but soon found it necessary to move to Baton Rouge to evade the boll weevil epidemic that retarded the progress of the farmer.

Sinve 1919, Victor Simon has gradually grown to the top in his field in the state of Louisiana, regardless of race, color or creed. With 64 years of service behind him, he carries on as if life just begins.

Railroad statistics show that his firm, the Union Stock Yards, did more business in 1937 than his two white competitors combined with gross receipts of $156,000 for mules and horses and $90,000 for cattle making a grand total of $246,000.

As a business man among men he reigns superior and as a Negro his achievements are almost unbelievable in Dixie.

The Union Stock Yards cover several acres, with a main barn and modern facilities shipping over 100 car loads of stock annually.

On interviewing Mr. Simon, the saddest words came last, "I only regret that I have been unable to interest any young Negro lad in my business to the extent of learning the art of cattle dealing. and when I die, it will no doubt go into the hands of the white race."

Mr. Simon's matrimonial score is one but he has no chlidren.

## IT IS BUT FAIR PLAY

(The Dallas Journal)

Texas has nothing approaching equal facilities for Negroes who seek education in the higher brackets. There is no need to pretend that the case is otherwise. It would be expensive in the extreme to provide a medical, dental, mining and general graduate curriculum for the comparativey few Texas Negroes who would want such education. Yet the Constitution guarantees like opportunity in education for black and white.

Intelligent leaders of both races have come together and formulated the suggestion that Texas follow the example of most other Southern states on this point and pass a modest appropriation annually to provide the tuition and railroad fare to the nearest institution outside of Texas offering the desired professional or advanced course not offered for Negroes in Texas. Not even all the tuition is asked. Instead the request is merely for whatever the amount by which the out-of-state tuition exceeds the tuition charged by our corresponding Texas institution to a Texas white student.

It is believe that $30,000 a year will cover the demands of this simple act of justice.

## Art Professor At State College Illustrates Book

As a token of esteem and appreciation, Prof. Vernon Winslow, head of the Art Department at Tennessee State College, presented President William J. Hale the first copy of Country Life Stories, a book which contains thirty illustrations by the celebrated artist. The publication, just issued by the E. P. Dutton Publishing Company of New York, contains an introduction by Prof. Mabel Carney of Columbia University. The work is the first of its kind to be written and illustrated by a Negro author and artist and represents the initial attempt of the Art Department of Tennessee State to give through the medium of a national publication a series of illustrations which will serve to inspire, rather than humiliate, the rural Negro.

Prof. Winslow, who assumed charge of the Art Department of A. and I. last year, is a graduate of the Art Institute of Chicago, a former student of Morehouse College and Atlanta University and was a special pupil of Dr. Hale Woodruff, head of the Art Department of Atlanta University.

Prior to the Jubilee last November, when the institution's twenty-fifth anniversary was celebrated, Prof. Winslow installed four murals upon the campus. These murals, like the illustrations in "Country Life Stories" attest the sound racial attitude which the College observes toward the rural Negro.

Both Dr. Mabel Carney of Columbia University, and Mr. Macrae, president of the Dutton Publishing Company, have sent congratulatory comments upon this remarkable work. Prof. Winslow's current exhibit at Dury's, one of Nashville's most exclusive downtown stores, is creating a sensation among members of both racial groups.

# HISTORY FOUND TO BE IN ERROR ON WHEN FIRST SLAVES ARRIVED

### Scholar Points Out Group Which Came to America In 1619 Were "Indentured Servants" Like Whites

(Nashville Globe-Independent)

Richmond, Va., March 17 (ANP)—If the Virginia senate passes its bill for erection of a monument near Jamestown on the site "where the first Negroes were landed in 1619," it should not be reared as being to "the first slaves," the senate learned last week in a message sent them by Matthew Page Andrews of Baltimore, historian.

According to Dr. Andrews, recent investigations have revealed that, contrary to statements in most histories and articles, "these first Negroes were entitled to freedom." He declared records have been found showing "the release of at least some of these Negroes after a term of service" in payment for their transportation to the colony, "similar to that of white indentures."

Dr. Andrews cited the case of Anthony Johnson, a Negro who was brought here in 1619 or "certainly before 1622." In due course, he was freed, the historian said, became a landholder, and as sueh seeured the services of a Negro named John Castor, a later arrival. Johnson held Castor in service longer than the indenture called for, and "white persons intervened to get Castor's release." Castor was to have been indentured seven or eight years, but was kept "servant for seven years longer than he should or ought," the records show.

## SWEETS CURED IN HOUSE FOR CHICKS

"We have about 300 bushels of sweet potatoes like that at home in the brooder house," Mrs. John Moody of the Massard community, north Sebastian county, remarked to G. M. Measeles, county agent, indicating some cured sweet potatoes she was selling on the curb market.

When Mr. Measeles asked her if they used their brooder house for potato storage, she replied:

"We use it for a curing and storage house both. The large, brick furnace we use in brooding our chicks furnishes plenty of heat for curing our potatoes in the fall. We can close the windows and make the house tight enough to make a good curing house, and the brooder house ventilators are just what we need to ventilate the potatoes."

The sweet potatoes are generally sold by the middle of February, and the house is then available for brooding the spring flock of chickens. This arrangement has saved the Moody's the expense of a curing house for several years.

## DR. EMBREE SAYS PRESENT METHOD OF EDUCATION FAILS

Statesboro, Ga., Feb. 24—Although American education involves a national investment exceeding 10 billion dollars and has come to be almost a religion, it is "failing in its purpose," declared Dr. Edwin R. Embree, president of the Julius Rosenwald Fund, in an address Thursday night before the Council of University System of Georgia. The fund has contributed approximately $100,000 to the university system for improvement of the education of white rural teachers and for a study of the state's offerings in higher education for colored.

"We in America are devoted to education with a passion and a university unknown in any other country at any other period of human history," Mr. Embree declared. "Yet we are not getting an educated citizenship. The proof of failure is only too clear on every hand. To take but a few glaring evidences, the reason is a shocking lack of thoughtful reading—or reading of any sort throughout our poulation or even among college graduates our public actions are marked not by intelligence, but by prejudice, stupidity, even gross corruption, our school and college practices are themselves formal, scholastic and trivial rather than truly educational.

"The pupils and their parents have asked for educational bread and we have given them stones called courses and credits. They have asked to be prepared for life and we have prepared them to pass examinations."

Embree suggested a four-point program of redemdy: (1) greater emhpasis on the stimulation of thinking rather than education; (2) the working out of interplay between theory and practice, so that students may have realistic and guided experience; (3) more attention to social and economic problems of given communities; (4) larger expenditures for teachers colleges, providing them with support comparable to that given other professional schools.

## FAVORS CONSUMER CO-OPS

Herbert H. Lehman, governor of New York, in his annual message to the State Legislature, January 5, declared that consumer cooperatives should be definitely encouraged and urged their organization as "yardsticks for the measurement of fair and just distribution costs." Pointing to the failure of both state and industry control in attempting to provide fair prices for the consumer, Governor Lehman declared that "properly operated consumer cooperative can supply milk at better retail prices and yet not impair a fair return to the producer."

It is trinmph under certain material conditions to retain your self-respect and to keep on living without bitterness.—Eleanor Roosevelt.

# THE NATIONAL FEDERATION OF COLORED FARMERS, INC.

### History

In 1922 this organization was founded by James P. Davis, the late Gilchrist Stewart, Cornelius R. Richardson and Leon R. Harris. Mr. Davis, a native of Georgia, had long been engaged in the commission business in his native state and was recognized as the leading authority of his race on the marketing of farm products. Mr. Stewart was a native of South Carolina, the son of a sharecropper, who had risen to eminence in his profession but had not forgotten the severe struggles of those who had nurtured him. Mr. Richardson, also a native son of Georgia, was and is a prominent lawyer. He has devoted much of his time and study to the legal phases of farm and co-operative organizations. Leon R. Harris, a native of Ohio, was reared on a hilly Kentucky farm eighteen miles from a railroad. And for six years he had been a North Carolina dirt farmer, rural school teacher and a leader in farm organization work in that state.

In 1929 Mr. Davis was chosen president and began devoting all his time and efforts for the welfare of the organization. Under his unselfish and inspiring leadership, growth was rapid and substantial.

The organization was incorporated under the laws of Illinois in 1930 and the national office was established in Chicago, the agricultural capital of the nation.

### Purpose And Aims

Quoting briefly from the "foreword" of the N. F. C. F., published in 1928, "It is the hope of the founders of the National Federation of Colored Farmers, to make life on the farm more attractive and more profitable, and to build up in this nation a Negro group of organized, influential and satisfied producers."

To accomplish this purpose the N. F. C. F. has advocated (1) co-operative buying, production and marketing. Local Units have purchased more than a quarter million dollars worth of farm and farm home supplies co-operatively during the past eight years. Local Units have produced and marketed co-operatively, hay, watermelons, string beans, peanuts, sweet potatoes and mixed cars of vegetables. The N. F. C. F. has advocated (2) land ownership. The Federation has assisted hundreds of its members in purchasing farms on reasonable terms. It has also been instrumental in securing better legal sharecrop contracts. It has helped its members by instruction and assistance to take advantage of farm relief legislation. The N. F. C. F. has advocated (3) better farming and better farm living, and through organization, assists in building better colored farm communities.

### Progress

The first local Unit of the N. F. C. F. was chartered at Howard, Miss., in 1929. Today it has a membership in 21 states. It admits to membership farmers, sharecroppers, tenants and farm hands, all members of the Race who are interested in any manner in the important business of farming. The organization has proven its worth. It has been a blessing to thousands of Negro farmers.

### HOW TO ORGANIZE A UNIT OF THE N. F. C. F. IN YOUR COMMUNITY

This is an age of GROUP ACTION. The INDIVIDUAL, working alone, can accomplish little. Colored farmers must ORGANIZE. Your organization is the N. F. C. F. YOU HAVE NO OTHER NATIONAL FARM ORGANIZATION. To organize a Unit of the N. F. C. F. in your community:

1. Make a list of the names of all who can and who should be members of your Unit. This list should include the names of farm owners, tenant farmers, sharecroppers, farm-hands, rural teachers, rural preachers, colored owners of farms in your community who live elsewhere, and all others of our Group who are interested in the business of farming.

2. Appoint a time and a place for a meeting and invite all whose names are on your list to attend it. The farmer's wife is an equal partner in his business and should also attend your organization meeting.

3. Elect the following officers: President, Vice President, Secretary, Treasurer, Market Agent, Chaplain, and Marshal. These and four others you elect constitute your Board of Directors.

4. Collect $3.00 annual dues from each member. Two dollars per member to be sent to the national office, one dollar per member to be put in the local Unit's treasury.

5. Appoint a standing Membership Committee of three members.

6. Appoint an Agent for "The Modern Farmer."

7. Name the time and place for your monthly or bi-monthly meetings.

8. Select a name for your local unit.

### WHAT YOU SHOULD DO AFTER YOU ORGANIZE

After your Unit has been organized and you have elected officers who are efficient and reliable, the first thing you should do is: MAKE A SURVEY OF YOUR COMMUNITY AND REPORT THE FOLLOWING FACTS TO YOUR NATIONAL OFFICE.

1. Number of colored farm owners in your community.
2. Number of colored tenant farmers and sharecroppers in your community.
3. Number of tenant farmers and sharecroppers who desire to purchase farms and who are able financially to make a down payment on a farm.
4. Number of farms or amount of farm acreage which can be purchased in your community.
5. Number of farmers in your community who desire to purchase farms in other communities.
6. Number of farm hands in your community and average daily, weekly monthly and annual wages they receive.
7. The money crops produced in your community and money crops which may be produced.
8. The money crops which may be produced co-operatively this season or next season.
9. The farm and home supplies used at which a saving may be made by cooperative buying.
10. Is your Unit prepared to engage in co-operative buying?
11. Home owner needs in your community—paint, fencing, household appliances, farm machinery, building, etc.
12. Government assistance desired, seed loans, farm loans, etc.
13. Does your county and community have, or does it need, the services of a Negro Farm Agent and a Negro Home Demonstration Agent.
14. Could a Farm Credit Union be organized in your community.

---

### General Information

After your Unit is organized a Colored Farm Women's Club and Colored Farm Boys' and Farm Girls' Club should be organized under competent leadership.

---

Your national office will send you a charter and individual membership cards when annual membership fees of two dollars per member is received.

---

Local Units can make and adopt by-laws to govern their local organizations. The national office will advise but will not interfere in the set-up or government of a Local Unit.

---

Local Units may assess and collect monthly payment of dues for the benefit of the Local Unit treasury. Local Units may also pay to the national office annual membership dues out of the local treasury. These dues may be raised by holding entertainments, picnics, or from crop or stock growing projects engaged in by the combined membership of the Local Unit.

---

The "Modern Farmer" is the official organ of the N. F. C. F. All members should read, subscribe for, and support this monthly farm paper. It is the only paper published for colored farmers.

---

All Units are required to report monthly to the national office.

FROM THE BIBLE:—

*"It is Christ that died, yea rather, that is risen again, who is even at the right hand of God, who also maketh intercession for us."* Romans 8: 34.

"The cities grow old and vanish;
Their people faint and die,
But the grasses are green forever,
Forever blue is the sky."
—Author unknown.

### EASTER—BEGIN AGAIN

Someone has called Easter the 'Feast Of New Beginnings." It is well that we should be reminded yearly of the opportunity we have to begin over again, to forget the past and past failures, and with new courage strive to be better and do better.

Have you walked through the fields in the springtime and seen the new blossoms springing up from the leaf mold of past years? Just so, a new life and a new beginning may be made from the ruins of the old. And this life may be born again, lifted up to a higher plane, and may find a new usefulness.

As we observe Easter, let us too observe a resurrection of new hope and a new life. Let us fill ourselves up with cheerfulness. Let us determine not to lose faith in ourselves nor in our fellowmen. Let us feel the joy of living—the joy of doing right —the joy of rendering unselfish service to others.

### BIGGER, BETTER GEORGIA

This month Gov. Rivers, of Georgia, will address the 13th Annual Georgia Conference on Social Work. He will tell of the many social reforms that have been made during his administration,—about the enlarged health program and the revised penal system with its emphasis on probation. He will tell those interested in social work that Georgia has taken a progressive stand for right and justice,—that Georgia is going to walk out from the "backward class" of states and join the ranks of those progressive states that believe in more prevention and less "cure,' more reform and less punishment,—more love and less prejudice.

All honor to Georgia and to a governor of Georgia who has the courage to "do something about it." It is high time the thoughtful and educated citizens of all our "backward states" seize the reins of government and put men in office who are willing and able to lead them forward. Officials of state governments who can't see through the black clouds of the past, who think more of their own future than of the future and welfare of their fellow citizens, should be put out of office and kept out. This is a time of change, and changes must be made quickly.

Georgia is going to become bigger and better. Some of her sister states should follow her example.

### "NO QUICK FARM CURE"

So says Secretary Wallace. He is right. And colored farmers, as a group, are the sickliest of the lot. It will take many years of hard and patient effort to cure a half million or more colored farmers of illiteracy, poverty and low living standards in general. Progress is being made, slowly but surely. The federal government is assisting, so are the state governments, and thousands of unselfish, noble extension workers, teachers and rural preachers are carrying the light into the darkest corners of the Southland where most of our farmers live. But the harvest is so great and the laborers, they are few in number and often weak and powerless.

Those favored ones of our Group, who know more and have more,—could assist much in bringing the light to thousands of our farm families. For instance, the Negro city church might take under its wing one or two rural churches. It could send good literature to the country church, books, magazines and newspapers. The Sunday School children might correspond with each other. All this would help. Then too, our big insurance companies, of which we are so proud, and our banks, lodges, Greek letter societies, etc., —all should have departments of rural welfare. All of these favored groups should think about doing something worthwhile for the benefit of those of our group farthest down, —our farmers.

Let's think about doing some of this needed doctoring ourselves.

### OBSERVE FARMERS SUNDAY

Every rural and urban community should observe Farmers Sunday this year,—the fifth Sunday in May, May the 29th. Farmers should invite their city friends and have good church and community programs.

The farmer's real business is farming. He should boost his business and his organization. He should show his fellowmen how big a business it is,—how important it is,—how necessary it is. And he should prove his love for it by honoring it this one day especially.

Make Farmers Sunday the biggest day in your community this year.

### THE N. F. C. F. HAS HELPED

Recently the secretary of the National Federation of Colored Farmers, Inc., "counted up" the names of those whom our organization had aided in the matter of holding on to farms they had purchased. These members, and some not members, had been given instruction and advice, letters to proper government officials had been written for them or about their difficulties, and, in many instances, they had been able to hold their farms after all hope had been lost. For this service, not one penny other than regular membership dues has been received or accepted.

We are glad the N. F. C. F. has been able to help so many. Those aided are now seeing the light where all was darkness before. They are boosting the N. F. C. F. in the fourteen states in which they live. Some forgot the organization the moment they were able to hold up their heads again, but such ungrateful people exist and are to be pitied.

The National Federation of Colored Farmers is a cooperative organization. It is a YOU—HELP—ME—AND—I—HELP—YOU organization. It is doing some mighty good work and merits the support of all who are trying to make our nation a better community and our people a better people.

There is no place like home. Many of your neighbors are repairing and remodeling now. It is a good time for you to begin. If it is only a cabin, there is something you can do to beautify it. Don't let the children grow up surrounded by dirt and ugliness. Repair and beautify your home.

Keep the idea of owning a home and farm of your own ever before you. The homeowner is independent. The renter or sharecropper is not. If you are chained to the sharecropping system of farming make every effort to get loose now. There is no time like today.

Don't expect to have good luck all the time. Misfortune comes to everyone. It usually comes suddenly. Prepare for the rainy day.

He is less than half-a-man who mistreats his wife.

Keep the children in school. Education is the chief defense of nations and of races. It will soon be a disgrace to be illiterate.

Subscribe for the MODERN FARMER.

The Modern Farmer will appreciate your support. Pay your subscription and tell your neighbor that he should be a subscriber.

### THE HOUSING BILL

The final passage of the administration housing bill will create a vast new market for small homes. Prospective purchases with a down payment of only $500 for a $5,000 house and $600 for a $6,000 house. The other 90 per cent will be taken care of by the FHA insurance on mortgage loans. Interest rates have been reduced from 6 to 5 cent, plus one-quarter of 1 per cent premium charge on smaller homes, thus reducing the payments over a twenty-year period.

Building of large scale projects by real estate owners, speculators, or building contractors is encouraged by provisions that a builder can get his mortgage insured, up to 80 per cent of the cost when he makes plans for ten or more houses or an apartment house. Heretofore he has had to have buyers before he could get federal insurance. The new act also applies to farm homes for the first time. Provision for modernization and repair loans have also been revived.

About all that appears to be left out of the next act is a provision for reducing the cost of building materials, which have been going up considerably the last year. One real estate authority warns that drastic reduction in replacement costs in the future may easily wipe out the home owner's small equity, bringing on a wave of foreclosures.

"The Cooperative Consumer"

## INTERESTING NEWS AND NOTES

A number of national Negro organizations are urging the Navy Department to recommend the manning of a first line battleship entirely with Negro officers and enlisted men.

Jesse Binga, formerly a prominent Chicago colored banker, has been paroled to the pastor of the Roman Catholic church of which he is a member and to which he gave at one time one thousand dollars for a new building. Binga says he will spend the remainder of his life in religious work.

A twelve year old colored girl near Gadsden, Ala., recently gave birth to twin sons.

State social workers of Georgia will convene in Macon in April. Gov. Rivers will address the meeting.

Sen. Bilbo, of Mississippi, says he will offer an amendment to the federal relief appropriation bill to provide an adequate sum for transportation of colored people to Liberia for colonization purposes. All colored people who desire to leave their native land and go to live in Africa are advised to get in touch with Senator Bilbo.

An African was one time a billionaire. His name was Tippoo Tib and he had a horde of ivory worth more than a billion dollars. He was half Negro and half Arab.

The Afghan hound is said to be the oldest breed of dog in the world. The Afghans think it is the kind of dog Noah took with him in the Ark.

The anti-lynching bill filibuster carried on in the Senate under the leadership of Southern senators, cost the taxpayers of the country approximately half a million dollars.

A total of 225,080 Negro workers were employed by WPA during the last quarter of 1937. This was a little over 15 per cent of all WPA employees. Over 73,000 were women.

Dr. I. W. Duggan has been appointed Director of the Southern Division of the AAA.

For the first time in history A colored man has served as foreman of a jury in Elizabeth City county, Virginia.

Clarence Darrow, America's famous lawyer for the defense, is dead. He fought for the poor, the oppressed, the captive and the weak.

Cotton and tobacco growers approved the Dept. of Agriculture's new crop control program by large majorities, in the referendum held March 12th. The vote for cotton marketing quotas was 1,189,828 against 98,144.

George Black, an Arcola, Ill., farmer, is feeding his hens dyes of various colors so the hens will lay colored eggs. The plan works. The dyes are harmless.

Minnesota has 1900 cooperative association, the largest of any state in the Union.

Before the depression the United States was selling about 150 million pounds of pork annually to Great Britain. The present trade with Great Britain is limited to 50 million pounds. This is one reason why a new trade treaty with the United Kingdom is believed to offer advantageous possibilties to the corn belt states.

The department of agriculture at Washington does not distribute free seeds. Each year about this time there are thousands of requests received by the department, asking for seed. The department has neither seeds nor plants to either give away or sell. Fifteen years ago and before, there was a practice of giving away seeds by the department, but the year 1923 was the last time that this has ever been done.

Child marriages and divorces are no novelty in the southern part of Yugoslavia, according to statistics just issued in Belgrade. There were 1508 marriages between children of 10 to 14 years during the years 1930 to 1934. In that period sixteen children under 14 became widows or widowers and there were 12 divorces among those under that age.

## NEW FARM LAY WILL AID SMALL COLORED FARMERS

Washington—The small farmer class, which embraces most colored agriculturists, will be aided by special provisions of the new Farm Bill which President Roosevelt signed last week, according to officials of the AAA.

One of the provisions specifies that conservation payments of less than $200 will be substantially increased. Most of the colored farmers are in this class.

The new act also stipulates that payments to be divided between landlords and tenants will be divided as the crop is divided. It also provides for two-thirds of the farmers to vote marketing quotas when surpluses threaten to pull down the price.

### THE DAILY DIGEST SAYS:

**Improved Milk Cooler**

"The demand for milk cooling steadily grows and likewise the improvement of mechanical coolers has been marked," says R. U. Blasingame, Pennsylvania State College, in Country Gentlemen (March). "---Now comes a new system, in which the water in the milk itself serves as refrigerant. Recent experiments at the Pennsylvania State College have taken this unusual direction, using a vacuum within the can to evaporate a small amount of the milk and thereby cool it. The warm milk was strained into a jacketed 10-gallon can, an airtight lid provided and a vacuum pump attached to reduce the pressure within. It took an electric motor five and one half hours, using 3.13 kilowatt hours' current, to cool the milk by this method from 88 to 51 degrees. Such methods are too slow and inefficient to compete with water-vat type of coolers, but hold enough promise to encourage further development.----"

A teacher asked for sentences using the word "Beans."

"My father grows beans," said the bright boy of the class.

"My mother cooks beans," came from another pupil.

Then a third piped up; "We are all human beans."

## National Baptist Publishing Board

**HENRY ALLEN BOYD, Secretary**

**523 Second Avenue, North** **Nashville, Tennessee**

**Agricultural Adjustment Administration**

(Continued from Page 1)

lotment Act and provides authority for the control of surpluses in the five commodities, cotton, tobacco, rice, corn and wheat.

2. Q. In what way does the act provide control of surpluses?

A. When supplies reach certain levels, marketing of the crops is regulated through the establishment of marketing quotas.

3. Q. Do the marketing quotas for tobacco apply to all kinds of tobacco or to each kind of tobacco separately?

A. The act defines different kinds of tobacco and the marketing quotas apply to each kind separately.

**Marketing Quotas For Flue-Cured Tobacco**

4. Q. When will flue-cured tobacco marketing quotas be put into effect?

A. They will be in effect in 1938, unless more than one-third of the producers voting in a referendum are opposed to such quotas.

5. Q. What determines when marketing quotas will be applicable?

A. The act provides that when the total supply exceeds the reserve supply level for flue-cured tobacco a national marketing quota will be in effect.

6. Q. What is the reserve supply level?

A. The reserve supply level is a quantity of tobacco 5 percent above the normal supply. The figure used in determining the 1938 marketing quota for flue-cured tobacco was 1,681 million pounds. Normal supply, as defined in the act, is the sum of a normal year's domestic consumption plus 175 percent of such consumption and a normal year's exports plus 65 percent of such exports.

7. Q. What is total supply?

A. Total supply is the quantity of tobacco on hand July 1, the beginning of the marketing year, plus the estimated crop for the year. The total supply of flue-cured tobacco on July 1, 1937, was 1,733 million pounds.

8. Q. What is a marketing quota?

A. A marketing quota is the quantity of tobacco which can be marketed without penalty.

9. Q. How much is the 1938 marketing quota for flue-cured tobacco?

A. The national marketing quota for 1938 is 705 million pounds.

10. Q. When is the Secretary required to announce the national marketing quota?

A. In 1938 the quota must be announced within 15 days after the approval of the act. In later years any quota must be announced not later than December 1.

**Referendum**

11. Q. When is the referendum required to be held?

A. In 1938 the referendum will be held March 12. In other years not later than December 31.

12. Q. Who is eligible to vote in the referendum?

A. Farmers engaged in the production of flue-cured tobacco in 1937. Each farmer will have one vote.

13. Q. How does the referendum affect the operation of the act?

A. If more than one-third of the growers voting in the referendum are opposed to the marketing quotas, the quota will not go into operation.

**Determination of State Quotas**

14. Q. How is the national marketing quota divided among States?

A. The national marketing quota is divided among the States on the basis of production in the past 5 years (including estimated production on diverted acres), with adjustments for abnormal weather and plant-bed diseases, for small farms, and for trends in production.

15. Q. Is all of the quota distributed on this basis?

A. Not less than 95 percent of the quota is distributed on this basis.

16. Q. How is the remaining part of the quota distributed?

A. The remaining part of the quota, not exceeding 5 percent, is used to provide allotments to new farms—farms on which tobacco is produced for the first time in 5 years—and for increases of quotas for small farms.

**Division of State Quotas Among Farms**

17. Q. How is the State quota divided among farms?

A. The State quota is divided among counties, and the local committeemen in each county recommend quotas for individual farms in accordance with uniform instructions.

18. Q. What are the local committees required to consider in recommending quotas for farms?

A. Past marketings of tobacco, adjusted for abnormal weather and plant-bed diseases; land, labor, and equipment available for production of tobacco; crop-rotation practices; and the soil and other physical factors affecting production of tobacco.

19. Q. What are the local committees required to consider in recommending quotas for new farms?

A. The same factors as for other farms, except past marketings of tobacco. The quota for any new farm cannot be more than 75 percent of the quotas for other farms in the locality which are similar with respect to land, labor, and equipment available for production of tobacco; crop-rotation practices; and the soil and other physical factors affecting production of tobacco.

20. Q. What consideration is given to small farms?

A. Small farms from which marketings have averaged less than 3,200 pounds will have a minimum poundage quota equal to their average marketings plus the normal production on any diverted acreage.

21. Q. Will all small farms be allowed to market up to 3,200 pounds, regardless of their past marketings?

A. No. A small farm will not have a marketing quota larger than its normal marketings, unless a specific adjustment should be made based upon recommendation by the local committee.

22. Q. Is it likely that new farms can obtain large quotas?

A. No. Quotas for new farms will consist of reasonable allotments for small farms. The maximum quota for any new farm propably will be 3,200 pounds.

23. Q. When will farmers be able to obtain information as to their marketing quotas?

A. Information as to farm marketing quotas will be available prior to the beginning of the marketing season. Acreage allotments under the Agricultural Conservation Program will be completed at an early date and they should serve as a guide to farmers in their plantings for the 1938 crop.

**Penalties**

24. Q. What is the penalty for marketing tobacco in excess of the quota?

A. The penalty will be 50 percent of the gross value of the tobacco, or 3 cents per pound, whichever is greater.

25. Q. Who will pay the penalty?

A. The penalty will be paid by the warehouseman or buyer who may deduct it from the price paid to the farmer.

**Transfer of Quotas**

26. Q. Can marketing quotas be transferred among farms?

A. The act empowers the Secretary of Agriculture to issue regulations under which marketing quotas may be transferred among farms.

**Marketing Quotas and the Agricultural Conservation Program**

27. Q. What is the relation between the marketing quotas and the Agricultural Conservation Program?

A. The marketing quotas are set up under the Agricultural Adjustment Act of 1938, while acreage allotments are set up under the Agricultural Conservation Program.

28. Q. Will the quotas affect the payments under the Agricultural Conservation Program?

A. No. Payments for acreage performance under the Agricultural Conservation Program will be made without regard to the marketing quotas. This payment will be at the rate of 1 cent per pound of the normal yield for each acre in the farm acreage allotment.

29. Q. How will the planting of an acreage in excess of the farm acreage allotment affect payments under the Agricultural Conservation Program?

A. A deduction will be made from the payment at the rate of 10 cents per pound of the normal yield for each excess acre.

30. Q. What will be the adjustments of acreage under the Agricultural Conservation Program?

A. For farms having a normal acreage of more than 5 acres, approximately 30 percent from the normal acreage; for farms having 3.5 acres or less, 10 percent from the normal acreage; and for farms having between 3.5 and 5 acres, adjustments ranging from 10 percent up to 30 percent from the normal acreage.

31. Q. Will the acreage allotments under the Agricultural Conservation Program be likely with normal yields to result in production in line with the marketing quotas?

A. Yes.

32. Q. What is the normal yield for flue-cured tobacco?

A. At the present time a normal yield for flue-cured tobacco appears to be above 800 pounds per acre. For the 10 years prior to 1932 the average yield was 686 pounds; for the 5 years from 1933 to 1937 the average yield was 842 pounds. Yields during the past 5 years have been unusually favorable.

33. Q. Is the normal yield mentioned under question 32 higher than that used heretofore under Agricultural Adjustment Administration programs?

A. Yes. The yield used under previous Agricultural Adjustment Administration programs has been around 775 pounds per acre.

**UNITED STATES DEPARTMENT OF AGRICULTURE**
**Agricultural Adjustment Administration**

**AAA**
**THE NEW FARM ACT**
**A SHORT SUMMARY OF THE PROVISIONS OF THE AGRICULTURAL ADJUSTMENT ACT OF 1938.**

In the Agricultural Adjustment Act of 1938, Congress declared the purposes of the new national farm legislation to be:

To conserve the Nation's soil resources and use them efficiently.

To assist in the marketing of farm products for domestic consumption and export:

To regulate interstate and foreign commerce in cotton, wheat, corn, tobacco, and rice, so as to—

Minimize violent fluctuations in supplies, marketings, and prices of farm commodities;

Protect consumers by maintaining adequate reserves of food and feed; and

Assure farmers a fair share in the national income.

These purposes are for the benefit of agriculture and for the welfare of the entire Nation.

The Agricultural Adjustment Act of 1938, aproved February 16, provides for a farm program open to participation by all farmers in the United States.

One part of the Act strengthens and continues those provisions of the Soil Conservation and Domestic Allotment Act under which about 4 million farmers took part in the agricultural conservation programs of 1936 and 1937. These provisions will be available, as in the past 2 years, to every farmer. They authorize continued payments to farmers who take part in the agricultural conservation program.

Another part of the new Act supplements the conservation programs with provisions for regulating interstate and foreign commerce in the five commodities listed in the Act—cotton, wheat, corn, tobacco, and rice.

**GENERAL OBJECTIVES OF THE ACT**

Both parts of the Act are designed to safeguard the productiveness of agriculture. All payments are to be conditioned upon participation in measures for soil conservation. Both parts of the Act are designed to stabilize commerce in agricultural products and to give farmers a fair share of the national income.

Broadly summarized, the provisions of the Act are seen to give the basis for a 6-point program designed to assist farmers to produce abundantly year after year. They are designed to protect agriculture against the price collapses that heretofore have penalized heavy production. The Act provides actual methods such as acreage allotments, marketing quotas, and commodity loans, to help give the stability of income that farmers need in order to grow and to maintain ample reserves of farm commodities for the Nation's use. In effect, this means that an Ever-Normal Granary will be started. It is estimated that the Act's provisions affecting reserve supplies will result in about doubling the average annual carry-overs of corn and wheat.

This 6-point program may be outlined as follows:

1. The A. A. A. soil-conservation program is continued and its objectives established as a part of permanent farm policy in the interests of future abundance of food and fiber.

2. National acreage allotments are set at levels to give production ample for domestic consumption, for exports, and for reserve supplies, and payments are made to encourage farmers to produce up to these allotments.

3. Systematic storage of food and feed surpluses from big crop years for use in years of shortage is assisted by loans.

4. Marketing quotas for commercial producers of cotton, wheat, corn, tobacco, and rice, backed by penalties on sales in excess of the quotas can be used, subject to approval of two-thirds of the producers voting, to obtain general participation of farmers in a program designed to hold surplus supplies of the five listed commodities off the market until they are needed.

5. Release of supplies withheld from market under marketing quotas is provided to meet any shortage.

6. Crop insurance for wheat, starting with the 1939 crop will give wheat producers and bread consumers better protection against crop failure. Gradual accumulations of wheat paid in by farmers as insurance premiums will contribute to the Ever-Normal Granary supplies.

**Referendum Provided**

An essential point in the new Farm Act is the fact that when excessive supplies pile up, producers themselves have the final say through a referendum as to whether marketing quotas for the five listed commodities are to be used or not.

In years when surpluses call for use of marketing quotas, the referendum must be held soon after the quotas are announced. If two-thirds of the producers voting favor the quota, it will be used, but if more than one-third of the voters oppose the quota, it will not go into actual operation.

The Act provides that the A. A. A. farm program in 1938 will be carried on locally through the existing community and county committees that have performed this function in the A. A. A. soil-conservation programs of 1936 and 1937. In the future slight changes will be made in the method by which farmers in county association choose the local and county committees. Local administrative areas are to be established within counties. Participating farmers in each area will elect local committeemen, and also choose a delegate to a county convention. The county convention will elect the county committee. The county agricultural extension agent will be, ex officio, a member of the county committee, without a vote and may be selected by the committee as its secretary.

In each State there is to be a State committee consisting of not more than five and not fewer than three farmer residents of the State, with the State Director of the Agricultural Extension Service, ex officio, an additional member.

**Farm Income Protected**

Protection of farm income is a vital purpose of the new Farm Act. It seeks to give farmers a larger and steadier share in the National income. Specifically the Act affords farmers the following measures of income protection:

**Payments to farmers** who cooperate in the A. A. A. program.

**Additional "parity" payments,** if at some future time funds over and above the present authorization of $500,000,000 annually should be made available.

**National acreage allotments** that encourage plantings in line with domestic demand, foreign markets, and ample carrying-overs, and that avoid sudden and extreme acreage shifts.

**Storage loans** to enable farmers to carry over unusually large supplies until the market needs them and they can be sold at fair prices.

# Flue-Cured Tobacco Facts

**United States Department of Agricultural Adjustment Administration.**

This statement presents the situation as regards flue-cured tobacco. It indicates the production needed for 1938 to maintain supply in line with demand. Acreage allotments which will be determined for individual farms under the 1933 Agricultural Conservation Program will take into account the amount of production needed. The information contained in this statement should prove useful to voters in connection with the referendum on marketing quotas for flue-cured tobacco under the Agricultural Adjustment Act of 1938.

**Summary**

1. The 1937 flue-cured tobacco crop was approximately 850 million pounds. This was 25 percent more than the 1936 crop of 682 million pounds, and second only to the record crop of 865 million pounds in 1930
2. The total supply of flue-cured tobacco in the United States July 1, 1937 (including 1937 production and carry-over), climbed to 1,7333,000,000 pounds, the highest supply on record, 11.5 percent more than on July 1, 1936.
3. Although world consumption of United States flue-cured tobacco has increased above the low point of 1932, it is still below the 1929-30 level. Gains in domestic consumption have not been sufficient to offset the loss in foreign consumption in 1931 and 1932.
4. Exports to Great Britain have increased, but the rate of increase has been less than the rate of increase in use of Empire-grown tobacco. China and Japan are consuming less United States flue-cured tobacco and growing more of their own.
5. Domestic stocks of flue-cured tobacco increased from 676 million pounds in 1933 to 883 million pounds in 1937. The 1937 crop will add about 100 million pounds on these stocks. It will also increase foreign stocks.
6. Supply now appears to be somewhat large even in relation to the higher consumption level. Continued production above consumption will mean prices less favorable than those that have been received for the last four crops.
7. In order to keep production in 1938 from exceeding world consumption of United States flue-cured tobacco, it will be necessary for growers to reduce plantings below those of 1937.

**Domestic Consumption and Supply**

Estimated domestic consumption of flue-cured tobacco will reach a new high level of around 350 million pounds during the current year 1937-38—an increase of about 5 percent above domestic consumption in the preceding year. The increase of consumption has resulted from the increased use of cigarettes, and has been sufficient to more than offset losses in flue-cured tobacco used for domestic smoking tobacco and chewing tobacco. About four-fifths of the flue-cured tobacco consumed in the United States is used in cigarettes and the remaining one-fifth is used chiefly in smoking tobacco and chewing tobacco.

There has been an annual increase in consumption of flue-cured tobacco in the United States since 1932. It is anticipated that domestic consumption will continue to increase, but the rate of the increase is expected to be slower. It is significant that the consumption of cigarettes during the last 6 months increased only 5 percent over the same months a year earlier, compared with a rate of increase of 10 per cent during the 21year period beginning July 1, 1935. Domestic stocks of flue-cured tobacco have increased in recent years, but up until the present time the larger stocks were not more than sufficient to maintain a normal ratio between stocks and the increased consumption.

The total supply of flue-cured tobacco at the beginning of the present marketing year reached a new high level of 1,733 million pounds. This supply resulted from addition of the 1937 crop of 850 million pounds to the United States carry-over of 883 million pounds on July 1, 1937. With the large crop in 1937, stocks next year will be increased over the 1937 stocks by about 100 million pounds. This will be somewhat above normal even with the higher level of domestic consumption. Consequently, it does not appear that the market will absorb another large crop in 1938 without a drop in prices to farmers.

**Foreign Situation**

Although foreign consumption of United States flue-cured tobacco has recovered to some extent from the decline of recent years, most of which occurred from 1931 to 1932, it is still estimated to be about 100 million pounds below the levels which prevailed from 1929 to 1931.

In the United Kingdom, the most important foreign market for this tobacco, the consumption of cigarettes has increased as it has in the United States, but somewhat less rapidly. The rate of increase in consumption of Empire-grown flue-cured tobacco has been greater than the rate of increase in consumption of American-grown tobacco. The lower tariff on imports of Empire-grown tobacco has encouraged the use of this tobacco rather than United States tobacco. With the exception of Germany, consumption has increased in other European countries and in Australia.

Consumption of United States flue-cured tobacco in China has declined since 1930 and has shown no tendency to improve. Chinese production of flue-cured tobacco has been increasing for many years, the crop of 1937 being estimated at more than 200 million pounds, compared with an average of around 150 million pounds during the period from 1933 to 1935 and less than 100 million pounds prior to 1931. Production of flue-cured tobacco has also increased in Japan. The present conflict in the Orient has resulted in unstable and uncertain conditions, the effects of which are not predictable.

In Canada substantial quantities of United States flue-cured tobacco has been displaced by increases in Canadian production, the estimated consumption of American grown having decreased from around 16,000,000 pounds during the period from 1928 to 1930 to around 4,000,000 pounds at the present time.

Stocks of the United States flue-cured tobacco in foreign countries were relatively low at the beginning of the 1937 marketing year. The 1937 crop was generally considered a good crop for the export trade. For some countries in which increased consumption in recent years has been accompanied by comparatively small purchases, there has been a tendency to purchase enough tobacco from the 1937 crop to meet current consumption and replenish depleted stocks. It is estimated that the total volume of exports during the current marketing year may reach 400 million pounds, which is considered to be sufficiently above the level of foreign consumption to permit stocks in most countries to be restored to approximately normal levels. In view of the relatively large exports from 1937 crops, it is likely that purchases for export from the 1933 crop will be substantially smaller.

**Acreage, Production, and Yield**

In 1937 the harvested acreage of flue-cured tobacco mounted to 962,500 acres, the highest since 1931. This increase occurred notwithstanding the fact that about two-thirds of the acreage on which flue-cured tobacco is grown was covered by the Agricultural Conservation Program. The large acreage in 1937 was accompanied by a high yield per acre, estimated at 883 pounds, which compares with an average of 832 pounds for the 4 preceding years, and 748 pounds for the 10 preceding years. The 1937 crop of 850 million pounds was exceeded in size only by the crop of 865 million pounds in 1930, and was from 125 to 150 million pounds above present world consumption.

## HAIL DAMAGES PLANE

In a dash of 150 miles to save the life of a child an airplane was seriously damaged near Durban South Afriea. During the flight the pilot avoided several storms, but was caught on the fringe of one over Umzimkulu mountain. Hailstones took chips out of the fuselage. The 14-month-old daughter of George Cullen was flown from Matatiele to the Durban hospital and her life was saved.

## THE LAW OF LIBERTY

THE LAW OF LIBERTY—that sounds at first like a contradiction. What is law but a limiting of liberty? What is liberty but an escape from law? Law shuts you in: liberty lets you out. The law of the state restricts the liberty of the citizen; the laws of nature hamper the freedom of the will. How then can the Apostle say that the perfect law brings liberty? He means, I suppose, that the only real liberty of life is to be found not outside of law, but through it. A country without law—the country of the anarchist—is not necessarily a free country. It may be, on the contrary, a place of the most savage despotism. A world without law would not necessarily give greater play to the fredom of man. On the contary, it would simply be a chaos of disorder, where there would be no scope for liberty. What, then, is the relation of liberty to law? It is this—that while some laws shut in and enslave life, other laws broaden and enlarge life. One is set free as he passes from one kind of law to the other. Liberty is allegiance to the higher law.

We speak of a liberal education. What is a liberal or liberating education? It is not an education without law. On the contrary, the liberally educated man has submitted himself to diseipline and learned the scope and authority of law. Intelleetual liberty means freedom from sordid, eommercial or disingenuous views of life, and the transfer of interest and loyalty to permanent ideals of truth or goodness or beauty. In so far as one has thus transferred his allegianee from narrowing and shifting interests to broadening and ideal interests, he is liberally educated. He has found the law of liberty.

Sometimes we wonder precisely what our religion does for us. It does not answer all our questions: it does not feed us or support us or free us from trouble and care. Well then, what does it do? It gives us a law of liberty. It sets us free from the lower interests which threaten to master our lives. God comes to the human heart and says: "My child, give me thy heart;" and in that allegiance to the higher law the petty interests and cares which were dominating life let go their hold, and the soul enters into the law of liberty. What is the problem of life, but just this transfer of the heart's desire, from the shut-in sense of routine, from the basement of life, to the refreshment and strength of the clearer, higher air; and what is liberty except the exhilarating emancipation of that new ideal?

"The freer step the fuller breath,
The wide horizon's grander view,
The sense of life that knows no death,
The life that maketh all things new." —Francis G. Peabody

## Howard Dentistry Dean Honored

**Dental Deans**

Dr. Dixon, Dean of Howard University Dental School, was the guest of Dr. D. H. Turpin, Dean of Meharry Dental School at his residence 903 1st Ave., South. Others on the guest list were friends, local and out of town.

Dean Dixon was introduced to the assemblage by Dean Turpin. Following the introduction we were invited to the dining room by Mrs. Turpin, where we partook of the very delicious repass especially prepared by the de-lovely wife of the host, Mrs. D. H. Turpin.

Among those present were: Dr. and Mrs. D. H. Turpin (Host), Dr. W. B. Reed, Dr. E. B. Jefferson, Mr. E. B. Jefferson, Jr., Dr. R. F. Sandford, Dr. C. B. Steele, Dr. W. H. Watson, Dr. and Mrs. Hemingway of Memphis, Tenn., Prof. and Mrs. Hemmingway of Fisk University Music School, Dr. and Mrs. Patterson of Memphis, Tenn., Dr. I. A. Watson of Memphis, Tenn., Prof. W. J. Hale, Jr., of A. and I. State College.

After dinner speeches and reminiscences of the past by various friends disclosed the fact that Dr. E. B. Cole and Dr. J. B. Singleton had been called, but found wanting. The Publicity Agent, Dr. J. M. Colston, made an effort to voice their sentiments, which are always good.

Before departing to our respective homes it was learned that Dr. D. H. Turpin and Dr. W. B. Reed will leave Friday morning for Chicago, to attend the Mid-Winter Session of the National Dental Association.

To the host, and guest; best wishes for a successful trip.

By J. M. Colston, Pub. Agt.
Capitol City Dental Society.

### Y'S IN TRIBUTE TO ROSENWALD

### PHILANTHROPIST HONORED ON RACE RELATIONS DAY

NEW YORK—The late Julius Rosenwald was called "the greatest benefactor of the Negro race since Abraham Lincoln" in a statement released here this week by Channing H. Tobias, senior national Y. M. C. A., secretary in connection with the Y's annual observance of Rosenwald Day and Race Relations Sunday, Feb. 13, In paying tribute to Mr. Rosenwald, wealthy Jewish philanthropist, Mr. Tobias extolled him as the finest example of a citizen who served humanity beyond racial lines.

"Today 5,000 rural schools in the South are giving a chance to over a half million Negro boys and girls to learn their 3 R's homemaking, simple farming and mechanical industries because of Mr. Rosenwald's interest in underprivileged Negroes. Modern Y. M. C. A.'s offering a recreational and cultural center for colored populations in 25 cities have been erected through his generosity. Through the Rosenwald Fund, schools, hospitals, clinics and colleges for white and colored and of all faiths have known, his benefactions.

"The colored department of the national Y. M. C. A.," Mr. Tobias continued, "is now launching a $125,000 campaign to conserve the investments in Y. M. C. A.'s made by such benefactors as Mr. Rosenwald; George Foster Peabody of New York, Mr. and Mrs. George B. Matthews of Buffalo, Dr. J. W. Anderson, Dallas; and the late Norman Harris of Chicago, Cleveland H. Dodge and Lucien C. Warner of New York. The campaign which is being carried on in connection with the 50th anniversary of the founding of the colored Y. M. C. A. work, also includes projects for establishing associations in southern states, where there are still 3,000,000 colored boys without Y. M. C. A. service.

"Dr. Leslie Pinckney Hill, president of the State Teachers college at Cheyney, Pa., is chairman of the campaign, with Dr. John R. Mott, Dr. R. R. Moton and Dr. J. E. Moorland, honorary chairman.

### SAYS SHE WAS FORCED TO WALK IN SOLDIERS' BLOOD

Mrs. Dora Burnside, 85 walked in the blood of Confederate soldiers.

It was not because she wanted to, but because she was a Negro slave child and behind her stood Green Grinston, union army sympathizer, who threatened to shoot her if she refused.

"Walk! Walk in it, I tell you. I want you to grow up and remember that you walked in rebel blood,' he said to me and my sisters," said Mrs. Burnside, who lives at 1020 Crocker St., Des Moines, Iowa.

MEMORY CLEAR

Mrs. Burnside, who came to Des Moines, from Kansas 14 years ago, was born and raised in Somerset, Pulaski County, Kentucky, just 13 miles from the childhood home of Jesse James.

Her memory of union and confederate army movements in Pulaski County—she was a child of 8—is clear. She has an unending lot of stories and tells them with interesting detail.

"I remember Green Grinston better than I'll ever remember you boys," said the old Negro woman. "He was tall and had long white hair like some of the men wore it then. He wore a big white hat.

"After the union and rebel armies had stopped fighting and had fallen back one day, I went with my father out onto the battlefield. There was Grinston on a pony—a fairly big pony—riding up and down the field trying to make his pony walk over the dead.

LAY DOWN

"Grinston was spitting into the faces of the dead rebels and cursing. The pony just wouldn't step on the dead. It finally just lay down and quit," she said.

Mrs. Burnside said her father, a former slave, had bought feedom for himself and his wife. His children, however, were too young for work as slaves.

RAN WILDLY

One day she, with a white girl, 13, and a baby, got lost among the union soldiers, she said. Frightened by a dispatch rider on a former slave, had bought freedom its nostrils, the girls had run wildly away. They ran right into a union picket who stopped them at point of a gun.

"'Dora, what shall we do?' Alice, the white girl, said to me. I said, 'We must pray!' and she said she didn't know how to pray. I said to her 'You ought to know. You're older and have been to Sunday School.'

"Well, we knelt right down and what we prayed I don't remember but it was something about not letting the rebels get us.

HAS WEAKNESS

'Then I looked up and the picket was standing right by and tears was a running from his eyes. I remember they dropped on his shoe. He said, "If I was as prepared to die as you are. I wouldn't mind going through this war.'".

The former slave, in good health has a weakness, she said.

'I'd be fine if I had glasses, but my eyes are going bad and I just can't get no glasses."

## NYA Projects Aiding Negro Youth, Mrs. Bethune Tells President

Washington, D. C.—One of the most significant accomplishments of the National Youth Administration in 1937 was the establishment of resident training projects for Negro youth in twenty-five Southern communities, Mrs. Mary McLeod Bethune, Director of the Division of Negro Affairs, told co-members of the NYA Advisory Committee at a meeting held here last Wednesday.

Mrs. Bethune later accompanied other members of the committee to the White House. The group was entertained at tea by Mrs. Roosevelt, and then spent over an hour with the President in a discussion of the future of the NYA.

In her report Mrs. Bethune said that over 1,100 young colored men and women are now enrolled in the twenty-five resident centers, located on or near the campuses of Negro educational institutions in thirteen states. These students, drawn from nearby rural communities, are taught farming techniques and home management, earning their "tuition" by part-time work on NYA projects

Types of training provided all students include soil conservation, care of plants and shrubbery, repair of farm tools equipment, dairying, poultry raising and personal hygiene. Girls are given special courses in the care of the home, canning, sewing, laundry work and foods. Boys are taught the fine points of gardening, marketing and animal husbandry.

The part-time work projects enable the young people to earn enough to pay for the training and subsistence, with about $5 a month left over for necessary personal expenditures.

The girls do such work as serving food in school cafeterias, cleaning and decorating school dormitories, making beds and gardening. The boys are employed at plastering, painting, repairing school buildings and constructing new dormitories and recreation centers.

The new emphasis given by the NYA in the past year to construction projects, Mrs. Bethune said, has made possible the improvement and extension of educational, recreational and other welfare facilities for Negro youth. Colored NYA workers have built several new school houses and community centers, and repaired the equipment of hundreds of existing structures. They have also constructed isolation huts for tuberculosis patients, graded vacant lots for playgrounds, and cleared away spaces for roadside parks.

The Special Negro Graduate Aid Fund of $70,000, in addition to providing financial assistance for 350 colored graduate students who could not obtain help from the regular NYA budget of their university, enabled a number of special projects to be carried out, Mrs. Bethune's report continued. Four groups of twenty-five students each were aided in studying library work at four centers. These 100 students are finding jobs in Negro high schools that up to now could not be accredited because they had no trained library worker on their staff.

Another project financed through this fund was the training course conducted by Tuskegee Institute for the purpose of preparing trained workers for hotel employment.

The NYA guidance and placement service, which since it was founded has placed thousands of Negro youth in jobs in all parts of the country, was particularly successful during the past year, Mrs. Bethune stated. To aid this work, a number of states printed bulletins and booklets designed to help Negro youth find work suited to their capabilities.

Concluding her report, Mrs. Bethune recommended an increase in the Negro Graduate Aid Fund; expansion of the Guidance and Placement Program; and extension of the resident and vocational training centers.

## FOR CONSUMER AGENCY

### Committee Would Coordinate and Extend U. S. Services

Creation of a central consumer agency in the federal government to give consumers equal status with labor, business and agriculture was recommended to President Roosevelt February 24 by a committee from the Consumers' National Federation. This federation is a coordinating agency for various consumer groups throughout the country and it is not to be confused with the chain-store-financed Consumers Foundation, Inc. The central agency proposed would initiate proceedings for the definition of standards of consumer goods, collect and publish information of value to consumers, represent consumers before regulatory bodies, and cooperate with an advisory interdepartmental committee for coordination and extension of consumer services now being performed in government departments.

## AGRICULTURAL ADJUSTMENT

(Continued from Page 6)

**Marketing quotas,** together with the storage loans, to hold unusual surpluses out of glutted markets and to protect the value of commodities.

Provisions in the new Act are designed to give additional protection to small farmers, to define the basis for dividing payments between tenants and landlords, and to apportion funds among the different commodities.

They prescribe specific increases in all soil-conservation payments up to $200. The smaller the payment, the greater the increase provided. The effect of these provisions is to take sums sufficient to make possible the increases in small payments from the funds available for all payments, before the money available is distributed.

Beginnig in 1939, a limit of $10,000 will be placed on individual payments.

Payments are to be divided between landlord and tenant in proportion as they share in the crop, except that payments for soil-building practices are divided in the proportion in which landlord and tenant contribute to carrying out the practices.

Funds available for payments will be divided among crops on the general basis of their average acreages and average value in the past, and the extent of the adjustments being required.

The Act contains a specific provision designed to protect dairy, livestock, and poultry producers against increased competition arising from changes in land use under the program. In general, the Act is also expected to help these producers by decreasing the likelihood that low prices will drive producers of corn, wheat, cotton, etc., into competition with them.

**National Acreage Allotments** are established for corn, wheat, and rice, and, under the Soil-Conservation and Domestic Allotment Act, for tobacco. The national allotments will be divided among the States producing these commodities. The State allotments will be divided among counties, and the county allotments among individual producers. The National cotton allotment (in bales) will be converted into acres and divided among States, counties, and individual farmers. All county allotments will be apportioned among individual farmers through the local and county committees.

**Marketing and Storage Quotas** for the five listed commodities can become effective only when supplies exceed normal by amounts definitely specified for each commodity, and then only when approved in a producers' referendum. The supply levels which must be exceeded before quotas can be put into use include reserves and carry-overs larger than the usual reserves and carry-overs. Sales in excess of marketing quotas are subject to a penalty per pound or per bushel. The penalty, together with loans on stored commodities, protects farmers who wish to hold products in storage when markets are becoming glutted and prices are threatened with collapse. The marketing-quota provisions apply to all producers.

Methods of using the marketing quotas vary among commodities. General procedure calls for determining, before the opening of the marketing year, whether the total supply of the commodity available for the coming year will exceed normal consumption and market requirements, plus carry-over.

The Act requires that all acreage allotments and marketing quotas be kept available for public inspection, and sets up a system of local committees for reviewing the quotas of any farmers who are dissatisfied and appeal for a review.

All quota provisions are subject to termination in a national emergency, and must be adjusted or suspended to meet shortage in domestic supplies or increases in exports.

**Commodity Loans** on any agricultural product (including dairy products), to be made through the Commodity Credit Corporation on the security of the commodities themselves, are authorized.

The Corporation is directed to make loans on corn, wheat, and cotton, when supplies rise above specified levels or prices fall below specified levels. Rates to cooperating farmers for loans on corn, cotton, and wheat range from 52 percent to 75 percent of parity. This range permits loans high enough to put a plank under prices to prevent their collapse, but not so high as to keep our products from competing for export markets. The rate to non-cooperators on that part of their crop that would be subject to penalty if marketed is 60 percent of the rate available to cooperators.

The Government's investments in the loans are protected by having marketing quotas available to prevent the dumping of surpluses and the wreckage prices. If the use of a marketing quota for any year is prevented by opposition of more than one-third of the producers voting in the referendum, no loan on that commodity can be made until the beginning of the next marketing year.

### NEW PROVISIONS FOR THE FIVE LISTED COMMODITIES

Following is a summary of the current situations and the way the new provisions of the Act apply to cotton, wheat, corn, tobacco, and rice.

**Cotton**—The Act applies directly to problems that continually face cotton growers. Some 10 million farm people, on 2 million farms in the South, depend on cotton as their chief source of income. So do several million other workers on railroads, in cotton gins, and in the textile mills. From one-third to one-half of the United States cotton crop usually is exported. The 1937 cotton crop here and abroad was the largest in history, and the world supply for the marketing year 1937-38 is the greatest on record. The price of cotton is set in the world market and now is low.

Under the Act a national allotment is to be announced each year in terms of the number of bales needed to make a normal supply available during the next marketing year. The allotments for 1938 and 1939, however, must be between 10 and 11 1-2 million bales.

The Act specifies how the bale allotment is to be divided among the growers. In general, it is to be apportioned among the States according to past production. Each State allotment (converted into terms of acres) is then to be apportioned among the counties according to past acreage. The county allotments are to be given to farmers primarily on the basis of tilled acreage not used for tobacco, wheat, or rice. Provision is made for minimum allotments to small farms.

A marketing quota is to apply, subject to final veto in a referendum, during the next marketing year whenever the total supply of cotton is found to be more than 107 percent of the normal supply, a total of about 19 1-2 million bales. This year the referendum has been set for March 12. The marketing quota for any farm will allow the marketing of all cotton produced on the farm's acreage allotment.

A penalty of 2 or 3 cents a pound, depending on the year of production and the year of marketing, will apply to cotton marketed in excess of the quota, except that no penalty is to apply to long-staple cotton or to cotton from any farm with an acreage allotment which produces less than 1,000 pounds of lint cotton.

**Wheat.**—The new Farm Act recognizes that the wheat farmer faces two chronic dangers. One is the risk of crop failure. This overtook him with successive short crops from 1933 to 1936. The other is the danger of tremendous surplus. Accumulation of successive surpluses without export outlets buried the farmer in 1932 under a mountain of 35-cent wheat.

The present situation is this: Wheat production in 1937 totaled 874 million bushels. Domestic consumption, plus limited wheat exports, will probably leave a carry-over on July 1 of more than 200 million bushels. Wheat plantings for harvest in 1938 are expected to be close to record levels. Meanwhile, drought has been foreshadowed by dust storms in the Southwest. Right now the wheat farmer does not know whether this year he will be the victim of drought or of surplus, or whether he will escape both for another year.

Under the Act a national wheat acreage allotment is to be announced every year. It is to be such as will normally make available for market a supply equal to 130 percent of a normal year's domestic consumption and exports, a total of about 910 million bushels. The allotment for 1938 is set by the Act at 62 1-2 million acres.

This national allotment is to be apportioned among the States chiefly according to past acreage, among the counties on a similar basis, and among producers on the basis of tillable acreage, crop-rotation practices, type of soil, and topography.

A marketing quota for wheat is to apply, unless disapproved in the referendum, during any marketing year when the estimated total supply is more than 135 percent of a normal year's domestic consumption and exports (a total of about 950 million bushels). The quota must make available for market 130 percent of normal needs, less the estimated carry-over and the wheat needed for seed and livestock feeding during the year. In general, the quota for any farm is to be the normal yield of a "marketing" percentage of the acreage allotment, plus any non-penalty wheat held over from previous years. No quota is to be applied in any year to a producer whose acreage that year, with normal yields, would produce less than 100 bushels.

The penalty for marketing in excess of a quota is 15 cents a bushel.

Under special provision in the Act, no quota is to apply in 1938 unless before May 15 provision has been made by law for payment in whole or in part in 1938 of parity payments on wheat.

**Crop Insurance for Wheat** is one of the most significant parts of the Act. It inaugurates the first Federal crop-insurance program in this country. It provides insurance for the wheat farmer against loss through crop failure and forecasts eventual extension of the plan to other commodities.

It creates the Federal Crop Insurance Corporation to carry out the crop-insurance provisions. Commencing with the wheat crop planted for harvest in 1939, the Corporation is authorized to insure wheat producers against loss of yield. Since amounts of losses are calculated in terms of wheat, the protection is given against losses of yield rather than price declines. The insurance applies to losses of yield resulting from

# National Jubilee Melodies

drought, flood, hail, or other weather hazard, and from insect pests and plant diseases.

Such insurance will cover not less than 50 percent nor more than 75 percent of the average yield of wheat on insured farms. Insured farmers will be paid the amount of actual wheat, or its cash equivalent, by which their yields in short crop years fall below the insurance coverage.

The Corporation will fix premiums which, like claims, are payable either in wheat or in its cash equivalent on the date due. The rate of these premiums will be determined on the basis of the average losses in yield, over a representative period, on the insured farm and on all farms in the county.

The wheat premiums will gradually accumulate as a part of the Ever-Normal Granary supply of wheat. Under average conditions, such accumulations may in time total from 50 to 100 million bushels, if farmers participate generally in the crop-insurance plan.

**Corn.**—The new Farm Act treats corn as a basic source of food for the Nation. It recognizes the importance of corn as a feed crop. About 88 percent of the corn crop is fed to livestock and reaches the consumer in the form of livestock products. Extreme swings in corn production and marketing upset the balance between feed supplies and supplies of livestock, and lead, within a season or two, to extreme fluctuations in supplies and prices of livestock products.

The 1937 corn crop of more than 2,640,000,000 bushels was larger than average and nearly double the small crop of the drought year of 1936. Grain-consuming animals on farms at the beginning of 1938 were 10 percent fewer than average because of the small feed crops of the drought years.

Large supplies of corn and low corn prices tend to cause over-expansion of livestock production. When corn supplies are again reduced, excessive numbers of livestock are marketed at low prices. This depletes livestock on farms and later brings about sharp increases in retail prices for meat, poultry, and dairy products.

Under the Act, an annual corn acreage allotment will apply only to corn produced in the commercial corn-producing area, which lies principally in the Corn Belt. It must allow for such an acreage as, with average yields plus the amount of the corn carry-over, and of production outside the commercial area, will make available for market a supply equal to 110 percent of a normal year's domestic consumption and exports (a total of about 2,600,000,000 bushels). This allotment is to be apportioned among States and counties principally according to past acreages, and among farmers on the basis of tillable acres, crop-rotation practices, and nature of farm land.

A marketing quota is to apply in the commercial area, unless voted down in the referendum, during any marketing year when the estimated total supply exceeds 110 percent of the normal supply (a total of about 2,800,000,000 bushels). It must make a normal supply available for market. Most of the remaining ear-corn is to be stored and withheld from market until a need develops on the farm, in the county, or in the country, when provision is made for its release.

Corn marketed in excess of marketing quotas in effect for the farm is subject to a penalty of 15 cents a bushel.

When a referendum on corn-marketing quotas is held it will be in the latter part of August or in early September.

**Tobacco.**—The Act applies to six different kinds of tobacco, each divided into types, and each handled largely as a separate commodity because its problems differ from the problems of the other kinds. For example, the supply of flue-cured tobacco on hand in the United States July 1, 1937, was 1,733,000,000 pounds, the largest in history, and 180 million pounds above the level of the previous year. Despite favorable demand, continued production of flue-cured tobacco at a level above consumption would soon mean unfavorable prices for growers. Supplies of cigar-filler and cigar-binder tobacco, on the other hand, are not excessive, and present production does not appeal likely to result immediately in a bad price situation.

Quotas are provided for the quantity of any kind of tobacco marketed. The only acreage allotments will be those established under the Soil Conservation and Domestic Allotment Act.

When the supply is more than 105 percent of the normal supply, a quota permitting the marketing of the normal supply is to be effective in the next year, subject to a referendum. In the case of burley, fire-cured, and dark air-cured tobacco, quotas are to apply during any current marketing year as well as the next year when the supply is more than 105 percent of the reserve supply (approximately 110 percent of the normal supply). Referenda for producers of flue-cured, fire-cured, and dark air-cured tobacco are to be held this year on March 12.

In general, the quotas are to be apportioned among the States according to past production and among farmers according to past marketing, production facilities, and crop-rotation practices.

The penalty for marketing in excess of a quota will be 50 percent of the market price but not less than 3 cents per pound for flue-cured tobacco and not less than 2 cents for other kinds of tobacco.

**Rice.**—The present supply of rice grown and on hand in the United States is the largest on record. Rice production in 1937 was 53 million bushels, more than 10 million bushels larger than the average in the 5-year period 1928-32. Rice farmers have been unable, without the help of the Federal Government, to organize effectively for orderly marketing to avoid recurrent glutting of markets.

An **acreage allotment** that, with average yields, will make available for market a normal supply, and a **domestic allotment** equal to the estimated amount needed for domestic consumption, are to be announced not later than December 31, of each year.

The acreage allotment is to be divided among States chiefly on the basis of past acreage, and among producers according to past production, production facilities, and crop-rotation practices. The domestic allotment is to be apportioned among both States and producers according to past production.

A quota permitting the marketing of a normal supply is to be applied, unless vetoed in a referendum of producers, when the total supply is more than 110 percent of a normal supply. The quota is to be apportioned among growers on the same basis as the domestic allotment.

The penalty for marketing in excess of a quota is 1-4 of a cent per pound.

The Act specifies that no quota is to be in effect during the marketing year beginning August 1, 1938.

### Other Provisions

The Act authorizes the Secretary of Agriculture to prosecute or participate in any freight-rate case before the Interstate Commerce Commission that affects the public interest in the transportation of farm products.

It extends the time of operation of the Federal Surplus Commodities Corporation to June 30, 1942.

It limits to 25 percent of the total the amounts of money that may be devoted to any one commodity under "section 32" of the Act of August 24, 1935, which appropriated 30 percent of annual customs receipts to be used for surplus purchases, and to stimulate domestic consumption and exports.

It authorizes the establishment and maintenance of four regional laboratories to develop new uses and markets for farm products, and allocates not over $4,000,000 annually for this purpose.

It requires a report to Congress each year giving the names of persons receiving total payments exceeding $1,000 for that year.

It defines the compliance with the 1938 farm program required to obtain price-adjustment payments on the 1937 cotton crop; it authorizes transfer to the Commodity Credit Corporation of title to cotton from the 1937 crop on which the Corporation has made or arranged for loans; it limits the amounts and sale price of the 1937 cotton to which the Corporation acquires title; and extends the maturity date of notes held by the Corporation and secured by 1937 cotton.

## BUSINESS GROUP GIVES ITS PRIZE TO BLIND GIRL

New York,—(Special)—A blind Negro girl yesterday won first place in the public high school group in the annual essay contest of the state chamber of commerce. About 300,000 pupils in parochial and public schools in the five boroughs competed in the contest, submitting essays on "What Are My Responsibilities in the Occupation Which I May Choose."?

The blind winner, who received $40 in prize money, is Miss Frances Berry, 23 years old, who lives in Brooklyn, and travels daily some twenty-five miles to and from Wadleigh High school in Manhattan because it has special facilities for teaching blind students.

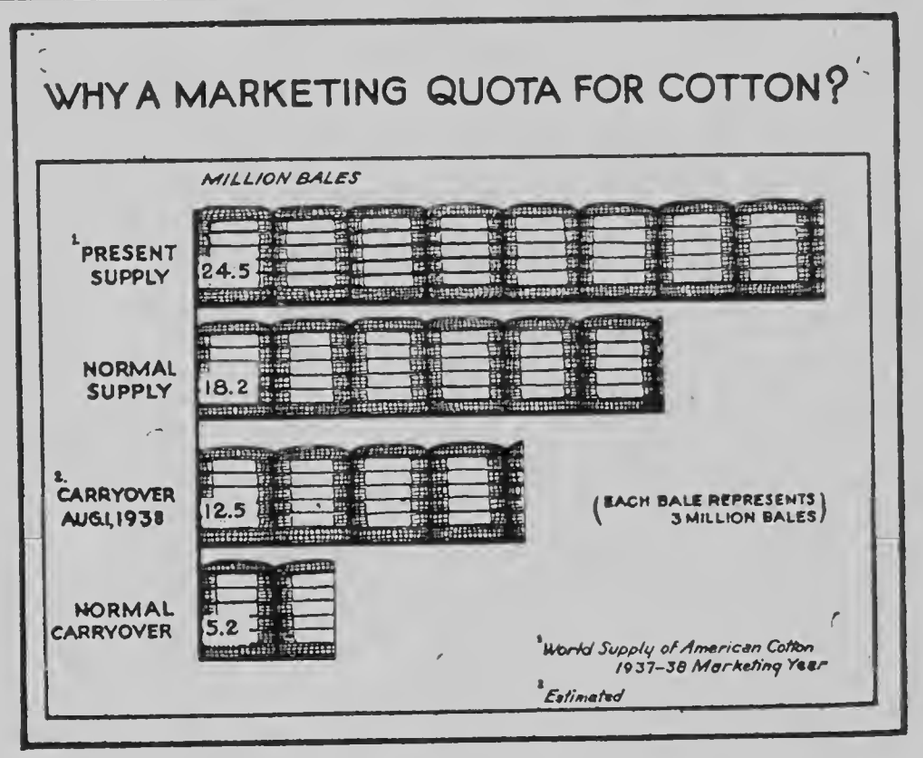
Miss Berry, who lost her sight in an accident six years ago, wrote that she had chosen as her profession, "The Rehabilitation of the Negro Blind." She was the first blind student, as well as the first Negro to win major honors in the annual contest.

Stern parent (to applicant for daughter's hand): "Young man, can you support a family?"

Young Man (meekly): "I only wanted Sarah."—Montreal Star.

Lawyer (irritated)—All right then, if you haven't any money you can pay for my services in kind.

Butcher :That's fine, I make baloney.



## Some Facts About The New Farm Act That Negro Farmers Should Know

The legislation provides marketing quotas on cotton, tobacco, wheat, corn and rice in those years when the supplies of these crops reach the point where they result in very low prices and consequently a low income for the farmer.

Each farmer will get his share of a quota. For example, the total cotton acreage quota for 1938 will be 26,300,000 acres. This will be alloted to the states, counties and finally to the individual farm.

But, before the cotton quota goes into effect for 1938, the farmers will vote on it. If one-third of the farmers who take part in the voting on March 12, vote against the quotas, there will be no quota on cotton this year. The same thing is true of proposed quotas on flue-cured and dark tobacco.

Any farmer who grew cotton, flue-cured tobacco, or dark tobacco in 1937 is eligible to vote in the referenda to be held March 12. The ballot will be secret—no one is entitled to know how an individual farmer votes. All Negro farmers who grew cotton, flue-cured tobacco or dark tobacco in 1937 should plan to vote. The ballot boxes will be placed in almost every cotton or tobacco growing community.

A farmer who receives his acreage allotment under the cotton or tobacco quotas—if they are in effect in 1938—is not forced to plant his acreage allotment and no more. For example, his acreage allotment may be ten acres. He may plant all the cotton he has land to plant and sell the cotton grown on the acres over 10 acres. But, he will have to pay a tax of two cents a pound on his excess cotton. And he will not be entitled to receive the AAA payments. Farmers generally will therefore, find it to their advantage to plant only their acreage allotment.

Tenants or sharecroppers are entitled to share in AAA payments as they share in the crop. For example, if the sharecropper got half the cotton on twenty acres of cotton, he is entitled to half the AAA payment made for diversion on that farm.

Negro farmers should visit their County Agents, or their County AAA committee, and where possible learn all they can about the program. If they wish further information, they may write the Southern Division, AAA, Department of Agriculture, Washington, D. C. or to James P. Davis, Head Field Officer, Southern Division, AAA, 916 Gaines St., Little Rock, Arkansas.

The aim of the quotas is to keep the supply of cotton and commodities balanced so that farmers will get the largest possible return from their crops. Negro farmers should remember, however, that we have a lot of cotton on hand carried over from last year and they should not be disappointed if the price this Fall is not all they expect.

## CASEY JONES' FIREMAN RIDES "OLD RUN" AGAIN

Memphis, Tenn.—(SNS)—Casey Jones' fireman went on the run he and the famed engineer made immortal years ago in America's memory again Tuesday, but this time as a guest.

Sim Webb, now grizzled and gray, smiled and paraded his kindly feebleness, as the years rolled backward to April 30, 1900, the day Casey Jones, white famed of song and story took his farewell trip to the Promised Land.

It was the honored old man, who acted as fireman on that ill-fated run by Casey Jones 38 years ago. According to the legend, it was to him that Casey turned and said when he saw the gleaming lights of another train ahead: "You had better jump for the two locomotives are going to bump."

Tuesday, Sim Webb climber back into the cab of a locomotive for another run over the rails from Memphis to Canton, Miss., a run with which he was well acquainted years ago. He made the trip at the invitation of officials of the Illinois Central railroad to refresh his memory" of the wreck of Casey's speeding train near Vaughn, Miss.

Later this week the honored fireman will appear on a nation-wide radio hookup to tell once more of the heroic death of Casey Jones and the ill fated run.

Hardly an average-informed school child in America does not know the story in some version, of Casey Jones' run and how he stuck to the throttle of the engine that roared to his death. Webb jumped to safety.

## CARVER GETS SERVICE KEY

**Tuskegee**, Feb. 24—Dr. George W. Carver, celebrated research chemist of Tuskegee Institute was presented the Distinguished Service Key of the Phi Beta Sigma Fraternity on Sunday, February 20, at a special service in the Institute.

### "CHEESE" CLOTH

Another item in the news concerns is a new use for milk. In Italy a fabric called lanital has been developed from casein, the curd of milk. It was shown at a fashion display by an Italian princess in New York recently. She explained that the fabric would be imported here and later a subsidiary plant of the Italian firm Smia Viscose would be established. Lanital is a substitute for wool.

Perhaps instead of Bossy surrendering her function to a machine, as Henry Ford predicted, textile machinery will be dependent on her. The cotton belt may become the dairy belt and still produce textiles! And what about the old argument between the cattle men and the sheep ranchers!

### ELEPHANT REMEMBERS

As an elephant walked along a road near Rangpur, Bengal, a man in a garden shouted and made faces at it. The beast ambled into the garden, but the mahout restrained it while the mocker fled to safety. When the elephant returned along the road the same night it rushed at its tormentor's house and damaged it.

## Republicans Should Take Warning

(Nashville Globe-Independent)

Even though these are times when the average citizen wears political party robes very loosely, it is very probable that there are more Republicans in Tennessee now than at any other time. The seeming indifference of Republican leaders of the state toward building up local units of the party and toward taking a bold stand for the historic tenets of the party, has, in recent years, rendered Tennessee Republicanism a mere ghost of its former self. Leaders of the party as they have time and again been warned, consume too much time carrying on warfare over control of the State Executive Committee, the net accomplishment of which is the existence of a state organization of generals who largely are bbereft of any privates.

The charge has been made by many observers that the apparent ambition of the Tennessee Republican leaders has been to maintain only an organization big enough to elect delegates to national conventions and be prepared to control federal patronage when a Republican President was elected. These leaders, it is charged, have shunned any effort to carry the state when division within Democratic ranks has presented them with an opportunity to do so. They also, as in 1934 avoided an opportunity faithfully to support an alliance with Democrats which promised them a golden opportunity to retire Senator K. D. McKellar from the Senate.

In 1936 Tennessee Republicans were afforded a golden opportunity to take the lead in crystallizing sentiment of a judge of dishonest election methods in the state. They neglected it and this, the most popular issue in state politics, has been embraced by the progressive element of the Democratic party.

As Republican leaders gather in Nashville this week-end, there is talk of organization leaders being fascinated with a proposal to form an alliance with the ring leaders of election frauds in the state, believing that such an alliance will enable them to elect a Republican Governor this year.

Such an alliance, if formed, would drive the masses of voters farther away from the Republican party than they are at present. There is nothnig that the masses of voters of all parties in the state are more deeply concerned with than the protection of their franchise, and of their right to count for the full force of their mallots when they take the trouble to go to the polls and cast them.

The way the masses turned out in Nashville Thursday of last week to support Senator Thomas L. Cummings, a man who had fought to provide his home city with voting machines so that fair elections could be conducted should be a warning to Republican leaders as well as to Democrats that the people are ready to support men who are the advocates of popular rule in government as against the rule of political bosses.

In this connection it is quite creditable of Nashville Republicans, that upon receiving an invitation from those alligned with the slipping Democratic bosses of Tennessee to oppose the election of Senator Cummings as mayor of Nashville these Republicans promptly spurned the invitation and at the same time unanimously endorsed the candidacy of Senator Cummings.

If the Republicans of the state will consider the low estate of their party throughout the nation and ponder ways to revive it they will refuse to give ear to any of the pledges of support that a discredited regime makes to them. Just as Republican members of the Tennessee legislature rallied to the support of Gov. Browning's election reform measures and thereby put their party in a favorable light, it behooves all other leaders to become allied with the progressive forces in the state rather than with the forces which robbed Republicans and Democrats alike of the right freely to vote and have their votes honestly counted.

Famous Characters of the Negro Race Depicted By Students

By Charles Satchell Morris, II.

A capacity crowd assembled in the Tennessee State College auditorium last Sunday evening at 6:30 p. m. to witness the annual program presented by the History Study Club under the direction of Prof. Merl R. Eppse. Famous figures of the Negro race dating back to Phyllis Wheatley and Crispus Attucks were ably depicted by students who were attired in the garb prevailing at the time the acts were enacted. Seldom has a vesper feature been more enthusiastically recived by faculty members, students and citizens of Nashville generally. The institution has placed much emphasis upon the black man's contribution to American civilization and stresses courses both in Negro history and Negro literature.

**Tuskegee Dean Chapel Speaker At Exercises Monday Morning**

Miss Ida Jackson, Dean of Women at Tuskegee Institute, and former Supreme Basileus of the Alpha Kappa Alpha Sorority, was guest speaker at chapel exercises on Monday morning. She was introduced by Mrs. Geraldine Bennett Fort of the department of Home Economics who told of Miss Jackson's promotion of the Mississippi Health Project begun in 1935, which since has attracted national attention. Miss Jackson brought an inspirational message in which she urged the students to take what they had and make what they wanted. She paid tribute to Prof. D. A. Forbes of the department of Chemistry for the inspiration he had given her while she was a mere girl in New Orleans. Prof. Forbes responded briefly in a telling speech.

President William J. Hale, who is ever heard gladly by the student body, made some pertinent observations and contrasted the situation of the Negro in America with that of the Jew. He grew dramatic and eloquent as he recited the difficulties and hardships which Jews have overcome in their onward march and paid fervent homage to the late Julius Rosenwald. Negroes are inclined to beg too much for what they need, according to the Tennessee State executive. He pointed out that every student in the vast audience had talent and that everyone had certain handicaps. "It is the purpose of the institution to develop the talent and to eliminate the handicaps as far as possible. We insist that you do not major in your handicaps here," he said in closing.

Mr. Donald Officer thrilled the great audience by his rendition of 'Mandy Lou," which song previously won for Mr. Cephus Douglass, a former student of the institution, a

**Concert Singers Inaugurate Season With Monster Recital At Springfield**

The celebrated A. and I. Concert Singers under the direction of Mrs. Marie Brooks Strange, head of the department of Music, were heard in a concert, Thursday evening at Springfield, Tennessee, attended by hundreds of persons of both races. Mrs. Strange, who came to the institution from Chicago nine years ago, has developed one of the finest musical aggregations in the entire nation. In constant demand for appearances at white colleges, universities, forums, on the radio, and at public gatherings generally, President William J. Hale stated Friday that no phase of the institution's life had received greater general commendation than the magnificent singing of the concert group. During the early spring, appearances will be made in numerous cities throughout Tennessee.

**Vice-President National Baptist Convention Third Sunday Speaker**

Rev. Dr. J. M. Nabritt, president of the American Baptist Theological Seminary, and vice-president of the National Baptist Convention, will be guest minister at the regular monthly religious service in the College auditorium on Sunday afternoon at three o'clock. For many years he served as president of the Georgia Baptist State Convention while he was pastoring in Atlanta. Dr Nabritt is one of the most eloquent orators and profoundest thinkers in the ranks of the clergy today. He is especially popular with college audiences. Music for the occasion will be furnished by the choir under the direction of Mrs. Marie Brooks Strange.

**Alabama A. and M. College Basketball Team To Play Here**

The highly-touted basketball aggregation will meet the Tennessee State Tigers in the local gymnasium on Friday and Saturday night. There will be staged as a preliminary on Friday evening, an inter-mural game, while Saturday night, volley ball will constitute the preliminary feature, followed by an exhibition of ping-pong played by the two "aces," Jones and Stockell. It is believed that capacity throngs will be in attendance both nights.

**A. and I. To Participate In Basketball Tournament At Kentucky State College**

On Friday and Saturday, February 25 and 26, A. and I. will participate in a monster annual basketball tournament to be held at Kentucky State Industrial College, Frankfort. Both male and female teams are expected to enter the fray.

**President Hale Departs For East**

President William J. Hale departs on Sunday, February 20, for an extended mid-western and eastern trip. He will attend Founder's Day exercises at Wilberforce University, and from that institution goes to Washington, Baltimore, Philadelphia, New Yorkk, and then to Atlantic City, New Jersey, for the N. E. A. Convention, which he has twice addressed. He will stop off at Pittsburgh while returning home, to be the guest of Hon. Robert L. Vann and Mrs. Vann of the Courier.

### GETTING IT STRAIGHT

Officer—Judge—this man leads a double life. He's a lawyer in the daytime and a burglar at night.

Judge—Which was he arrested for?

A. L. Vollman, who produced the Cavalcade of the Americas at the Dallas Exposition in 1937, will produce a super spectacle—the Cavalcade of the Golden West—at the 1939 Golden Gate International Exposition.

Twenty "Pacific Pageant Prints," fabrics decked with floral and architectural designs, have been created in honor of the 1939 Western World's Fair at San Francisco.

A company of CCC boys will act as guides at the Federal Building on Treasure Island, San Francisco Bay site of the 1939 Golden Gate International Exposition.

## MRS. ROOSEVELT'S PHILOSOPHY

In an address recently delivered before a colored audience in Philadelphia. F. D. Roosevelt uttered some philosophy which should prove of timely interest to all her fellow Americans. Excerpts from her address follow:

"Sometime ago I visited a prison class in West Virginia, a women's federal prison. In fact there were three young women. They were reading aloud when I went in, I didn't pay much attention to it until the teacher said, "Ten months ago not one of these young women could read a word." In ten months they had learned to read.

I asked her whether they were foreign and for that reason were not able to read. She said, "No, they are native born Americans. They haven't had a chance to learn to read." They were not colored. They were white.

**From that time on I have told that story because we want to get into our minds and hearts the realization that there should be no place in this country and no people who have to go to prison to learn to read and write.**

And there are other injustices, other inequalities which touch your race very closely. Now, in many cases people do not recognize that inequalities of one race always hurt the entire community of people. It can be segregation.

### GROUPS INTERLOCK

If one group of people is to have a low standard of living because of low economic conditions, the rest of the group around are going to be affected too. So, that we have, if we can only get people to understand it, a neutral and cooperative interest of raising the standards for all of us. No one is going to suffer alone. No one group is going to be badly off without the rest of the people in the community suffering too.

If you live in houses that are not decent for habitation, something is going to happen. Your children are not going to be as strong and as well as if you had had proper educational and sanitary facilities, and they won't be desirable citizens.

### Not Just to Children

It is not just your children who are going to suffer, you are not going to suffer alone; the rest of the community is going to suffer, only by paying a little more in taxes. You constantly hear this said, "Oh, well, the rich people pay enough taxes to take care of the poor people in the community."

That is only one way of paying. They are going to pay in a great many other ways that they don't recognize so easily.

I remember very well in New York City, a woman, I knew. She had her children so beautifully brought up that they were not allowed near any germs or did they come in contact with them. I asked if her daughter could go to see what the tenements were like in New York City.

The daughter was eighteen and there were some younger children in the family. The mother was shocked. She feared the daughter might bring home some germs to her younger children.

**A month later there came into that house an epidemic. She had a maid who worked in the house and who lived in the tenement to which her daughter could not possibly go. That mother did everything to keep disease from her children, but she did nothing to keep it from the children who lived in the tenement. That is where you have to begin.**

### Do Best for Selves

You can do it best for yourselves. You have to do it for everybody. That is the first thing we are gradually learning, but it is something which is going to be the greatest help to the citizens of the United States, because in a democracy, and we are the most important democracy today, every individual citizen counts."

## SAYS BIG BUSINESS AND NOT CONSUMERS GETS TVA BENEFITS

### Senator Bridges Raps Authority's Methods And Calls for Probe

Washington, D. C.—In a recent address to the Senate, Senator Bridges of New Hampshire charged that the Tennessee Valley Authority, instead of benefiting the farmers, small business and home-owners in the Southeast, has in reality been of benefit principally to a group of very large manufacturing corporations—including some of the concerns that are now under attack for alleged monopolies.

Senator Bridges brings a wealth of irrefutable testimony to buttress this criticism. TVA power is largely sold, under contract, to big factories in the area. These contracts were closed, without competitive bidding, by the TVA directors. Inasmuch as the Authority's low electric rates are made possible only by tax subsidies, all the people of the United States are, in effect, helping pay the electric bills of the favored corporations! That may help bring the more abundant life to the lucky concerns who are getting electricity at less than its real cost—but it certainly means a less abundant life for the taxpayer.

Senator Bridges makes the telling observation that if the U. S. treasury were to make an ontright gift of U. S. government bonds to a group of favored businesses, the scandal would rock the country—yet, to all intents and purposes; that would be little different from what is happening now in the Southeast. The TVA has always been ballyhooed as a boon to the common people—and scores of millions of public funds have been spent in developing it. Now it appears that these funds have been largely used to provide a below-cost service to a few fortunate big businesses.

In concluding his address, Senator Bridges asked that the Senate anthorize an investigation of the Authority. In the light of his disclosure, this would seem to be an inescapable duty owed the public by our lawmakers.

### SOME GUN

New York,—When police halted Conrad Miller. 25 years old, colored, he carried a paper bag in his hand. In the bag the policemen found a mousetrap, altered to discharge .22 caliber cartridges. Miller said the gun worked and he was on his way to find some one to hold up. He went to jail instead.

### TREE SEED

More than a million pounds of tree seed have been collected by CCC members at six soil conservation camps, the regional headquarters reported recently. Camp groups in Pennsylvania, New York, New Jersey, Maryland and West Virginia helped several hundred farmers put 30 types of erosion control work into effect. (A. P.)

### MINERALIZING FOR RACERS

In Veterinary Record (February 5) Dr. Robert Lee Humphrey, Montville, Va., reports his experience in taking charge of the E. B. McLean racing stable near Leesburg, from 1926 to 1928. The stable had not been making a satisfactory record in winnings, averaging about $36,000 in purses for 10 years. Dr. Humphrey reports analyzing the blood of colts which without exception were badly deficient in calcium and phosphorus. He instituted a program of liming pastures and fertilization with superphosphates, and supplemented by feeding with heavy oats of high mineral content and cod-liver oil emulsions. In 90 days the blood tests showed a radical increase in mineral content. In 1927 the stable won $46,000 and in 1928, the winnings were $234,000. Dr. Humphrey reports that when his contract ended he left the farm and "the practices I had adopted to assure an ample supply of minerals were not continued. It is interesting and perhaps significant that the winnings of the stable fell rather sharply to a point about the same as where they had been before the mineralizing program had been put into effect."

### ASKS RELIEF FOR FAMILY AND DOG

**Dog Must Eat Too, Defendant Tells Court.**

RALEIGH, N. C.,—(ANP)—When Willis Haywood told City Judge W. G. Barnes in court Friday that he had six children, the judge made a grab for Haywood's relief card.

"This card," said the court, "indicates you have seven dependents. How do you explain that?"

"Well," said Haywood, "you see, I've got a dog and he has to eat, too. So I put him down on the card."

The defendant, however, drew 60 days at the county house for selling whiskey.

Commenting editorially on the incident, the Raleigh News and Observer said:

"Sometimes it almost seems that the deeper the poverty the more numerous the dogs. Indeed, the probability is that there are a million dogs living on federal relief in the South at this moment. And their eating may explain why so many of their owners are on relief.

"The dog on the Southern land is too often not only a consumer but an incentive to idleness and an example of the anesthetic aspects of relaxation."

Straw alone failed as a feed for 1,000 dry cows last winter, according to E. T. Robbins, livestock extension speciallist College of Agriculture. University of Illinois. The cows had weak calves many of which died. The cause may have been lack of vitamins. On other farms where a little legume hay was fed each day, there was no such loss.

# Four Thousand Young Folk Trek To Washington With Plea For Chance To Work

### AYC Members Ask For Grant Of Half Billion Dollars To Provide Education And Jobs, 500 Colored Youth In Group

Washington, D. C.—"There are no racial prejudices among the progressive youth of America!" That is the only possible conclusion to draw from the events of "Youth's Piigrimage for Jobs and Education" which was held by the American Youth Congress in Washington last week. Four thousand young people, including five hundred Negro youth, came from all parts of the country to see their Congressmen, urging passage of the American Youth Act and other legistion.

The American Youth Act, introduced by Senator Lundeen of Minnesota, would appropriate $500,000,000 to establish a permanent National Youth Service Administrationviding vocational guidance, vocational training, and employment opportunities for high school, college, and post-graduate students. A section of the Bill provides that it be administered with regard for the race, color, or creed of the beneficiaries.

During the first five days of the week, hearings on the Bill were held before the Senate Committee on Education and Labor. Unlike most hearings at which "authorities" testify, this Committee heard American youth talk about itself. A West Virginia coal miner, an unemployed Negro from Alabama, a transient er-steelworker from Pennsylvania, a Minnesota farm youth, and dozens of others took the stand to describe their plight and that of their friends. There were experts, too: Professor Doxie Wilkerson of Howard; Homer P. Rainey of the American Youth Commission; Aubrey Williams, National Youth Administrator and others gave the figures which the young people translated in terms of human beings. But youth, not experts, held the center of the stage.

The summary was simple and convincing; all agreed on basic points. One-quarter of American Youth between the ages of 16 and 25 is both out of school and out of work. Since 1929 ten million Americans have come of working age, and at least a third of these have never known what it is like to hold a steady job at any salary. Millions of youth attend schools open for only six months, or less. each year. There is n working system of vocational training or apprenticeship. Of employed youth, at least a third are unable to establish homes of their own because they are the chief supports of their families. The conditions of the 5,000,000 Negro youth are infinitely worse.

The testimony suggested both the immediate and future results of the problem. Perhaps most frightening was the testimony of several experts that if left unsolved, the problem would multiply itself rapidly. Dr. Melvin, for example, showed that in ten years the numbers of urban youth had decreased by 600,000 while rural youth increased 2,000,000; at the same time the work opportunities on the farms were steadily and inevitably decreasing, forcing young people away from the farms into cities already overburdened with unemployed.

Youthful criminals have come to predominate in the police files, the crime experts said, nineteen being the age at which the most arrests occur. Warden Lawes reported that most of these young ciminals had never been able to obtain education beyond the sixth grade, and that a high proportion of them were unemployed at the time of their arrest. Speaking from personal experience, young people described the way in which sheer lack of food had forced their friends to turn to thievery.

"By the time the country has been victimized by, and has caught and jailed a young delinquent, it has run up a bill many times the amount that would have paid his way through Harvard!" declared Murrell Lank. ".....The half billion dollars provided by the youth act is economy, not extravagance."

**A survey introduced by the Maryland Youth Commission revealed sharply the relationship between poverty and moral delinquency. Significant of youth's despair was the tabulation showing that almost half of the young people with no means of support were willing to volunteer for military service at any time, in any war, wherever it might be fought.**

Others described the dropping marriage rate, the rise in moral delinquency, and the increase of venereal diseases.

Almost without exception, experts and youth joined in expressing their faith in democratic government and their deep concern for its fuutre. "If youth finds that democracy can offer neither education nor jobs, if democratic government cannot care for its youth, how can we expect youth to defend democracy?"

William Dodd, Jr., son of the former ambassador to Germany, described his observations as a student in the University of Berlin and the way in which the desperate youth of Germany turned to Hitler, who promised them things which the Republic denied them. "An unsolved youth problem," Dodd declared, "is an opened door to fascism"

The American youth Congress, sponsor of the American Youth Act, issued the call to the Pilgrimage. Headed by William W. Hinckley, native of St. Joseph, Missouri, the Youth Congress—a federation of national youth groups—represents some 12,000,000 young Americans. The four thousand delegates to the Pilgrimage came from thirty-four states, from every economic stratum, and from every kind of social background. No race, color, or creed was lacking.

During the hearings a Catholic priest, Father Vincent Mooney ventured the opinion that few Catholics could be found among the group; this brought a quick retort from James Carey, youthful president of the United Electrical, Radio and Machinists Workers Union, who said that sixty percent of the members of his union were Irish Catholics. In the parade the Youth Congress staged on Saturday, New York girls in mink coats marched beside Mexican pecan pickers; Jewish garment workers walked with Negroes from the cotton belt; and Harvard men were in the ranks with farm girls from Minnesota.

After a conference with President Roosevelt on Saturday, officers of the American Youth Congress, whose headquarters are at 55 West 42nd Street, New York City, predicted that a revised Youth Act would be passed by this session of Congress. "The need is too urgent to be ignored by Congress," William Hinckley declared.

## 47TH ANNUAL

(Continued from page 1)

first consideration in Farm Program Planning.

The decrease in the price of cotton which caused an increase of debts and cost of living to many farmers, makes it all the more important that agricultural leaders reemphasize the live-at-home program to all the farm folk. The reduction of cotton acreage under the 1938 Agricultural Conservation Program should serve as a stimulant to farmers to carry out a practical live-at-home program here in the South.

**4. Farm Organization**

Knowing the benefits to be derived from cooperative effort, Negro farmers are urged to secure representation in all local, county and state farm organizations and administrative agencies.

We earnestly recommend all Negro farmers to take part in community and county study and cooperative groups so that they may be fully informed and inspired for better farm life.

**5. Soil Conservation**

It has been estimated that 61 per cent of all eroded lands in the United States are located in the Southern states. This destruction of the productivity of our soil creates a serious problem which directly affects the farmer's income.

Therefore, we endorse the Agricultural Conservation Program which seeks to assist farmers to reclaim certain partially eroded lands, to conserve those already in use, and to stabilize the farmers' income, through the adjustment of production to demand.

Negro farmers are urged to co-operate with this program to conserve our greatest natural resource—the soil—and, with the assistance of extension workers and specialists from Land Grant Colleges, to study the soil on their own farms for a closer check on crop adaptation and land use.

**6. Federal Agencies**

The present Administration of our national government has provided a number of agencies whose functions supplement the long established extension service and vocational education activities. Among these agencies now available to the farmer are the Agricultural Adjustment Administration which directs the Agricultural Conservation Program and the Farm Security Administration, through which loans to farmers under the Bankhead-Jones Act are made available and through which certain rural housing projects are devloped and small loans for the purchase of tools and equipment provided.

The Farm Credit Administration also provides loans for farm purchases and through the Production Credit Corporation, loans for crops and fertilizer. Through the establishment of Credit Unions, it seeks to promote thrift and community self-help.

Information concerning these and other government agencies are presented to the farmers through competent representatives. We recommend that the Negro personnel of these agencies be increased in order to further expand and extend the work and we respectfully petition the administrators of these agencies to provide Negro representation in local administrative offices, especially in those communities where Negroes represent the larger part of the community population.

**7. The Pending Farm Bill**

The Congress, now in session, is attempting to enact legislation which will seek to keep production of farm products more nearly in balance with foreign and domestic needs; protect the interests of the consumer by maintaining some form of an ever-normal granary and provide parity payments to insure parity income for all agricultural producers. This conference highly endorses these objective.

In order, however, for these objectives to be attained, certain items in the bill provide for crop control marketing quotas and other regulatory procedures. This Conference respectfully petitions the Congress to provide such safeguards in these regulations as will prevent unfair local interpretations of the law towards those small farmers who, through lack of education or local traditions, may not be able freely to speak in their own behalf.

**8. Farm and Home Makers Short Course**

This Conference desires to express its thanks to Tuskegee Institute for providing a one-week short course for farm folk. The return of many this year who attended the school last year is indicative of a realization that the effort is worthwhile. We recommend that this farmers' school be continued and expanded.

**9. Rural Leadership**

This Conference recognizes the great need for Negro rural leadership. It is felt that the best type of leadership is that which emerges from within the group. We recommend that rural leaders concentrate on training members of local groups to map and execute programs of social betterment. We further recommend that rural leaders spend all available time in such professional improvement as will enable them better to execute a desirable type of guidance to Negro farmers in search of practical farming information.

We deplore the vast world expenditures for implements of war and other deadly means of destruction. We recommend a "re-thinking" for American citizens; a steady continuous development of programs of upbuilding for the homes and farms, the school and the church; a spirit of cooperation, good will and mutual understanding of all races; greater employment and economic opportunities and prosperity for all.

## POVERTY IN SOUTH

(Continued from page 1)

Southern farms for home use, the speaker called attention to a recent report from the Bureau of Home Economics which estimates that an adequate diet for sharecroppers of the Southeastern States would mean 40 per cent more eggs, 60 per cent more milk and 25 per cent more fruits and vegetables.

Dr. Duggan praised Negro farmers for their cooperation with the Soil Conservation programs and added that the sooner the nation recognizes that "your well-being si irtertwined with the well-being of the community, the state and finally the nation, the sooner will we make some real and lasting progress. If many farmers are poor, the entire South suffers."

In closing, Dr. Dugan called attention to the fact that "some Negro farmers have not been benefitted by AAA and the other programs because they did not know the programs. They did not know how to take advantage of them. We are trying to give Negro Farmers a better opportunity to familiarize themselvs with these programs. We need your help and the help of all your leaders in that effort."

President M. F. Whittaker of the College presided and Dr. D. W. Watkins of Clemson College, State Extension Director, presented Dr. Duggan. Other speakers included A. F. Lever, Regional Director, Farm Credit Administration, who explained how the small farmer may qualify for assistance through the Administration, and Harry E. Daniels, Negro State extension Leader, who arranged the meeting.

## CHICKENS PAID COST OF CHEER FOR HER HOME

The $165 Mrs. Geter Miley of the Allendale home demonstration club. Monroe county, cleared from her poultry flock last year has paid for many improvements in the Miley home, said Miss Rose V. White, home demonstration agent.

Mrs. Miley placed first in the kitchen improvement contest.

She papered her kitchen, enameled the woodwork ivory, and turned over two linoleum rugs and painted them green and ivory.

A new built-in cabinet was constructed. A sink, a built-in closet for food storage, and a mop and broom closet were installed.

A new pressure cooker is the most important of the several new pieces of kitchen equipment Mrs. Miley bought.

Making use of all sorts of material is a hobby of Mrs. Miley's. Feed sacks drape her windows, serve as hand towels, dish towels, table cloths, napkins, pillow slips, and sheets and even have been turned into quilts the home demonstration agent cited.

Mrs. Miley's flock consists of 200 White Wyandotte hens hatched at home from eggs produced by a state accredited flock. During 1937 they laid 1,000 dozen eggs, and Mrs. Miley sold $50 worth of fryers from the flock.

She manages her birds and has built her brooder house according to University of Arkansas College of Agriculture plans, the demonstration agent said.

## ARE YOU PAYING THE OLD DEBTS SECOND TIME?

### Obligations Settled Under Concilliation Cannot Be Renewed.

Albert S Goss, land bank commissioner of the Farm Credit Administration, warns farmers not to be intimidated into paying old debts already settled from refinaneing loans made by the feral land banks or the land bank commissioner.

Goss says many farmers have given new notes for eancelled debts, under "persuasion" of former ereditors who had agreed to scale down their claims and settle for what the farmer could borrow from the land bank and the commissioner. The courts have repeatedly held that such ereditors violate a legal contract when they attempt to collect more than the amount of the claim, as reduced by the "scale-down agreement."

"In 1933 and 1934 thousands of heavily indebted farmers whose obligations were frozen assets in the hands of their ereditors, applied to the federal land banks and the commissioner for refinaneing loans," Goss explained. "Often the amount which a farmer could borrow in this manner was much less than his total indebtedness and it was obvious that he could not earn enough from his farming operations to pay out.

"In such cases, ereditors had the choice of sealing-down their claims to amounts which could be paid from the refinaneing loans—or continuing to hold claims with no immediate prospect of collection. So thousands of ereditors chose to scale down their claims and voluntarily agreed to accept the amounts available from refinaneing loans as full and complete satisfaction of farmers' debts.

"These scale-down agreements are legal obligations," Commissioner Gross continued. "The courts generally have held that where a ereditor agrees to reduce his claim in order to get the benefit of a refinaneing loan he is bound by his agreement. Such a ereditor may not lawfully accept money from a refinaneing loan as full payment of a farmer's debt and at the same time take a new note from the farmer. Where a farmer is sued by his old ereditors on a note taken under such circumstances the courts refuse to grant judgment on the note."

## INDIAN ART COLLECTOR HAS ANTIQUE POTTERY

Amelia Elizabeth White has been making a collection of North American Indian art for the last twenty-five years. She is now displaying this collection in six museums of the United States, including the Cleveland Museum of Art, Cleveland, Ohio.

Miss White, of Florida and Santa Fe, N. M., has long been interested in the welfare of the American Indian and has established a gallery of American Indian art in New York to foster this interest.

It has been said that "the life of a Navaho begins and ends in beauty." The pottery in Miss White's collection ranges from prehistoric black-on-white ware, to recently developed black polished ware of the San Ildefonso and Santa Clara Pueblos.

To set the colors in spring wash material soak the material an hour in salt water, using a third of a cup of salt to each gallon of warm water. Hang the material up while it is dripping. Be sure to place it in the shade.

## IMPORTANT HISTORICAL FACTS

Colored people lived in America thousands of years before Columbus. Central American monuments show numerous carvings of them as gods. When Columbus came to the New World, Negroes had been crossing from Africa to South America, a distance of 1600 miles. The first white men to reach the American mainland tell of seeing Negroes. Columbus who never touched the mainland says he had heard of them.

The present colored race of Africa did not originate there, but in Asia and Oceania. The earliest inhabitants of Africa were not black but brown.

# THE MODERN FARMER

Vol. XI. NASHVILLE, TENN., MAY 15, 1938 No4

# National Farmers Sunday is May 29th Says Pres. Harris

## AUTHORIZED BY BOARD OF DIRECTORS OF THE NATIONAL FEDERATION OF COLORED FARMERS, INC., CHICAGO, ILL.

### THE PRESIDENT'S PROCLAMATION

*Pursuant to the authority vested in me by the Board of Directors of the National Federation of Colored Farmers, Inc., I, Leon R. Harris, president of said organization, do designate Sunday, May* 29, 1938, *as annual "FARMERS' SUNDAY." All Units of our Federation are hereby ordered to have appropriate religious services on that day.*

Once more we are privileged to assemble together and give thanksgiving and praise to the God of our fathers and mothers, who has been so good to us, who has guided and helped us, whom we still know is the farmer's Best Friend.

Today let us be thankiul for life and opportunities. Let us be thankful that the shadows are disappearing, that a new day is dawning. Let us be thankful that, through our organization, we have a chance and a way to help others.

Let us pray for more knowledge, patience, faith and love. Let us pray for our Federation, for our officers and brethren, for the many thousands of our group and vocation. Let us pray for our native land and for those in authority, for peace and prosperity and for the coming of the day when every citizen may have an equal opportunity to live and prosper.

Therefore every Unit under the jurisdiction of the National Federation of Colored Farmers, Inc., is instructed to assemble in some church on this day to render thanks unto Almighty God for the blessings we enjoy and to pray for Divine guidance and assistance. Every member is hereby instructed to take part in the exercises.

May the principles of cooperation, service and charity fill every mind and heart, and, united, may we go forward with renewed determination to advance the work and welfare of our organization.

Given under my hand, this, the 25th day of April, 1938.

(Signed) LEON R. HARRIS, President.

### OFFICIAL PROGRAM

SONG—"Bringing in the Sheaves."
PRAYER.
RESPONSIVE READING—(From The Psalms).

"Bless the Lord, O my soul."

"Thou visitest the earth and waterest it. Thou settlest the furrows thereof; thou blessest the springing thereof."

"Thou crownest the year with thy goodness."

"The pastures are clothed with flocks; the valleys also are covered over with corn.'"

"He causeth grass to grow for the cattle and herb for the service of man."

"The earth is full of thy riches."

SONG—(Selected).
READING OF PRESIDENT'S PROCLAMATION.
WELCOME ADDRESSES.
SONG—"The Farmers' Hymn" (Official Hymn, N. F. C. F., Inc., Tune: "My Faith Looks Up To Thee.")

Send plenteous sun and rain
On mountain, hill and plain,
And valley wide;
Grant us prosperity,
Increase our faith in Thee,
O may we happy be
Whate'er betide.

God bless us, we who toil
Upon the goodly soil
Which Thou hast made;
Uphold us by Thy might,
Help us to know the right,
And ever, day and night,
Be Thou our aid.

Unite us heart and hand
In one fraternal band
Until the end;
That we may praise Thy name,
Of all men, Lord, the same;
Our God, whom we proclaim:
"The Farmer's Friend."

INTRODUCTION OF VISITORS.
SERMON. OFFERING. ANNOUNCEMENTS. BENEDICTION.

### INSTRUCTIONS

Officers and members should strive to make FARMERS' SUNDAY a great day for farmers throughout the nation. Appoint a special committee. Invite the public. Invite your city friends and relatives. Have special music. An all-day meeting would not be out of place. Let the world know you are proud of your vocation. If for any reason you are unable to hold your services May 29th, be sure and hold them as soon thereafter as possible. FARMERS' SUNDAY must be observed.

## NEGRO AGRICULTURE PROGRESS

### Activities Reported From Various Sections

The 1937 4-H Club enrollment in Georgia was 14,136 girls and 9,182 boys; a total of 23,328. Typical of the several projects completed by these boys and girls was the production of 66,409 bushels of corn by 2,610 of the enrollees. Most of the girls made the Christmas presents which they gave to relatives and friends.

A series of 11 meetings in various sections of Florida brought together groups of farmers to hear various phases of the 1938 Agricultural outlook discussed by H. A. Hunt, Special Assistant, Farm Credit Administration, Joseph H. B. Evans, Administrative Assistant, Farm Security Administration and T. M. Campbell, Field Supervisor, U. S. Extension Service. The tour was arranged by A. A. Turner, Negro District Agent, Agricultural Extension Service.

Two additional counties in Georgia have added Negro Home Demonstration Agents. Mrs. Mamie A. Byrnes was assigned to Baker County and Miss Mary Blount to Hancock County.

Nineteen farm families from 12 communities exhibited 200 pounds of cured meats in the first annual Meat Show which was held last month in Osceola, Arkansas. Mayor A. S. Rogers of Osceola welcomed the farmers and congratulated William S. Barabin, Negro County Agent, who arranged the Exhibit.

Miles Hackney of Union Springs, Georgia who is the Soil Conservation Demonstration Farmer for his state under the AAA, reports suc-

## FARM FEDERATION ELECTS NEW LEADERS

### Important Chances Made In By-Laws

**Chicago, Ill.**—At the recent annual meeting of the Board of Directors of the National Federation of Colored Farmers, Inc., national officers were elected for three year terms and important changes were made in the by-laws of the organization.

Leon R. Harris, of Moline, Ill., who has served the organization as secretary for ten years and as acting president for the past three years, was elected president. Maj. R. A. Byrd, of Springfield, Ill., was re-elected vice-president. Miss S. B. Wilson, Nashville, Tenn., who has served as treasurer for ten years, will assume the duties of secretary-treasurer. National headquarters will be maintained at Vincennes Hotel, Chicago. The new Board of Directors include the officers and James

## THE SOUTH'S NEW INDUSTRY POTATO STARCH

### CHEMISTS HAVE FOUND SWEET POTATO CONTAINS ENOUGH FOR COUNTRY

One of the newest industries in the South is the production of sweet potato starch. Chemists have found that sweet potatoes not only contain enough starch to process them, but that the starch is of a high quality and can be used in cotton mills, adhesive factories, commercial laundries, and indirectly in the manufacture of postage stamps. Manufacture of this sweet potato starch is on the eve of a great future that will not only help Southern industry but Southern Agriculture as well.

Starch has been used in the homes for centuries. One of its biggest uses is for sizing warp yarn in textile mills. Starch is used in manufacture of adhesives; home and commercial laundries; making tapioca pudding, vegetable glue, dextrin, candy, and many other things.

The United States consumes about 800,000,000 pounds of cereal starch and about 250,000,000 pounds of root starch a year. Millions of bushels of wheat, corn, and rice are used in manufacture of cereal starch. Most of this starch is made in the United States. With exception of a small amount of starch made in Maine, the bulk of imported starch comes from Cassava which is a tropical plant not produced commercially in the United States. In developing sweet potato starch, we are merely developing a new market for something for which we already have the raw material, and not trying to displace the cereal starch industry. A sweet potato starch will help the farmer of the South just as corn starch industry helps the farmer of the Middle West.

For many years Japan has been

## SURPLUS RICE PURCHASES

### 33,610,000 Pounds Reported by Federal Surplus Commodities Corporation

The Agricultural Adjustment Administration announced today that up to February 1 a total of 33,610,000 pounds of rice had been purchased by the Federal Surplus Commodities Corporation in its program to remove surplus rice from commercial channels for distribution for relief purposes.

Purchases of surplus rice have been made in Louisiana, Texas, and Arkansas; the principal rice-producing area in the South, and the program has been extended to include purchases of milled rice in California.

Purchases to February 1 included 9,280,000 pounds in Louisiana; 8,430,000 pounds in Texas, and 15,900,000 pounds in Arkansas, at a cost of $787,177.50.

The rice obtained under the program has been allocated to nearly every State for relief distribution.

The Corporation's purchases are being made on the basis of offers

## LEON HARRIS TO BROADCAST

### Acting President-Secretary National Federation of Colored Farmers To be on the Air

Moline, Ill. (Special)—An invitation has just reached here and been accepted by Mr. Leon Harris, to go on the air on Sunday, May 29th. The invitation was extended by Rev. Glenn T. Settle. the director of "WINGS OVER JORDAN" which is the National Negro Hour appearing at 9:00 o'clock, eastern standard time each Sunday over the Columbia hookup from Cleveland, Ohio. Mr. Harris is the guest speaker representing the National Federation of Colored Farmers, who have set apart May 29th as Farm Sunday. He will be voicing the sentiment of and encouraging the efforts of the nine hundred thousand colored farmers in the United States.

This will be the first time that any interest has been given to Negro farmers in this broadcast and nation-wide hookup. Mr. Harris will leave this city for Cleveland in time to arrive for the "WINGS OVER JORDAN" program early on the morning of May 29th.

The person who finds that evil, sin, disease, and failure appear in his life believes in their power.

## ANNUAL CONVENTION TO MEET IN GEORGIA

**Chicago, Ill.**—The ninth annual convention of the National Federation of Colored Farmers will meet in Forsyth, Georgia, October 26-29, according to a statement released from the national offices of the federation here this week. The State Teachers and Agricultural College, Dr. W. M. Hubbard, President, will serve as host.

This will be the second meeting of the farmers in the state of Georgia. The cordial reception accorded the delegates last year and the desire of the leaders of the organization to render greater service to southeastern colored farmers influenced the board of directors in making their choice. Invitations were received from Louisiana, North Carolina and Missouri.

Leaders of the organization in fourteen states are planning on making this year's meeting the best ever and it is expected that the largest group of organized colored farmers ever assembled will be in Forsyth next October.

## LOSS OF HENS IS INCREASING

**Mounting Disease Toll Viewed as Serious Problem.**

The future of the poultry industry depends on the ability of poultrymen to control diseases, declares H. L. Kempster of the Missouri college of agriculture.

Pointing out that diseases increase as the numbers of poultry become larger, the specialist said:

"Two decades ago attention in poultry disease control was directed primarily to losses of baby chicks. It was not unusual for the poultry raiser to lose one-third of the chicks before the pullets were ready for the laying quarters.

"In a few years, by educational campaigns and new knowledge relative to disease control, it was possible to raise 90 per cent or more of the baby chicks, provided the poultryman followed a few simple sanitation and management practices.

"A study of adult mortality of poultry compiled from Missouri record keeping flocks for the period 1919 to 1925, revealed that losses from various causes among laying flocks was 11 per cent annually.

**Came With Heavier Laying.**

"Apparently with increased egg production has come an increased problem of disease. This condition has developed in spite of improved systems of management.

"Losses among baby chicks have been materially reduced, but there is no question but that mortality among adult hens is increasing.

"Cannibalism among laying flocks, and new diseases such as leukemia and range paralysis, are taking heavy toll in addition to the diseases which prevailed a decade ago."

The poultryman who has escaped these ravages is fortunate and should be cautious in introducing new stock until assured that the flock from which it came is free from disease, Mr. Kempster observed.

"Low egg production is bound to result when disease attacks the flock," the specialist said.

---

"You remember when you cured my rheumatism, a year ago, don't you, Doc?" asked the patient, "and you told me I should avoid dampness?"

"Yes, that's right," replied the medico, approvingly.

"Well, I've just come back to ask if you think it would be safe for me to take a bath?"

## HIGHER PRICES SEEN FOR EGGS

**Chicken Market Likely to Drop, Say U. S. Economists.**

Egg prices apparently have reached the usual early year low point and will probably trend upward during the spring months, says the U. S. Bureau of Agricultural Economics.

Chicken prices, however, are tending downward and by mid-year may go below prices of 1937, the bureau predicts.

Pointing out that some small declines in egg prices may occur during the spring, the bureau believes, nevertheless, that unless consumer incomes fall more than is now believed likely, the general trend of egg prices will be upward.

Supplies of eggs probably will be smaller than in 1937 and August 1 storage stocks substantially smaller than a year earlier, it is stated, and the effect of the smaller holdings in the last half of the year will probably be to raise prices above those of 1937.

**Bigger Hatch Expected.**

"In contrast, chicken prices are declining compared with the average for corresponding months in other years, even though supplies of poultry are rather small, both on farms and in storage," the bureau says. The drop is attributed, at least in part, to declining consumer incomes.

"Chicken prices are likely to go below those of 1937, in the last half of the year, largely because of greater supplies of poultry expected from this year's larger hatch.

"The favorable feed situation and present low level in numbers of laying hens on farms are the major factors tending toward an increase in hatchings this spring.

"A five to ten per cent increase in the number of young chickens on hand June 1, as compared with a year ago, is reported as probable, because of the 26 per cent drop in the feed-egg ratio from October to March. This decline in the ratio means that fewer eggs are required to buy 100 pounds of feed, the bureau points out.

## DOES WELL ON THIN ACREAGE AT MARIANNA

**Value Proved by Farm Experience Throughout State.**

### EXAMPLE IS CITED

**Good Results on Cheap Land Told by Greene County Man.**

Thousands of Arkansas farmers have proved to their satisfaction that pasture grazed by good livestocks is a profitable use for land.

At the cotton branch experiment station at Marianna, they have been testing pasture as a crop for second-grade land for several years, and have got an average return of about 200 pounds of beef per acre from such land handled in that way. Even better results have been obtained at the Hope branch station.

It is pointed out that these grass-and-beef returns are better than could be got from the same kind of land by any other method of cropping.

The state extension service has recommended that a half-million acres already in pasture be given treatment to increase its yield of grazing, since much of it now produces very little feed, the extension service says.

Grass is generally recognized by livestock men as being the cheapest feed they can grow. Pasture doesn't have to be plowed every year, it needs no cultivating, and is harvested by the animals themselves. If given proper care, it yields a fair return, and at the same time builds up the soil, where constant row-cropping or grain growing wears it out.

**Cow to Acre**

How a pasture was made on cheap land, which the owner expects will carry a cow to the acre when it has become well established, was described by Everett Rogers, Greene county, in a letter which won first prize in a contest conducted by the Progressive Farmer. Mr. Rogers wrote:

Realizing that a good permanent pasture would be the source of the cheapest roughage for my newly established herd of registered Polled Herefords, and being unwilling to establish such a permanent pasture, the basis of which was to be Bermuda sod, on my fertile creek bottom land, I acquired in the summer of 1936, a wornout severely eroded field of red clay, consisting of 40 acres.

This field was overgrown to persimmon sprouts, sagebrush and weeds and was capable of carrying only one animal unit to each six acres.

In August, 1936, the sprouts were grubbed. Then I secured the assistance of an engineer of the Soil Conservation Service to establish lines for contour ridges, and in the fall of 1936 I constructed these ridges. Torrential rains occurred in January, 1937, but only one of the contour ridges gave way. This was immediately repaired.

In March, 1937, I flat-broke this field, breaking separately each area between the contour ridges; this broadened the base of my ridges. I then applied two tons of agricultural limestone and 200 pounds of 20 per cent superphosphate to the acre, mixing the two together and applying with a manure spreader with lime attachment. Barnyard manure was applied to the gullies and the poorer slopes.

**Sodded With Bermuda.**

The field was then sodded with Bermuda sod, a part being applied as thin as possible with the manure spreader and the remainder thrown from the wagon. The sod was placed about four feet apart. Immediately after sodding, the field was double-disked and the seedbed finished by double-harrowing.

Bermuda sod check dams were constructed in all gullies and the banks were either spot-sodded or strip-sodded to Bermuda.

Realizing that I must provide water for my stock, I constructed a large storage reservoir, fencing it so that the stock would not have access to it. Just below the dam I built a large concrete trough and connected it to the reservoir with a two-inch pipe. I also equipped it with an automatic cut-off float valve to insure having a full trough at all times.

I seeded the following mixture:

| | Pounds | Pounds per acre |
|---|---|---|
| Dallis grass ..... | 100 | 2½ |
| White Dutch clover | 100 | 2½ |
| Redtop ..... | 200 | 5 |
| Kobe lespedeza .... | 200 | 5 |
| Korean lespedeza... | 150 | 3¾ |
| Yellow hop clover. | 75 | 1⅞ |
| Sweet clover ..... | 50 | 1¼ |

Both Kobe and Korean lespedezas were used, because they would give me about four week's additional pasture, the Korean coming on about two weeks earlier than the Kobe and the Kobe lasting about two weeks longer than the Korean. This seeding was completed in April.

**Much Feed First Year**

After fencing off the storage reservoir and a gullied area which I planted to black locust seedlings for fence posts, I had 35 acres of pasture. Last June I turned 18 head of cattle into this field. These cattle were pastured continuously, and seven head of horses a part of the time, until October, despite the six-week drouth we had during July and August.

I was over this pasture today, February 9. There is a solid carpet of yellow hop clover and White Dutch clover over the field. I am positive that I shall turn my cattle on this pasture by March 1 and allow them to remain until frost.

I confidently expect one acre of this improved permanent pasture to carry one cow after the third year. This has been done on land that can be bought for $10 to $15 per acre.

## NEW WAY TO SELL "SWEETS" IS DEVELOPED

**Opens Opportunity for Arkansas, Believes P. T. Ecton.**

An incident showing how Arkansas might sell more sweet potatoes, and more of other farm products as well, was related by P. T. Ecton, extension horticulturist.

Not long ago, he said, the Sunday night strollers along the main thoroughfare to Detroit, Mich., watched with mild interest a man who stood in front of a restaurant copying a brightly-painted window streamer, which read:

"Virginia Ham and Southern Yams." Illustrating the words was a picture of a tempting slice of ham flanked by two golden sweet potatoes.

The man was from the deep South, Mr. Ecton related, and he wanted to find out why his state's sales of sweet potatoes had suddenly leaped ahead of the sales by Virginia, which had always led before.

"He found the answer in that gay sign," Mr. Ecton explained. 'Advertising was the reason."

Some of the larger chain stores had launched a campaign to bring the tasty sweet potatoes to the attention of their customers, and other stores had followed their lead, the Arkansas specialist said.

In a number of cases recently, producers of fruits, vegetables and similar products have had surpluses cleared away by the help of groups of stores—chain store organizations, and a large association of independent stores. The latter group is now putting on a campaign to sell a big supply of Western fruit.

Mr. Ecton went on with his story:

That man from the deep South learned that Northen cooks had been shown a new delicacy in the golden-hued Porto Rico sweet potatoes from his section, a delicacy for puddings, pies and even bread, where before they had only baked or fried them, as they had always prepared the dry, pale-skinned Jersey sweet potato.

"Hotels, restaurants and cafeterias were featuring the rich yellow sweet potatoes from that man's state.

"The investigator visited Cleveland, Toledo, Chicago and Pittsburgh, spending the midnight hours at the bustling produce markets hearing perspiring dealers praising the keeping qualities of the Southern Porto Rico, visiting the suburban retail stores in the afternoons, and eating sweet potatoes at restaurants between times.

In the retail stores, he found the hidden spring of this prosperity. Until recent years the meal barrel, kerosene and sweet potatoes were all kept under the counter or in the storeroom. Sweet potatoes were sold only on request, and eaten mostly as a filler.

"But now the retailers led by the larger chains that could distribute carloads, have placed the copper skinned Porto Rico before the public as a choice dish. A square crate or bin now meets Little Rock or Texarkana housewives, as it does millions elsewhere, just inside the grocer's door, and they are attracted by the burnished appearance of the potatoes, obtained by dusting with a burlap brush before packing.

"The recent entrance of the sweet potato into the vitamin field puts it in the social register of vegetables."

**Big Demand Is Seen**

And thus an enormous demand for Southern Porto Rico's has been created over the Eastern Jersey variety, Mr. Ecton continued. One or two Gulf states are selling more than 6,000 carloads of about 500 bushels each, he said, adding:

"The Arkansas sweet potato is of the same high quality, and needs only to be brushed and packed to satisfy Northern and Eastern dealers. The dreaded sweet potato weevil, which is reducing the Gulf states' commercial acreage, does not visit as far north as Arkansas.

"With this enormous demand created in the cities, natural growing sections of the South may benefit as North Carolina is moving to do on the seaboard.

"No central state has yet taken such a step. Only the original Gulf state of Louisiana supplies the trade while continuing the death fight against the weevil. And since the Porto Rico will not produce north of Arkansas, the possibilities are limited to Arkansas, Mississippi, Texas and Oklahoma."

In the majority of cases, at least, where producers have got the help of the big chain stores in disposing of surpluses, the producers have been organized. They were thus in position to guarantee a plentiful supply for merchandising campaign.

Farmers in many sections believe that in this method they have found a big aid to getting better returns from a wide range of products, and reports are that they are building up their co-operative organizations, as a means of making the most of it.

## FERTILIZER ON PASTURE PAYS

**Stimulates Growth and Helps Check Weeds, Expert Says.**

Pastures ought to be fertilized for the following reasons, according to Martin Nelson, agronomist at the Arkansas college of agriculture:

The growth of the pasture plants is stimulated, which means not only more and better feed, but reduces the growth of weeds. This totals a return which far outweighs the cost of the fertilizer.

Every permanent pasture should include hop clover, white clover, bur clover and lespedeza, Mr. Nelson said. At least three of these can always be used to advantage in pastures, and the most important fertilizer for them is super-phosphate, he pointed out.

The addition of lime will help but it is not necessary to add lime in order to get good results, Mr. Nelson continued. Two hundred pounds per acre of 20 per cent super-phosphate will return profits from year to year if the pasture and the livestock are otherwise cared for.

It is not necessary, however, to fertilize every year, the agronomist advised. The direct effect is upon the legumes, and through their better growth an abundant supply of nitrogen is provided to carry the grasses in the pasture after the legumes have matured in June.

# *Tennessee Agricultural and Industrial State College Especially Interested in Farmers*

## President William J. Hale, Living Embodiment of Success Attending Efforts of a Former Farm Boy

**By Charles Satchell Morris, II.**

If one will examine closely the name of Tennessee State College, one will find that Agricultural is the very first word therein. Because this is largely a rural State where people must earn their living by the sweat of their brows, this is as it should be. President William J. Hale relishes nothing better than to recite the fact that he was for many years boy and man engaged in farming at his famous Retro. And, in spite of the attentions, distinctions, and honors which have been thrust upon him by members of both races, this writer happens to know that he is still a "dirt farmer" at heart.

PRESIDENT WM. J. HALE,

Living Embodiment of Success Attending Efforts of a Former Farm Boy

Almost any day one can see the president walking over the wide acres owned by the college, and engaging in earnest conversation with the students and other laborers who are working on the farm. He likes to get out and dig for himself in the rich soil and feel his kinship to Mother Nature. The spacious and magnificent barns on the campus, the large herd of cows, the great tracts of land under cultivation, all testify to the fact that the wonder-working State College is a believer in the soul—more than that—he is a lover of the soil.

It so happens that this very week, the Tennessee Chapter of the New Farmers of America is holding its annual meeting here. Prof. Walter S. Davis, a product of the farm himself and a native Mississippian, is coming home from Cornell University at Ithaca, New York, to direct this meeting, so great is his passion for the cause. He his been studying there on fellowship for the doctorate in Animal Husbandry. Prof. Davis is the head of the Department of Agrienlture at this institution and his made its influence felt throughout the entire nation. Repeatedly, the students under his direction have won prizes in national contests and have brought glory to Tennessee. No farm lad ever is at a disadvantage here, since the entire personnel conceive it to be their privilege to carry out the purpose for which the College was originally brought into being. Every effort has been made to enrich farm life, to encourage farm ownership among Negroes, to make available better and more scientific methods of tilling the soil to the end that the lot of the black man in this State might be more fruitful and happy.

The romance of the development and progress of A. and I. reads like a chapter from a fairy story. Just twenty-six years ago the then Principal William J. Hale of a Chattanooga high school came to Nashville to head the "baby" normal school provided for by legislative enactment and located on a high mound overlooking the historic Cumberland river. Much, very much, has happened since the day when the former farm boy came to this "Athens of the South" to begin the monumental work which brought him national acclaim at the Silver Jubilee last November. The Governor of Tennessee landed him from the platform, while the President of the United States and Mrs. Roosevelt sent him personal messages of congratulation. Loving cups and silver services were presented him by admiring friends, both white and black. In the hour of his greatest triumph, with America saluting him, he referred to his days at Retro, when, under sun and sky, his was the blissful influence of seeing things grow. And ever since, not only has the grown tremendously himself, but everything which he has touched has likewise grown.

A rocky hillside has been transformed into a veritable paradise of beauty. To his aid, summoned Mr. David A. Williston, expert landscape gardner, whose services at Talladega College, Tuskegee Institute, Howard University and for the United States Government had made him famous. Love for this spot has inspired the now Prof. Williston in the labors which he has undertaken in creating here one of the show places of the South. Perhaps in no other state institution has a president found a man who could render such magnificent services in carrying out his ideas and ideals as has President Hale in Professor Williston. Sought throughout the country — and even now occasionally loaned to the government—he has remained here to complete his glorious work.

PROF. MERL R. EPPSE

Born 10 miles from railroad station —also a "Dirt Farmer"

Prof. Reuben A. Munday, formerly of Tuskegee, has given painstaking thought and care to the expansion of the poultry farm and has introduced the latest methods of incubation and breeding. He is an authority on poultry and has appeared frequently throughout the State in pursuance of the College's extension program. He has a well-trained corps of assistants who are destined to revolutionize chicken cultivation in Tennessee.

Although A. and I. was the last State College to be born, it now ranks first in enrollment in the country, with a student body of more than twelve hundred. For many years, its summer session was the most largely attended in the nation. The value of its great plant here has been placed at more than three million dollars. Its new stadium and field house are the finest to be found in any Negro institution. Many of its teachers have become celebrated for their intellectual achievements. The Concert Singers under the direction of Mrs. Marie Brooks Strange, have sung themselves into the affections of the people of both races. Large groups are constantly visiting the college to study the methods employed. Prof. Merl R. Eppse has written "A Guide to the Study of Negro History," which has attracted widespread attention. Beautiful lakes, orchards, greenhouses, tennis courts, and quiet nooks dot the sloping hillsides. If one were to seek to give the background for all this, one would be forced to say that that background is fundamentally rural—the dream of a former farm boy to build an institution so clean, efficient, practical and inspiring that it never would be mistaken for one operated by Negroes. For it must be admitted, that to the nth degree A. and I. State College is William J. Hale, and that William J. Hale is A. and I. State College.

Scarcely a week passes but that delegations of farm boys and girls are entertained at this institution. The latchstring proverbially hangs out and hospitality is the watchword. We are happy to invite the readers of the Modern Farmer to be our guests whenever they happen to be in Nashville. We can assure them that Our Chief has never "lost the common touch" and that he never is so buoyant as when in the company of those who live close to the heart of nature.

It is the primary mission of A. and I. State College to make life more enjoyable and stimulating for the masses and particularly for the rural masses. Those in scattered sections may be denied many of the comforts and luxuries of our civilization. We are seeking to do away with this isolation and so far as is humanly possible, when people are unable to come to college to take the college to the people. The living epitome of this service and the outstanding representative of his race in Tennessee is William J. Hale, the former farm boy of Retro.

**THE MODERN FARMER**

Leon R Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

# EDITORIALS

From the Bible:—

"Trust in the Lord and do good; so shalt thou dwell in the land, and verily thou shalt be fed.' Psalms 37:3.

God comes down in the rain,
And the crop grows tall—
This is the country faith,
And best of all!

—Norman Gale.

### SCHOOL'S OUT

School is out in the country. The children have left their books for the plow and hoe. For many, the brief happy life is over. The life of drudgery begins. Little reading or studying will be done while crops are growing. Recreation will be limited to rainy days and Sundays. And parents will now have a greater responsibility for the care and guidance of the children for the schoolhouse door is shut and the teacher has gone away.

The school is a very important institution in the country. It gives what no other can give,—knowledge, —yes,—but also it gives opportunity for neighbors to be neighborly,—for all the people of the community to meet on a common level, and work, all together, for the community welfare. The school helps the young folks become good citizens and it will also help the old folks become better citizens if they will but realize what it really is and what it represents in community and American lite.

The colored farmer has always been a loyal supporter of his school. And now, though school is out, he should remember that the doors will open again this fall and he should plan, with his neighbors, to make the next school-year the best his community has ever known.

### SOME ARE STILL BLIND

Congressman Taber, of New York, ranking minority member of the house appropriations committee, in answer to assertions of Democrats that critics of the administration have never presented any constructive plans or suggestions, has outlined a six-point recovery program. This Republican program recommends abolition of the Works Progress Administration, Public Works Administration, Housing Authority, Farm Security Administration, and all other "costly schemes."

If these agencies are abolished, as Mr. Taber suggests, many Republicans as well as Democrats will believe the country is taking a step backward instead of a step forward. It is as much the duty of government to add to the enjoyment and happiness of the people as it is to add to their security and protection. People may be satisfied to just exist in some parts of the world, but Americans want to live. We want to own our homes and our farms,—we want parks, playgrounds and recreational facilities,—we want our national resources conserved,—we want good roads and waterways. And if private enterprise has failed to give the people the things they should have, then the government must provide them, for the people are going to have them.

And we can see no sense in the argument that government should assist the people of a county to build and own a good highway but should not assist these same people in purchasing, owning and improving the farms on which they live. If it is a good thing and a right thing for government to loan money to a railroad, bank, or corporation when such institutions are in trouble,—then it is also a good and right thing for government to loan money to a poor black or white farmer when the individual is in trouble.

American citizens have long known what they wanted and needed to make their country a better country and themselves, a happier people. During the past few years they have learned there is a logical, sensible and right way to get these things. These things they are going to have and that statesman is indeed blind who cannot see the needs of the people he professes to serve.

### TALK FOR YOURSELF

The Negro farmer is engaged in the biggest business carried on by his racial group in America. We have three hundred and fifty million dollars invested in this business and it is high time we were doing more talking about it and letting our fellow-citizens know just how important it is.

We should tell the world that the ambitious and industrious Negro farmer is standing on his own feet, hoeing his own row, and is enjoying a standard of living many of his fellow citizens might envy. We should tell them that our vocation provides a contented way of life. We should tell them that we are not ashamed of ourselves or of our jobs, and we should hold up our heads, walk erect, feel our importance and act it.

When we meet FARMERS SUNDAY and observe the day, let there be no whining,—no complaining. Make it a day of rejoicing. Let us be glad and proud we are farmers,—engaged in such an important business,—doing our part well in promoting the civic and social as well as the economic progress of our group.

### OPPORTUNITY FOR ORGANIZATION

At the recent annual meeting of the Board of Directors of the National Federation of Colored Farmers, Incorporated, important changes were made in the by-laws which will give all colored farmers a better opportunity to become members of the N. F. C. F. Groups of farmers may now unite with the organization at little cost and will have the chance to associate themselves with the most progressive farmers of our group and reap all the many benefits of organization.

The N. F. C. F. expects to double its membership this year and its officers are working toward this end. We are asking all colored farmers to rally to the support of this organization which has never failed to serve in the most needy times and which is recognized as the best organization of Negro farmers in the nation.

### TALLADEGA LIBRARY WILL BE NAMED FOR FAMOUS SLAVE

**William Savery, Bondaged Carpenter, Who Labored to Build School's First Building, to be Honored.**

Talladega, Ala.—The new library building now being erected is to be named in honor of William Savery, an original founder and incorporator of Talladega College. There will be two plaques in the entrance vestibule commemorating the founders of the college here in Talladega, while the name of Mr. Savery will be inscribed over the entrance door on the west side of the building.

In 1852-53 William Savery, a carpenter in bondage, labored to build Old Awayne Hall. In 1863 as a freedman, he together with others attended the conference in Mobile. This convention was made up of freedmen from all parts of Alabama; and its purpose was to lay plans for racial progress. Along with Thomas Tarrant, an ex-slave, William Savery returned to Talladega and immediately started a school in the residence of David White, Sr., another freedman. By rapidly outgrowing its first quarters, the school presented a problem of larger housing for its work. In 1867 Savery led the Freedmen's Bureau and the American Missionary Association in the purchase of Old Swayne Hall and the founding of Talladega College.

This building still serves the college as a traditional landmark and as an admistration hall. In 1869, an incorporator of the college, Savery wrote into its charter a provision "to provide educational opportunities for all youth, from which no one shall be debarred because of race or color."

Thomas Tarrant, Harry Knox, and other freedmen, who worked with William Savery in the founding of Talladega, will be commemorated on one of the plaques in the entrance vestibule.

### Precious Youth

Visitor—"And how old are you, Bobbie?"

Bobbie—"I'm just at the awkward age."

Visitor—"Really? And what do you call the awkward age?"

Bobbie—"I'm too old to cry and too young to swear."

Visitor—"And what time do you have dinner, my little man?"

Little Man—"Soon as you've gone, I heard ma say."

"Willie,' said his mother, "I wish you would run across the street and see how old Mrs. Brown is this morning."

A few minutes later Willie returned and reported:

"Mrs. Brown says it's none of your business how old she is."

The light of Christ within you is the light that illumines your way today.

# WIDE CHOICE OF VEGETABLES OFFERED STATE

## Varieties, Amount of Seed Suggested by Specialist

How much seed will you need for you garden? P. T. Ecton, horticulturist at the Arkansas college of agriculture, got out his pencil and a tab of paper, and worked up some guiding answers to the question. But first he advised:

"If all the slow-growing crops are placed together at one end of the garden with the asparagus and other perennials, then the beans and radishes may be replanted or replaced early in the summer.

"A garden large enough for four people should be 100 feet square, with the rows of the larger-growing vegetables four feet apart."

Then the specialist offered the following suggestions, as to the amount of seed required.

Two rows of Porto Rico sweet potatoes, 20 inches apart in the rows, will require 120 plants.

A row of white Spine or Davis Perfect cucumbers 30 inches apart in the row will require one-half ounce of seed.

A row of Early White Bush squash will need one-half ounce of seed planted 36 inches apart.

For early tomatoes, set 50 plants of Gulf State Market variety 18 inches apart. For later tomatoes set a row of the Marglobe variety.

**Early Start Necessary**

Tomato plants, as well as pepper and eggplant, must be started in late February in a hotbed or in a box in the house. They can be set after danger of a killing frost is past.

A half row of California Wonder or Worldbeater pepper, 35 plants set the same as tomatoes, and the remainder of the row set to Black Beauty or New York Purple eggplant, will be sufficient.

Rows for the following crops need be only three feet apart, Mr. Ecton said.

Two rows of Prizetaker or Yellow Globe Danvers onions will take two ounces of seed, spaced three inches apart.

One ounce of Danvers Half Long or Chantenay carrot seed for two rows will need the same spacing.

A half row of Detroit Dark Red or Crosby Egyptian beets will take one ounce of seed spaced three inches, with the row completed with one-fourth ounce of Purple Top Globe turnips for early use. Another full row of turnips should be sowed several weeks later.

A row of cabbage should be divided between the early Jersey Wakefield and the large Copenhagen Market with the plants 18 inches apart.

Fifteen pounds of Bliss Triumph or Irish Cobbler potato seed will plant three rows of potatoes, 14 inches between each hill.

**Beans Every Two Weeks**

Three rows of Stringless Greenpod or Bountiful Bush beans will require three pints of seed if planted from two to three inches apart. Plantings should be made at two-week intervals to provide a longer harvest period.

A row of Hunderson's or Burpee's bush lima beans may be added.

One quart of Yellow Globe Danvers onion sets will plant a row.

Two pounds of Alaska English peas will provide early peas and should be divided into two plantings in the row. Another row of Laxtonian peas will provide a later crop.

"On the end of the garden may be the fast-growing, leafy vegetables, such as mustard, collards, one row each, and one-half row of lettnce, each of which will require one-half ounce of seed," the specialist advised. "A half row of Scarlet Globe radishes will complete the garden, leaving a little room for any favorite vegetables that have not been mentioned.

"There are many other varieties than the above that will do well in Arkansas, but these are the most common and are usually in stock locally."

"As fast as the short season crops are harvested, they should be replaced to keep vegetabls available for the table. If the garden can be irrigated, many of these vegetables can be carried through the summer."

## COTTON CROPS COTTON STAPLE LENGTH

Manufacturers Record (April) says editorially: ". . . The contention of our cotton farmers that staple length and grade is largely depencent upon climatic, insect and soil conditions, is no longer entirely tenable. The United States Bureau of Plant Industry has conclusively proved its numerous cotton growing experiments at a variety of places thoroughout the South, that good quality long staple cotton can be grown under conditions virtually identical with those which produce poor quality short staple cotton. Over a period of years there has been a slight improvement in American cotton, but with certain exceptions this has been due almost exclusively to the work of plant breeders. . . The astonishing thing too is that growth of an uniform long staple crop will increase a cotton farmer's income from ten to twenty per cent for buyers pay as much as $20 per bale more for the long varieties. Furthermore, as the Bureau points out, 15-16 inch and lower cottons can, in the majority of cases, be made to produce virtually the same amount of lint per acre as do the shorter staple varieties."

## SHORTER STORAGE OF PORK ADVISED

Pork stored in freezer-locker compartments is at its best when removed and used within three or four months, advises the U. S. Department of Agriculture. When held longer the fat flavor tends to become strong, it is explained.

Reports to the department on storing various meats at low temperatures after sharp freezing, indicate that beef, lamb, and poultry can be held in excellent condition for six months or longer.

In the case of pork, it is advisable to fill lockers with smaller quantities of at more frequent intervals, rather than to slaughter on a large scale about twice a year, the department suggests.

This works out advantageously for the farm family, as it enables them to rent a smaller locker, and also, by rapid turnover of its contents, to store more pounds of meat in the course of a year, it is pointed out.

## MISSISSIPPI HAY CROP A RECORD

A Clarksdale, Miss. report to the New Orleans Times-Picayune (Jan. 30) says: "The sale of hay by Mississippi farmers in 1937 amounted to $1,000,000 as compared to $600,000 in 1936, according to compilations of state extension officials, who state that the hay crop was the greatest in the state's history. The income from hay in 1937 ranks second in income for farmers, being exceeded only by cotton and cottonseed. Cash income in 1937 from the sale of corn was $1,540,000 as compared with $1,580 000 in 1936. The income from hay during 1937 was sufficient to provide for the feed costs for wintering stock in Delta counties. The Yazoo-Mississippi Delta levee board at Clarksdale, which maintains more than 100 miles of levees along the Mississippi river, harvested a crop valued at $100,000. The revenue was sufficient to maintain levee board work."

## TRANSPARENT CAN FOR FOOD

A large German canning establishment has succeeded in producing a satisfactory container for preserved foods from a transparent plastic material technically known as acetyl cellulose which is treated with oil lacquer, according to a report to the Chemical Division, Department of Commerce. A feature of the new container contrasted with tin is its transparency which enables purchasers to see what they are buying, the report states. The top and bottom of the new container is made of tin, which provides it with the necessary stability so that it may be handled in the same manner as cans made entirely of tin. As the German canning industry used 137,000,000 containers in packing last year's crop of fruits and vegetables, for which tin had to be imported, this new container is being encouraged by the government in furtherance of the Four Year Plan of economic self-sufficiency.

## VALUE OF SOY BEAN

### Came About Quickly

"Sixteen years ago, it was almost impossible to collect enough soybeans from all sections of the country to make a tankcar of soybean oil: but in 1935, 44,000,000 bushels were produced and about 25,000,000 bushels were processed in the United States, yielding roughly 25,000,000 gallons of oil and 60,000 tons of soybean oil meal."

Now, Mr. Bradley said (speaking early in 1937) after only 16 years of development, there are about 40 soybean oil mills in the country, 20 or more concerns making soybean food products, some 15 mills grinding soybean flour, and 50 factories turning out various industrial products from this "wonder crop."

A ton of soybeans (thirty-three and one-third bushels of 60 pounds each) yields around 250 pounds of oil and 1,600 pounds of meal, according to the United States Department of Agriculture. Something like 150 pounds of the ton is waste, it is explained.

The oil yield of a ton of cottonseed is larger, averaging about 313 pounds, but it gives only a little over half as much meal or cake—around 890 pounds—as a ton of soybeans does. About one-fourth of the weight of cottonseed is hulls. There is, however, the linters from cottonseed, amounting to something like 120 pounds from a ton.

### Above Cotton Oil.

Soybean oil has been quoted higher than cottonseed oil in the New York market. It averaged nearly 11 cents a pound (10.9 cents) through 1937, compared with a little over nine cents (9.2 cents) for cottonseed oil, as reported in government figures—for the refined oil in both cases.

All oil prices have dropped in recent months. The latest quotations given in government reports, from the New York market, are for January, 1937, when cottonseed oil was 7.8 cents a pound and soybean oil 8.6 cents.

Some market observers believe soybean oil will bring better prices next fall and winter, along with cottonseed oil, because of a reduced supply of cottonseed this year to press oil from. They think result will be higher prices for both soybeans and cottonseed.

Soybean oil comes into competition with cottonseed oil in margarine and shortening, though a good deal of it goes to make varnishes and paints. Because of this competition, many Arkansans who have studied the matter believe the state should get into the soybean and soybean oil industry on an increasing scale, not only because of the bright industrial outlook for soybeans, but so we will have the oil to sell and manufacture if it becomes as profitable a rival to cottonseed oil as some think it will.

### Methods of Crushing.

According to the department of agriculture, "no marked changes in the equipment of the modern oil mill" is needed for crushing soybeans. It says further: "The methods used in the extraction of oil from soybeans are similar to those used with other oil seeds, as cottonseed, linseed and peanuts." And the same authority adds:

"Different processes are used in the manufacture of oil from soybeans. The oldest method is by expression, in which the hydraulic press or expeller is used. The hydraulic process is widely used in processing cottonseed in the South and linseed in the North, but the expeller process is coming into more general use, especially where mills are being equipped solely for soybeans."

Soybeans, an immigrant crop from the Far East, were "naturalized" in the Virginias and Carolinas, by the U. S. Department of Agriculture. In the Far East, soybeans have provided human food and feed for animals for thousands of years.

As a feed crop, soybeans rank among the best. Hay made from soybeans is regarded as about equal to clover or alfalfa hay. The beans are a rich grain feed, high in the expensive element of protein, and the meal left after the oil is pressed from the beans is rated among the best of concentrated feeds.

For pasture, soybeans have proved to be an excellent forage for all kinds of stock.

And with all else, soybeans are recommended as among the most valuable crops for building up the soil.

## TREATING FENCE POSTS

Professor Woodbridge Metcalf, Extension Forester for the University of California, has been experimenting successfully in treating freshly cut fence posts of a number of species of zinc chloride solution as a preventive of decay. The formula requires 21 pounds of a 50 percent zinc chloride solution mixed with 10 gallons of water. Species of wood is not important as long as there is a good thickness of sapwood and the posts are treated promptly after cutting with the bark left on. The large end of the post is elevated at least two feet and the bark peeled for about 4 inches from the end. Cut an old inner tube and slip one end of it over the end of the post and fasten tightly to prevent leakage. Fill the tube with the preservative solution. The slight pressure of the liquid will force it through the post within 24 hours, entering only the sapwood."

## PROPERTY OWNER IS ACCUSED

**Clarskdale, Miss.** (Special)—Arraigned here Tuesday before Circuit Court Judge William A. Alcorn, on a charge of murdering John Henry Lightner, white, of Ratio, Ark., Henry Hardy entered a plea of not guilty.

Lighter was shot and killed when and his wife rowed across the river to the Mississippi bank to pick pecans. Negro owners of the property in the locality had previously warned Lighter, it is said, not to carry any pecans away with him.

His wife claims that a Negro man, after shooting her husband, forced her to carry pecans to his home some distance away, and that after that she escaped in the boat. Hardy maintains he did not shoot anyone, and knows nothing about the tragedy.

## BETTER LAYERS BY GOOD CARE

### Cleanliness Stressed as Essential to Success With Chicks

Pointing out that the first eight to 10 weeks of a chick's life are its most critical time, D. D. Moyer, of the Missouri college of agriculture, urges the importance of good care during this period.

Even if pullets survive poor care, they cannot be expected to make as good layers as those which were protected from parasites and disease during the tender weeks of their lives, Mr. Moyer said, adding:

"The sanitation program should be well planned and started before the chicks are placed in the brooder house.

"The brooder house, brooder stove, feeding and water equipment should be thoroughly cleaned and disinfected. Floors and walls should be scraped to remove all filth before disinfecting is attempted.

"After this has been done the floor and walls should be well soaked and scrubbed with a strong lye water solution, using one can of common household lye to each 12 gallons of cold water.

"The location of the brooder house should be where no chicks or mature stock have ranged for at least two years, and where no droppings have been spread on the ground during that time.

"The house should be located so that the drainage from the old poultry yards and previously-used ranges does not flow over this area.

### Disease Lives in Soil.

"This is very important because the small parasite which causes coccidiosis will live over in contaminated ground from one year to the next. The risk from this and other parasites is too great to attempt brooding on the same ground year after year.

"If the brooder house can not be moved to clean ground, a sun porch about the size of the brooder house should be constructed and placed in front of the house to keep the chicks off the contaminated ground.

"Many poultry raisers build the summer range shelter without the roof and use it as a sun porch during the brooding period. When the pullets are ready to go to range, straw is placed over the rafters, and this provides ample protection during the summer.

"If the brooder house is not in good condition the cracks in the walls and floors should be repaired. Scrap building paper, cardboard or pieces of packing boxes may be used on the inside walls to prevent drafts and make the house easier to keep warm.

"It is also desirable to bank dirt or place boards around the house to keep the cold air from sweeping under the floor."

## PERIL IN HOME CHARGED FENCES

A home-made device for charging a fence with electricity to turn stock may be a danger to life, advises M. M. Jones, of the Missouri Agricultural College. He said:

"For an electric fence to be safe and effective, it must be energized or 'charged' with a special controller designed and built for that purpose. Connecting a fence wire direct to a 110-volt lighting circuit, or even using lamp bulbs or resistances between the 110-volt source and the fence, is positively dangerous.

"An 11-year-old girl was recently killed near Moberly, Mo., by a fence which was reported to have been connected direct to a lighting circuit. There are other definite records of deaths, of both human beings and animals, caused by fences connected to lighting circuits, either direct or through home-made controllers.

"Although it is possible to make safe home-made controllers to be operated from batteries, it is difficult to make one that will be dependable and give trouble-free service over a long period and at the same time be economical of battery current.

"Regarding the safety of electric fences in general, it may be said that battery-operated controllers are generally considered quite safe. While there may be some slight danger connected with the use of 110-volt commercial controllers, this danger, if any, appears to be quite small, provided the controller is a good one made by a reputable manufacturer. The real danger is in the use of home-made 110-volt controllers."

## PET COBRA GUARDS LIFE OF MISTRESS

**Simla, India**—A pet cobra rescued its mistress by killing an Indian raider who broke into her house in the village of Gunpur, according to a story told here.

The cobra was at the door when the raiding Dacoit tried to enter the house. He slashed at it with a dagger and the snake slipped into a nearby rat hole.

A few minutes later, when the snake saw its mistress being bound and gagged by the Dacoit, the cobra slipped out of the hole again and bit the man's ankle. The robber died a few minutes later.

If your nose is close
To the grindstone rough,
And you hold it down
There long enough,
In time you'll say
There's no such thing
As brooks that babble
And birds that sing.
These three will all
Your world compose—
Just You, the Stone
And your darned old Nose.

## STATE FINDING LESPEDEZA IS VALUABLE CROP

Lespedeza is claiming increased interest in Arkansas, because of its value for feed, its moderate cost, its habit of volunteering, and its fairly high resistence to drouth, said Martin Nelson, crop specialist of the state college of agriculture. He added:

"The four annual varieties, common lespedeza, Tennessee 76, Kobe, and Korean, are fairly well known. Of these varieties Kobe and Korean make the larger growth.

"The growth of crops obtained from common lespedeza and Tennessee 76 are usually very similar; both can be grown advantageously on the lower rich lands of the central and southern part of the state.

"In pastures, common lespedeza succeeds in reseeding itself more effectively than other types.

"Korean lespedeza, the most popular variety, is showing more and more that it is adapted to the northern belt of the state, rather than to central and southern sections.

### Seeding Time Here

"The adaptation of Kobe lespedeza to the central and southern section of the state is beyond question.

"Seeding time of the annual varieties comes in the first half of March in the southern half of the state and the last half of March in the northern half of the state. Sowing on small grain is a good practice. Seed does not tolerate covering.

"Seeding lespedeza sericea continues to be problematical. Broadcast seeding is rarely successful. It still seems advisable to sow this variety in narrow rows and cultivate well the first season, allowing the seed to ripen and fall on the ground the second season to produce volunteer stands between the rows, in order to get a satisfactory meadow stand.

"Two or three pounds of seed per acre is sufficient when seeding sericea lespedeza is sown."

## Farm Federation Elects New Leaders

### Important Changes Made In By-Laws

(Continued from page 1)

P. Davis, Chicago, and Henry Allen Boyd, Nashville, Tenn.

Changes made in the by-laws include the appointment of an executive committee and the setting up of an advisory board of twenty regional vice-presidents. Legislation was also enacted which will permit organized state and regional groups of farmers to unite or affiliate with the Federation.

The National Federation of Colored Farmers was organized in 1922 and incorporated in 1930. James P. Davis, founder and for many years its president, is now head field officer, Agricultural Adjustment Administration. It admits to membership farmers, tenants, share-croppers, farm laborers and all who are engaged in the business of agriculture or who are interested in rural progress. It is the pioneer organization of colored farmers and its work and ideals have been approved by agricultural leaders throughout the nation.

### LUCKY

First Prof.—"Do you believe a rabbits foot ever brought good luck?"

Second Prof.—"Yes, I do. My wife felt one in my pocket and thought it was a mouse."

### PASTOR RESIGNS PULPIT AND OLD CLOCK STOPS

When Rev. W. J. Smith, pastor of Bathhurst United church, in Toronto, Ont., tendered his resignation a 66-year-old clock stopped ticking and did not start again until nine years later, when he paid a brief visit to his former pulpit.

When the pastor left, all efforts to start the clock proved futile, and the ancient timepiece was relegated to the minister's vestry as a historic relic. That was in 1925.

When Smith entered the vestry in 1934 the familiar ticktock of the clock was heard, to the amazement of the sexton, and continued after he left. It still keeps time.

The clock was presented to the church by Benjamin "Old King" Cole, a Negro church member and a former slave.

### MENDING TORN DRESS

To mend a tear in a dress, I turn the dress inside out and smear the edges of the tear several times with raw egg white, a woman writes in Succesful Farming. Next, I cut a patch of strong material, press it to the wrong side of the tear so that it adheres to the egg, and finally press well with a warm iron. The mend will be invisible from the right side and will never come off, even when washed.

## NATION'S SCOUTS MET IN CLEVELAND, OHIO LAST WEEK

Cleveland, Ohio, (Special)—Their common interest in America's boyhood- brought together at Cleveland, Ohio, May 13 and 14 several hundred business men, educators, public officials, doctors, lawyers and churchmen for the 28th annual National Council meeting of the Boy Scouts of America. The theme chosen for the conclave was "Scouting for all boys wherever they are."

Most of the delegates representing the 537 Local Boy Scout Councils that administer the Scout Program in the United States and its possessions are leaders in the life of their home communities.

There are two main features of the Boy Scouts' national annual meetings. As the legislative meeting of the National Council, made up of more than 1,800 members who form a true cross-section of American life, they will elect officers, approve new policies and hear annual reports on the many phases and activities of the Boy Scouts.

The Cleveland meeting was also an inspirational gathering. Methods for promoting the Scout Program locally and for advancing the work of Scout Troops were discussed. The gathering gave opportunities for interchange of ideas and speakers portrayed trends in Scouting.

**Distinguished Speakers Scheduled**

Wheeler McMillen, editorial director of "The Country Home" magazine, will speak on the needs of the rural boy and what Scouting offers him. Mr. McMillen is President of the American Association of Agricultural Editors and a recognized authority of national agricultural economics and rural affairs. He is a forceful speaker and progressive leader in farming. He is chairman of the National Committee on Rural Scouting of the Boy Scouts of America.

Dr. William Mather Lewis, President of Lafayette College, another speaker, told of the needs of American youth from the viewpoint of the college president. Dr. Lewis, for many years a student of education in America and Europe, is a former President of the Association of American Colleges and the Association of Urban Universities. An outstanding educator, he is an active leader in the Church and in public and civic affairs.

**Scouts Participated**

Boy Scouts also had a share in the meeting. On Friday, May 13, the 6,751 Boy Scouts and 597 Cubs of the Greater Cleveland Council were hosts at a big Scout Circus that was hel in the Arena in Clevelan.

The next evening Scouts of Region Four, comprising Ohio, Kentucky and West Virginia, will put on several Scout demonstrations during the Annual Fellowship Banquet. At this occasion, there will be presented the Awards of the Silver Buffalo for "distinguished service to boyhood."

The meetings were held at the Hotel Cleveland where an unusual set of exhibits portraying the activities, growth and scope of the Movement was displayed. The annual banquet, May 14, was held in the Statler Hotel.

Walter W. Head of St. Louis, President of the Boy Scouts of America since 1926, presided. Daniel Carter Beard, National Scout Commissioner, made report for the National Court of Honor. Dr. James E. West, Chief Scout Executive, made report on the accomplishments of 1937, which proved to be the busiest of Scouting's 28 years in America with participation in the Fifth World Jamboree in The Netherlands last August and its own first National Jamboree in Washington, D. C., last June 30 to July 9.

**Coin Collecting Merit Badge Announced**

Coin collecting, a fascinating hobby through which one may learn a great deal concerning customs, architecture, plants and animals, Weapons, armour and clothing, religious and government, history and mythology and many other things pertaining to the ancients, will undoubtedly win many new adherents through the new Merit Badge in Coin Collecting which may be earned by Boy Scouts.

Coins have been a valuable help in historic research and at times have been the only source of information available about the customs of ancient peoples. The names of many kings, princes and other rulers were unknown until their portraits. dates and other legends were found on coins.

Coin collecting may be enjoyed by anyone. It is not necessary to own speciments of the very rare coins to be a successful numismatist, as coin collectors are known. Scouts are told they should be able to recognize a coin and know something about it, or where to find out about it.

The dividends from coin collecting combine fun, knowledge and entertainment which increase each year with the size of the collection. The greatest satisfaction is obtained when a boy finally locates and acquires some long-sought coin. A molt interesting part of this hobby is assembling information about each coin and labeling the collection. Initiative and design play a large part in making the collection interesting to others.

To earn the new Merit Badge in Coin Collecting a Scout of First Class rank must:

1. Own and exhibit at least 100 types of coins personally collected by him and mounted for display, including coins from at least 15 different countries, properly classified as to country, ruler (if any), denomination, date and any special reason for issuing. This collection shall also include five coins made of each of the following materials properly noted as part of the classification date—silver, nickel, copper and two other alloys.

2. Give a brief interesting history of; (a) the origin of the American dollar; and the derivation of its name; (b) U. S. coins since the first ones issued, giving all denominations of U. S. coins issued for circulation and the metals used in each.

3. Explain fully what is meant by the following terms, illustrating with examples from his own collection wherever possible: Pine Tree Shilling; Trade Dollar; Colonial Coins; Hard Times Token or Jackson Cents; Commemorative issue; Necessity Money of the United States; flying Eagle Cent, and fractional currency.

4 Explain the following terms, illustrating with examples from his own collection wherever possible: AU; AR; AE; Bust; Exergue; Flan; Head; Incuse; Inscription or Legend Obverse; Overstrike; Counterfeit; Counterstamp; Rounded Edge, Lettered Edge; Reverse; Struck Coin and Cast Coin.

5. Describe the condition of coins classified in the following ways: proof, uncirculated, fine, good, poor. Explain how the value of a coin is determined.

6. Classifv as to country, denomination and material, five coins furnished by his Merit Badge Counselor.

7. What is the purpose of mint marks on a coin. Name three United States mints and show a coin from each mint from his own collection.

**Scouts to Honor Beard on his 88th Birthday**

Daniel Carter Beard, National Scout Commissioner and Chairman of the National Court of Honor of the Boy Scouts of America, will be eighty-eight years old on June 21st. His fame as an outdoorsman and as a friend of boyhood extends beyond the bounds of his own country, and in his honor, several thousand Boy Scouts will make a pilgrimage to his home at Suffern, New York, on Saturday, June 18, to pay him honor.

On a special field near his home where exercises will be held with a minimum of speeches, Scouts will pitch their tents and each group will be given an opportunity to share in the outdoor pageants that will mark the day.

The National Executive Board of the Boy Scouts of America appointed Col. Theodore Roosevelt as Chairman of a special committee to arrange the celebration, and Walter W. Head, President of the National Council, hopes the gathering will be "the biggest thing of its kind which has ever taken place in Scouting."

Mr. Beard, or "Uncle Dan" as he is better known to millions of boys, was a leader in work among boys for many years, and he is still at it just as keenly and vigorously as ever. He is a regular contributor to "BOYS' LIFE," the magazine published by the Boy Scouts of America for all boys. As a pioneer in activities for boys he was a member of the first Executive Board of the Boy Scouts of America, elected in 1910, of which there are two other members still serving, namely, Colin H. Livingstone of Washington, D. C., who was President of the Boy Scouts from 1910 to 1925; and William D. Murray of Plainfield, N. J.

A Silver Buffalo, awarded by the Boy Scouts of America for "distinguished service to boyhood," was conferred upon "Uncle Dan" in 1926, the first year of this honor, the citation accompanying, read:

"Daniel Carter Beard, author, artist, outdoorsman, pioneer of outdoor movement for boys as founder of Boy Pioneers and Sons of Daniel Boone, Honorary Vice President, National Scout Commissioner, Chairman, National Court of Honor and Charter Member of the Executive Board of the Boy Scouts of America, whose prestige, wisdom and experience have been pillars in the structure of the organization."

**Boy Scouts Add Fingerprinting Merit Badge**

Fingerprinting, which has become more interesting to the general public since 1933 when the Federal Bureau of Investigation established personal identification records for citizens who wished to have their fingerprints on record, has been added as a new subject in the Boy Scout Merit Badge program of over 100 hobby, craft, nature and voca-

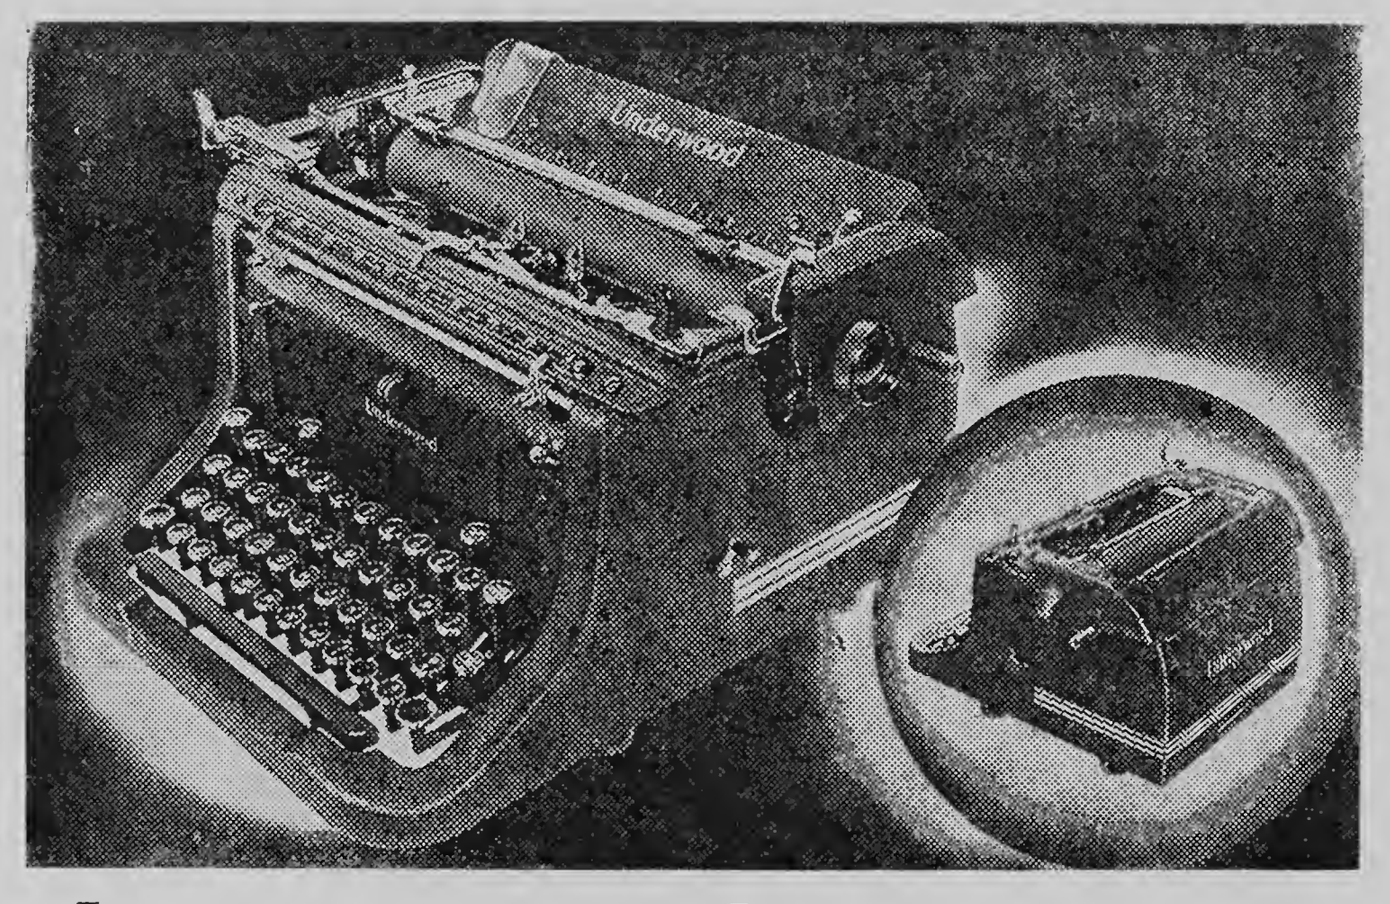
# THE *New* UNDERWOOD MASTER TYPEWRITER



**✓MASTER OF SPEED ✓MASTER OF TOUCH**
**✓MASTER OF TYPEMANSHIP**

YOU must see the new Underwood Master to appreciate it. It is way out in front of any machine you've ever used . . . easier to operate, does far better work and its trim, new styling makes it an *attractive* addition to the office, too. New features include the Sealed Action Frame and Dual Touch Tuning. Telephone for a free trial now and get a trade-in valuation on your old obsolete machines. If you're not using Underwoods you're not getting top typing performance.

**The New UNDERWOOD MASTER**
**You don't have to Buy it to Try it**
**—Telephone UNDERWOOD *TODAY!***

**TRADE IN YOUR OLD TYPEWRITERS IN PART PAYMENT . . .**

*This is the time that you should examine your old typewriters, check them for age and condition and consult your nearest Underwood Elliott Fisher Branch. Regardless of the make of your old typewriters they will be accepted by Underwood Elliott Fisher as part payment for a new Underwood Standard . . . an Underwood Noiseless or the new outstanding Underwood Master.*

Underwood Elliott Fisher Co.
313 4th Avenue, No. -:- Nashville, Tenn.

(Continued from page 1)

### SPECIAL NOTICE

Leon R. Harris, president of the National Federation of Colored Farmers, will be guest speaker on the "Wings Over Jordan program, from Radio Station WGAR, Cleveland, Ohio, and associated stations of the Columbia Broadcasting Co., Farmers Sunday, May 29th. Time of broadcast, 9:30 Eastern Standard Time; 8:30 Central Standard Time.

This is one of the best national programs now being carried on the air. You will enjoy the music. Tune in and listen to "Wings Over Jordan," then wire, or write a card to Station WGAR, Cleveland, Ohio, or to the station from which you received the program, and let the Columbia Broadcasting Co. know that you apperciated it.

## NEGRO AGRICULTURE PROGRESS

(Continued from Page 1)

cess in rebuilding some worn-out land by a systematic planting of Austrian winter peas. Corn produced on this experimental land averaged 40 bushels to the acre.

William Sanchions, Negro Vocational Agricultural teacher at Fitzgerald, Georgia, has initiated an intensive campaign for the production of string beans, tomatoes and corn in his county. His program includes the establishment of a canning plant to take care of the surplus not sold in fresh vegetable markets. Mr. Sanchious reports that 75 Negro farmers and 35 white farmers have enrolled with the project.

With unusual production of peanuts in DeSoto Parish, Louisiana this year, Mrs. Stazzie Hudson Haynes, Negro Home Demonstration Agent has encouraged 4-H Club girls to prepare novel and tasty lunches with various combinations of the peanut.

Mrs. Mary T. McKenzie, Home Demonstration Agent, Alachua County Florida reports a successful fruit-tree planting campagin among her Club women.

Eight hundred farmers and community leaders attended the Annual Negro Farmers Conference recently held at Utica Institute, Mississippi. The Live-at-Home Program and Soil Conservation were among the topics emphasized. T. M. Campbell, Negro Field Supervisor, U. S. Extention Service was the principal speaker. William H. Holtzclaw, Utica Principal, reports that a large group of white farmers were among those in attendance.

Negro farmers of Alachua County, Florida won first prizes for their hog, grain, forage and cured meat exhibits at the Florida State Fair held in Tampa, early this year. F. E. Pinder is the Negro County Agent.

The Memphis (Tennessee) Commercial-Appeal has announced that in 1938, Negro farmers may participate in their annual Plant-to-Prosper Campaign. The sum of $650 has been set aside for awards to Negro farmers who will be scored on "living at home, diversification, soil conservation and home improvement." Among those who discussed with Commercial-Appeal officials the plans for Negro participation was Dr. J. E. Walker, President Universal Life Insurance Company of Memphis. Negro farmers in Arkansas, Mississippi, Missouri and Tennessee are being encouraged by Negro County Agents to enroll in the competition.

Negro strawberry growers were invited to participate in the Ninth Annual Florida Strawberry Festival which was held in Plant City on February 22nd. Negro County and Home Agents, who were in charge of the Negro section of the parade, were assited by Negro 4-H Club boys and girls and the W P A Negro Band of Tampa.

Texas Home Demonstration Agents report that in the 1937 Home Improvement Program 2,179 farm families improved walls, woodwork and floors in their homes and 325 homes were remodeled. Home furnishings made by the women included 688 mattresses and 667 rugs. For the yards and premises, 1492 shade trees were planted and 1533 lawns were started or improved.

## VITAMINS IN EGGS

Texas A. and M. College through its experiment station staff is working on the production of eggs high in vitamin content by special feeding of the hens. Tests now under way show that by applying special food it is possible to increase the vitamin content greatly and establish a specialized market for such eggs to fit particular dietary requirements. (Dallas Morning News, March 20.)

## THE SOUTH'S NEW INDUSTRY

(Continued from Page 1)

making sweet potato starch. It produces about 40,000,000 pounds a year. Little effort is made to remove the natural yellow color and the sale is greatly restricted because the market prefers white starch.

The first sweet potato starch in this country was erected near Thibodaux, La. in 1928, but Irish potato starch machinery was used and as there was no known method for eliminating the "off color" this pioneer attempt failed and the plant dismantled, and at this point the chemist entered the picture. As a result of continued search, chemists succeeded in solving the color problem, and the starch that is being made at the new plant is not only white but of an unusually high quality.

This process for making starch came to attention of FERA during the spring of 1934 when it was searching for an griculutral industry to aid the people of the Coast Plains section of southern Mississippi. The Administration being impressed allotted $150 000 for the construction, equipping, and operating of a plan that would not only provide emergency relief work, but a market for sweet potatoes produced in that section, and a plant where methods and equipment could be perfected on a commercial scale. The factory was located in an abandoned sawmill plant at Laurel, Mississippi, and operated for the first time in the fall of 1934. The Laurel plant, which has a capacity of 200,000 bushels of sweet potatoes and 2,000,000 pounds of starch per 100-day season, has been deeded to the Mississippi Agricultural Experiment Station and leased to a self-help cooperative organization of farmers, at least 51 percent of whom are being rehabilitated. Listed below are the results of the 3 season's operations:

1934 produced 140,000 pounds of starch
1935 produced 250,000 pounds of starch
1936 produced 420,000 pounds of starch

Cost of manufacturing the starch including cost of raw material was, roughly:

1934—13 cents a pound
1935—10 cents a pound
1936—3 cents a pound

Sweet potato starch keeps well and can be carried over from one season to the next. There is very little deterioration when the starch is stored under normal conditions.

The new industry not only provides a cash market for culls, cuts, and other unmarketable sweet potatoes, but a ready market for a few acres of potatoes produced as a sideline to the main crop.

The country produces about 75,000,000 bushels of sweet potatoes per year, and a crop is grown on more than half the farms in the South. The most important vegetable crop produced in the Southern states is the sweet potato. North Carolina, Mississippi, Georgia, Louisiana, Alabama and Tennessee lead in production.

Following is a list of yield and starch content of 10 Southern varieties produced in test pilots at Laurel in 1936. These potatoes were produced under better than average conditions, but not better than progressive farmers can and are employing.

| Variety | Yield Bushel | Starch Content Per-Cent |
|---|---|---|
| Miss. Blue Stem | | |
| Triumph | 308 | 24 |
| Wennop (from Australia) | 303 | 27 |
| Pierson | 293 | 26 |
| U. S. 95984 | 279 | 21 |
| Miss. Green Stem | | |
| Triumph | 275 | 25 |
| U. S. 85985 | 275 | 21 |
| Norton | 267 | 28 |
| Nancy Hall | 252 | 22 |
| Porto Rico | 244 | 21 |
| Southern Queen | 212 | 23 |

A bushel of potatoes produces about 10 pounds of starch and close to five pounds of dried potato pulp which is about equal to sugar beet pulp in feeding. It takes about 48 hours to convert potatoes into market starch. It would take 150 plants the size of the one at Laurel, Mississippi to make as much root starch as we import.

The cost of building and equipping additional plants similar to the one at Laurel would run between $75,000 and $100,000 a plant. It requires 52 men working a three hour shift to operate the Laurel plant at full capacity.

## "STANDARDIZED" COTTON CROPS

An extra cash return of $8,500,000 was realized on the 1937 crop by growers in 781 communities who "standardized" good varieties of medium to long staple cotton. These growers produced about 1,500.000 bales ranging from an inch to 1 1-16 inch in staple length, said J. C. Ferguson, extension cotton gin specialist at North Carolina State College. The results secured in communities over the cotton belt are indicative of what growers in all cotton-growing communities can do if they cooperate in improving the quality of their product. In "standardizing" a community, growers get together and select a variety of medium staple cotton that is suited to their soil and climate. Then all or nearly all plant this one variety. Ferguson urges growers to secure good seed and wherever possible, cooperate with their neighbors in "standardizing" a good variety. "If you can't buy enough good seed to plant all your crop this year,' he said, "buy some good seed, raise it, keep it pure, and use the seed from this planting for next year's crop." —(Raleigh News Observer, March 21.)

## SURPLUS RICE PURCHASES

(Continued from Page 1)

to sell from millers, and acceptances by the Corporation, if the offers are regarded as in keeping with current market and surplus conditions. Opportunity has been given the millers for several months to submit offers under this program to the Corporation at Washington. It is expected that the program will continue for some time.

## TOWN GETS EARLY START ON SUMMER WAR WITH CRICKETS

Sundance, Wyo.—Warned that Mormon crickets would soon start their annual march across Wyoming, residents here today prepared to stop the invaders outside the city limits with hot oil and a wall.

Miles of shiny tin fence, erected last year only after the cricket hordes had crawled into homes, covering the walls with a brown and black creeping mass, will be thrown up earlier this year.

The defense was successful. Tons of the crickets piled up behind the strip of tin, a little more than a foot high. There they were saturated with oil and burned.

Last June and July so many crickets were killed in the streets by automobiles the Sundance fire department washed the streets daily.

Tourists visited Sundance to see the millions of crickets while residents joined in the belated battle against the invaders. This year, Sundancers say, it won't be a belated battle.

## NEW YORK REPORTS FARM LABOR SHORTAGE

Higher farm wages are not attracting workers to farms, and despite a business recession, the supply of farm labor available in New York State in January was actually less than a year earlier, it was recently reported by the New York Extension Service. Farmers were offering about 10 percent more pay for hired help, but fewer persons were available for farm work, it was stated.

The Service said that the type of agriculture in the State is such that considerable hired help is needed in winter.

## CONSUMERS SERVICE SEEKS TO POPULARIZE POPCORN

The Consumers Information Service of the New York Department of Agriculture and Markets each week issres a booklet on the preparation and uses of individual foods. Latest in the series is "Popcorn, Please" containing suggestions for popping corn and recipes for serving it in different ways.

"Revive the old custom of serving heaping dishes of hot buttered popcorn," the Department urges the housewives. "There are distinctive flavors in various kinds of popcorn, flavors as characteristic as those to be found in different varieties of apples.'

Meanwhile, the Bureau of Agricultural Economics reveled the scope of the popcorn industry in a report showing that commercial popcorn production in the 8 principal producing States totalled 92,664,000 pounds in 1937. This compared with the small crop of 36,721,000 pounds in 1936. Largest increases were reported for Iowa, Kansas and Texas.

## BEANS SHOULD RANK HIGH IN GARDEN FAVOR

For the space occupied, beans give more food than any other crop home gardeners can grow.

Only a "stringless" bush variety should be grown in the home garden. These are now available in four types: Round and flat green pods; round and flat wax pods.

As between these types, there is no definite difference in flavor and tenderness. Market buyers in recent years show a preference for green pods, but the home gardener may follow his own taste, or grow both for variety.

Flat pod beans give a heavier yield in some localities, but round pods are preferred by many good cooks, though not for any reason they can put in words. It would seem to be just a matter of taste.

Earliest bush beans will mature in 48 days. Pole beans take at least two weeks longer. Both the bush and pole beans may be eaten when half grown; indeed they are at their best at this stage.

Pole beans give a heavier yield than bush; but besides being later, most of them develop strings when they mature. A row of Kentucky Wonder on a fence will provide many delicious servings in the late summer, if one is careful to pick the long pods before they have gone too far.

All beans are tender plants and should never be planted until the ground is warm and frosts have ended. They need room to develop, at least six inches in the row and 18 inches between the rows.

In the home garden it is possible to gather beans from the first planting through the garden year, though the later yield will be smaller than the first. By successive plantings, heavy yields of bush beans may be had until killing frosts arrive.

Liberal feeding will repay well in growing beans. A balanced plant food should be applied to the bean patch at the rate of four pounds to 100 square feet, after the ground has been prepared and before the seed is planted. Rake it lightly into the top soil so that water will dissolve it and carry it down to the plant roots, making it immediately available to the young plants.

### IPECAC IN DEMAND

A Managua cable to the New York Times says the demand for Nicaraguan ipecac has become so great that to avoid its extinction President Anastasio Somoza has issued a decree forbidding digging up of the plant during March, April, and May. Heavy fines are provided for breaking of the law. The plant grows wild in some parts of Nicaragua. All attempts to cultivate it have failed. The United States and Germany are large purchasers of ipecac roots.

## FARM SOIL MAPPING

"Few farmers have their soils mapped," says an editorial in Better Crops With Plant Food (March). "Therefore additional credit should be given that already accorded Elmer Christenson of Fremont, Michigan, as being the first in Michigan to complete a 4-H club project in farm-soil mapping. He last summer mapped 13 fields totaling 160 acres, and became one of the best amateur soil-map makers that Michigan State College specialists have ever found. Through cooperation with the county agricultural agent and members of the soil-conservation department of the college, the boy set up maps showing lime requirements of each field, made an erosion-survey map, a soil-type map, and a base map of the farm. Each one shows accurate outlines, fence lines, and measured areas differing within fields. He found that lime requirements range from none on six fields to a demand for 20 tons of marl for a field containing 9.4 acres. He set down 1936 and 1937 crop yields of the various fields so that results of future cropping and management changes can be measured. Without doubt this young man has started a scientific as well as thoroughly practical understanding of the possibilities of increased profits from those 160 acres___ The completion of this project and the influence it may have on similar projects are contributions in keeping with those from many other important 4-H club projects which have attracted the nation's commendation."

## NATION'S SCOUTS

(Continued from page 8)

tional subjects through which Scouts are encouraged to discover their aptitudes.

At its annual meeting in 1936 the National Council of the Boy Scouts unanimously adopted a resolution to suggest "to any and all Scouts and Scouters, past, present and future, that they voluntarily send a copy of their fingerprints to the Department of Justice on the civilian cards which will be furnished by the Department."

The resolution pointed out that the filing of fingerprints by civilians is an infallible means of identification of law-abiding citizens who would benefit personally in cases of loss of money, accidental death and attacks upon their persons. Following the New London, Texas School disaster in March, 1937, many of the lifeless children were identified solely through the civilian files of the fingerprint records they had made while visiting the Texas Centennial Exposition at Dallas.

To earn the new Merit Badge for Fingerprinting as a Scout of First Class Rank must:

1. Take a clear and legible set of fingerprints, including rolled and plain impressions, on a standard 8 by 8 fingerprint card.

2. (a) Name the surfaces of the human body on which friction or papillary ridges are found. (b) Explain why plain impressions must necessarily be taken on a fingerprint card.

3. Show that he can identify the nine pattern types in which Sir Edward Henry groups fingerprint patterns; and collect a specimen of at least six of these types.

4. Give a brief history of identification by fingerprinting, and distinguish between civil identificaton and crminal identification, pointng out the useful purposes served by each.

5. Obtain the fingerprints of five persons and present evidence that these fingerprints, together with complete descriptive data, have been accepted for the civil identification file.

**Sea Scout Honored at Annapolis**

In an unprecedented ceremony at the U. S. Naval Academy, Annapolis, Md., the Quartermaster Badge, highest in Sea Scouting, was presented by National Director of Sea Scouting Thomas J. Keane to Midshipman Paul E. Becker, Jr., of Bridgeport, Conn.

Becker who graduates from Annapolis in June helped to organize Sea Scout Ship "Regnis" of Bridgeport five years ago. Quartermaster Sea Scout rank is so difficult to attain that only 1,100 young men have earned it.

**Blind Scoutmasters Are Honored**

Scoutmasters are civic-minded men whole volunteer service as leaders make possible the 34,201 Boy Scout Troops of the nation. Many of them lead the same Troops for many years.

Two unusual records of Scoutmasters' devotion to their boys were recognized with the presentation of Silver Beaver Awards to two blind Scoutmasters, one of Chicago and the other of Brooklyn, N. Y., for "distinguished service to boyhood."

Lewis Holden Smith became Scoutmaster of Troop 19, Brooklyn, N. Y., when it was organized in January 1919. In June 1920 he partially lost his sight, and feeling it would be impossible to carry on his responsibility as Scoutmaster he told of his feelings to his Scouts and the Troop Committee and presented his resiguation.

This, his associates flatly refused. They assured Mr. Smith that they would do the work if he told them how to do it.

Late in 1926 Mr. Smith's vision failed completely. By this time the Troop, under his guidance, was going along so well that he felt there was no reason for not going on. When he was honored at a testimonial dinner at the completion of his 19 years as Scoutmaster at which time he was succeeded by another Scoutmaster, Mr. Smith cheerfully said:

"Being a blind Scoutmaster is not really a hard job. With faith in boys, a vivid imagination, and by training oneself not to worry unnecessarily and putting the responsibility for the details of the work squarely up to the Scouts, it is just as much fun, if not more so, than to be a sighted leader with all sorts of technical training."

The second blind Scoutmaster is Fred F. Bolotin of Troop 300, Chicago, Ill., all of whose 18 Scouts are blind. In its 19 years this Troop has made an amazing record, having among its "graduates" a lawyer who uses a seeing-eye dog, a foreign language tutor, several chiropractors, college students and a piano tuner.

These boys wear Scout Uniforms and work in Scouting just like their brother Scouts. Their Scout Handbook is in Braille and they signal with morse code buzzers instead of flags. They make moccasins and belts of leather, book-ends of wood, Scout insignia of beads and needlework. Four Scouts play accordians and one sings very well.

"The most important thing we try to teach our blind Scouts," Scoutmaster Bolotin says, "is to be absolutely fearless. At camp near Whitehall, Mich., for two weeks each summer, each boy must climb a tree; it gives him courage. We haven't had an accident in twelve summers."

**Scout Heroes Rescue 24**

Since 1910, the National Court of Honor of the Boy Scouts of America, of which Daniel Carter Beard is Chairman, has recognized the deeds of 2,108 Scouts who saved the lives of others at great risk to themselves.

The seventeen Boy Scouts who were awarded Gold Honor Medals in 1937 rescued twenty-four persons.

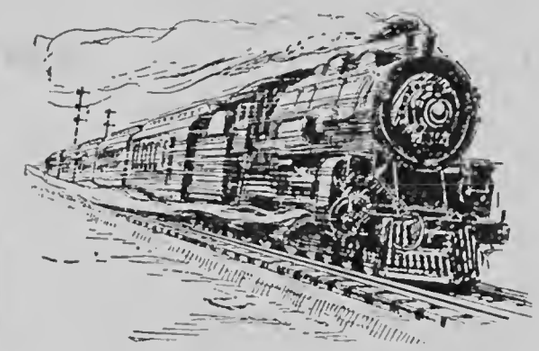
Fifteen persons were saved from drowning; five who had broken through the ice owe their lives to Scouts skilled in ice rescues; one person was safely brought out of a burning building, the scene of a fireworks factory explosion. A middle aged couple was rescued from their blazing motor cruiser just in the nick of time, and one Scout who knew just what to do in such an emergency saved his friend from death by contact with a live wire.

The Sunday School Congress

Will Meet This Year in

KANSAS CITY, MISSOURI

June 8-12, 1938



I Shall Expect to

SHAKE HANDS

With You in This

THIRTY-FOURTH ANNUAL SESSION OF OUR SUMMER SCHOOL OF METHODS

ST. STEPHENS BAPTIST CHURCH

With Rev. R. J. Jordan, Pastor

is planning the grandest reception possible for the workers in Sunday Schools, B. Y. P. U.'s Organized Classes, Mission Circles, Home Department Workers, Vacation Bible School Workers, Pastors and other delegates. Kansas City offers many inducements to those who have never visited this industrious, Metropolitan, busy city.

*The Sunday Mass Meeting will be held in the CITY AUDITORIUM, Which cost the city $6,500,000.00*

This magnificent structure alone is worth the trip to Kansas City. Historic St. Stephens Baptist Church, formerly pastored by the late Rev. J. W. Hurse, is well adapted to the needs of the Sunday School Congress. Ministers of the Baptist Denomination are giving Rev. R. J. Jordan, pastor of St. Stephens and the Committee appointed every assistance, as are ministers of other denominations, to make the 34th Annual Session the greatest in the history of the Congress movement.

**May I Expect You and Other Workers from Your School?**

# SIXTY-FIVE GET ON HONOR ROLL AT STATE COLLEGE

## Nashville Has 19 In Group Reported By Registrar For Winter Term

Miss Georgia L. Jenkins, Registrar at Tennessee State College, announced at special chapel exercises today the names of the honor students during the Winter Quarter. The sixty-five persons who attained this enviable distinction represent a big increase over the mere thirteen who were honored at the close of the Fall Quarter.

Miss Gwendolyn Claire Hale, the only daughter of President and Mrs. William J. Hale, again maintained her stellar performance of being first in scholarship in the entire institution. Miss Mary Forbes of Nashville, the daughter of Prof. and Mrs. D. A. Forbes of A. and I., and Miss Frances Chavers of Centerville, tied for second place; and Mrs. Rachel Patillo of Nashville and Mr. Louis Tolliver of Chattanooga tied for third. The complete list follows:

Gwendolyn Hale, Mary Forbes, Rachel Patillo, George Hardin, Lula Meredith, Katherine Morris, Mildred Johnson, Margaret Bays, Willye K. Harris. Ruth D. Sims, Harold Love, Don Q. Pullen, Louise Stinson, James Bailey, Edward Hale, Mabel Keemer, Everil Harwell, and John C. Hull of Nashville; Frances Chavers, Centerville; Louis Tolliver, Marguerite Gillespie, Lyzabeth Harrison, Mildred Clift, Clara Ghiden, and Elizabeth Douglas, Chattanooga; Thelma Lytle, and Erskine Lytle, Murfreesboro; Corinne Taylor, Vicksburg, Miss.; Anne Patton, Alcorn, Miss.; Vivian Weddington, Chicago, Ill.; Mayme Hubert, Savannah, Ga.; Charles D. Coleman, Halls, Tenn.; Annie G. Davis, Marion, Ala.; A. C. Searles, Albany, Ga.; Allie Kinley, and Bessie Johnson, South Pittsburgh; Mildred Fields, E. Chicago, Ind.; Oliver Ward, Theodore Lawson, Birmingham, Ala.; Glyndon Flynt, Fayetteville; Celeste McMahan, Knoxville; Frances McGuire, Memphis; Allie R. Odell, Paducah, Ky.; Anethia Barksdale, Baltimore, Md.; Jeanette Tuggle, Batavia, Ill.; William Fox, Milwaukee, Wis.; Lillie Bland, Bowling Green, Ky.; Beverly Bethel, Covington; Lemuel Lanier, Dickson; Mary Wickware, Franklin, Ky.; Mary Buckner, Clarksville; Ernestine Walker, Springfield; LaVerne Crawford, E. St. Louis, Ill.; Gilbert Pleasant, Middletown, Ohio; Mae Barbee, Springfield, Ohio; William Vantrease, Watertown, Tenn.; Charles Farmer, Franklin, Tenn.; Billy Jones, E. St. Louis, Ill.; Inez McDowell, Asheville, N. C.; James McGlothern, Maryville, Tenn.; Neal McAlpin, Dayton, Tenn.; Lillian Johnson, Los Angeles, Calif.; Blanche Boone, Luxora, Ark.; and Samuel A. Walcott, New York City.

**Famous War Correspondent Visits Institution**

Mr. R. W. Merguson, famous war correspondent and special representative of the Pittsburgh Courier, was the honored guest of the College, Wednesday and Thursday. He was with the armies in Ethiopia during the invasion of that country and his cabled articles attracted world attention.

**Singers Return**

The celebrated A. and I. Concert Singers under the superb direction of Mrs. Marie Brooks Strange, have just returned to the institution from a whirlwind swing through East Tennessee. Hundreds greeted them at Chattanooga, Knoxville, Morristown, Johnson City and elsewhere. President Hale accompanied the group with a small party of his own. Everywhere the songsters were wildly acclaimed.

## WOMAN KILLS WHITE FARMER

Walterboro, S. C.—(ANP)—County officers last Monday arrested Mrs. Lottie Kensey on the charge of fatally shooting J. S. Padgett, 71 years old, a well known farmer and business man of Padgett's in upper Colleton county.

According to the story told police by Mrs. Kensey, the shooting occurred at her home at about 3 o'clock in the morning, following a dispute over some property. She said Padgett was trying to dispossess her. She fired her single-barreled shotgun, the charge entering Padgett's left side, killing him instantly.

She then reloaded the gun, went on a rampage of shooting, killing a bulldog and a pig, seriously wounding another farm dog, and a cow. She said she did not intend to let "them have anything off the place." After the shooting spree Mrs. Kensey said she went to the house of a neighbor to get him to drive her to the sheriff at Walterboro, but he refused. She was found later at the home of her uncle and placed under arrest by Sheriff Rhodes.

## ALL-NEGRO FARM TOWN IN ALABAMA PROPOSED

**Project Would be Model Community of Farms, With Stores, Parks, Theatres, Plan Centers**

Birmingham, Ala.—Alabama may be one of the first states in the nation to boast of an all-Negro farm town if plans initiated by the Southern Progress Association materialize.

The association is sponsoring the idea of farm towns within a radius of 30 miles of the Birmingham district, the towns to be owned, controlled by and peopled with Negroes. Representatives of the association report they have a tract of land half way between Gadsden and Birmingham, upon which it hopes to initiate the experiment.

The land will be sold in lots to Negroes in the Birmingham district, who will then be expected to place a relative or tenant on the farm to operate it on a partnership basis.

The association hopes the result will be a model community of farms, surrounding a business area containing modern stores, parks, theatres and play centers.

The Southern Progress Association will be a model community of farms, surrounding a business area containing modern stores, parks, theatres and play centers.

## Harry L. Hopkins Tells WPA Workers To Vote Sentiments

**Have No Fear of Losing Their Jobs if They Do, He Assures Them**

Washington, D. C.—Harry L. Hopkins, Works Progress Administrator, today wrote a letter which will be received by every WPA worker when he collects his pay check emphasizing the absolute political freedom of every person on the rolls of this agency.

No one will lose his job because of his vote in any election or his failure to contribute to any campaign funds," Administrator Hopkins wrote, underlining these words: "This has always been an absolute rule of WPA," he added, "and it is my responsibility and yours to see that there are no exceptions. What's more, I want you to let me know if anybody tries to tell you anything different."

Sufficient copies of the letter have been ordered so that each of the nearly 2,600,000 project workers and the supervisory and administrative employes will receive this message with the next payroll check distributed by the Treasury State Disbursing offices.

## QUESIONS AND ANSWERS

**Is Morehouse College accredited by the Southern Association of Colleges and Secondary Schools? Please tell me of its works since affiliating with Atlanta University.**

Ans. Yes, Morehouse College in Atlanta, Georgia, is accredited by the Southern Association of Colleges and Secondary Schools. It received the "Class A" rating in 1932. On April 1, 1929, an arrangement was completed among Atlanta University, Morehouse College and Spelman College for the affiliation of these three institutions in a university plan, the graduate and professional work to be carried on by Atlanta University, the college work to be done by Morehouse College and Spelman College. Further information on this affiliation and the present-day offerings of Morehouse may be found in its catalogue. Write for one.

**Who is the editor of "Opportunity"?**

Ans.—Elmer Anderson Carter is editor of "Opportunity, Journal of Negro Life".

**What is the oldest book in the Negro Collection of the Fisk University Library?**

Ans.—Probably the oldest book in the Negro Collection at Fisk University is "A New History of Ethiopia" by Job Ludolphus and translated into English by J. P. Gent. It is two hundred and fifty-six years old, being published in London in 1682.

**What do you consider some of the greater needs of the native Africans of today?**

Ans.—I know of no better answer to give than to quote from a recent writer on this subject who lives in South Africa. I believe his points are well stated: "First and foremost among the present-day needs of the Africans is more land on which to farm. They are an agricultural and pastoral people. But their lack of rural holdings, due to the encroachment of white farmers who own twelve-thirteenths of the land, has forced large numbers of the Africans to go to the cities and towns to live. They constitute a baffling housing and employment situation in urban areas." Education should be made available. "Only twenty-six per cent of the native children in South Africa are within reach of a school." They also need special agencies of many kinds to aid them to make a satisfactory adjustment to an industrial order. Christianity constitutes a need which all of us realize and there confronts the Christian African this great present-day need, a unified church—a unification of the missionary agencies at work among them. In the final analysis the needs confronting the native African of today also confront the present-day American Negro.

## Howard University

Washington, D. C.—Mr. William Pierce Goodwin, who is registered in the College of Liberal Arts, Howard University, has been selected as the recipient of the Medal and Junior Membership offered annually by the American Institute of Chemists for outstanding scholarship in Chemistry.

These awards are made annually in designated universities to the student majoring in Chemistry who excels in scholarship and in the personal qualities of integrity and leadership.

The award to the Howard University student last year went to Joseph Taylor Ligoure of New York City, who received a Bachelor of Science degree from the College of Liberal Arts at the annual commencement exercises held June 11, 1937.

We free ourselves from the habit of condemnation when we see that we have no right to condemn others.

There is nothing equal to new ideas to renew the mind.

When we find ourselves thinking of evil, change our thought.

When we are malicious toward another; we open the way for malice to appear in our own life.

# LOUISIANA LEADERS CHARGE CANE WORKERS INTIMIDATED

## Forced to Work Fourteen Hours a Day for $1 in Wages—Mrs. Margery Goldstone and Rev. W. T. Handy, Speak

New Orleans, La.—Meeting at the Association of Commerce under the auspices of the Department of Commerce with examiners from the Federal department in charge, leading Negroes of New Orleans and of other sections of Louisiana charged that the cane workers were intimidated, that bad sanitary conditions existed, that low wages and long hours obtained and many other unfair practices existed. Some white leaders also spoke.

Mrs. Margery Goldstone, representative of the Co-operative Union of America said that the Negroes on the fields were forced to work from sun-up to sun-down, some fourteen hours per day, and were paid a wage of approximately $1 per day. She urged the men who were unskilled to be given a $1.50 per day, and the women received $1.20 per day. She urged the establishment of a ten-hour day. The union also asked that a representative be present when the cane was weighed. It was brought out in the meeting that the cane was taken off the wagon and the man who brought it not permitted to see the weight. Any weight could be given him, and he would be forced to accept it.

The Rev. W. T. Handy, pastor of Mt. Zion Baptist Church, stated that many of the hands had left the cane farm because of these poor conditions and that if the conditions were bettered, they would return. "All they wanted," said he, "was fair wages and a decent living wage."

W. T. Meade Grant, head of the local Elks Lodge spoke about the deplorable conditions, and named specifically plantations where actual slavery conditions existed. About 75 persons attended the meeting.

## DISEASE FROM RAW MILK

'More than one half of the 123,000,000 people in the United States are still consuming potentially dangerous raw, or unpasteurized, market milk even though the public health importance of milk pasteurization has long been established, Dr. James A. Tobey, prominent New York health expert, recently told the annual convention of the International Association of Milk Dealers," says Scientific American (January). "Only about 4 percent of the fluid milk produced in this country is pasteurized. 'In 1936 there were 42 epidemics of milk-borne diseases in the United States, involving 1,547 cases of preventable diseases, and 28 unnecessary deaths, as reported by the U. S. Public Health Service,' said Mr. Tobey. 'In every instance these unfortunate outbreaks of typhoid fever, septic sore throat, scarlet fever and other communicable diseases were caused by infected raw milk of low grades. The only gratifying fact about these epidemics is the fact that the number is less than the country's average for the past 10 years, indicating a gradual improvement in the small town and rural milk supplies in which most of these outbreaks occur---'"

today?"

Dub: "Two motorists after the same pedestrian."

# RED CAP RETIRES AFTER 27 YEARS SERVICE; OWNS BUILDING, FARM

Chicago, May 5—(ANP)—William Pryor Bell, 67 years old, a well known Chicagoan and for years the chief usher at North Western station, last Thursday heard the "all aboard" shout of the train conductor officially for the last time, picked up his last piece of baggage for a hurrying passenger—and thus ended 27 years of active life as a Red Cap in the hustle and bustle of the train shed.

Owner of a six-apartment building on South Parkway and a 12-acre farm in Michigan, Retired Red Cap Bell anticipates a future active existence on the farm, whence he departed in 1890, to be a waiter on the Northern Pacific Railroad. He said:

"I've had what I call a great career. I've been successful anyway, and I've enjoyed working. Now it's back to the farm for me. That's my first love and it won't be hard to return to it." His farm is located near a lake well stocked with fish. He plans to raise chickens and goats. Asked his recipe for success, Bell paid deserved tribute to his wife. "You can give all the credit to my wife. If it had been left in my hands, I'd have spent everything long ago."

## HOME-CANNED TOMATO JUICE

Hazel M. Hauck, of the New York State College of Home Economics, reports in the Journal of Home Economics (March) on the vitamin C content of home-canned tomato juice. In summarizing the work, she says: 'The observation that home-canned tomato juice may be a good source of vitamin C is confirmed by the study here reported. Tomato juice canned in tin was found to contain approximately twice as much reduced ascorbic acid as similar juice canned in glass and stored in the dark. Reduced ascorbic acid, which was the principal form found in freshly opened tomato juice, was more stable in the juice canned in tin than in samples of the same lot of juice canned in glass. Tomato juice canned in tin lost about one-fourth of its reduced ascorbic when held 4 days in the refrigerator after opening."

## FT. VALLEY'S HAM, EGG SHOW PROVES BIG SUCCESS

Ft. Valley, Ga. (SNS)—Thursday and Friday brought again Fort Valley's wonderful Ham and Egg Show which seemed the climax of all previous exhibitions. There were 250 hams besides whole sides of bacon, cured and attractively staged all across the auditorium and 100 dozen fine eggs. The 4-H boys and girls came in a swarm from Houston and Peach counties to the number of 600. In addition were 300 farmers and their wives who enlarged the exhibition which included cakes submitted by farmers' wives in contest for prizes. There was also a contest for the best hams for prizes of $25 offered by the Macon Telegraph.

The whole program was enlivened by music from the Fort Valley choir and by a heated debate on the subject, "Resolved: That Poultry is of More Value than Hog." The decision went to the speakers for poultry but the audience was in favor of those who argued for swine.

Among the prominent visitors were Bishop W. A. Fountain, of the African Methodist Episcopal church; Hon. W. T. Anderson, editor of the Macon Telegraph; Jones Purcell, state swine specialist; Eugene Anderson, Miss Camilla Weems, assistant State Agent for Negro Extension Workers in Georgia; Alexander Hurst, State Club Agent; A. Price, successful business man of Atlanta, and many others. All of the speakers gave glowing tributs to the Ham Show and to the Fort Valley Normal and Industrial School.

## PICKED FORTY-SIX YEARS AGO

Two bales of cotton, 46 years old, were sold recently at Fayetteville, Ga., by B. B. Gilbert, of Fayette county, according to Farm Journal. They were ginned in 1891 and were wrapped in white Alliance cotton bagging. The cotton was a good staple. It brought nine cents.

# NASHVILLE WOMAN GIVEN PLACE ON NATL Y.W.C.A. BOARD

During the recent meeting of the Fifteenth Annual Convention of the National Y. W. C. A. of America, the local Branch was signally honored by members of its organization. Mrs. W. J. Faulkner, Recording Secretary of the Committee of Management, was a member of the Resolutions Committee of the Convention, and Mrs. Chas. S. Johnson, Branch Chairman Committee on Colored Work, was elected to the 1940 Planning Committee for 16th National Convention of the Y. W. C. A. of America. Miss Rachel I. Taylor, Executive Secretary, was elected to speak for the Negro Secretaries of the United States at the banquet held in honor of Mrs. Cordelia A. Wynn, National Secretary who retires after 20 years of service. More than 3,000 women and girls from 45 states in the Union and from foreign countries were in attendance. The leading hotels and restaurants of Columbus, Ohio, were opened for Whites and Negroes, it being the policy of the Y. W. C. A. not to meet in any city where discrimination is made. Vital issues of the day were considered and the convention was felt to be the turning point for the Y. W. C. A. of the future. Delegates from Nashville included Mrs. S. S. Morris, former president; Mrs. Alta Mae Turpin, corresponding secretary; Miss Allene Williams, former president Co-op's Club; Mrs. Charles S. Johnson, Mrs. W. J. Faulkner, and Miss Rachel I. Taylor.

## HE WHO KNOWS—

—How to work has laid the cornerstone of success.

—How to laugh has learned how to conquer worry.

—How to serve is on the highway to greatness.

—How to trust humanity has prepared for a happy old age.

—How to study has gone into partnership with the universe.

—How to forget has saved himself from a burden of grudges.

## SWEET POTATO CHAMP'S CROP GETS A-1 CARE

Beginning as a 4-H club boy in 1933, Wilson Pratt, Union county, has been a consistent winner each year in the sweet potato project, the first three years with a record of more than 200 bushels per acre, and in 1936 and 1937 with a record of more than 300 bushels per acre.

This high yield has not been an accident, but was the result of good practices, said Roger C. Crum, county agent.

"Wilson thoroughly prepares his land, then puts up as high a hill as possible, using two furrows with an eight-inch turning plow," the county agent explained. "The balk is then run out with a large middle buster. Three hundred pounds of 4-8-6 fertilizer is used per acre.

"The plants are set 18 inches apart and cultivated as shallow as possible throughout the season. They are set as early as weather will permit.

"When the potatoes are harvested, a vine cutter made from an old cross-cut saw is used to cut the vines. Number 1 and Number 2 potatoes and seed potatoes are harvested. Jumbos, damaged, and other off-grade potatoes are left in the field to be harvested by hogs bought with money earned by 4-H club projects.

"The quality of the potatoes Wilson grows is indicated by the fact that in 1934 he exhibited at the National Club Congress in Chicago, and won first place in competition with entries from 10 other states."

With money made from five years of 4-H club work, Wilson has bought hogs, beef cattle, and a horse, and has money saved to attend college when he finishes high school this year, the county agent said.

## "PLATED" COTTON BALES INVESTIGATED IN LOUISIANA

An investigation of reports of the "plating" of cotton—the practice of placing low-grade cotton or metal in the center of a bale—was recently announced by Federal Attorney Harvey G. Fields, Shreveport, Louisiana. Fields explained that samples taken from bales surfaced with high-grade cotton and centered with low-grade cotton fail to reveal actual values. He said that the "plating" of cotton is against the Federal law, that persons guilty of the offense and ginners who press the bales are liable for prosecution.

### THE DAILY DIGEST SAYS: LAFORGE FARMS EXPERIMENT

One hundred men, a few months removed from their sharecropper status, urged 100 teams of newly acquired mules to greater speed recently as they plowed level acres of LaForge farms, the Farm Security Administration's latest experiment in rural rehabilitation, says an Associated Press report from New Madrid, Missouri. Each man has been set up as a diversified farmer, with a farm of from 55 to 70 acres, leased to him by FSA, a team of mules, new farming equipment, a milk cow, a hog and pigs, and 50 chickens, purchased with funds loaned by FSA. Each of the 60 white and 40 Negro families, numbering about 600 persons, has a large garden plot. Each of the farms will have new buildings, prefabricated and hauled knocked-down by truck to locations. Cost of the houses is figured at slightly under $1,000 and the barns at approximately $500 each. The houses have three bed-rooms, combination living and dining room and kitchen. In the middle of the 6,700-acre tract, purchased at an average cost of $41 an acre, is a cotton gin valued at $25,000. The farmers organized the LaForge Co-operative Association to operate the gin. The association also set up a co-operative store. The cotton crop is to be marketed co-operatively. Carl Puckett, president of the Co-operative Association, said purchase of implements through the store saved the farmers $12,000. The farmers are committed to repay their loans to FSA by turning over one-fourth of the cash from their cotton crops in addition to $50 rental this year. After the farmers have had opportunity to establish themselves, it is probable that a plan will be worked out whereby they can become land-owners. The farmers have agreed to plant only certified cotton seed from which they expect to produce staple of premium grade.

### COW NEARS 40TH YEAR SAYS INDIANA FARMER

Old Red, a cow that has had 37 calves, will celebrate her 40th birthday "some time this spring."

Her owner, John Hetrick, of Ft. Wayne, Ind., said she had given a good supply of milk until last fall —"that's why we never sold 'er. She's just a part of the family now."

Old Red hasn't any teeth and must be fed chopped feed. Hetrick said she shows "a strong strain of Hereford blood, but she might have a trace of the Scottish Highland breed in her."

## WILT-RESISTANT WATERMELON

"Farmers who have been forced to stop growing watermelons because their land is contaminated with the fungus that causes the wilt disease can now grow this crop successfully by using the new Hawkes Wilt Resistant watermelon that is being introduced by the Virginia Truck Experiment Station this year," says Dr. Harold T. Cook, of the Station, in the Southern Planter (March). "This new watermelon is not only resistant to wilt, but in the trials that have been conducted at Smithfield, it was of such excellent quality and type that many experienced watermelon growers who were not yet troubled with wilt expressed a desire to grow on their farms." Stating that the seed as obtained from Australia, he says the seed is available for trial___ So far none of these melons has been found affected with 'white heart'___"

## POSTERS TO PROMOTE POULTRY IMPROVEMENT

The United States Department of Agriculture announced last week that "to promote interest in well-bred, healthy chicks, posters featuring 'A Guide to Quality Poultry'" will be displayed during the 1938 hatching season in the 42 States using the National Poultry Improvement Plan in cooperation with the Department.

The posters carry the improvement-plan emblem with its alert baby chick, an already-familiar design to cooperating poultry breeders and hatchery operators and to chick buyers who have been purchasing N. P. I. P. chicks during the two hatching seasons the plan has been in operation.

One consolation about talking to yourself is that nobody's going to talk back.

Especially prepared Recipes and Menus for the Readers of the Globe
By CHARLES W. FRANCIS

ROOT VEGETABLE LENDS ITSELF BEST TO COMBINATION WITH OTHER DISHES
PLEASING POTATO RECIPES FOR MEALS IN THE EARLY SPRING
POTATOES ARE AMONG THE CHEAPEST OF FUEL FOODS

### DINNER MENU

Baked Spareribs with Potatoes — Southern Cabbage
Vegetable Salad — Buttered Apples
Corn Sticks — Coffee
Pineapple Pie

### POTATO COOKERY NO. 1

Wash and peel potatoes and cook in boiling salted water until soft. Drain and butter or mash. If mashed add butter and salt, mix thoroughly and add enough milk to make them light and fluffy. Keep potatoes in the top of a double boiler until they are to be served.

### POTATO COOKERY NO. 8
Fried

Wash and pare potatoes. Let stand in ice water for an hour. Cut in cubes, dry thoroughly in a clean towel. Have frying pan of fat, heating and a dripping pan with either wire rack or soft brown paper ready for draining. The salt should be added after the potatoes are done. Serve at once.

### CREAM SAUCE FOR POTATOES

½ cup butter — 2 cups milk
3 tablespoons flour — salt

Melt the fat, add flour and salt and stir until smooth, add milk. Cook until thick, stirring all the time to prevent burning.

### PAN SAUCE FOR POTATOES
(Brown Gravy)

2 tablespoons fat — 3 cups of hot water
1 tablespoon flour — Pepper and salt

Brown fat in which meat has been cooked, add flour and let it brown. Add the hot water. Stir, season. Cook until the starch flavor is lost.

POTATOES ARE EASILY AND QUICKLY REHEATED, LEFT OVER POTATOES HAVE MANY USES

### POTATO PUFFS

6 cups hot mashed Potatoes — 6 tablespoons milk
1½ teaspoons salt — 3 tablespoons butter
½ teaspoon paprika — 3 eggs

Add the seasonings to the mashed potatoes and the well-beaten yolks of the eggs and beat well. Then, add whites of eggs which have been beaten stiff. Turn into a baking dish and bake until a golden brown. Cold potatoes may be used in place of hot potatoes if they are heated in a double boiler before using in the recipe.

### POTATO PATTIES

Whenever there is mashed potatoes left from supper, make into little cakes about two inches thick and two and half inches in diameter, roll in flour and fry in pan with a little fat. until a light brown. This makes a wonderful breakfast dish.

### POTATO SPOON BREAD

1 cup corn meal — 1 cup milk
2¼ teaspoons salt — 1 cup mashed potatoes
1¾ cups water — 1 tablespoon shortening
3 eggs — 1 teaspoon baking powder

Mix the cornmeal, salt and water, and boil seven minutes. Add milk, mashed potatoes, and shortening to well-beaten eggs. Combine these ingredients to the cornmeal mixture, and beat for five minutes. Bake in a greased baking dish in a moderate oven. Serve from the dish it is baked in with a spoon.

### MORE POTATO SUGGESTIONS

1. Use the water drained from potatoes in making yeast bread.
2. Use cold potatoes in meat balls.
3. Use mashed potatoes for thickening gravies.
4. Make potato salad from hot or cold potatoes.

POTATOES ARE HEALTHFUL, FILLING, EASILY DIGESTED. POTATOES WITH VEGETABLES ARE GOOD.

### POTATOES AND PEAS

1 cup Peas — 6 teaspoons butter
3 cups cubed potatoes — 4 teaspoons flour

Pare potatoes and cut in cubes. Cook, drain, dry out. Make sauce of the butter, flour, seasoning and milk. Combine all and heat thoroughly.

### POTATOES WITH ONIONS

6 cups diced cooked Potatoes — ½ cup fat
2 large onions — salt and pepper

Brown potatoes and onions in hot cooking fat. Season to taste.

### POTATO DESSERT
Mashed Potato Cake

2 cups brown sugar
1 cup butter, creamed well
1 cup sweet milk
½ cup mashed potatoes
1 cup raisins
1 cup chopped nuts
1 square of chocolate (melted)
2 teaspoons baking powder
2 cups flour
1 teaspoon cinnamon
½ teaspoon clover
1 teaspoon nutmeg
4 eggs, beaten lightly

### POTATO PIE

1½ cups mashed potatoes
1 cup cream
1½ cups sugar
¼ teaspoon salt
½ teaspoon nutmeg
¼ teaspoon cinnamon
2 eggs, slightly beaten
4 tablespoons butter

Combine ingredients. Mix thoroughly. Pour into pastry which has been baked and continue to bake the filling until an inserted knife comes out clean.

If you would like any special recipe, write—Charles W. Francis, Tuskegee Institute, Alabama. Enclose a stamped envelope.

## AYRSHIRE RECORD

The world's record Ayrshire producer in the senior three-year-old, 305-day division of the roll of honor, is Penshurst Charming Elma, owned by Richard Whitney of Far Hills, New Jersey. This heifer made a record of 15,857 pounds of butterfat, displacing her nearest rival by 79 pounds of butterfat. Characteristic of her record was the uniformity of production of this Ayrshire. In no month did she exceed an average of 60 pounds of milk per day, and she completed her lactation with a production of 40 pounds per day. During her record, Penshurst Charming Elma produced five pounds of milk for each pound of grain consumed. (Coastal Cattleman, April.)

## NEW ORLEANS DELEGATION ROUTED

### Dr. Wm. Jackson, Chairman Announces Scheduled

New Orleans, La., (Special)—One of the largest delegations in the history of the Sunday School Congress Movement will go from this Crescent City to Kansas City to attend the Thirty-fourth Annual Session of this Summer School of Methods. Assurance was given of this movement at a recent session of the transportation committee, which is headed by the Rev. Wm. Jackson, D. D., as chairman who is also president of the Louisiana Freedman Missionary Baptist State Association.

Dr. Jackson also announced that the committee had selected the Missouri-Pacific Lines out of New Orleans as their route. They are to leave the Missouri-Pacific Station at Thalia and Annunciation streets at ten o'clock Monday night, June 6th. They will arrive at the Union Station, Kansas City, at 7:15 Wednesday morning, June 8th, in time to meet the Sunday School Congress special with its officials, that will arrive at nine o'clock the same morning.

Rev. Mr. Jackson further announced that a coach rate for parties of twenty-five or more had been promised them by the Missouri-Pacific System of $26.55. He stated that the ministerial rate for those preachers who hold either the Southwestern or the Western Clergy Book would be $17.69.

Their special car, says Dr. Jackson, will be operated on the going trip, via St. Louis, Mo., that is, they will leave New Orleans and go directly to St. Louis; and after the adjournment of the Congress the return trip will bring the messengers home via Coffeyville and Fort Smith, Ark.

The following is the personnel of the committee on transportation whose report was read and accepted at their last meeting:

Rev. W. M. Jackson, chairman.
Rev. C. C. Taylor, vice chairman
Rev. Allen J. Carter, vice chairman.
Mr. James ' Townzal, president Sunday School Asso.
Mr. Thomas Haydem, president B. Y. P. U. Asso.
Mrs. Margaret B. Young, chairlady Boosters Club.
Mrs. A. D. Saulsbury, Mrs. S. Washington, Miss Thresa Boyd, Mrs Adele Andrews, Mrs. Viola Lee, Mrs. Ruby Green, Mrs. A. M. Hamiliton, Mrs. E. Porter, Miss Alberta Sherman, Miss Ruth Jackson, Mr. John Clark, Mr. Eugene C. Cannon, Mr. John S. Coleman, Mr. D. Roberts, Mr. Thomas Hedgman, Mr. Newton T. Hill, Rev. F. F. Johnson, Rev. Irby Jewel, Rev. Paul Jackson, Mr. Walter Strudie, Rev. R. D. Wright, Rev. B. F. Chester, Rev. J. H. Lenard, Rev. H. B. P. Johnson, Mrs. M. Gomez.

**Entries in the Name-The-Fun-Zone Contest of the 1938 Golden Gate International Exposition reached a total of 454,477— which gives the judges plenty to keep them busy.**

## Walter White

Mr. White made a plain every day commonsense talk to his race, at the First Congregational Church in Atlanta May 1st, 1938. He made no effort at oratory, but made a commonsense statement of the facts constituting the social, economic and political plight of every Negro in America, that ought to appeal to every Negro who heard him talk.

If Walter White's talk didn't prick the conscience of every person, who heard him, and arouse in their breast a sense of racial consciousness, they never had before, our case is helpless; to the end that Negroes will think in terms of race solidarity, and fight for the free exercise of their constitutional rights.

Liberty comes only to those who strike first for liberty. Lincoln gave the Negro freedom but he did not give him liberty. He gave us freedom that we might fight for, and earn our liberty. Human liberty is a precious jewel not given to man, but earned by man through sacrifice and blood. Eternal vigilance is the price of liberty, and no other price can buy it.

Somehow we believe in Forrester Washington, Director of School of Social Work. We do not know why, but we keep on thinking we have something "there" in Mr. Washington. We guess we believe in him, because he will fight, and we love a game fighter. In introducing Mr. White, Mr. Washington said, I do not know what to say and I am a little somewhat embarrassed. Right then we wanted to take over the job. We have some funny notions or ideas like Mr. Washington. We think degrees and titles detract from real men and add nothing to their personality. It is the background upon which the training is based, that stands out, and not the title and degrees. The only speech necessary in presenting Mr. White, is, "Gentlemen and ladies, I have the honor to present to you, Walter White our speaker today." You cannot introduce men like Walter White, Henry Allen Boyd, Forrester B. Washington, Jr., L. K. Williams, E. R. Carter, Mordecai Johnson to the people, any more than you could have introduced Teddy Roosevelt, Booker Washington, Abe Lincoln, Richard Boyd, Fred Douglas in their day to the public. The public knows more about men in these classes than an introducer can tell it.

Mr. Washington said that right was never defeated; and that Mr. White had won a greater victory for his people than he would have, if he had passed the Anti-Lynching Bill. Because he had put the Southern Senators on the naked spot and created a sentiment, that would eventually write the Anti-Lynch law bill on the Federal Law Book. He asked the public to give Mr. White more moral and financial support in his struggle to obtain an equality of rights and opportunities for his race. Walter White gave us a new sight into his efforts to serve his race and more faith and confidence in his sincerity.

---

With Violet cuddling in his arms,
he drove his car—poor silly,
Where once he held his Violet, he
now just holds a lily.

---

"I suppose," said the lady to the bus operator, "If I pay the fare of my dog he will be treated the same as other passengers and be allowed to occupy a seat."

"Of course, madame," the operator replied politely. "He will be treated the same as other passengers and can occupy a seat provided he does not put his feet on it."

# NATIONAL FEDERATION of COLORED FARMERS, Inc.

FOUNDED BY JAMES P. DAVIS

FOR THE 900,000 NEGRO FARM OPERATORS IN THE UNITED STATES

LEON R. HARRIS, PRES.
MAJ. R. A. BYRD, VICE-PRES.
S. B. WILSON, SECY.-TREAS.

FOUNDED IN 1922
INCORPORATED IN 1930
MEMBERSHIP IN TWENTY-ONE STATES

OFFICE OF THE PRESIDENT
MOLINE, ILLINOIS
P. O. BOX 285

DEAR FRIEND:

FARMERS SUNDAY should be a national institution. This special day, set apart in honor of the farmer and for his benefit, should be observed throughout the nation.

For the past nine years the National Federation of Colored Farmers has proclaimed the second monthly fifth Sunday of the year as FARMERS SUNDAY. Members of our organization observe the day by holding appropriate religious services. It is also a day of family reunions; a day when city friends may visit the rural community; a day when the farmer has a special opportunity to pay due honor to his business and vocation.

Farmers have contributed more than any other group to the substantial progress of the nation. We are requesting that you join us in observing this, their day, Sunday, May 29th. See that FARMERS SUNDAY is observed in your community. Tell your farmer friends about it. Help us make this day a NATIONAL INSTITUTION.

Any consideration given this request will be greatly appreciated. We would like to know what you think about FARMERS SUNDAY as a national day for ALL AMERICAN FARMERS.

Sincerely,

LEON R. HARRIS, President.

# ATLANTA'S FAMED WILLIE DANIELS, CATERESS TO THOUSANDS, IS DEAD

### There Have Been But Few Outstanding Events That A Negro Didn't 'Fix for White Folks'; Peak was Luncheon for 16,000 at Agnes Scott

Willie Wimbish Daniel, a Negro girl who came to Atlanta with a gift of cookery that built a career of "fixing for white folks"—an institution among the city's socially-prominent families—died last week.

Willie, who was 66 years old, was Atlanta's first cateress. Not many outstanding social events, teas, dinners, luncheons, debutante parties, wedding receptions took place without Willie presiding in the kitchen, and few notables or dignitaries were feted at tables except under her supervision.

And she remained loyal and devoted to her Atlanta "white folks." When a luncheon was given October 27, 1921, for Mrs. Warren G. Harding, wife of President Harding, at the home of Mrs. Lee Ashcraft, the President's wife asked to meet the cook "who had prepared such beautiful food."

**Invited to the White House**

Willie came from behind the scenes, after the luncheon, and Mrs. Harding said to her, "Some day I would like you to see how we do things in the White House kitchen."

Willie answered, "All I am I owe to these, my people, and I will live and die with them."

Known to generations of prominent Atlantans, Willie supervised the serving of many of the city's largest banquets, including those for such distinguished guests as Andrew Carnegie, Theodore Roosevelt and President Franklin D. Roosevelt.

The peak of her catering career came when a luncheon was served for 16,000 persons on the campus of Agnes Scott College, at a meeting of the Northern and southern Presbyterians. She also catered a dinner for 5.000 Shriners in the city auditorium. Her business was known throughout Georgia, and in North Carolina and South Carolina.

**Succumbs to Pneumonia**

Pneumonia, following an attack of influenza a few days ago, resulted in her death at her home at 72 Fulton street.

Willie accumulated wealth and became a leader of her own race. She served as treasurer of th national Colored Parent-Teachers' Association, as treasurer of the state group, and as president of the E. P. Johnson Parent-Teacher Association.

She was active in civic, church and cultural affairs of her race.

Willie was born in Greenville, Ga., the daughter of slaves. When she was 17 she came to Atlanta, obtaining work as a nurse in the home of Captain and Mrs. William J. Garrett on Washington street.

**Mrs. Garrett's Advice**

Her cooking ability first came to light when she cooked a meal for the Garretts when the regular cook was ill. She soon supplanted the regular cook. A short time later, she married, but it ended unhappily and she sought advice and solace from Mrs. Garrett.

Mrs. Garrett advised her to enter the catering business, pointing out that there was no caterer here, that the city was growing, and that Willie's ability and reputation were well known. Thus she entered the business that grew rapidly.

She attended school in New York, and Boston to improve her work and methods.

Willie is survived by a nephew, Dr. J. W. Madison; a niece, Rosa Mae Collier, and three brothers, Mobil and Scott Wimbish and A. Heard.—Atlanta Constitution.

# THE MODERN FARMER

Vol. XI. NASHVILLE, TENN., JUNE 15, 1938 No. 5

LIBRARY JUN 16 1938 U.S. DEPT. OF AGRICULTURE

# Radio Address of President Leon R. Harris of National Association

## THE AMERICAN NEGRO FARMER EULOGIZED

### Accomplishments, Overcoming Obstacles Moving on to Success

*(This address was delivered by Leon R. Harris, president of the National Federation of Colored Farmers, on the "Wings Over Jordan" program, Rev. Glenn T. Settle, Director, from Station WGAR, Cleveland, Ohio, May 29th. This program, a regular feature of the Columbia Broadcasting System, is presented over a nation-wide hookup, at 9:30 EST, every Sunday morning. The Modern Farmer and the N. F. C. F. have received many requests for copies of the address.)*

FRIENDS:

The kind Providence who will not let his fields lie fallow, does not forget the lover and the tiller of his fields. To the farmer he has given the most perfect reward,—the opportunity to live well a farmer's life. Tillage of the soil was man's first occupation and the farmer's job has always kept him close to his Creator,—close to the "Giver of every good and perfect gift." The difficulties of his job have made him a man. The responsibilities of his job have made him a good man. He prepares his soil for the planting and visions the harvest; he is filled with hope and faith and courage. He cultivates the tender, growing plants and is taught patience and humility. He gathers in his crops, and, whether bountiful or small, is thankful for the blessings received, and for the blessings he has, for there is no hunger or unemployment on the farm, and another springtime is always coming.

The biggest business carried on by our racial group in this nation is the business of farming. Almost a million of us are operators of farms. We own more than eleven million

(Continued on Page 16)

## HEMPSTEAD NETS $20 AN ACRE ON RADISHES

Hempstead county farmers received $13,920 for their 58-acre radish crop harvested during the last of March and the first of April, C. M. Lamkin, county agent reports.

About 1,400 acres of radishes were planted by 350 farmers. The average yield was 100 bushed per acre and the average price received was 40 cents per bushel. This gave an average gross income of $40 per acre.

The average expense for seed, fertilizer and and labor was $20 per acre, leaving a net profit of $20.

Several farmers who had radishes for the early market received 75 cents per bushel. Mr. Lamkin said. The majority report that 500 pounds of commercial truck fertilizer was used followed with a side dressing of 100 pounds of nitrate of soda. Most of the land will be planted to cotton, and a large percentage of the value of the fertilizer will be available for the crop.

## SOUTH TURNS TO LIVESTOCK

### Notable Farm Journal Shows Facts and Figures

The Progressive Farmer (May) says in an editorial: "As the writer noted on a recent trip through the South, interest in livestock production is increasing everywhere. Armour is preparing to spend $1,000,000 to $1,500,000 for a new plant at Houston, Texas. A $750,000 plant is being constructed by Swift at Lake Charles, La. Plants have already been established in Ocala, Fla., Memphis, Tenn., and Tifton and Albany, Ga.____How often we have heard it said, 'If you want to make a stockman, begin early!' Who knows what it can mean to the agricultural

(Continued on page 16)

## SHOWER BATH IS EASY TO HAVE

Farm people can have shower baths just as well as people in town, and at much less expense, even without any expense, believes Mrs. Virgil James, Lincoln county home demonstration club member. She proved this by building a shower bath, reports Miss Frances Rast, home demonstration agent.

Mrs. James is a member of the Crigler Farmstead, a Farm Security project, and their new house and outbuildings have recently been completed. When the smokehouse was built, a small porch, or permanent awning, was added, to be used as a wash-shed, part of which Mrs. James converted into a shower bath with material from the old building and some burlap bags.

She took four pieces of tin roofing from the old dwelling, putting two pieces on the end of the wash-shed and two pieces on the side, making a nook closed in on three sides. Burlap bags make a curtain for the fourth side of the room.

A tub is hung from the top of the room. Water is poured in the tub, and comes through small holes punched in the bottom.

Mrs. James did all the work except moving concrete slags, which was done by her husband the demonstration agent said.

## MADE BEDSPREAD OUT OF FERTILIZER SACKS

A bedspread was made from 24 fertilizer sacks by Mrs. Ruby Long of Hempstead county, Ark., said Miss Ella Posey, district home demonstration agent.

The sacks were sewed together with big seams; then the seam edges were raveled out, leaving a tufted effect.

An extra piece was sewed around the spring, raveled, and tied, to make a fringed effect.

## 150 TENANTS GET FARMS

### $487,556 Program In State Of Arkansas

Thomas B. Fatherree, regional tenant purchase chief of the Farm Security Administration, said yesterday that 39 Bankhead-Jones loan dockets have been processed by committeemen and field workers in Arkansas and have been submitted for final approval of the regional and Washington offices. Legal review of land titles must be made before checks can be delivered, he said.

The Bankhead-Jones farm tenant purchase program provides for the expenditure of $487,556 in making loans to approximately 150 capable and carefully selected farm tenant families in Arkansas to enable them to purchase family-size farms.

Fatherree said that funds appropriated for the present program must be loaned by the end of the current fiscal year, June 30. County committeemen, rural FSA supervisors, land appraisers and others responsible for the program have been spending their efforts to complete the work.

Selection of families, appraisal and optioning of land and similar details have been completed in most of the 21 counties.

Scarcity of suitable farming lands that can be purchased at the appraised price is handicapping the progress of the program in a few counties. Mr. Fatherree said committees are still making every effort to obtain the necessary land in these counties but if they are not successful loans will be transferred to other counties in the state where acquisition of suitable farms is not a problem.—Ark. Democrat.

## POETRY IN REAL ESTATE

Bill bought a car with his money
And Joe bought a piece of ground;
Bill was swell for a year or two,
As he traveled the country around,
But the car grew old and the paint came off
And often the tires went flat,
But Joe's land did not depreciate
In any such way as that.

Joe had little to show at first
For the money he had spent,
For a piece of ground couldn't follow him around
On pleasure and business bent.
Bill was a swell for a year or two,
But the worth of a car goes down
While a bit of earth increases its worth
If it is close to a thriving town.

Today Joe rides in a modern car,
For a bit of his land he sold.
He has no fear for the coming year,
No terror of growing old,
For he bought land with his little sum,
While Bill bought a shining car.
Now Joe has a first class modern home,
And Bill has a worn-out car.

## FARM BUILDING LOANS

### Federal Housing Administration's Plans

Deputy Administrator, Charles C. McGhee, says; restoration of the property improvement credit plan and other changes in the recently amended National Housing Act should prove particularly interesting and helpful to farmers desiring to finance the cost of repairing, rebuilding or modernizing their homes, barns and other service buildings.

New dwellings, garages, barns, silos, hogs, poultry and milk houses and other such structures may also be built with loans insured by the Federal Housing Administration, this feature of the National Housing Administration being a special opportunity for farmers desiring to improve their living conditions or increase the efficiency of their farm

(Continued on page 16)

## GLOVES NOW EASILY WASHED AS YOUR HANDS

Washable leather gloves have been improved until they are almost as easy to wash as your own hands. There are just a few rules for the novice to remember. Don't wait until they become badly soiled. Use plenty of soapsuds. Avoid harsh rubbing and squeezing, and keep both washing and rinsing waters at an even lukewarm temperature.

As chamois and doeskin gloves become slippery and soft in water, it is best to wash them off the hands. Otherwise, the seams may weaken and split. Suede, kid and other washable leather gloves may be washed on the hands with ease and safety. Finger tips and other badly soiled spots may be gently scrubbed with a nail brush well lathered with soap.

Be careful in removing the gloves from your hands, otherwise the stitching may break. Turn them gently inside out, and wash the inner surface. Use one soapy rinse followed by three clear rinses.

Roll the gloves in a towel for a moment to absorb as much of the moisture as possible. Use a wire glove form for drying or blow into the fingers and stuff a piece of tissue into each glove to hold it open. Lay out flat or hang on a rack near a current of air but away from direct heat or freezing outdoor temperatures.

Before the gloves are entirely dry, work them with the fingers to soften. This makes them easy to put on again.

## NINE IN FAMILY DROWN

Manchester, Ky.—A colored mother, and eight of her children were drowned yesterday when their home was washed away in flooded Tobey Creek.

## OWNERSHIP AIDS BALANCED

### Dr. J. T. Sanders Submits Data on One-Crop Ideas

"Surveys prove that tenantry and one-crop farming go together and that owner-operating encourages a balanced farming system," says an editorial in Farm and Ranch (May). "Dr. J. T. Sanders, former head of the Agricultural Economics Department of the Oklahoma A. and M. College, states that 86 percent of tenants are one-crop farmers while only 56 percent of owner-operators are one-crop specialists. It is our observation that owners, either retired farmers or those who have come into possession of farms, either in satisfaction of debt, or purchased as an investment, are too busy with other matters to give the necessary attention to the management of a farm with balanced production with livestock____Many owners lack the necessary knowledge and managerial ability to work with a tenant in any other kind of farming but cotton. They are not farmers to begin with, and they do not have the time or inclination to know what should be done to build up their lands to a profitable basis. Cotton is a major project in the Southwest. It should be produced on most farms in reasonable amount on land that is suited to it. It should be rotated, however, with other crops in order that acre yields of better cotton can be increased. This is not possible when one-crop farming is practiced. The greatest handicap to making agriculture in the South a paying industry is the absentee landlord whose time is taken up with other lines of business. That is one of the reasons why more owner-operated farms are needed."

(Continued on Page 16)

## CASH FROM ACRE OF SORGHUM EQUAL TO TWO ACRES OF COTTON

One acre of syrup sorghum brings in as much cash as two acres of cotton on the Prairie county farm of F. O. Norman.

From one acre of sorghum grown on his hill farm, Mr. Norman made $57, in addition to having plenty of sorghum for home use, he told H. E. Maxwell, county agent.

The acre planted to sorghum was along a small ditch and was a little above the average fertility of the farm. It took no more labor to grow the sorghum than it would cotton, and a ready market was found because of the syrup's exceptional quality.

Mr. Norman makes syrup for his neighbors on shares and markets his share. The price of this has varied with the quality of syrup from 50 to 75 cents. His own syrup always brings 75 cents, Mr. Maxwell said.

# High Praise Accorded "Wings Over Jordan" By Veteran Educator

## Columbia Radio Program, Originated By Rev. Glenn T. Settle, Given Rating Of Finest Religious Treat On Airways By Dr. Miller

By Kelley Miller

"Wings Over Jordan" is the title of a Sunday morning broadcast of jubilee melodies originated by Rev. Settle, a Negro Baptist clergyman of Cleveland, Ohio, and maintained by the Columbia Broadcasting Company for the Negroes of America.

My only knowledge of Dr. Settle is derived from his relation to this broadcast. I am thoroughly convinced, however, that he is man of sound intelligence, deep piety and of earnest consecration and devotion to the welfare of his race. His conduct of the Sunday morning program is characterized by a reverent and devout spirit which is deeper than the requirement of a broadcast program. One must also admire his resourcefulness in devising such a spiritual enterprise as well as his persuasiveness in introducing the Columbia Broadcasting System to support and maintain it and the executive aptness with which he directs the proceedings.

The radio is being universally utilized as a Sunday morning medium of worship before the regular church services begin later on. The air is made resonant with the radio matinee proclaiming "Lord in the Morning Thou Shalt Hear My Voice Ascending High." Had the psalmist been acquainted with the mysteries of modern science he doubtless would have added another instrument to his orchestra, and we would have been called upon to include the radio as an instrument of praise along with the sound of the trumpet, the psaltery and the harp, the timbrel and dance, the stringed instruments, and the loud sounding cymbals and high sounding cymbals.

We are thus reminded of the original broadcast by the Angelic Choir announcing upon the happy air, "Peace on earth; good will among men."

Of all the Sunday morning broadcasts which bombard the throne of heaven, none is more intense with spiritual meaning and power than those conveyed in the pubilee melodies which sprung out of the soul of unsophisticated black folk. Of the numerous jubilee broadcast, none is more spiritually reverent or appealing than "Wings Over Jordan" sponsored by Dr. Settle.

The announcer of this broadcast states each Sunday morning that it is maintained by the Columbia broadcasting System for the Negroes of America. A friend of mine who has always been on the alert against racial discrimination remarked, "Why to the Negroes of America?" I have no doubt that there are ten white to every Negro listener to "Wings over Jordan." The spirituals sprung spontaneously from the Negro soul exposed to the peculiar environment of American slavery. They did not originate in Africa nor yet in Latin America where the Negro has had longer exposure to slavery under the Spanish regime than in the United States. Just why the peculiar circumstances and situation of slave contact with the Anglo-Saxon race evoked this peculiar plaintive lugubrious moanful melody would furnish an engaging theme for an ambitious candidate for the doctorate. These spirituals furnish the chief contribution which the Negro race in the New World has yet made to the general culture of the human spirit. Like all genuine spiritual utterances these spirituals are expressed in the first person, singular number: "When I went down in the valley to pray," "Nobody knows the trouble I see."

There was no assignable personal authorship, they are a social product. Some unknown Negro voice a little louder than the rest caught the refrain and gave it vogue. Some white eaves-dropper overheard these strange melodies and made them a part of the musical repertoire of the nation. They now contribute an essential part to the musical literature of the world. These spirituals come directly from th heart of the Negro and appeal directly to the heart of mankind.

They have a special mission and meaning to the would-be sophisticated Negro of this day and generation and discover him to himself, reminding him that the chief contribution of his race to the culture of the world may not spring from the head, but from the heart. Nothing yet written in America surpasses the Spiritual and Lyric appeal of "Swing Low Sweet Chariot" or "Steal Away to Jesus."

The Negro intelligentsia, ambitious to reveal to his white competitors in abstract, scientific and philanthropic disquisition was at one time disposed to spurn the jubilee melodies becausc of their lowly origin. I can distinctly remember when the choir of a great Negro University disdained jubilee melodies in its musical repetoire. Shakespeare somewhere tells of the toad ashamed of the jewel in his head. But the white race evinced the disposition to take these melodies up where the Negro leaves off. Until today the jubilee melodies hold an important place in the spiritual ritual.

Negro voices alone can render these spirituals with their original intent and meaning. Jubilee Singers are universally endowed by white sponsor to delight and uplift the soul of white listeners.

I want to urge my readers to tune in to the Columbia Broadcast each Sunday morning to hear "Wings Over Jordan." Nowhere can the half hour be more profitably devoted to the worship of God in purity o spirit and beauty of holiness.

## HOGS PAID HIM PLEASANT PROFIT

Floyd—How one farmer doubled his money in an investment the first year, is shown by an experience of George W. Hallett's of the McRae community.

Mr. Hallett, leading dewberry producer and general farmer, said that during the last week of last September he picked up seven O. I. C. pigs at a cost of $26. Shortly thereafter he bought 100 bushels of corn for —.

A few weeks ago he sold four of the hogs at $21 each. He now has about 25 bushels of the corn left, and the three remaining hogs weighing approximately 300 pounds each, are profit.

These hogs, Mr. Hallett observed, would have been heavier had he pushed them.

In addition to the corn, Mr. Hallett fed slop and scraps from the table which he does not value, as it would have gone to waste otherwise.

He believes he stands a fine chance of making upwards of $100 on the hogs by fall killing time.

## Sale Of Five Million Poppies Aids Injured War Vets

New York City, June 9 (ANP)—Each year during the week of Memorial Day the Veterans of Foreign Wars conduct their annual national sale of Buddy Poppies, as a tribute of memory to America's soldier-dead, a renewed pledge "that we will keep the faith for which they died." A total of more than 5,000,000 Buddy Poppies were used for the 1938 sale which, as usual, was endorsed by the President of the United States.

Brigadier General Frank T. Hines, Veterans Administrator, points out that he considers 1938 a "critical" year for former soldiers. "The average age of World War veterans already is between 45 and 46," he said. "Increasing age with natural physical handicaps and resultant unemployment constitutes a serious and progressive problem, especially because of commercial and industrial reluctance to employ older men."

## C. M. E. Church Raised $375,510.28 In Four Years

Jackson, Tenn.—(C)— According to the fourth quadrennial report of the financial department of the C. M. E. Church at the general conference, Hot Springs, Ark., recently, the church raised a total of $375,510.28 during the past four years, and after disbursements on seventeen items, had $42,355.99 cash balance. Prof. George F. Porter is financial secretary, and the auditing committee, composed of J. B. Boyd, M. C. Jackson and A. T. Clark, certified the report, saying the Secretary "has conserved the resources of the Church, practiced economy and faithfully administered every interest and obligation entrusted to him." The committee found the records of the Secretary "in perfect shape.

Chief items of expense were: paid bishops $115,150; Department of Education, $60,750.40; Superannuated Preachers, Widows and Orphans, $54,778.40; Kingdom Extension, $26,790.71; Colleges for "Special Education," $20,176.93; and Religious Education, $18,563.18.

**"Visits" to the 1939 Golden Gate International Exposition will be on sale at 17,000 railroad agencies next year, under an American Express Company plan that will include railway passage, sightseeing trips, hotel accommodations—everything but meals—in a single ticket.**

## BIGGER COTTON YIELD BY PLANTING VETCH

Planting hairy vetch each fall in his cotton middles is a regular practice with I. J. Hooten, Quitman, said Lovard Davis, Cleburne county agent.

Usually, Mr. Hooten grows 50 acres of cotton on his 300-acre farm, and he has been planting vetch in the middles for five years.

The result is an increase of the cotton yield from an average lint production of 178 pounds to the acre to 293 pounds, he told the county agent.

## RARE BOOKS WANTED FOR LIBRARY OF U. S. CONGRESS

Washington, D. C.—If you own first editions of any of the authors listed below, communicate at once with Gustav Davidson, Rare Book Room, Library of Congress, Washington, D. C.

Mr. Davidson is preparing a bibliography of the more important series writers of American juveniles of the latter hali of the 19th Century, and will welcome your interest and co-operation in helping him build, for the national library, as complete a collection as possible.

Here are the authors:

**Louisa May Alcott, Horatio Alger, Jr., T. S. Arthur, Capt. Ralph Bonta Cheney, Paul Creyton, Edward S. Ellis, Martha Finley, Francis chill, Harry Castlemon, O. Augus- Forrester, Lucy Ellen Guernsey, Samuel Goodrich (Peter Parley), Lieut. R. H. Jayne, Elijah Kellogg, Colonel H. R. Gordon, Lawrence Lancewood, Madeline Leslie, Brooks McCormick, Sophie May, May Mannering, Joanna Matthews, James Otis, Oliver Optic (Wm. T. Adams), Pansy, Arthur Lee Putnam, Margaret Sidney, C. A. Stephens, Edward Stratemeyer, J. T. Trowbridge, Anna Warner, Elizabeth Wetherell, Susan Warner, Arthur M. Winfield, Daniel Wise, Francis Woodworth, Jacob Abbott.**

Our enemies are ever seeking to find fault with us. They desire to have something to condemn us for; likewise they want some excuse to justify their own guilty selves.

# SCOTTSBORO BOY IS SENTENCED TO ELECTRIC CHAIR

## Clarence Norris Must Die On Word Of Victoria Price, Says Alabama Supreme Court

Montgomery, Ala., June 23—Clarence Norris, one of the nine innocent Scottsboro Boys, for the second time in the past three years faces death in the Alabama electric chair, if the murder verdict handed down against him last Thursday is not halted within the next 60 days.

The Alabama State Supreme Court last week affirmed the death sentence imposed on young Norris in Decatur, Ala., in July, 1937, and ordered his execution for Aug. 19. The court refused the plea for a new trial, holding that the "record discloses no reversible errors and the judgment of the trial court must be affirmed."

Norris was the first to be tried in the last series of Scottsboro trials and was convicted on the same evidence upon which four of the nine Scottsboro Boys were unconditionally released. Two of the others tried at that same time, Andy Wright and Charlie Weems were given sentences of 99 years and 75 years respectively on the same lie-ridden testimony of Victoria Price who maintained all of the boys were equally guilty of having attacked her.

In freeing four of the boys, Olen Montgomery, Willie Roberson, Roy Wright and Eugene Williams, Alabama authorities admitted that Victoria Price's testimony and identification were 'mistaken." It was the same testimony which was used to sentence Norris to the electric chair.

## BUSINESS LEAGUE PLANS MEMORIAL TO WASHINGTON

Houston, Tex.—(ANP)—One of the highlight of the August 18th session of the National Negro Business League Convention to be held in Houston August 17-19, will be special memorial services in honor of Dr. Booker T. Washington, eminent founder of Tuskegee Institute and organizer of the Business League.

Dr. Frederick D. Patterson, president of Tuskegee, will deliver the principal address and other speakers of state and national repute will be on program. In Prairie View last week it was announced that the program for that day will also include a feast of barbecue and Texas watermelons all produced in or near the campus of the school.

The pre-convention smoker will be held on Tuesday night before the opening of the League at Harlem Grill, arrangements for which are in the hands of Prof. James D. Ryan.

## BEES ARE PROFITABLE SIDELINE, HE FINDS

Claude Rider, Hempstead county, has kept from six to 150 stands of bees for the past 15 years, placed all over his farm, and finds they pay him well, said C. M. Lampkin, assistant county agent.

Mr. Rider pointed out that this is one type of business that requires only a very small capital on which to operate. Last fall he had 100 stands, and sold 100 gallons of honey receiving $100 net profit, he told Mr. Lamkin.

Next year he hopes to have 150 stands of bees.

# WHO BELIEVES NEW DEAL STRONGER NOW THAN IN 1936?—HAMILTON

## G. O. P. Chairman Sees Roosevelt Slipping Following Rebuff by His Party in Iowa

Washington, D. C.,—Statement by John Hamilton, Chairman of the Republican National Committee:

Those whose faith in the future of American democracy has been gravely disturbed by recent events should take comfort and encouragement out of the results of the Iowa primary returns. Even though Senator Gillette is a New Dealer, his overwhelming victory can only be interpreted as a slap by the Democrats of Iowa at White House interference in purely local contests. Had the President's lefthand adviser Thomas Corcoram, his son James and his relief administrator, Harry Hopkins, remained out of the Iowa fight, Mr. Wearin might have made a better showing. His crushing defeat is a well-merited rebuke to the Roosevelt Administration for its shameless attempt to play politics with relief. The voice that comes out of Iowa today will become a national shout of disapprovai if this Administration continues to use relief as a part of its political machine.

Most significant is the fact that almost twice as many votes were cast in the Republican Senatorial contest as in the Democratic primary fight, even though there was incentive for Republicans to vote. I ask those who say this is without significance, because the same thing happened in 1936, to remember that Senator Herring was elected over Senator Dickinson by a margin of only 35,000 votes out of more than 1,000,000 cast in that year of great Democratic victory. The Democratic Governor Kraschel was elected only by a margin of 2400 votes. In view of the Roosevelt depression, who believes the New Deal is stronger this year than it was in 1936?

## AMERICAN FARMING

The history of American agriculture is in many respects a travelogue. It is a story of a steady movement westward by land seeking families until the Pacific coast was reached.

The American revolution opened lands formerly owned by England to colonization and settlement; the Louisiana purchase in 1803 opened more to the settlers; the treaty with Mexico in 1848 gave the United States California, New Mexico, and Arizona, and resulted in annexation of Texas. The homestead act of 1862 sent thousands of settlers into the west and did more to populate the new lands than any other single factor.

By 1890 the American farmer faced a new situaton. Almost all of the desirable western lands which had seemed inexhaustible, were fenced in and used for grazing or were under cultivation. No longer could a man, after running his farm by careless cultivation, move on to new soil. The farmer then turned to the task of conserving and rebuilding the soil upon which he had settled.

## A NEW CROP NEEDED

Ten years ago, when Dr. Sam W. Small was writing from Washington for The Constitution, he not infrequently bemoaned the passing of the older type of southern statesmen and often stressed the need of "growing a new crop.'" A constant visitor in the halls of congress, he was not only in a position to judge, at first hand, the behavior and abilities of the then current crop, but to compare them with the statesmen of past eras through which he had lived. His judgment was not favorable.

"There is a strong call to the young men of the south," he emphasized, "to become seriously concerned for the safety and welfare of our political institutions; to prepare themselves as thoroughly as possible to take the leadership that may be available to them. We have plenty of peanut politicians, to yap and scrap over the spoils, but where are the successors to the statesmen of the generation before the war; and those who lapped over that conflict, redeemed their states from the era of reconstruction and later represented them so brilliantly in the national councils?

"Just now, in this booming era of political expansion," he went on, as if speaking of the present extravaganza, "young men have the finest, fullest opportunity to master the elements of statesmanship and ultimately write their names on the same roll with Jefferson, Madison, Clay, Calhoun, Stephens, Lamar and Ben Hill."

Perhaps the observant correspondent would have suffered doubly if he could have seen today's practice of elevating patronage above principle, of political expediency over statesmanship.

Sacrifice for the safety of American institutions is no less necessary now than 10 to 50 years ago. The patronage-seeking politician of today is all too likely to become the political rubber-stamp of tomorrow.

**Sam Small's' vision came true.**

He named the young white men of the south, of their opportunity to become constructive statesmen and fill the shoes of Ben Hill, Alex Stephens, John Calhoun, Lamar, Clay and Jefferson; but they passed the buck and elected to be politicians for revenue only and the result is, the south has no statesmen in Congress, and the men as a rule, who announce for office, do not announce for office on their own merit, but on the president's coat tail. Their one plank in the platform is I am 100 per cent for the president—just spineless syco phant, without conscience or conviction—just rubber stamps to be used by the president when he needs votes to put over his program.

These rubber stamps are willing to turn over to the president the Judicial and Legislative powers of the government for patronage.

## Bishop W. T. Vernon At The Sunday School Congress

Kansas City, Mo.—(Special)—Religious leaders, irrespective of denomination, seemed to have vied with each other in the recent session of the Sunday School Congress which convened in this city at the municipal auditorium last week. Outstanding among the Methodists who graced the Congress with their presence was Rt. Rev. Bishop W. T. Vernon of the African Methodist Episcopal Church.

Bishop Vernon was presented to the Congress by Secretary Henry Allen Boyd, who told the messengers assembled that this guest at this hour was a personal friend and acquaintance of the late Dr. R. H. Boyd, and that they had worked together for years prior to Dr. Boyd's passing. Bishop Vernon was former president of Western University at Quindara, Kansas, a registrar of the United States Treasury, and for years has been one of the towering figures in the entire race.

He brought greetings to the Congress messengers. He paid a high tribute to Henry Allen Boyd, saying he is the worthy son of an illustrious sire, and that he could point to but few boys or men of today who were so ably carrying on where their father had left off as is Henry Allen Boyd. The Congress heard the Bishop at length.

## Tid Bits

**Tarry at the promise till God meets you there: He always returns by way of His promise.**

**Have faith that whatever you ask for in prayer, is already granted you, and you will find that it will be. Faith that goes forward triumphs.**

**Men may misjudge thy aim,**
**Think they have cause to blame,**
**Say thou art wrong;**
**Keep on thy ouiet way,**
**Christ is the Judge,**
**Not they, fear not, be strong.**

**God is in every tomorrow,**
**Therefore I live for today,**
**Certain of finding at sunrise,**
**Guidance and strength for the way;**
**Power for each moment of weakness,**
**Hope for each moment of pain,**
**Comfort for every sorrow,**
**Sunshine and joy after rain.**

**Others may do a greater work,**
**But you have your part to do;**
**And no one in all God's heritage**
**Can do it so well as you.**

## It's Our Leaders Who Need Lesson On Race Pride

**Year in and year out we hear orators and the "leaders" harping on that much overworked term, "Race Pride." We are told day in and day out that we must have race pride and stick by this leader or that leader for the sake of it. We are advised that we cannot permit this institution to fail because of race pride. We are exhorted to give support to this individual or that individual because we must keep our race pride. In almost every instance we have responded in some sort of fashion and rallied almost to a man on the theory that race pride demanded it.**

**While the rank and file of us have been giving our best to these leaders on the policy of race pride, these same leaders, with very few exceptions, have failed to remember us and have thrown aside race pride themselves and for us after they have gotten what they want. These leaders in state, church, business and political activities are elevated to the high places on our shoulders and virtue of our support on the theory of "pride of race" and then shut the door in our faces and forget all about race pride. When they have obtained the goal these praters on race pride then buy from the other man, ride by us in fine cars, convert everything to their own use, and stay in the spotlight, still singing their song of "racial uplift" at so much per lift.**

**The time has come when we have got to teach these race pride orators that they too must show some pride of race and that it goes for them as well as or those who make them possible. If we elevate them on the theory of race pride and they lose it, then we must learn enough race pride to tear them down when they fail to practice what they preach. Let's begin now.**

**—Chicago Defender.**

"My God, I have never thanked Thee for my thorn, I have thanked Thee a thousand times for my roses, but not once for my thorn."

When the better self decides to do the right thing, the other self must retreat.

## Fireside Philosophy

By Jones H. Hinton

### CHRISTIANITY WILL ULTIMATELY WIN

It is said that during the battle of Waterloo, as Napoleon was fighting vainly to extend his dominion and tyranny across the English channel, in the thickest of the conflict, when smoke from the battlefield had almost blackened the sky, Great Britain waited anxious for a dispatch announcing the outcome of the struggle.

Suddenly there went up a message in the smoky sky that read: "Wellington Conquered." This message was immediately flashed to England. Banks of this great nation closed their doors, the stock market crashed, men and women walked the streets of cities lamenting their downfall.

But when the smoke had cleared away from the battlefield, the message was read in full, "Wellington Conquered Napoleon."

In this world of chaos, sin and evil, when the satanic forces are snorting out their threats against the army of God, it may appear to the unspiritual mind that the cause of Christ has gone down in an inglorious defeat. But just stand and wait until the smoke has cleared away, and we will behold the message in the clear, blue sky that can be read by all men: "Christianity Conquered Sin and Evil."

Let us stand like Spartan soldiers and strike until the last armed foe expires. Though we fall we will not utterly be cast down. There can be but one flag, and that must be the banner of Christianity; there can be but one song, and that must be "Onward Christian Soldiers." There can be but one battle cry and that must be, "All the world for Christ." Christianity has won, but the news hasn't reached the foe.

## WATERMELON CONTROL COMMITTEE NAMED FOR SOUTHEASTERN STATES

The Agricultural Adjustment Administration announced the selection of members and alternates of the 1938 control committee which will administer the watermelon program under a marketing agreement and order regulating the handling of watermelons grown in Florida, Georgia, North Carolina and South Carolina.

The Watermelon marketing program for these States has been in operation since August, 1934. Since May, 1936, the program has operated under a federal marketing agreement and order. Previously it was under a license.

The control committee in these Southeastern States comprises 6 grower and 6 handler members who are chosen annually by the Secretary of Agriculture, from nominations submitted by the groups entitled to representation within the industry.

## COLORED WAR VETS ORGANIZATION SEEKING TO GET 100,000 MEMBERS

Boston—(AN P)—An organization meeting of the executive committee, National Colored War Veterans of America, was held last week to draft a public statement on Veteran affairs as they affect colored veterans of the nation. A new plan of organization was adopted in order to secure a membership of 100,000 by October 1, 1938, to be known as a "Colored Veterans Join-Up." The vets will hold a two-day session here July 31—August 1.

Explaining the organization's program, Monroe Mason, temporary organizer, said. "100,000 Colored War Veterans being unemployed, a serious study must be made to find jobs for them and their dependents, who are employables.

"20,000 totally disabled Colored War veterans because of pre-war laborer status have been denied the privilege of total disability compensation. An estimate of $30,000,000 retroactive payments is the sum that the Veterans' Administration has unjustly withheld from these ex-soldiers."

## EDITORIALS

From The Bible:—

"A good name is rather to be chosen than great riches." Proverbs 22:1.

Flower in the crannied wall,
I pluck you out of the crannies;—
Hold you here, root and all, in my hand,
Little flower—but if I could understand
What you are, root and all, and all in all,
I should know what God and man is.
—Alfred Tennyson.

### THE BEGINNING OF THE END

The Supreme Court of the state of Mississippi has at last heard the cry of a sharecropper for justice and has rendered a judgment in favor of Les Taylor, sharecropper, against J. W. Copeland, landlord. The court decided that the landlord charged his tenant more than twenty per cent per year interest on "advances" and that such interest was usury. Therefore the tenant was entitled to recover the interest and also the principal he had paid.

No wonder this particular decision by Mississippi's highest court has created a flurry of excitement throughout the length and breadth of the land. At last the truth is known. There is such a thing as debt-slavery and the tenants and sharecroppers on many plantations in the South are the debt-slaves.

This unusual decision will not end debt-slavery by any means. But may we all hope and pray that it is the beginning of the end.

### ORGANIZE CREDIT UNIONS

Farm leaders in colored farm communities should investigate the possibilities of credit unions. These financial institutions have been a boon to many low-income groups and should prove to be of value to farmers. They are easy to organize and it requires little capital to begin operation.

Write to Dr. H. A. Hunt, Farm Credit Administration, Washington, D. C. and ask for information about farm credit unions.

### PRAY FOR HIS RECOVERY

Reports that Dr. Carver, of Tuskegee, is ill and confined in the hospital there, will be of great concern to every colored farmer in the nation. No man of any race has done more for the farmers of our group. He has been a great benefactor of his fellowmen.

We hope and pray that he may soon be restored to health and be able to carry on his work as usual.

## Interesting News and Notes

The Tri-States Livestock Association of Pine Bluff, Ark., sold to farmers during the first month of its organization 200 Hereford cows, 128 Jersey cows and 600 baby chicks. More pure bred stock will be distributed to farmers of its territory.

In a recent address to a Negro audience in Pittsburgh, Pa., Dr. I. W. Duggan, Director Southern Division, AAA, said the "South cannot progress until all its people progress, whether they be landlords or tenants, white or colored." He also said, "the need for conservation of human resources is just as great as the need for conservation of soil resources."

The new queen of the dairy world is Femco Alma, a pure bred Holstein of outstanding butter producing ability. This cow produced 1,252 pounds of butter during a year's test. Milk produced was 20,582 pounds, averaging 4.9 per cent butterfat. One cow like this one would get most any colored farmer out of debt in a year's time.

One of the best crops to plant to prevent soil erosion is hairy vetch.

Freeman Hill, of Lonoke county, Ark., realized a profit of $100 an acre from seven acres of okra. Mr. Hill believes in diversified farming. He raises truck crops, feed crops, eight to twelve acres of cotton, dairy cows and hogs. And he makes money every year.

The southern Illinois peach crop is reported promising in spite of a late freeze. Little damage was caused to peaches on high ground.

The American Farm Bureau Federation will hold its annual convention in New Orleans, La., the week of December 5th. The National Federation of Colored Farmers will hold its annual convention in Forsyth, Ga., the week of October 24th.

A Guernsey cow was a special guest at the Congress Hotel in Chicago recently. The occasion was the sixty-first annual luncheon of the American Guernsey Cattle Club. 200 Guernsey breeders from all parts of the United States attended.

LeRoy Tappen of Franklin Park, New Jersey, a student in the vocational agriculture course at New Brunswick high school has a winning flock of 150 New Hampshire Pullets. LeRoy's birds were awarded first prize for the North Jersey group and second place in the sweepstake. He started his project with 300 chicks, and by culling and selecting, entered 150 ideal type New Hampshires in the contest. The others he sold as meat. Along with this project he has grown and combined six acres of wheat, and worked out as a farm laborer.

A White Leghorn hen broke the record of 20 years for consecutive daily lay of producing her 213th egg. On Saturday afternoon she laid her 214th egg without a stop.

A total production of 113,649.3 pounds of milk and 3,831.1 pounds of fat during seven lactation periods is the record of Ormsby Spofford Gila King, a purebred Holstein cow in the University of Arizona herd. The 113,649 pounds of milk contained 13,581 pounds of food constituents of the best quality. Total dry matter in this milk was equivalent to more than contained in the carcass of twenty-eight 1,000 pound steers. During the month of January she produced 2,574 pounds of milk containing 87.5 pounds of fat equal to 109 pounds of butter. This cow is 11 years old and still in the very best of physical condition.

The North Dakota Agricultural College agricultural engineering department has developed plans where you can have electric lights, hot and cold running water in a farm home for less than $30.00.

Thru use of a wind driven generator, electricity can be had in every farm home at a cost of from $5.00 to $15.00. A running water system can be made at home for as little as $10.00. Detailed plans for these and other farm home improvements are being made available to North Dakota farmers by the North Dakota Agricultural College.

Is it safe to leave food in a tin can after it is opened? Food spoils no faster and no slower in an opened tin can than in any other type of container, provided it is kept cool and covered. Acid foods may take on a metallic flavor after standing in a can, but the food becomes no less wholesome. The metallic taste is due to particles of iron, not tin, dissolved in the food. Some canning concerns now line cans with enamel so that canned fruit will not lose its color.

### BETSY HAS TWINS TWICE ON FARM IN MICHIGAN

Ogden Center, Mich.—On June 24, 1937, Betsy, a Holstein cow owned by Henry Knisel, gave birth to twin calves. Yesterday she did it again.

## Agricultural Shorts

By Albon L. Holsey, Field Officer Tuskegee Institute, Ala.

During the past four years the Federal Surplus Commodities Corporation has bought and distributed to people on relief approximately 3,000,000,000 pounds of surplus foodstuff. This has helped to prevent market gluts of farm products.

Under our trade agreement with Canada, the amount of farm grown products exported to Canada during 1937 was $14,000,000 or 27 per cent more than in 1936.

A vegetable breeding laboratory to serve the Southeastern States was recently established by the United States Department of Agriculture at Charleston, South Carolina. At present the scientists are studying string beans, tomatoes, sweet corn, cabbage and watermelons with a view to making these products more resistant to bacterial blights.

Because of the devolopent of paper making from Southern pines, many farmers are turning to private forestry for a supplementary income of the future.

Dr. Martha M. Eliot, Assistant Chief, Children's Bureau of the U. S. Department of Labor said recently that from 60 to 75 per cent of maternity deaths are preventable. Conditions in rural areas where there are few public health nurses are deplorable according to Dr. Eliot. Figures released by Charles E. Hall, Negro Statistician of the U. S. Bureau of Census show that in some Southern States there is only one Negro trained nurse for every 5000 Negroes.

"Mix a handful of pumpkin seed with each gallon of seed corn planted in bottom lands," says Henry Land, Negro farmer of Bibb County, Georgia. Mr. Land rises from 40 to 50 tons of pumpkins each year and recommends them as an excellent feed for livestock.

A Government report says that "if a producer does not sell his cotton prior to July 1, 1938, he may receive a cotton price adjustment payment at the rate applicable on June 30, 1938, regardless of whether or not the cotton was under a loan."

"Due to the heavy crops of 1937," says a report from the AAA, "wholesale prices for agricultural products are 5 per cent lower than they were a year ago while prices for many manufactured products are higher." "Farmers are hit harder than city consumers by these price trends," the report continues, "because farmers must sell at the lowered prices and buy manufactured goods at the higher prices."

Figures compiled by Bureau of Agricultural Economics and the census show that in the states of Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Texas and Oklahoma, only 71 per cent of the farms have a dairy cow. This is far below the average for the country and is "held responsible, in a large measure, for the inadequate diet of the farm families in these states." Since the AAA programs were started there has been a 6 per cent increase in dairy cow ownership in these Southern States.

"Those who argue that the diversion of cotton land into soil-conserving uses will increase greatly the commercial dairy production of the South may well pause to consider whether the competition from the cotton seed oil production on these lands when in cotton may not be more significant than the competition from a few dairy cows," says Secretary of Agriculture, Henry A. Wallace.

## For The Housewife

Wash flour sieves with water to which a little soda has been added. Never wash them in soap suds, as the soap is likely to adhere to the fine meshes.

One-fourth teaspoon of vanilla added to each four cups of milk improves the flavor of hot cocoa or chocolate.

Heating raisins in a wire sieve over a steaming kettle makes the raisins plump.

Minced parsley and onion added to cream soups improve the flavor. Dried celery leaves may also be used to flavor soups.

To make baked potatoes dry and mealy, put a fork at least twice into each when they are tender and let the steam escape.

Pancakes baked on a large frying pan over the campfire are a rather hearty food when served with fruit sauce or maple sirup. Ingredients can be carried and quickly combined at the picnic.

If rhubarb is cut in one-inch pieces and placed in an open casserole and baked for 15 minutes in a moderate oven, the color and shape will be retained. Add sugar to taste before putting into the oven.

A little vinegar added to the water in which corned beef is cooked will make the corned beef more tender.

### MICHIGAN BLOSSOM PARADE VIEWED BY 350,000 CROWD

Benton Harbor, Mich.— St. Joseph and Benton Harbor entertained the largest crowd in their history—estimated at 350,000 spectators—for the sixteenth annual blossom festival floral parade here this afternoon. Perfect parade weather prevailed as thirty-seven floats and twenty-three bands and drum corps marched over a five mile route between the two cities.

## FSCC TO PURCHASE SURPLUS WHITE FLOUR

The Federal Surplus Commodities Corporation will buy upward of 125,000 barrels of surplus wheat flour under a purchase program authorized for the remainder of this fiscal year, the Agricultural Adjustment Administration announced today. Distribution of the flour purchased will be made to needy people through State relief agencies.

About 575,000 bushels of wheat will be required for the manufacture of the total quantity of flour authorized for purchase under the program.

Purchase of the entire quantity authorized would divert a substantial supply of surplus wheat from normal trade channels and increase consumption of flour by distribution to needy people unable to buy flour in adequate quantities, AAA officials point out.

Purchases will be made from millers in all sections of the United States where distribution needs make it feasible. Delivery of the flour to the Corporation is to be made during each of the four weeks beginning June 4, 11, 18 and 25.

Under a recent program, the Corporation purchased about 10,000 barrels of flour, at the request of Illinois and Ohio State authorities, to meet emergency relief needs. Distribution of the flour was made, through State agencies, to relief clients in Chicago, Cleveland and Toledo and in other sections of both states.

## RELIGIOUS LITERATURE CIRCULATION INCREASES SAYS SECRETARY

### Millions of Copies of Denominational Tracts And Publications Distributed Last Quarter

During the past quarter which embraces the months of April, May and June, the circulation of the literature from the National Baptist Publishing Board's plant in Nashville, Tenn., attained a high water mark. The secretary of the Publishing Board declared that the circulation in periodicals had passed again the million mark for each month, and that he had been able in tabulating the report, to show that more than eighteen thousand orders had come in, been filled and sent to the churches, Sunday Schools, B. Y. P. U.'s, Organized Classes and Missionary Circles.

He stated that it was gratifying to see how the religious forces of the United States, Canada, Mexico, the West Indies Islands, Stations in Africa, in India, in the Hawaiian Islands as well as in the Philippine Islands are receiving, accepting and being helped by the publications from the institution operated in this city under the auspices of the National Baptist Convention of America.

"These millions of people could not all be wrong. They have shown that they have been helped, they have proven to be satisfied patrons, and that the lessons, the preachments, the instructions and the pronouncements contained in these publications that have to do with their religious life, and meet with their approval, so they are constantly coming back with their repeat orders each quarter.

"We have just now begun a new quarter to supply the literature for July, August and September. The plant is in full operation, working morning, noon and night, leaving no stone unturned to keep up the recognized service that this plant, established by the late Dr. R. H. Boyd more than forty-five years ago, has specialized in giving to the constituency as well as the people, irrespective of denomination.

## THE DEBT WE OWE CBS

As a race of people we could, with profit to ourselves in many ways offer praise to our benefactors in as big a volume as we utter protests against our detractors. This thought is suggested by the current release from Dr. Kelly Miller being wide ly published in our newspapers in which the eminent Washington writer eloquently praises "Wings Over Jordan," that superb religious and educational program which the Columbia Broadcasting System provides for its listeners every Sunday morning.

While the Columbia System represents this program as being for the Negroes of America, we are confident, as Dr. Miller says, that, "there are ten white for every Negro listener to 'Wings Over Jordan'."

White listeners undoubtedly are fascinated by the splendid rendition of the spirituals by the program's great choir. We have never had on the airways a group of singers that was superior to this choir, and the introduction to each song as made by the Rev. Glenn T. Settle, the accomplished sponsor of the program, enhances the appreciation for each number rendered.

But we have no doubt that millions of white people listen to the splendid short talks delivered by Negro speakers and are astounded to know that the Negro race has produced such talent for speaking as is demonstrated in these addresses by our leading men and women. To many millions of white Americans the opportunity of hearing competent Negroes state their case "before the bar of public opinion" is something new under the sun. It would be difficult to estimate the power for good these addresses are doing as they mold for the Negro race public sentiment of a most desirable kind.

It is by no means too much to say that "Wings Over Jordan" has ushered in a new epoch in the forward march of the race. It is for this reason that we need to become more vocal in our show of appreciation for this program. One form of these expressions of thanks and appreciation should be by resolutions proposed and adopted at the great religious, fraternal and educational gatherings we shall be holding this summer. We should let the thoughtful and generous owners of the Columbia system know that we consider them benefactors of the Negro race and that their act in sending "Wings Over Jordan" out upon the airways has been a great contribution to interracial good will in the United States and the world. Nor should we forget to give praise to the Rev. Settle and his asscciates in having given to the world this program that for a while was confined only to the limited area covered by Columbia's Cleveland, Ohio, station.

Let us give praise to him who deserves it, while he is alive and can hear what we say. For, as the poet tells us, he "can not read his tombstone when he's dead."

—Nashville Globe.

## Mrs. Mattie B. Watkins Looking For Her Brother

**Any one knowing the present address and whereabouts of Willie Williams, or better known as Willie Buck, is requested to notify Mrs. Mattie Watkins, 903 13th Avenue, South, Nashville, Tenn. She writes that she is trying to locate her brother, who at tne time of his birth was named Willie Buck, but later on he was known as Willie Williams.**

**He was drafted in 1917 to the U. S. Army. but because of his not being old enough he did not report and was not enlisted. Mrs. Watkins is his oldest sister. She is sometimes known as Mrs. Mattie Mulligan. She lived at one time in Louisville, Ky.**

**Anv information concerning Willie Buck or Willie Watkins should be sent to Mrs. Mattie Watkins, 903 13th Avenue, South, Nashville, Tenn.**

**Nearly 3,000 miniature trees grace the new $10,000 model of the Golden Gate International Exposition. showing Treasure Island as it will appear eleven months from now on opening day, February 18. It is on display in Los Angeles.**

## Military Order Of Cootie

Chicago, June 9 (ANP)—A large number of ex-service men as well as the general public are expected to attend installation of officers of the Military Order of the Cootie of the U. S., to be held June 4, at the 8th Regiment Armory. The MOC was organized in 1920, in Washington, D. C., promotes social and re-union features among its members. Stanley B. Norvell is Hungry Cootie and Joseph W. Rollins the Seam Squirrel. Pup Tent No. 20, is the designation of the Chicago branch and similar branches are being organized throughout the country.

## Fete Doctor For 34 Years Work In Rural Area

Little Rock, Ark.—(ANP)—More than 1,000 residents of the Scott, Ark., community and surrounding cities and towns assembled at Scott Sunday to observe the 34th anniversary of Dr. Arthur Hicks as a practicing physician in that thriving rural center. Dr. Hicks is a native son and excepting the years he was away in college, has never resided in any other locality.

**Governor R. L. Cochran of Nebraska has named twenty prominent Nebraskans on his state's World's Fair Commission, to plan the state display at the 1939 Golden Gate International Exposition on Treasure Island in San Francisco Bay.**

## DOG PAYS OWN BILL

Seward, Neb.—"Skippy," Boston terrier belonging to Florence Mayland, appeared at the city clerk's office with a dollar bill in his mouth.

He paid for his dog license, took the receipt in his mouth, and returned home.

The city clerk wasn't surprised, because Skippy did the same thing last year and the year before.

## WPA Teaches 101-Year Old Mother To Write Her Name

**Cleveland,** O.—(ANP) Last Monday morning when the WPA elementary school opened classes for the day on the 2nd floor of a branch library, "Mother" Carrie Kirk, 101 years old, trudged slowly up the stairs to the classroom, followed an instructress to a table and was handed a pencil, something she had never before tried to use.

At the teacher's instruction, the aged woman put her pencil to paper, followed the copy laid before her, and scrawled "Carrie Kirk." She had written her name for the first time in her life.

## NAT'L ASSOCIATION OF UNDERTAKERS MEETS NEXT WEEK

### All Sections of Country To Send Delegates to To Philadelphia

**Philadelphia,** June 23—(ANP) The undertakers of Philadelphia are waiting with open arms for their professional comrades from every section of the country who are to attend the annual convention of the Independent National Association of Funeral Directors, which is to be held here June 26-30. Entertainment which is to be in the hands of the local and state associations of Philadelphia and Pennsylvania is headed by the following officers: Thomas Powell, president, Walter C. Beckett, general chairman, Mrs. Jennie Morris, vice president, Edward M. Baker, secretary, Handy Beckett, financial secretary, and Miss Anna C. Swan, convention secretary. Among the committee heads who have been appointed and who are functioning effectively are W. Stanley Jackson, housing, Mrs. J. E. Morris, reception, Mrs. Sarah E. Brown, arrival, Damie R. Yancey, smoker and ball, and Paul F. Kenn, finance.

From points as far west as Texas, where the state association of funeral directors, headed by Secretary L. H. Latson of Taylor, Tex., is to be represented in numbers; to Florida, where Lawton L. Pratt, Kelsey Pharr of Miami are active in promoting attendance; and Chicago where National president William Morsell, local president Alvin Poole and Charles Crook are leading a large delegation; Alabama, where A L. Welch of the Welch Embalming school, W. E. Shortridge and Smith and Gaston of Birmingham have assumed leadership; Arkansas, W A. Rowell of Ft. Smith and J. W. Releford of Stuttgart; Kansas City, where T. B. Watkins, Benjamin Moore and Julius Fickland are leaders; in fact, the attendance records at this convention promise to outstrip those of any previous gathering of morticians.

Some members are coming, it is said, with the avowed intention of demanding a change in the business affairs of the organization, which is one of the heaviest dues paying groups among Negro trade bodies; others are inquiring why they have not been notified properly by the national office of convention preparations and activities. That there may be something of an upheaval in the official family of the I. W. F. D. is admitted by many within the inner circle.

Here in Philadelphia the chief concern is to see that the reputation of the "City of Brotherly Love" as one of the best convention centers in the country is upheld and the activity of the committees seems to point at least to the fact that the morticians of the country are going to have one grand time both professionally and socially.

## QUESTIONS AND ANSWERS ABOUT THE NEGRO

**All requests for information about the Negro not involving extensive research will be answered gladly through this column. Send stamps if a personal reply is desired. Address all communications to S. E. Grinstead, Fisk University Library, Nashville, Tennessee.**

**Is Mrs. Mary McLeod Bethune's school in Florida denominational?**

Ans.—Yes, the Bethune-Cookman College of Daytona, Florida, is under the auspices of the Board of Education of the Methodist Episcopal Church.

**How old is Dr. Mordecai Wyatt Johnson?**

Ans.—Dr. Mordecai Wyatt Johnson, president of Howard University, is 48 years old. He was born at Paris, Tennessee, January 12, 1890.

**From what schools is Countee Cullen a graduate?**

Ans.—Countee Cullen, the poet who has often been referred to as the leader in the present-day renaissance of Negro literature, was educated in the public schools of New York City. He graduated from DeWitt Clinton High School in 1922, and received the degree of Bachelor of Arts from New York University in 1925. He also received the degree of Master of Arts from Harvard University in 1926.

**Please tell me of David Walker, the writer of the "Appeal."**

Ans.—David Walker was born in Wilmington, North Carolina in 1785. His mother was a free woman but his father was a slave. His father died when Walker was very young. Having realized the lack of opportunity in the South at the time when Walker was a young man, he set out for the North and Boston. In 1827 he opened a clothat length succeeded in reaching ing store and the next year married. In 1829 he published his famous "Appeal." The governors of Virginia and North Carolina sent messages to their legislature about it and the governor of Georgia wrote to the mayor of Boston to ask that it be suppressed. A reward of a thousand dollars was placed on Walker's head, the amount to be ten times as much if he was taken alive. His wife and friends urged that he go to Canada, but he refused to leave Boston. He died in 1830.

—Nashville, Globe.

## HALF OF 1,427,000 WHO DIED IN U. S. IN 1937 INSURED

A little less than half the persons who died in 1937 in the United States owned life insurance, A. E. McKeough, president of the Chicago Association of Life Underwriters, said yesterday. The association in a campaign this week is presenting the "Annual Message of Life Insurance."

Death totaled 1,427,000 in 1937, McKeough said, and this number 651,600 persons were insured. They carried 1,086,000 policies, he said, and the average amount of insurance per policy holder was $1,473.

In 1937 life insurance companies paid to the beneficiaries of the 651,600 policy holders 960 million dollars, McKeough said.

# FINE FRATERNAL SPIRIT SHOWN BY BAPTISTS OF SOUTH CAROLINA

**Rock Hill**, S. C.—(ANP) The Baptist Educational and Missionary Convention of South Carolina met here last week. Rev. Henry H. Butler of Hartsville was re-elected president. Other officers are Rev. C. G. Daniels, Georgetown, vice president; Lincoln C. Jenkins, Columbia, recording secretary; S. C. Campbell, corresponding secretary, and J. W. Coleman of Spartanburg, treasurer.

President Butler appointed delegates to both the National Baptist Convention Inc. of which L. K. Williams is president, and the unincorporated National Baptist Convention, known as the Boyd Convention. He said South Carolina was "with all the conventions which were Baptist and that there would be no strife in that state because of differences in questions regarding Baptist conventions." Rev. J. P. Reeder of Columbia, secretary of the Foreign missions of the Boyd group, introduced Rev. J. M. Nabritt, secretary of the National Baptist Convention, Inc., who attended as a visitor and speaker. Rev. Rowland Smith of Atlanta also spoke.

## CHOPPING ALFALFA

"A new trend is coming into hay storage, where the alfalfa is to be fed on the farm where produced," says Kansas Farmer (May 7). "It is chopped directly from the windrow, by transportation with sweep rake or hay wagon. A fine-cutting ensilage cutter, or coarse-set roughage mill will handle the job. In Eastern Kansas and Missouri the common method may be to blow the chopped hay into the barn, as long as storage space lasts. Farther west in Kansas, farmers can chop the hay right in the field, by pitching it from the sweep rake and blow it into cirular corn cribbing. Later the cribbing may be removed, unless it is needed as protection against stock. One advantage of this method is its saving in time, not altogether at haying, but when feeding time comes. The feed may be handled with a silage or cob fork. There is much less waste in feeding, and the hay may be placed in silage bunks wherever the farmer likes. This makes feeding in the open fields particularly easy. . . ."

# A.F.L. SEEKING TO WIN COLORED MEN FROM RANKS OF CIO

## Strategy Seen in Big Strike of Colored Teamsters in New Orleans

**New Orleans**, (By Leon Lewis for ANP) Motives behind the causes of the Jahncke Service, Inc., teamsters' strike leaked out this week as American Federation of Labor officials announced a drive for 150,000 members. The strike of truck drivers for the Jahncke company was called by the Teamsters' local, an A. F. of L. affiliate, demonstrative of their rights to be recognized as bargaining agents.

The striking teamsters are practically all Negroes. Many substitute drivers and strikers were injured, molested and arrested during the flare of violence as the strike broke out last week. Publicized reasons for the strike led many to express a degree of surprise at the efforts of American Federation of Labor to directly concern themselves with "perking up' the effects of local labor conditions, so far as Negroes are concerned.

Those who have kept in close touch with the labor activities of the country related the policies of A. F. of L. regarding Negroes, which in no way have shown any "just' consideration to them. They say, due to the fact that Negroes have been discriminated against and in all instances excluded from A. F. of L. craft unions, it was doubtful as to A. F. of L.'s sincerity of purpose in concerning themselves with Negro Labor effects at the Jahncke yards. They believe it is a threat to offset progress being made by the CIO in organizing laborers on a mass scale.

Since CIO's policies of labor organization are especially attracting Negroes and because so great a number of Negroes are in the labor circles of New Orleans, and anticipated reason for A. F. of L. recent efforts to "take in" Negroes is taken as a matter of fact. Announcement came immediately following the strike that A. F. of L. was entering into a city-wide mobilization drive in order that their forty or fifty thousand roles might be swelled to 150,000 in six months. To reach this quota, Negroes must be included.

# DEWEY'S DRAGNET CATCHES BIGGEST NUMBERS BARONS

## New York D. A. Lands Tammany Hall Big Fish Who is Supposed to be "Too Big"

**New York** (ANP)—Bearding the lion in his den, District Attorney Thomas E. Dewey brought to a head the ultimate end of his bitter fight against New York and its rackets when last week he caused the arrest of Jimmy Hines, most powerful leader in the Tammany Hall councils, destroying with one fell swoop, the maxim that Hines could never be brought before a bar of justice, for his alleged participation in the Numbers Empire of the late Dutch Schultz.

And thereby hangs a strange tale, involving hundreds of colored policy people in greater New York whose names have made history over a period of 7 or 8 years. Beginning with the time Caspar Holstein was kidnapped by the Schultz gang and shorn of his power and authority in the numbers world, the story has more ramifications than a Nick Carter mystery novel.

Schultz is alleged to have enjoyed the protection of Hines, and because of this rose to dizzy heights in the numbers world. Included in the list of henchmen of Schultz are the well known names of Henry Miro, the Porto Rican who came to the United States penniless and in less time than it takes to write had organized a numbers game that made him a millionaire and sent him to Federal Prison in Atlanta for evasion of income taxes.

District Attorney Dewey wants to know why Miro in his heyday sent Mr. Hines a dozen silk shirts costing $14.50 each, and why he also sent similar gifts to Schultz and other district leaders. Ironically enough, Miro sent Caspar Holstein a dozen suits of underwear!

**Japan's exhibit at the 1939 World's Fair of the West, opening next February 18, will cost approximately $330,000.**

## FERTILIZER DOLLAR

"A fertilizer dollar can be stretched," says an editorial in Better Crops With Plant Food (April). "More and more evidence of the economies to be effected in the careful choosing of plant food is coming to light. Important in these investigations is the practicability of using higher analysis fertilizers, and an article by J. J. Skinner, Senior Biochemist, U. S. Department of Agriculture, published in the April issue of the Progressive Farmer, well points out and geographically illustrates instances where substantial savings were obtained from increasing the units of plant food in fertilizers purchased. 'We need to recognize first of all that distribution costs, which include cost of bags, labor, taxes, freight, sales costs, dealer's profits, trucking to the farm, mixing, and a few other items, are practically the same per ton (about $12) regardless of the fertilizer bought,' Dr. Skinner says. He then goes on to compare prices of low analysis fertilizers with those of higher analysis mixtures, as well as costs of fertilizers made from various sources of plant food, and shows how millions of dollars might be saved on the fertilizer bill of the South. . . . Research and educational work on methods of application of fertilizers together with the possibility of now making high analysis fertilizers with a total concentration of salts no higher than formerly are dispelling the fear of burning. Through experiments conducted by Skinner, Mann Collins, Batten and Bledsoe in North Carolina, South Carolina, Virginia and Georgia, reported in Soil Science, have shown that if the psysiological acidity is properly corrected, high analysis fertilizers formulated from high grade chemicals give as good or better yields than the lower analysis. The trend to the use of higher analyses is definitely upward. . . ."

## Missionary From Liberia

**Philadelphia**—(ANP)—Miss Emma F. Butler of the Bendoe Mission in the Republic of Liberia where she has been working under the National Baptist Convention, Inc., of which Dr. L. K. Williams is president, has returned to America on a furlough.

Miss Butler is now resting at Hampton, Va., where she will remain until Secretary J. H. Jackson prepares a lecture tour for he.

Several Baptist missionaries are due furloughs but owing to the present depression it has been impossible to grant them. As soon as possible the most urgent cases are to be looked after, Secretary Jackson stated here this week.

## Political Use Of Race Issue Is Boomerang

**Johannesburg**, South Africa (ANP)—The sex-race issue, involving white women and black men, was injected in the recent general election by Dr. Malan, leader of the Nationalist party, who bears the title of "Little Hitler." But instead of creating votes for his party, it aroused opposition.

In the closing stages of the race, Malan had posters plastered showing white women holding colored babies talking to smart-looking young native men. Europeans resented these posters as "a slur on their racial purity."

# Memory of Late Dr. R. H. Boyd, Founder of Organization, Is Extolled by His Followers Who End Historic Meeting In Kansas City, Mo.

Kansas City, Mo.—(Special)—With the music hall filled almost to over-flowing here in the municipal auditorium, the closing session of the Thirty-fourth Annual Sunday School Congress was a scene which almost beggars description. As the long line of enthusiastic Sunday School and B. Y. P. U. workers, citizens, ministers, and visitors filed into the auditorium following the mammoth street parade, the Sunday School Congress band from Nashville played many pleasing airs, among which were "Hail The Baptist Congress!" "On, On, Metokas And Galedas," "Christian Soldiers Marching," with many other spiritual and religious selections.

The secretary of the Congress acted as master of ceremonies. He delighted his audience with what he termed brutal frankness, on this Summer School of Methods, and why it came into being. He paid a high tribute to his father, the late R. H. Boyd, out of whose fertile brains he said came this mammoth national training school of religious workers.

There were many dignitaries occupying seats upon the platform and in the audience. Notable among them were Dr. G. L. Prince and wife, of Galveston, Texas, Dr. G. B. Taylor of Nashville, Tenn., Rev. J. L. Harding of Nashville, Dr. W. S. Bacote, Kansas City, Rev. H. W. Owens, New Orleans, La., Dr. J. B. Ridley, Nashville, Mrs. M. A. B. Fuller, Austin, Texas, Rev. and Mrs. Holland of Edmonton, Alberta, Canada. Rev. Ernest Hall of Cleveland, Ohio, Rev. A. Lively, Los Angeles, Cal., Dr. E. R. Carter, Atlanta, Ga., Mr. B. J. Davis, editor of The National Baptist Union-Review, Atlanta, Ga., Dr. R. J. Jordan, pastor of St. Stephens Baptist Church, this city, the entertaining pastor, Mr. J. W. Welch, Ensley, Ala., Prof. W. T. McDaniel, Tupelo, Miss., Dr. D. M. Miller, an eminent physician of this city, with a large group of others, augmented by the huge Sunday School Congress chorus and the participants on the program.

It was an evening given over to the interpretation of Negro music, most of which is found in some of the twenty different song books published by the National Baptist Publishing Board's plant in the capital city of the Volunteer State. Some of the song books used were the National Baptist Anthem, from which they sang "The Lord's Prayer' by Carter; "Princes Awake" by Roseborough and Isaac; the Jubilee Melody Song Book, from which they sang "Train Is Acoming," "Swing Low Sweet Chariot," 'Wings Of A Dove," and others. The Victory Song Book and the Golden Gems were two other books used.

The inspired address of the evening was delivered by the Rev. G. L. Prince, D. D., President of the National Baptist Convention of America, who emphasized the Three-point Program of his Convention and denomination. He was followed by a spicy talk made by Mr. B. J. Davis.

The meeting began promptly at 3:00 P. M. and closed at 5:30. This however, was hard to do, as the master of ceremonies had difficulty in keeping down the encores that came after practically every rendition. The first selection sung by the chorus was "The Lord's Prayer," then Rev. J. B. Ridley, pastor of Mt. Olive Baptist Church, Nashville, Tenn., and a member of the National Baptist Publishing Board, offered prayer. The vice chairman, Rev. G. B. Taylor, pastor of Second Baptist Church, Nashville, who was presiding over the session of the Congress, in the absence of the chairman, the venerable Dr. J. P. Robinson, pastor emeritus of the First Baptist Church, Little Rock, Ark., announced then that the program would go on, and that Henry Allen Boyd, secretary of the Congress, would continue to serve through the afternoon as master of ceremonies.

Miss Ruby King of Lexington, Ky., was the first to stir the vast audience with her solo. She was followed by Mrs. Alice Simms, of New Orleans, La., another sweet gospel singer; the chorus then sang "Wings Of A Dove." Mr. Russell Turner, of Nashville, Tenn., member of the Sunday School Congress Band, rendered a saxophone solo; after which there was a solo by Mrs. Gladys Boykins of this city; selection by the chorus "Daniel Saw The Stone." At this time there were repeated calls for Mrs. Lula Mae Hurse, the sweet gospel singer, who rendered two solos, which were her original compositions. The chorus sang "I Feel Like My Time Ain't Long;" then Rev. H. H. Owens of New Orleans, La., rendered a solo dedicated to Henry Allen Boyd. Then there was a trio by three small children, who were compelled to respond to an encore. Solo by Miss Ruby N. Parks of this city. Selection by the chorus "Swing Low, Sweet Chariot;" Rev. R. J. Jordan, yielding to the importuning of members of St. Stephens, friends and visitors, thrilled the audience when he sang "Something Within Me," responding to an encore with "He's My Everything." The chorus sang "I Can Tell The World;" benediction by Rev. G. B. Taylor.

## HE FINDS COW, SOW AND HENS BANISH DEBTS

"The cow, hen and sow are the farmer's mortgage lifters," declared W. H. Edwards, Beebe, in submitting his 1937 record to W. B. Proctor, White country agent.

Mr. Edwards' cream checks averaged $52 a month last year. He said:

"We milk 12 dairy cows, sell cream and feed our skim milk to two brood sows and their litters of pigs and our laying hens.

"We sold last year over $100 worth of pork after supplying our home needs, and $107.50 worth of eggs from our laying flock. We culled one cow that we sold for $35, and marketed seven veal calves for a total of $40."

Mr. Edwards' record shows a total 1937 income from the 12 dairy cows, two brood sows, and 100 laying hens of $768.32, the county agent related. Only $131 was spent for winter feed to supplement home grown feeds.

"We grow all the feed possible for our cows, poultry and hogs," Mr. Edwards pointed out. Forty acres of good Bermuda pasture furnish grazing eight to nine months in the year.

# HUNDREDS OF BOYS WERE GUESTS OF SECRETARY BOYD

## Several Scout Masters in Attendance, With a Scout Troup From the Police Department of Kansas City

Kansas City, Mo.—(Special)—Carrying out his promise and fulfilling his word to the boys of this city, Henry Allen Boyd, Secretary of the Sunday School Congress, was host to hundreds of boys Saturday afternoon, June 11th. He had announced each day that he wanted the boys to be his guests. He sent letters to every pastor of Baptist Church in the twin cities and to the superintendent of each of the Schools, notifying them that he had extended an invitation to the boys of Kansas City. He brought with him Scout Master Chas. M. Vaught of Jacksonville, Fla. and a Boy Man, T. L. Hayden of New Orleans, La. These two were augmented by several special police officers who directed the Boy Scout Division that is under the police department of this city.

They were busy all the week, and by Saturday afternoon there were so many boys at the St. Stephens Baptist Church that it took more than a dozen men to handle them. Secretary Boyd sent the Sunday School Congress Band out to the church to serve these future men of this great city of the plains. The band paraded, the boys marched, the scout leaders and masters directed, the boy man drilled them. Hundreds of people were attracted to this section of Kansas City and vicinity of Fifteenth and Paseo while the boys were being carried through military tactics and executing scout maneuvers.

At three o'clock they were assembled around the big fountain in the Paseo where they were photographed. Hundreds of individual cartons of cream and cakes were on hand, and Mrs. Frances Batson, the president of the Woman's State Convention of Tennessee, had charge of the refreshments. While they were preparing for this the boys yelled, they turned hand spring, they played leap frog, and they were carried through all kinds of actions that could be performed without a trapese and without gymnasium appliances. When Secretary Boyd arrived at St. Stephens Church they began their yells. This continued for more than fifteen minutes, all of them yelling "What's the matter with Henry Allen Boyd?" then they would say "He's all right;" their leader would say "Who said so," then they would say "The Kansas City boys."

When the repast was ready to be served they were marched across the Paseo, where every boy was given his special carton of cream, a spoon and two cup cakes. Some of the boys, like boys they are, stole marches upon Mrs. Batson and were served twice, but this only increased the interest and caused more pleasure and enjoyment.

# FINDS PEANUTS ARE PAYING UPLAND CROP

W. H. Clemmens, Havanna, Yell county, recently sold 35 bushels of peanuts at $1.35 per bushel, a total of $36.75 from three-quarters of an acre, said E. A. Hansen, county agent.

In addition to the cash from the nuts Mr. Clemmens got 1 1-2 tons of hay, which was enough to feed his milk cow throughout the winter.

The peanuts were produced on ordinary upland, fine, sandy soil, with little effort, Mr. Clemmens told the country agent, adding:

"Feed crops can be produced in our uplands. It is a matter of selecting crops to suit the soil. While corn may not do well in some cases, the grain sorghums, peanuts, and legume hays can usually be depended on to produce fair yields."

Uncle Sam's newest weather station is on Treasure Island, site of the 1939 World's Fair on San Francisco Bay.

# HYPOCRITICAL CRUSADES

If and when daily newspapers decide to begin a crusade against gambling and vice of all kinds they will be able to enlist the sympathy and support of all righteous people in their communities. A majority of people are opposed to these evils and know that their communities would be better places in which to live if vice were completely eliminated from them.

But a majority of even righteous people look with suspicion and disgust upon these crusades that are started by people with no higher motive than that of being sensational and who pick as the victims of their crusades the easiest people to "pick on."

There are very few cities in which gambling of all kinds is not carried on. The biggest form being stock-market gambling in which the "big shots" engage in a form of "gaming" which virtually enjoys the sanction of law. Nevertheless by any fair appreciation of the teachings of morality, stock-market playing is as sinful and unworthy of the participation of professed Christians as is this other form of following the stock market pages called "playing the numbers."

But whereas one of these forms of gambling is a special privilege of the high and mighty among us, the other is a diversion of the masses. But the latter are no lower in the sight of the Lord than the former, nor is their form of gambling calculated to bring misery to innocent people as that which the trustees of other peoples' money often visit upon their unsuspecting clients, such as bank depositors and insurance policyholders.

Again, in many communities gambling in the form of big poker games, big dice games and big bridge games are carried on right "under the nose of the law" yet seldom if ever do we hear our eminent judges delivering instructions to grand juries, urging that the gambling lairs of big as well as little folks be broken up. Also with their unlimited sources of information about where "big gambling" is going on, there is seldom if ever an exposure of these conditions made by our crusading newspapers.

When the law is recreant in its duty of going after all gamblers, big as well as little, it thereby plays its part in encouraging the masses to have a disrespect for law, and to look upon it as a net devised and operated solely to catch "little fish."

When newspapers begin a high and holy crusade against vice and wind up with only a few "little fellows" as the only participants in vice, these newspapers prove that they primarily are interested in building a circulation, and deserve to lose the confidence of all persons who hate hypocrisy.

# APPOINTED TO COMMITTEE ON COURTESIES

## Rev. Roy G. Ross, Gen'l Sec'y of International Council of Religious Education Names Henry Allen Boyd

Chicago—(Special)—Coming from the International Council of Religious Education headquarters in this city, located at 203 N. Wabash Avenue, is the personnel of the Committee On Courtesies that will honor Mr. Russell Colgate, the president, during the meeting of the Quadrennial Convention in session next week in Columbus, Ohio.

The announcement of this committee was made by Rev. Roy G. Ross, D. D., General Secretary, from the headquarters here in this city last week. The committee consists of:

Mr. T. T. Swearingen, Chairman, Missions Building, Indianapolis, Indiana

Mr. Allan Watson, Staff Representative, I. C. R. N. Office, Chicago, Illinois

Mr. N. E. Barnes, 148 S. Grant Street, Denver, Colorado

Rev. Henry A. Boyd, 523 Second Avenue, North, Nashville, Tennessee

Mr. Emerson O. Bradshaw, 77 W. Washington St., Chicago, Illinois

Hon. Thomas J. Davis, Harrisville, West Virginia

Dr. O. T. Deever, 1441 U. B. Building, Dayton, Ohio

Mr. John D. Duff, 5819 Howe Street, Pittsburgh, Pennsylvania

Dr. Errol T. Elliott, 1241 N. Alabama St., Indianapolis, Indiana

Rev. F. L. Gibbs, 3267 W. Liberty Avenue, Pittsburgh (16), Pennsylvania

Dr. William Ralph Hall, 1125 Witherspoon Building, Philadelphia, Pa.

Mr. Herbert Hendricks, 1169 Citizens' Bank Building, Decatur, Illinois

Dr. Ray M. Johnson, Euron, South Dakota

Dr. Frank Langford, 299 Queen Street, W., Toronto, Ontario, Can.

Dr. Frank M. McKibbon, Northwestern University, Evanston, Illinois

Rev. J. Quinter Miller, 18 Asylum Street, Hartford, Connecticut

Mr. Walter E. Myers, 1511 Arch Street, Philadelphia, Pa.

Dr. Charles Elmer Rosser, 2805 35th St., N. W., Washington, D. C.

Dr. John Q. Schisler, 810 Broadway, Nashville, Tennessee

Rev. Roy Schreiner, 13th and Walnut St., Harrisburg, Pennsylvania

Rev. Myron C. Settle, 1421 Western Avenue, Topeka, Kansas.

Rev. Frank A. Shults, 22-24 Davies Building, Dayton, Ohio

Rev. B. Julian Smith, Box 467, Jackson, Tennessee

Rev. John C. White, 1540 S. 23rd Street, Lincoln, Nebraska

Rev. J. B. Whiteman, Winona Lake, Indiana.

**J. Hormel, president of the Hormel Packing Company, is chairman of the Minnesota World's Fair Commission named by Governor Elmer Benson to take charge of the state's exhibit at the 1939 Golden Gate International Exposition. The Commission is made up of 31 business and civic leaders.**

## FARMER HARNESSES BAD BULL TO PLOW TRYING TO TAME HIM

Goshen, Ind.—Chieftain, a registered 3 year old Holstein bull, is being worked on a plow owned by Daniel Yoder, a farmer near Shipshewana, in order to tame the animal after it tried to attack Mrs. Yoder, who escaped injury when the family dog came to the rescue.

The bull was hitched to a plow with a team of mules. Some trouble was experienced at first, when the bull tried to gore the mules. But now the bull walks along the furrow as patiently as his teammates.

Ordinary horse harness is used on the bull, except that the collar is turned upside down.

## Translation Of Generalissimo Chiang Kai-Shek's Easter Message, "Why Believe In Jesus?"

On Good Friday of last year at the Methodist Episcopal Asia Central Conference I spoke on the theme, "No man can live without a religious faith." The need of faith is a conviction formed from my study of an meditation upon the Bible during the past ten years. Tonight I have the privilege of continuing further my testimony of last year on Good Friday and I have chosen for my topic, "Why Believe in Jesus."

**Jesus, the Leader of a National Revolution**

First, Jesus was the leader of a national revolution. He was born in Judea when the Jewish nation was being oppressed by the Roman Empire. According to the historical records the Jews suffered injustice and cruelty under their enemies to such an extent that they were leading lives of slaves. Their enemies held over them the power of life and death. The Jews that day not only offered no active resistance but even their will to resist had vanished. Fortunately a leader of national revolution was born in the person of Jesus Christ.

All of us know that Jesus did not come from the aristocracy of that day. He had no power or prestige. He was not of a wealthy family and did not receive what was then considered a higher education. He was of a laborer's family, the son of a carpenter. When He saw the nation in a perishing condition the sons of Abraham about to be destroyed, He, with determination and courage, took upon His own shoulders the responsibility of reviving the race. With the spirit of an all-consuming love He determined to struggle and sacrifice in the effort to save His nation and ultimately to save the whole world. He, leading His disciples, travelled all about Judea. With His gift of speech and through His work or preaching and healing, He proclaimed the three principles of justice, truth and life, thus beginning the work of national revolution.

**Jesus, the Leader of a Social Revolution**

Secondly, Jesus was the leader of a social revolution. There may be many causes for the deterioation of a nation but a stagnant and irrational economic order and life is the chief one. The leader of a national revolution must do away with ignorance, corruption, confusion, selfishness and covetousness and then promote a new life through the inculcation of a new spirit which will develop and grow until the emancipation of the whole nation is accomplished.

Jesus clearly saw that to revive the nation He must begin with the reformation of society. Therefore He vigorously attacked the forces of evil and endeavored to break up wicked practices and customs. His aim was by means of His leadership and teaching to rescue from darkness the perishing multitudes, so creating a new nation and laying the foundation of a social revolution. So I say Jesus was the leader of a social revolution.

**Jesus, the Leader of a Religious Revolution**

Third, Jesus was the leader of a religious revolution. He perceived the religious corruption of the day, the prevalence of harmful superstition, the ruling elders exploiting the people and using superstititious means to deceive them. Their motives were wholly selfish. Jesus was aggrived and indignant at the tyranny of the Jewish church of His day and the hypocrisy of its worship. He was convinced that unless this superstition and hypocrisy was thoroughly purged away there would be no hope for the awakening of the people and for the manifestation and development of the true religious spirit.

He, therefore, rebuked those who prayed on the corners of the streets to be seen of men and denounced vested interests, religious and social, which misled and oppressed the people. He overthrew the tables of the money changers in the temple. Through His parables he denounced cruel landlords, rebuked the corrupt and held up to scorn the stingy capitalists. Through all this His purpose was to lead the church from darkness to light, from deterioation to regeneration, from confusion to order and from avarice to integrity. The task of the purifying of religion was never so important and onerous but Jesus unalterably determined to rescue religion and society from all those evils which beset them and arouse the people of that time out of their lethargy. And so I assert that Jesus was the leader of a religious revolution.

**Jesus' Spirit of Love**

I have long sought to know the source of the revolutionary spirit of Jesus. From whence did it spring? I have come to realize that it came entirely from His spirit of live. He would, through the spirit of love, drive from the minds of men all evil thinking and break up systems of inequality that all men might exercise the heaven-given right to enjoy liberty and equality. He considered that "all within the four seas are brothers." So He taught that men should love one another, help each other in trouble and calamity and serve each other in sickness. In international relations, peace and justice should be exalted.

Thus all through His life, Jesus opposed the use of might without right, but unheld the cause of justice. Through His words and works He manifested the reality of His love and His sacrificial spirit. In order to accomplish His heaven-appointed task of saving the individual and the world, He, with an unalterable purpose, an immovable faith, and a spirit of fearlessness, willing to sacrifice his very life and all things else for the cause of righteousness, struggled to the end, when He was nailed to the cross. He suffered the utmost pain and agony without resentment or complaint. The instances of His faithfulness to His work and His loyalty to His friends and disciples are innumerable. How rare and noble were His virtues of fidelity and forgiveness! When He was hanging upon the cross, He even prayed for His enemies, asking the heavenly Father to be merciful toward their ignorance. What an all comprehending love!

## A BOOK ON ORTHODOX

### Compilation by Rev. E. R. Carter, D. D., and Rev. E. H. Borden, D. D., For the Baptists of the Nation

There has just appeared from the presses of the National Baptist Publishing Board's plant at Nashville, a book on Orthodoxy of the Missionary Baptist Churches. It is the report of the committee that was adopted by the National Baptist Convention of America in session in Birmingham last September. The report was ordered put into book form by the president of the National Baptist Convention of America, so that it could be distributed among the Baptist leaders, whether they be in the pulpit or in the pew.

The first twenty-four pages of the book were written by the Rev. E. H. Borden, D. D., editorial secretary of the National Baptist Publishing Board s plant, pastor of a Baptist Church in Beaumont, Texas and moderator of one of the Associations in Texas. The second part of the book from page twenty-five to forty-four, was written by Rev. E. R. Carter, D. D., member of the International Lesson Committee, pastor of the Friendship Baptist Church of Atlanta, Ga., for the past fifty-six years, who has travelled extensively, and who is one of the few of the older rank and file of Baptist preachers who have always been regarded as fundamentalists.

The National Baptist Publishing Board announced that this publication can be had for twenty-five cents a copy, postage paid, sent to any address in the United States.

## Ethiopian Runs Amuck In Rome, Slashes Four With Sword

Rome, Italy—(ANP)—Four persons, an army officer, a butcher's boy and two Fascist militiamen, were wounded here last Wednesday when an Ethiopian ran amuck with a sword, slashing furiously at all who came within striking distance.

The incident occurred before the monument commemorating the Italian soldiers who were slaughtered by Ethiopians at Dogali in 1887. A gilded lion of Judah, taken in Addis Ababa during the recent Ethiopian campaign, is at the base of the monument. The Ethiopian was observed praying aloud before the lion of Judah when an army captain stepped up. The kneeling man suddenly sprang to his feet, pulled for the scimitar and wounded the captain severely.

A butcher's delivery boy, nearby, hurled his bicycle at the Ethiopian, was in turn slashed by the man. Two Fascist militiamen were also cut, but in the melee one of them fired four shots which felled the sword wielder.

## MEDICINAL ROOT GATHERING SEASON UNDER WAY

Sylamore, Ark.—The medicinal root gathering season is in full swing in the Arkansas Ozarks. Hundreds of pounds of roots are being gathered, dried and marketed. Most of the produce houses in the hills buy them, and ship them to the larger markets. There is a root or herb in the Ozarks that is sold as a panacea for most every human ill. The early settlers of the country were acquainted with them, and at that time they constituted the family medicine chest almost entirely. Now they are gathered and sold for conversion into a refined state as prescription or proprietary medicine.

Some of the roots bring high prices, others are cheap. The price depends a great deal on the scarcity of the particular kind. Ginseng roots are bringing the highest price this season. Buyers are giving $8 a pound for them in the cured state. Most of these finally find their way to China, where they are used as a general cure all.

May apple roots are the most plentiful and among the lowest priced. These grow in large patches in the deep woods, with broad leaves and white flowers. They produce a pear-shaped fruit. They bring five and six cents a pound and derivatives from them are used as a liver stimulant.

The red pocoon or blood root is also cheap, bringing from five to six cents a pound, and is utilized for different kinds of tonic.

Yellow pocoon or golden seal is much scarcer and brings a much higher price. The roots, when cured, bring $2.50 a pound. The dried tops too, are valuable, bringing 60 cents a pound. Golden seal and its deviv-atives are used as a stomach and intestinal antiseptic. One pharmacist said that it was also used in some mouth washes.

Pink Root, a rather rare herb, is used in the elimination of worms. Little of it is being marketed this year.

Lady slipper, another herb that is not so plentiful, is used as a tonic, and brings 20 cents per pound.

Wild ginger is one of the few wild roots and herbs that does not go into medicine. It is used as a spice, and brings 12 cents a pound. —Arkansas Democrat.

## Tuskegee Grads Insure Lives For "Dear Alma Mater"

Tuskegee, Ala—(ANP)— Breaking precedents and combining a gift to their alma mater, while supporting a program of Negro business, the graduating class of Tuskegee Institute on Commencement Day, May 26, 1938, presented to the president of Tuskegee Institute, Dr. Frederick D. Patterson, a gift of $10,400 in insurance planned on the 20-year endowment basis. One hundred and four graduates participated in the plan and this group is the first graduating class of any Negro institution to initiate and support such a plan.

Each of these persons was insured for $100 and presented the insurance as a gift to Tuskegee Institute. Every individual has assumed the responsibility of paying the premium from year to year which amounts to approximately $5.00 annually, or about 10 cents per week. The contract is the standard endowment policy with all non-forfeiture provisions beginning in the third year. In addition, it carries double and triple indemnity features: (1) It pays twice the face value of the policy for accidental death; (2) it pays three times the face value of the policy in case of accidental death sustained while on a common carrier, according to the terms and conditions of the policy; (3) accidental benefits are given for certain losses without reducing the face value of the policy. These accidental death and dismemberment that the class knew no better method of expressing appreciation for indemnities are automatically increased 10 per cent annually for three years, according to the terms and conditions of the policy.

The president of the class, Mr. Nathaniel Montgomery of Ft. Worth, Texas, in presenting this gift to Tuskegee Institute, stated its Alma Mater in a tangible way than through this gift endowment plan. He stated that the contracts were purposely broken down to the small unit of $100 in order that the premium might remain within the reach of all. The policies were taken in a well known colored company.

## 26 SUPERVISORS HOLD CONVENTION AT STATE COLLEGE

### Prof. R. E. Clay, Host To Group, To Hold Seminar At Hampton Institute

The twenty-six Jeanes Teachers from throughout Tennessee assembled on Thursday morning in their annual gathering at A. and I. State College. These supervisors who are directly responsible for much of the effectiveness of the public school system especially in the rural counties were welcomed to the institution by President William J. Hale. Brief addresses were made by Dudley E. Tanner and Mr. E. Turner of the State Department of Education and by Mr. C. J. Ijams, superintendent of schools at Jackson. Mr. Robert E. Clay, veteran State Developer of Negro Education is host to the group. A very practical and thorough-going program was presented during the two day session the closing event of which was a dinner Friday evening tendered by President and Mrs. Hale in the Woman's Building. The guest list included the following persons: Mrs. Katherine L. Allen; Mrs. Gertrude L. Stewart; Mrs. C. M. Denney; Mrs. Frankie J. Davis, Mrs. Georgia Cash Frierson, Mrs. M. R. Campbell, Mrs. Mary R. Hardy, Mrs. W. P. Ware,, Mrs. Johnnie Baker, Mrs. Albura H. Fagala, Mr. J. H. White, Mrs. Lucille Williams. Mrs. Laura Clay, Mrs. Ernestine Jackson, Mrs. L. Seet Hampton, Mrs. Fannie Dobbins. Mrs. Stella H. Smith, Mrs. Susie B. Brown, Mrs. Vivian C. Baskerville, Mrs. Evelyn Hall, Miss Katye Bogan, Miss Picola Smith, Mrs. Mamie Starnes, Mrs. Cordelia Norris, Mr. Kurtys L. Clay, Miss Algee Currie, Mrs. Kathleen M. Brooks, Mrs. Pearl O. Nichols.

#### OFF TO HAMPTON

Prof. Robert E. Clay, State Developer of Education and Mrs. Clay accompanied by two Jeanes Supervisors departed by automobile for Hampton Institute early Saturday morning. They will attend a conference of Jeanes teachers which will last for six weeks. He is to direct the work of the Tennessee group. Recently he was at the University of Georgia for an important seminar attended by important officials from various sections of the South.

## HANDICRAFT MARKETS

"Roadside markets where Florida farm families, especially the women, have increased outlets for their traditional handicrafts and home products are an innovation which it is hoped will not only offer a subsidiary source of family income but result in revival of many near-lost native handicrafts," says Julia May Sampley, Assistant to Director of State Markets, in Florida Grower (May). ". . . A trial market, the first producers' handicraft market in the state, opened in Melbourne last November, on the Rixie highway . . . This market has been the source of revenue not only for citizens of Brevard county, but statewide as well, during the three months of its operation. Miss Eunice F. Gay, home demonstration agent for Brevard county, is an active member of this market committee, assisting in establishing and mainitaining standards of excellence . . . In Holly Hill an elaborate market is under way. When completed it will be the first market to be erected in Florida especially for this purpose. Here it is hoped not only to have home products for sale, but also to set up work rooms where visitors may see Florida's native products made into attractive articles . . . The present operating system of these markets is based on yearly membership at a nominal fee. Products are placed in the markets on a consignment basis, and a commission of 20 per cent is charged for actual expense of operation. A standards committee passes upon the quality of all products placed on the market and also assists producers to bring their products up to the required standard. The market managers are under bond, and fire and burglary insurance protect the products and market equipment . . ."

## CLARENCE KENNEDY OF KNOXVILLE IS SLAIN BY OFFICER

### Billiard Hall Operator Meets Tragic Death in Gun Duel

**Knoxville,** Tenn.—(ANP By Dr. O. B. Taylor- Clarence Kennedy, a well known resident here, who has been in the restaurant and billiard parlor business on Vine street for more than 20 years, was shot to death early last Saturday morning during a pistol duel with Policeman Guy Vance. Both men are colored.

Earlier Saturday night, according to reports, Vance, with several other police, raided Kennedy's place, alleging that liquor was sold there. Kennedy was arrested, but later released on bond. Vance is then said to have gone back to Kennedy's place of business and arrested a waiter, and Kennedy, angered, is said to have threatened to thrash the policeman.

A short time later, the men met near the entrance to a hall where a dance was in progress. Vance claims Kennedy threatened him and both men began firing. Kennedy fell dead instantly, a bullet through his heart, four others in his body. Vance was hit by one bullet, which bored through his side near the spine, partially paralyzing him. He is at City hospital in a serious condition. An unidentified young woman was shot in the head by a stray missive. Kennedy had a host of friends here, many of whom are outspoken in criticism of the policeman's action, which they term unjustified.

## COLORED MAN RUNS FOR CONGRESS IN LOS ANGELES, CALIF.

### Republican Leaders Taking on New Life in Far West State

**Los Angeles** (ANP)—With the Negro Republicans of the city attempting to take on new life, a surprising and unusual number of men will seek the Republican nomination from the 62nd Assembly district this year. Fred Roberts who held it for 14 years until defeated by the present incumbent, Augustus Hawkins, will not run again according to reports but instead will run for U. S. congressman from the 14th district.

Among those who plan to take place in a battle royal for the nomination are A. Hartley Jones, exalted ruler of the Golden West Elks lodge and former secretary of the Liberty Loan association; Amos Black, well known politician; Spurgeon J. Jones, assistant manager of the Eastern Outfitting Co.; James Jones, president of American Advancement league; Carl Johnson, musician, and W. C. Anstin, real estate broker and politician.

On the Democratic side no dangerous opposition has arisen as yet, although it is rumored that Samuel Baumann, druggist who ran a good race in the last election, will again oppose Hawkins.

## COOKSVILLE, ILL., MAN IS FIRST TO BUY LAND BY FARM TENANT ACT

Bloomington, Ill.—James Herman of Cooksville, east of Bloomington, is the first man in Illinois to buy a farm by means of a tenant purchase loan authorized by the Bankhead-Jones farm tenant act. He received a federal check for $10,284 today.

After 18 years of tenant farming, Herman is realizing his ambition to own a farm. The place contains 80 acres of fertile land.

Of the total loan, $8,000 will go to purchase the farm, $1,752 for building improvements, $428 for land improvement, and $50 for abstracting fees and recording. The sale price, $100 an acre, is considerably below the appraisal value.

Herman has 40 years in which to repay the loan at 3 per cent interest annual payments including interest having been set at $444.88.

## HARTSVILLE BOY WINS PRIZE FROM CHICAGO TRIBUNE

Hartsville, Tenn. (Special)—Henry Lee Hall, son of Mr. and Mrs. B. L. Hall, received a check last Friday and a letter informing him that he had won one of the cash prizes in the nation wide contest which was conducted by the Chicago Tribune newspaper.

This is considered quite a distinction in view of the fact that practically all of the contestants were of the white race and that there were only three southern states represented on the winning list.

The contest closed Easter Sunday and was based on the most artistic arrangement of a set of twelve Easter Bunnies. Henry Lee is one of the Hall Brothers, who are agents for the Nashville Globe and other race publications. He has not cashed his check yet but he has been seen casting wishful glances at a bicycle in the display window of a local store.

# HARLEMITES PICKET STORES OF SECTION IN CAMPAIGN FOR JOBS

**New York,** (ANP)—The widely publicized "job-campaign being waged in Harlem against merchants of 125th street and other stores in upper Harlem's shopping district, is finding the going slow and tedious. Faced with an ultimatum from the embattled merchants, the units engaged in this struggle are balking at the terms as laid down by the Uptown Chamber of Commerce, the organization through which negotiations are being conducted. Among the terms dictated by this group are the following: "That the insiduous campaign that 125th street stores sell inferior merchandise must be stopped; that picketing be confined only to stores violating the agreement; that 40 per cent of the employes of the stores shall be colored, although this is not compulsory in that stores which have more than this number will not be required to reduce their personnel to meet the percentage; and that co-operation between the agencies demanding the employment of colored workers must be exerted to bring more business to the stores and that a central employment bureau be established whereby the needs when they arise, shall be suitably filled for the stores."

# LOUIS C. BLOUNT HEADS INSURANCE MEN OF NATION

## NNIA Closes Splendid Meeting In Cleveland, O.; 200 Delegates From 18 States Attend

**Cleveland,** June 23—(By M. C. Clarke for ANP) At its 18th annual meeting here Wednesday through Friday, the National Negro Insurance association elected Louis C. Blount president. Other officers elected were Dr. P. P. Creuzot, 1st vice president; C. R. Alexander, 2nd vice president; J. E. Smith, 3rd vice president; Dr. Julian Kelso, 4th vice president; C. L. Townes, secretary; A. M. Carter, assistant secretary; H. L. Street, treasurer; Howard W Russell, chaplain; Asa T. Spaulding, actuary; Mamie Hickerson, statistician; J. Leonard Lewis, general counsel; and M. S. Stuart, historian.

Attendance this year at the convention of the association, the only national organization of Negro insurance men, set a new record. Approximately 200 delegates from 18 states and the District of Columbia were in attendance, representing 35 companies.

A production slightly in excess of $14,000,000 was reported for the week from May 9-14 by the Committee on National Negro Insurance Week, and special certificates were awarded by the association to the agencies and agents producing specified amounts of insurance.

One of the highlights of the convention was the annual message of the retiring president, G. D. Rodgers. In his address he outlined and recommended a constructive program of operation for the association.

The public meeting was held at Antioch Baptist church Wednesday evening. J. F. Morning, Cleveland manager of the Supreme Liberty Life, was master of ceremonies. The principal address was delivered by Robert L. Vann, editor of the Pittsburgh Courier, on "The Progress of Negro Business Financed by Negro Capital." Mr. Vann was introduced by Harry H. Pace, president of the Supreme Liberty Life of Chicago.

Others on the program were Fred W. Ramsey, welfare director of Cleveland; L. B. Blakemore, deputy superintendent of insurance of Ohio; the Rev. Oliver B. Quick, pastor of Cory M. E. church; Harry Davis, M. C. Clarke, president of Dunbar Mutual of Cleveland, and W. O. Walker, editor of Cleveland Call and Post. The response on behalf of the association was made by Thomas J. Walker, vice president of the Pilgrim Health and Life Insurance company.

The business sessions were held in the auditorium of the Phillis Wheatley association. Among those who delivered addresses were George W. Cox, chairman of the "National Negro Insurance Week committee. Asa T. Spaulding, A. Maceo Walker, Attorney B. V. Lawson, Jr., L. C. Blount, Miss Esther O. Tibbs, and Miss Bernice Sanders.

The Supreme Liberty Life Insurance company of Chicago and the Dunbar Mutual Insurance society of Cleveland were hosts to the convention.

Of the new officers elected, L. C. Blount is vice president-secretary of the Great Lakes Mutual of Detroit; Dr. Creuzot is secretary of the Louisiana Industrial Life of New Orleans; C. R. Alexander is a member of the Underwriters Association of Maryland, J. E. Smith is vice president and agency director of the Domestic Life of Louisville; Dr Kelso is medical director of the Louisiana Industrial Life, C. L. Townes is secretary of the Virginia Mutual Benefit Life of Richmond; A. M. Carter is comptrolier of the Pilgrim Health and Life of Augusta, Ga.; H. L. Street is secretary of the Mammoth Life of Louisville; H. W. Russell is assistant agency director of the Atlanta Life of Atlanta; Asa T. Spaulding is assistant secretary-actuary of the North Carolina Mutual Life of Durham, N. C.; Mamie Hickerson is statistician of the Supreme Liberty Life of Chicago; J. Leonard Lewis is general counsel of the Afro-American Life of Jacksonville, Fla.; and M. S. Stuart is vice president of the Universal Life of Memphis.

Those elected to the executive committee of the association were W. Ellis Stewart, chairman, president-secretary of the Supreme Liberty Life of Chicago; G. D. Rodgers, president of the Central Life of Tampa, Fla.; E. M. Martin, secretary of the Atlanta Life; C. B. Gilpin, secretary of the Richmond Beneficial Life of Richmond, Va., and J. E. Mitchem, secretary of the Victory Mutual of Chicago.

## TRY

**The Lord is in his holy temple, the Lord's throne is in heaven: his eyes behold, his eyelids try, the children of men.—Psalm 11:4.**

**Try: To put to a trial or test; to determine the character of by comparison with a standard.—New Standard Dictionary.**

This short, biting word is peculiarly rich in meaning and force for the Christian youth and adult in today's world. Asked whether we are Christians, we answer that we are trying to be as good Christians as we are able. When we think about it, we realize that God is trying us every day, in ways we may or may not be aware of. Actually the sort of lives we live form the test of the sort of Christianity we live by. Christ himself is the standard for all Christian lives; we should try our own life, that is, determine its character, by strict and frequent comparison with the Christ-standard.

It has been well observed that "you are the only Christian some one knows." Granting the truth of that, we realize that we are being tried by that person; that he is trying the worth of our Christianity by the standard of what sort of person that Christianity makes us, what it makes us do with our words, thoughts, acts, time.

# PICKENS SUGGESTS FAIR DEAL PLAN ON HOUSING UNIT

## Wants Government to Let Negroes Pay Same Rent Whites Pay

**Columbia,** S. C.,—(ANP) Dean William Pickens, director of branches, NAACP, and Federal Forum leader who has been delivering lectures in Columbia and vicinity for more than nine weeks, is cooperating with local residents in an effort to reetify alleged inequalities and inferior accomodations given Negroes at University Terrace, WPA low-cost housing project.

In University Terrace, houses for whites and Negroes are arranged on the same square but face different streets. Negro tenants complain that they are required to pay rent and furnish heat, while the rent paid by whites includes steam heat, refrigeration and other conveniences. A colored assistant who manages the Negro houses says that while the colored families pay extra for heat, they are furnished refrigeration and that they pay extra for electricity only when they use more than a certain maximum.

In a letter to the U. S. Housing Authority, Department of the Interior in Washington, Dean Pickens suggested a solution to the present difficulty and a guard against similar problems in the future. Dean Pickens' letter in part was as follows:

"Seeing that you are planning to finance new housing projects for the two races in Columbia, I want to call certain things to your attention—and the suggestions which I make to you would be supported by the leading colored people of Columbia.

"1. That since the Negro project is to be always separate from the white, the management be also distinct; and that the Negro project be managed by a Negro, through their own project office. Your new projects, for white and colored, are to be, we are told, on separate lots, perhaps in separate parts of the city.

"2. That you build the same type of housing with the same equipment and for the same rental, for colored as for white. Your University Terrace has a serious illusion: that the Negroes are being charged a cheaper housing cost—whereas they are paying as much or more than the whites, for inferior accomodations to the conveniences of the whites."

You are in life today—you may be numbered among the dead tomorrow.

I need not be weak so long as God is strong.

## PURCHASES AUTHORIZED UNDER BANKHEAD-JONES TENANT ACT

Washington, D. C.—Secretary of Agriculture Henry A. Wallace approved plans for the expenditure of $786,896 for the purchase of approximately 60,000 acres of submarginal lands which are to be converted into forest, pastures, recreation centers and wild life refuges.

The purchases were authorized under the Bankhead-Jones Tenant Act, which appropriated $10,000,000 for this year. This authorization covers projects in 11 states, which includes Arkansas, Alabama, Florida, Georgia, Louisiana, Mississippi and South Carolina.

This movement on the part of the Department of Agriculture should mean much to the Negro farmer throughout the cotton belt.

### LOTS OF LUCK ON SMALL SCALE

# RACE HAS 58,350 MORE BIRTHS THAN DEATHS IN 1936

Washington, D. C., Aril — There were 251,098 Negro births reported in the United States during the year 1936 as compared with 192,748 deaths, or an excess of 58,350 births over deaths, according to W. L. Austin, Director of the Census. In 1935 the number of births exceeded the number of deaths by 77,601. This decrease in the excess of births over deaths was mainly the result of an increase of 15,225 in the number of deaths. At the same time, there was a decrease of 4,026 in the number of births.

In the South the excess of births over deaths in 1936 was 61,455. Outside the South there were 3,105 more deaths than births. Kentucky, Tennessee, and Oklahoma were the only southern states in which the deaths exceed the births. In the North the only states in which the births of Negroes exceed the deaths were Pennsylvania, New Jersey, New York, Massachusetts, Connecticut, Rhode Island and Michigan.

In the state of New York the excess of births over deaths decreased from 1,473 in 1933 to 293 in 1936; in New Jersey, from 1,048 to 615; in Pennsylvania, from 1,170 to 661; in Maryland, from 1,386 to 392; in Michigan, from 369 to 167. Other Midwest industrial states, Ohio, Indiana, Illinois, and Missouri, reported increases of Negro deaths over births from 1933 to 1936. Increases in the excess of births over deaths in 1936 as compared with 1933 were reported for Massachusetts, Connecticut, Florida, Mississippi, Louisiana, and the District of Columbia. Massachusetts was the only state with a Negro population of 50,000 or more that reported fewer deaths in 1936 than in 1935.

Commenting on these figures, Director Austin said, "We have reason to believe that in many states, especially in the South, the registration of Negro births is deficient although every effort is being made to correct that situation. If the records were complete, the actual excess of births shown would probably be larger than the above figures indicate. It is to be hoped that Negroes everywhere will take pains to see that the births occurring in their families or in the communities in which they live are duly registered according to the law which requires that a certificate of birth be filled out by the attendant physician or midwife and filed with the local registrar."

# CRITICAL CHRISTINE

Christine was not very capable and tried to make up for this by continually finding fault with others. Since this was not only unpleasant for the class but was making the child unpopular, the teacher decided to try to correct the habit. Taking Christine for a ride one day, she purposely passed the place where an old mansion was being wrecked.

"How long," she asked the foreman, "will it take to tear this down?"

"About ten days."

"And do you know how long it took to build it?"

"Nearly five months, they say."

After Christine and her teacher had driven a short distance farther, the teacher said thoughtfully, "There's quite a difference, isn't there, between the time it took to build that house and to wreck it? Several months were needed in which to put it up, but only a few days to tear it down."

Christine nodded.

"And I've been thinking," continued the other, "how much less time and effort it takes to tear down some one else's work or character than it takes to build it. How careful we should be about criticizing—"

"I never thought of that," came slowly.

But the teacher knew from Christine's tone that she would think of it in the future.

---

Almost a century ago, Ralph Waldo Emerson said: "What is civilization? I answer, the power of good women. What they say and think is the shadow of coming events——Woman moulds the law-giver and writes the law. You may proceed in the faith that whatever the woman's heart is prompted to desire, the man's mind is simulanteously prompted to accomplish——Women, who always carry the conscience of a people—They are the best index of the coming hour!"

# MR. AND MRS. HOLLAND ATTEND S. S. CONGRESS

Kansas City, Mo.—(Special)—While there were messengers here attending the Sunday School Congress from many states in the Union, the honor of having come the farthest distance is reputed to have been given to the Rev. Shepherd K. Holland and his wife, who were here from Edmonton Alberta, Canada. Rev. Mr. Holland and his better half arrived the morning before the Congress opened. They were on hand when the special train arrived and when the big demonstaration was made at the Union Station on the morning of Wednesday, June 8th. They remained throughout the week of the Congress.

Rev. Holland attended the Ministerial Department, the Bible Lectures and the four principal Lectures in the main auditorium of the Music Hall every day, while Mrs. Holland busied herself in the Missionary Department, the Superintendent's Department and the Organized Classes Section. She too, was presented to the main body at one of its general sessions.

Rev. Holland has often been referred to as the "Church Extension Globe Trotter." It is said that he has traveled extensively, having crossed the Atlantic ten times into Europe, visiting the Holy Land, twice across the Pacific into the Orient, twice across both the Berean Sea and the Berean Strait, visiting Alaska and North Siberia, thence across the Gulf of Mexico. His friends say he has been heard by hundreds of thousands in the varions countries and different lands in which he has travelled.

Many tracts have been printed and distributed by him in his missionary work; one entitled "Tonight and Tomorrow;" another one "Today and Tomorrow;' and a third one "God Is No Respecter of Persons." He was reported to be returning to his Edmonton. Canada headquarters via Portland. Oregon, Seattle, Washnigton, thence into the Canadian Northwest, stopping at Vancouver before going on to Edmonton.

# WE, LABORING

Elaine V. Emans

We, laboring in field and laboratory,
On wings into the sun, and dizzy story
Above the street, in schoolroom, studio,
And humming mill, and darknesses below
The sunlight, we in home and church and shop,
And conference and fishing schooner, stop
An interval and stand apart from doing.
With one accord we think of work, renewing
Our pride in it, our reverence, our sure
Conviction work is honorable and pure.
We, laboring, now pause and think how very
Dear labor is to man, and necessary

---

A good neighbor in the home is one who provides something more than food and clean surroundings. God's highest will for me is better than health and all blessings.

# SUPREME SERVICE COMPANY IS UNIQUE BUSINESS IN CHICAGO

Something new and unique in Negro business is the recent organization and incorporation of the Supreme Service Company of Chicago, Illinois. The company, which is located in the Supreme Liberty Life Building, 3507 South Parkway, will Specialize in Funeral Financing.

Funeral financing, according to the organizers of the Company, has grown to major proportions on the South Side where most of Chicago's colored population lives. Its possibilities first became eminent during the early days of the depression when credit conditions grew tighter and practically non-existent. Chicago's 63 Negro undertakers found themselves in a predicament where they had to finance with cash most of the funerals of the estimated 7,000 of our people who die annually in Chicago. In addition they had to wait for their money until the insurance company paid off their clients.

It is estimated that over $250,000.00 is paid out annually to financing funerals for Chicago's colored citizens. In the past all of these finance charges have gone into the hands of members of the other race.

The personnel of the Supreme Service Company is made up of men who have many years of experience in the field of Insurance and are therefore qualified to pass on the merits of any kind of policy.

The officers are H. L. Thompson, president; T. K. Gibson, Jr., secretary; W. Ellis Stewart, treasurer; E. W. Beasley, vice president; M. C. Atkins, vice president and J. G. Ish, Jr., vice president.

Aside from financing funerals the company will also operate a currency exchange as an auxiliary activity where checks will be cashed and money orders issued to pay gas, light, water and other bills.

# ARMY-NAVY UNION ENDORSES BERRY FOR U. S. SENATOR

## Says More Men like Noted Tennessean Needed in Present Crisis

Johnson City, Tenn.—The Army and Navy Union, U. S. A., organized in 1886, and today the oldest active veterans organization in the United States, in a statement issued by John J. Crim, National Legislative Chairman, endorsed the candidacy of Senator George L. Berry for return to the Senate.

"In these troublesome days that we are now experiencing we need such men as Major Berry in our United States Senate. His past record of service to his fellowmen is ample proof of his ability and integrity, and if we had more men in the United States Senate like George Berry, we would have no fear of the future of this county," said Crim.

"We, as veterans of the armed forces of our country, know of the unselfish services of Senator Berry not only during the period of the World War, but ever since those days of 1918 he has been an active and ardent worker for our disabled comrades," stated Crim.

"Senator Berry's stand on the principles of Americanism is one that should win the commendation of all true Americans who believe in our present day Democracy, and I feel certain that not only the veterans of Tennessee but every true citizen of this great State of ours will rally to the support of Senator Berry and send him back to the United States Senate with the greatest plurality ever given a distinguished son of Tennessee," continued Crim.

"We, as members of the Army and Navy Union, whose rolls have carried such illustrious names as Colonel Theodore Roosevelt, Admiral Dewey, General Funston, and every President of the United States since McKinley, are proud to have such a man as Senator Berry in our organization," added Crim.

# INGRAM IN NEW FILM, "LET MY PEOPLE LIVE"

New York, May—(ANP) Rex Ingram, who played the part of "De Lawd" in the film "Green Pastures," plays a leading role in the National Tuberculosis association's new moving picture, "Let My People Live." The picture, which will be released this summer, has an all-Negro cast. It dramatizes facts of tuberculosis as it affects the colored race.

"Let My People Live" was filmed entirely at Tuskegee Institute, Ala., and among its features is the Tuskegee Choir of 100 voices, under the direction of William L. Dawson. The Federal Theater Project granted Ingram leave of absence from the W. P. A. stage production, "Haiti," to make "Let My People Live." Other persons in the cast include Peggy Howard, Erostine Coles and Earl Brown.

The picture, which lasts 20 minutes, will be shown in theatres throughout the South and in large cities in the North. State and local tuberculosis associations, also will show the picture at meetings of Negro fraternal, educational, church and civic groups.

---

If we had only the present, life would be drear for some of us, for today doesn't end all; there's another glad tomorrow just ahead!

# CEDAR TREE, WALNUT POSTS FURNISH HOME

Attractive furniture for little money makes the home of Mrs. Tula Mae Miller, member of the Walnut Springs home demonstration club in Sevier county, a more comfortable place to live, said Miss Ella Posey, district home demonstration agent.

Mrs. Miller's father took lumber from an old cedar tree that had blown down several years ago, and some walnut fence posts, and made a book case, a cook table, a kitchen stool, a clock shelf, some picture frames, and a radio table.

The expense was $2, which included varnish, enamel, glue, screws, corner braces, and pine lumber for the kitchen table, Miss Posey added.

# I AM SAFE

N. Florence Leech

Mother taught me a Bible verse,
And I say it when wind and rain
Are beating against the roof at night,
And shaking my window-pane.

"Lo, I am with you always,"
Jesus promised, and so I know
That I am safe, for He is near,
Though stormy winds may blow.

**A special commission to represent him in organizing Brazil's exhibit at the 1939 World's Fair of the West on Treasure Island, has been appointed bv President Getulio Vargas.**

# THE OTHER SCOTTSBORO BOYS

**These United States of America are assuming the role of the Pharisee who stood in the temple and thanked God that he was not like other sinners.**

**We should, the rather, take our place along side of the poor Publican who was honest enough to smite upon his breast and say, "Lord have mercy upon me a sinner."**

**We are undertaking to lecture other nations of the world for atrocities committed within their borders. Our hearts are bleeding for the Chinese who have been outraged by Japanese aggressors. It is a fine spirit, but one wonders why it was not in evidence when equally as bad atrocities were visited upon the Ethiopians, by the Italian bandits..**

**Our hate for Hitler is terrific and we are virtually ready to launch a war against this new menace to world peace in line with the way we mobilized our men and other resources twenty years ago to make the world safe for democracy.**

**But like so many other people who are prone to meddle into the affairs of another, we are doing so in ridiculous disregard of our own shameless inhumanity to man.**

**As proof, note the latest news from Alabama. The supreme court of that state has solemnly reviewed the evidence in the case of the Scottsboro boys and, on the unsupported word of one scarlet woman, has given the word that one of these boys must die in the electric chair.**

**That the evidence against these boys is a pure invention, a cock and bull story of a woman whose word is undeserving of belief in a just court of law, the whole world now knows.**

**Victoria Price has been ruled as unworthy of belief in the case of four of the Scottsboro boys who have been set free. The freed youths are just as guilty of the crime for which Clarence Norris is scheduled to die in the electric chair on August 9 as is Norris himself.**

**But Alabama has made a cowardly surrender to race prejudice in this instance. Its leaders refuse to rise to the dignity and statesmanship as did Judge Horton, who set aside the conviction of the boys in one trial because he could not countenance the misuse of judicial power to persecute plainly innocent human beings.**

**The United States of America stands stained and shamed by the Scottsboro persecutions. The crime is upon the head of the whole nation, not just the state of Alabama.**

**We can not, without qualifying in advance as being top flight Pharisees, condemn persecutions in Germany, China or any other part of the world until we have preserved for Alabama its constitutionally required "Republican Form of Government," which, in this instance, requires that the state set the other innocent Scottsboro boys free.** —Nashville, Globe.

### THE AMERICAN NEGRO FARMER

(Continued from Page 1)

acres of American soil. We cultivate about thirty-eight million acres. The value of land and farm buildings we own is approximately three hundred and fifty million dollars.

Our rural population is more than six and a half millions. Over fifty per cent of our group live on farms. We reside in every state. There are one hundred and eighty-one thousand Negro farmers in Mississippi. There are three Negro farmers in the state of Nevada.

We engage in all kinds and types of farming. Farmers of our group produce 40 per cent of the nation's cotton; four per cent of our grain crops; ten per cent of our rice crops; ten per cent of our tobacco crops; 25 per cent of our sweet potato crops; 40 per cent of our watermelons. Some of us are fruit-growers, in all the fruit producing sections of the country; some are stock-raisers on the western plains; some are dairymen, poultrymen, gardeners, floriculturists. Like the poet-king, David, son of Jesse, the Bethlehem farmer, we know the earth is full of God's riches. And with Dr. Carver, our famous farmer-scientist, we have asked God to teach us why so many of his blessings are secreted in the common soil, and to help us find, develop and distribute these blessings for the welfare of our fellowmen.

The Negro farmer has not been a failure as a farmer, neither has he been a failure as a man or as an American citizen. When he heard the bells of freedom sounding o'er his cotton fields he loved those fields too well to leave them. He was too thoughtful to rush to the bustling city, and there seek wealth, fame and honors. He shunned the allurements of fashion, of pleasure, yea, the allurements of seemingly necessary happiness, and was content to continue to delve into the good earth, side-by-side with those who had held him in bondage, but who have never forgotten and who never will forget what they owe to his brawny arm and faithful heart. By the paths his slave-parents trod he has erected the rural church and the rural school house. His sons and daughters, nurtured in that strict farm discipline so essential to the substantial progress of any race, have become the business and professional leaders of our group.

The Negro farmer is not ashamed of his vocation. He is not ashamed of himself. He is proud of the progress of his Race. He has faith in his Race. And he still has plenty of love in his heart for all his fellowmen. For the old-time farm, Friend, —the American-mothers sang: "It makes me love everybody,"—and we are thankful indeed that the old time farm provides a contented way of life and a happy way of living for several millions of us yet.

Today, on Farmers' Sunday, which was first proclaimed by the National Federation of Colored Farmers nine years ago, and which we observe annually, we felicitate all who are interested in the progress and welfare of the American farmer. Greetings to our contemporary organizations, The Farm Bureau, The Farmers Union, and the National Grange. Greetings to our faithful rural ministers and teachers,—to our farm and home demonstration agents, whose work has been so efficient, so courageous, so honorable, so helpful. Greetings to you, our boys and girls —our future farmers, and to you who have left the old farm home. Our prayer will ever follow you.

The day is at hand when no American farmer, anywhere in America,—shall be the "man farthest down." No longer "bowed by the weight of centuries," but exalted, by the wisdom and justice of his day and age, he shall march on in the vanguard of civilization. And the Negro farmer, a good farmer and a good man, will never destroy his heritage. He will love the land he lives upon. He will give it a square-deal. Where weeds are growing, he will produce grass. When trees are felled, he will plant more. The barren acres he will make fertile. The stony acres, he will make smooth. He will fill his soil with humus and leave it to his children better than he found it. As a man,—as a farmer,—as a citizen, may he ever merit from his countrymen this tribute by a poet of his Race, who says:—

Just as your droughty corn will upward start,
When kissed by rain,—God's potent elixir,—
And rise, absorbing life, to life impart,—
So in the future will your Race aver
Your faith and courage true, and then shall it
Arise, possessing power you did transmit.

Arise to flourish and to bless the world;
To render you all homage willingly;
Who, bruised by trials which man and Nature hurled,
Yet overcoming, weak but faithfully,
Humbly and nobly sweat and toiled to found
Our future glory on your well-tilled ground.

From this group of American farmers to you, Friends, comes the message first given the farmer-shepherds on those silent Judean hills: "Peace—peace on earth, goodwill to all."

## OWNERSHIP AIDS

(Continued from Page 1)

### FINDING NEW CROPS

"If you keep your eyes open as you go about the farm you may find an improved strain of some crop that can be developed into an excellent money maker," says Capper's Farmer (May). 'Earl Clari, Sedgwick county, Kansas, found three superior heads of wheat in his father's field. He saved them, increased the amount of seed, and found the new wheat would outyield every other variety in his county. Now Clark's Blackhull is grown over a wide area from northern Texas to central Kansas, and increases production of the area by millions of bushels annually. Clark's eyes were opened to the possibility of improved selections, and he has developed a number of other new varieties. Two men in Hennepin county, Minnesota, found a strawberry plant blooming and bearing in fall in a field of June bearing plants. Fred W. Barden, brother of one of the men, isolated the plant, increased it, and found he had a distinct new variety of everbearer. His first plants were sold in 1932, but demand has been so great for the new berry, named Wayzata, that plants still sell abnormally high. Braden not only is profiting by plant sales but by fruit sales as well. Last fall he was picking $80 to $90 worth a day from 2 3-4 acres. The year before he sold $2,400 worth of fruit from 2 1-2 acres_____John Brown, White county, Illinois, found a vine that produced watermelons different from those on other vines in his patch. The melons seemed superior to any others he grew. He saved seed from the melon, which proved to be a cross, worked with the variety until he had a distinctive improved melon that has been his best paying crop for years. These are but a few of the new crops developed from outstanding individual plants. Though many are developed by plant breeders, it is possible that more than half are the increase of superior plants discovered by growers who kept their eyes open___"

## SOUTH TURNS

(Continued from Page 1)

progress of the South if year after year (as in 1936) through 4-H club work alone 85,000 boys and girls are becoming better acquainted with poultry, 28,000 have a calf or a cow or a steer of their own (maybe colts will be included after this year), and 56,000 are learning how to make profits from hogs."

### ANCIENT LOTUS SEEDS

Oriental lotus plants are being grown from seeds estimated to be from 300 to 500 years old, at the Field Museum of Natural History. The seeds were obtained from soil that had once been a lake bottom in southern Manchuria, near Port Arthur. Records show that the lake was drained some time between 160 and 250 years ago, and since then large willow trees have grown up on the ancient lake bed. The seeds, which were presented to the museum by the University of Chicago, are believed to be the oldest seeds ever made to sprout. (Science Service.)

### FOIL-WRAPPED LETTUCE

Top-quality head lettuce, marked for shipment to big city luxury shops, is going to town in costumes of gold and silver. Wrapped in metallic foil veneered with wax, these swanky heads hit the buyer harder, fetch higher prices. And they're worth more. Tests conducted recently in California show that naked lettuce loses 28.6 percent of moisture after twenty-one days of storage, while heads wrapped in foil lose less than one percent. (Country Home Magazine, April.)

## FARM BUILDING

(Continued from Page 1)

business.

"How to Modernize Your Farm Home," a booklet describing the National Housing Act, as it applies to farmers, is now available and free copies may be had by writing the Federal Housing Administration, Washington, D. C.

Under the property improvement credit plan, owners of farms or tenants having leases which will expire not less than six months after the maturity date of the loan, may borrow up to $10,000 to be used exclusively for property improvements of a permanent character. Installation and purchase of equipment and machinery, such as cream separators, churns and poultry batteries, are no longer eligible for insurance under Title 1, but such permanent improvements as barn pens, feed bins, stalls, troughs, ventilating systems, water systems, electric wiring and silos, for example, are eligible.

Property improvement credit loans to farmers are repayable in monthly or seasonal payments from the sale of crops or livestock; but there must be at least one payment a year. Interest and other charges depend upon what arrangement can be made with the bank or other private lending agencies granting the loan which is repaid in equal monthly installments.

For the first time under the Property Improvement Credit Plan new construction loans of two types may be insured up to $25000. These are called Class 2 loans, and apply to the building of new structures such as barns, garages, service buildings of various kinds—poultry, hog and milk houses—roadside markets, tourist cabins, gasoline stations and various other industrial and commercial buildings. These loans may run for five years and are payable in equal monthly installments.

Class 3 loans, under Title 1, apply to such new construction used wholly or in part for residential purposes. Certain property construction requirements as established by the Federal Housing Administration, must be complied with. These loans are also limited to $2500 in amount, but may run for a period of 10 years and are payable in equal monthly installments.

Whether or not security will be required for loans up to $2500 is a matter to be decided by the lending institution. Where loans exceed $2500 the taking of Security is strongly urged by the Administration. And in the case of loans for the erection of Class 3 structures, Collateral mortgage security must be furnished.

## WATCH CHILD'S EYES

Approximately 5 million of the 29 million school children in this country have some form of defective vision requiring corrective lenses, it is estimated by scientists.

Studies made of the problem indicate further, they added, that poor eyesight is probably responsible for a large proportion of present-day school failures.

Every parent should observe carefully to note whether the child takes extra effort to read or observe; if any doubt exists regarding the child's visual acuity, have his eyes examined, they advise.

Prisoner—"Everything I do, I do fast."

Judge—"Better do sixty days; see how fast you can do that."

### BANTAM ROOSTER HELPS HEN WITH HATCHING OF TWELVE EGGS

Kalamazoo, Mich.—Butch, a bantam rooster owned by Mrs. Carrie Fike, is sharing domestic duties and occupies the nest side by side with a bantam hen sitting on a hatching of eggs. Six of the dozen eggs have been alloted him by Minnie, the hen. The pair have occupied the nest together for two weeks. The eggs are due to hatch in a week.

**Marion Davies, movie star, is a member of the Fine Arts committee under the chairmanship of Herbert Fleishhacker, San Francisco financier, in charge of assembling the $20,000,000 fine arts exhibit at the World's Fair of the West opening next February 18.**

# COLORED OFFICIAL OF DETROIT IS HONORED FOR 40 YEARS OF SERVICE

## Benjamin B. Pelham Presented Oil Portrait Painted By White Artist; Judge Presides

Detroit, Mich.—(ANP)—In appreciation of his 40 years of excellent service as head of the most important department in the Wayne county set up, that of chief accountant in the auditor's office, Benjamin B. Pelham was signally honored by the department heads and employes of Wayne county through the presentation of an oil portrait at the Y. W. C. A. here Friday aiternoon.

The portrait was done by Miss Eloise Meyers, a white artist, but the thought behind it was that of Pelham's friends and co-workers. Every department head was present and the presentation was made by Presiding Judge Ira W. Jayne of the circuit court, who said "Pelham started out as a newspaper man. Some men never get over it, but Ben left the newspaper business for politics and soon-graduated into public service.'

Regardless of what political party held the administration hand in the setup, Mr. Pelham has always remained as he has been for 40 years the hub around which the entire county administration revolved.

In response Mr. Pelham said: "To those who have thus shown their appreciation for what little I might have done in the past I hope in the years to come they will never have occasion to regret it."

# SEE CHURCH FIGHT BACK OF ROBBERY OF PRESIDING ELDER

Little Rock, Ark.—(ANP)—A factional fight between friends supporting Dr. A. O. Wilson in his candidacy for the A. M. E. bishopric and those backing Dr. J. H. Clayborn, editor of the Southern Recorder, in his candidacy for the same position, was seen last week as the probable cause of the shooting and robbery of the Rev. O. Sherman, 44, presiding elder of the Camden district, at his home a week ago. Two ministers have been arrested and quizzed as his assailants.

Rev. Sherman had attended a meeting of the finance committe of the board of trustees of Shorter College, an A. M. E. institution, and was given a satchel containing $2,319 raised for the college to take home and keep overnight. Two men followed him in their car and as he drove in his driveway, one shot Rev. Camden through the mouth and snatched the money bag. He chased them in his machine until he collapsed from loss of blood and shock.

It has since been pointed out that turning the funds over to Rev. Sherman was "irregular" inasmuch as Dr. Clayborn is treasurer of Shorter, and that the presiding elder's assailants were thoroughly aware of the circumstances surrounding the committee meeting.

Rev. Sherman has identified one of his assailants to police as the Rev. Harold Nelson, an Oklahoma pastor whose father is one of Arkansas' leading ministers. Rev. Nelson, about 27, is a former student at Shorter. He was arrested and is being held without bond in Pulaski county jail.

Police also arrested the Rev. A. A. Cooper, pastor of the Second A. M. E. Church in Camden, but he was released when officers were convinced he was not involved.

Rev. Sherman, who is slowly recovering from the gunshot wound, is a Wilson supporter, while Rev. Nelson is understood to be backing Dr. Clayburn.

# THE MODERN FARMER

AUG 23 1938

Vol. XI. NASHVILLE, TENN., JULY 15, 1938 No. 3

# Nation's Negro Farmers Will Meet in Forsyth, Georgia. Oct. 26-29, 1938

## Official Call Issued to All Workers and All Friends

Moline, Ill.,—The National Convention of the National Federation of Colored Farmers, Inc., will meet in Forsyth, Georgia, at the State Teachers And Agricultural College, October 26-29. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our Federation are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of State and Federal Agricultural Departments who plan to attend the Convention should communicate with us not later than September 1st. Suitable arrangements will be made to entertain all delegates and visitors and all farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.

Arrange to attend the greatest Convention of organized Negro farmers in America.

Sincerely,

LEON R. HARRIS, President
Box 285, Moline, Illinois.

## INTERESTING SLEEP FACTS

The first written record of beds is probably found in the "Book of Esther." Stuffed cushions were piled in a corner of a room to be used as beds at night, and as seats in daytime.

Some early Egyptian beds had special head rests to protect the coiffure.

Solomon's bed was made of Cedar of Lebanon.

Cleopatra's bed was made of Ivory and Gold.

Louis XIV had 413 beds. Some of them were ornamented by pearls on a background of silver and gold.

The "Bed of Ware" made for Edward IV accommodated 68 sleepers. The trundle bed under it provided space for 34 others. On exhibit at Roxbury, England.

Charles Dickens always carried a compass with him when traveling, which he used to place his bed so that his heaad would be towards the north as he slept.

An ancient form of Chinese torture was to keep prisoners awake. They rarely kept their reason after the fifth or sixth day.

In normal, healthy sleep, a person changes position from 20 to 45 times during the night.

**Marion Davies, movie star, is a member of the Fine Arts committee under the chairmanship of Herbert Fleishhacker, San Francisco financier, in charge of assembling the $20,000,000 fine arts exhibit at the World's Fair of the West opening next February 18.**

More than 200 wells were sunk in Treasure Island, site of the 1939 Golden Gate International Exposition on San Francisco Bay, to unsalt the man-made island for a $1,500,000 planting program.

## GRAZING CONDITIONS IN AREAS

### 80 Per Cent of Pasture Lands in Two States

Eighty per cent of the pasture lands of the Kansas Flint hills and the Osage range of Oklahoma are filled with cattle, and from all indications this will be the greatest grazing season in years. D L. Mullendore, Howard rancher and president of the Wichita Production Credit corporation, said yesterday.

Subsoil on both ranges is soaked The blue stem grass is growing rapidly. Springs that have been dry for several seasons are running again, filling streams and ponds, assuring the landowners of a plentiful supply of water for the summer.

"Taking everything into consideration, this year looks like a great one in both states," Mullendore said. "There may be a few of the pastures that have not been leased, but they are the poorer ones."

Broomweed, which took a large area of the pasture land in recent years, thus far has shown little inclination to outdo the blue stem this year, although it still is too early to predict what it will do. Mullendore said. "My guess is, through, it will not get far," he added.

Cultivated land throughout pasture areas in both Kansas and Oklahoma is being planted to corn and kafir, since prospects for a bumper crop are unusually bright. The feed will go a long way toward feed lot feeding in the fall and winter. In recent years it has been necessary to plant other row crops to take care of the livestock which had barely enough grass to get by on.

## WARN FARMERS CORN BORER OUT FOR A BIG YEAR

Washington, D. C., April 24.—The agriculture department warned corn-belt and northeastern states today that they will face perhaps the most widespread outbreak of the destructive European corn borer in their history this spring and summer.

Department entomologists said last summer's plentiful moisture and last winter's mild weather encouraged development of borer eggs in greater number than usual. Only dry weather in June, they said, would prevent general hatching of the eggs and a serious infestation.

The insect feeds on corn, potatoes, and truck crops, as well as flowers and numerous other plants. In recent years it had become increasingly destructive to market sweet corn in the Great Lakes and the eastern states, where it caused losses last year estimated by the department at $2,000,000.

## OWNING OF A HOME

### Backbone of America Is In These People

THE MOST important step in the acquisition of a home is the making up of your mind that you intend to have one. The very fact that you can afford to pay rent proves that you can afford to own your own home.

There is no better way to emphasize the fact that every family should own its own home than to quote the words of John Howard Payne, written many years ago and sung all over this broad land, and translated and sung in almost every known lanuage, commonly known as "Home, Sweet Home:"

"Mid pleasures and palaces, though we may roam,
Be it ever so humble, there's no place like home."

The wide and general acceptance of the sentiment expressed in those lines prove conclusively the truth of the statement there is no place like home, and there is no reason why every up-standing citizen should not own his own home. The trouble with too many is, that they do not stop to think, do not realize the importance, do not have the moral courage or the backbone to shoulder the responsibility of this important step. Too many indulge in wasteful extravagance, live away beyond themselves, thundering along at a speed that is hard to stop. Too many think only of present pleasures and do not consider future happiness.

Permit me to suggest to you, that at once you step on the brakes, hesitate for a moment's serious reflection, take an inventory of yourself, think of the possibilities of a home of your own—then away deep down in your heart, pass a resolution to save and accumulate funds, so that in the near future you, too, can invest and be the owner of a part of Mother Earth. It has been said that the best investment on earth is the earth itself.

"The home owner has a constructive aim in life; he spends his leisure more profitably and he and his family live a finer life and enjoy more of the comforts and cultivating influences of our modern civilization.

"A husband and wife who own their home are more likely to save. They have an interest in the advancement of a social system that permits the individual to store up the fruits of his labor. As direct taxpayers, they take a more active part in local government. Above all, the love of home is one of the finest instincts and greatest inspirations of our people."

Grandpa: When I was young, my big ambition was to have a gig and a gal.

Dad: We'l, when I was a boy, I wanted a flivver and a flapper.

Son: Hey, Pop, how about me having a 'plane and a jane?

## WIDE INTEREST SHOWN

### 100 Acres Near Van Buren, Ark., Used for Seed

Fort Smith, Ark.,—Growing of flax for its seed may become a real industry of the state if a trial made in Crawford County proves as successful as expected.

A 100-acre field of flax on the Whiteside farms near Van Buren is ready to harvest and is expected to yield an average of 20 bushels of seed to the acre. The experiment is the first in the history of the Southern and Southwestern states and has attracted attention.

The latter part of April and the first few days of May, when the flax was in full bloom the 100-acre tract presented the appearance of a billowing blue sea. Garden club women forsook their own small gardens and their club activities to visit the flax field and revel in its beauty. The flowers are a deep violet blue.

Planting of the flax started February 24 and was finished March 3 under the supervision of Mike Meyer, manager of the Whiteside plantation. Preparation of the ground was completed soon after the floods in February and the planting was completed in a seven-day period.

Seed flax can be produced in this section for about $6 per acre, including production and harvesting of the crop, Meyers estimates, and when the short period needed for production is considered there's an excellent financial return.

Red Wing, a blight resistant variety of flax, was used in planting the tract, and a fine stand was obtained, Meyer said. The flax, practically ready for harvesting now, is from 28 to 32 inches in height, and

(Continued on Page 8)

## QUEEN BESS' NECK RUFF COLLAPSED IN THE WASH

We who keep our neckwear in a state of perpetual freshness by washing after every wearing can sympathize with the laundry man whom Queen Elizabeth ordered beheaded because one of her favorite neck ruffs went to pieces in the wash. The trembling benchman, the legend has it, was saved only at the zero hour when Sir Walter Raleigh intervened and convinced his irate ruler that it had been necessary to use strong chemicals to get the royal neckwear clean.

The queen's cleanliness standards might provoke raised eyebrows if we didn't know that all this happened some 400 years ago. If good soaps were available at that time the royal ruff would have been put in the wash long before strenuous cleaning methods were called for, thus preserving it for the queen's adornment and for the interest of posterity.

## ONE HUNDRED FIFTY MILLION DOLLARS

### Cotton Growers of the South may get Large Payments

Washington, D. C., July 18.—Payments approximating $130,000,000 will go to farmers in the cotton growing States within the next few months. These payments will help to offset the comparatively low price for cotton which seems likely this fall. The payments are cotton price adjustment payments and will be made to farmers who comply with the 1938 AAA Farm Program. Thousands of Negro farmers will share in these payments.

The application for a cotton price adjustment payment will be made by the operator of the farm and those who have tenants will list them. The application will be checked with the data given by the operator of the farm in connection, with his 1937 application for payment. This procedure will give protection to tenants since an investigation will be made if the two applications do not tally. Checks due tenants will be made in the name of the tenant.

Although payments will be made in 1938, they are based on cotton grown in 1937 and no payments will be made to farmers who overplanted their 1938 cotton acreage allotments.

Some tenants who grew cotton in

(Continued on Page 8)

## SURRENDERING TO THE MOSQUITO

Once in a while some one does something about the mosquito, but in these climes it is never enough. Over a period of years the mosquito comes out on top. People may not feel the full humiliation of their losing fight, but the licking they take is about complete. They are chased inside the house or behind the porch screens, abandoning the outside premises to the enemy. They can look at the lawn and the gardens from behind tiny bars, but they cannot use them.

As a restriction of property use this is a tyranny. The cool of evening falls. The wood thrush sings. The nicotiana opens its petals and sends abroad its perfumes. The fireflies sparkle in the brush and thru the vistas. The moonlight floods the scene and man flails the air two or three times and runs for the protection of his screens, surrendering his premises to a hostile possessor.

The mosquito does not even need the householder for meat and drink It can get along without him. The householder is merely a luxury. His only protection is in flight and hiding. The surrender is about as abject as anything in history.

—Chicago Tribune

## SOIL POISONING IN ORCHARDS

The problem of soil poisoning has become an acute one in many apple orchards where the accumulation of the spray materials of 20 years or more is making land toxic to many kinds of plant life. The State College of Washington has been devoting research effort toward the discovery of some treatment that will overcome this ill effect of arsenic spray residues in the soil. A report has been issued by Dr. S. C. Vandecaveye of the soils department and Dr. E. L. Overholser of the horticultural department. "A number of chemical compounds and organic materials tried on these soils by the agricultural experiment station, State College of Washington, have given beneficial effects," the report states. "So far, however, none has proven capable of completely counteracting the toxic condition developed in the soil where this has been sufficiently pronounced to inhibit or seriously damage the growth of the common field and vegetable crops." Several unknown factors yet remain in connection with the problem of soil toxicity. "Our investigation of this problem," concludes the report, "is being continued with the hope that an effective as well as practical solution will be found for all the affected soils." (Washington Farmer, April 14.)

## NOT A FABLE, BUT IT HAS A MORAL

(CHICAGO TRIBUNE)

Revised estimates of the 1939 federal budget indicate that the deficit will be 3 billions more than the anticipation in the budget message of last January. Expenditures have gone up 2 billions more than the amount provided and revenue has dropped 919 millions below what was expected.

The new depression was coming, but the budget makers didn't see it. The story now is that the planned society would have been all right if somebody hadn't deliberately tripped it. Capitalism, so the planners say, saw that the government had actually brought about a recovery and then refused to accept or tolerate it. Therefore, to prevent a return to thriving industries, full time reemployment, reduction of government expenditures, the closing up of Mr. Hopkins' department of alms, and the reduction of public works to a small time business, along with the restoration of stock values, the resumption of dividends, and all the other nice things that go along with humming industry and confident trade, the capitalists, who are supposed to thrive on good business, went on a sitdown strike.

For reasons which would be understandable if they prevailed in Bedlam the capitalists and industrialists stopped recovery in its tracks. They are supposed to have closed their plants, turned their employes out on the street, locked their desks, refused to make goods, just to prove to the planners that they couldn't get the American people out of the hole they're in. Therefore everything that was so rosy in January, when the original budget estimates were made, has been changed. The deficit will be much greater than was anticipated, the revenue will be much lower.

If such a story were presented to the people of the United States outside of politics, if it were something they had to consider in the light of their ordinary dealings with men and human affairs in which their common sense and experience were employed they would probably come to some pretty sensible conclusions.

Suppose the chief actor were a man they had been watching for some six years in charge of an enterprise in which they were deeply interested, depending on him and it to make good in order that they could pay up some bills and buy things they had been needing some time. The gentleman starts off with a great deal of confidence in himself, and what he tells the people makes them believe that he is the man for the job. He has a great many plans and he persuades himself they will work. He promises to get the enterprise on its feet again and they can trust him because he knows just how to do it.

A number of the practices he adopts are new, but he says the times demand decided changes in Methods, some of which will be unnecessary in a year or two, after he has put the business back on its feet. He is given authority to do anything he wants to and if he needs money he's to have it. Time goes by, and although things do not change for the better he needs more money. He gets it. He needs more authority and he gets that. When doubts arise he quiets them by his persuasive explanations that he is quite right. He is on the right road and, although he is meeting some unreasonable opposition from selfish people, he can, if supported, carry the thing through to its successful outcome, but he will need more money.

Each year of operation produces more debt and gets no increased return. The expenses of the enterprise go up and he must borrow more money. Among the people dependent upon him in his efforts, those who have been able to keep going and make any money themselves, are required to give him an increasing amount of what they can save, and the people who are wholly dependent on him have to be given larger and larger sums to keep going. Nevertheless he says he is right, and after four years of this people are still persuaded they can trust him to put that enterprise on its feet.

In the sixth year he is again before his trusting people, saying that he is right but that selfish men have thrown more obstacles in his way. He has lost still more money, he is again borrowing, nobody's any better off, most of them are in worse shape, but still he is right. All he needs is more money.

The debts now plastered all over the enterprise do not bother him if only the people will give him larger sums. True, he expects that by the end of the year there will be a 40 billion dollar debt and his operating expenses will be at least 2 billion dollars more than he thought at the beginning of the year. Nevertheless, as he paints them, prospects are all bright. He has the only plan which will put this enterprise on its feet, but he must insist that there be no further criticism of what he is doing and the people who are asking embarrassing questions and saying discouraging things must be fired out. He will deal only with the people who in the sixth year of this experiment trust him implicitly and have no counter suggestions to annoy him.

If that record and that story were given to the people in their ordinary conduct of business they would pull their hats down on their heads, put their hands in their pockets to hold on to what was left of their resources, if they had any, and they would walk out, having had enough of explanations telling them why everything which had been so confidently promised them year after year had not been realized. In their ordinary affairs they couldn't possibly be so imposed upon for half the length of time they have been duped in politics.

They might find among their number some who had done very well indeed and wanted to continue the management, but that discovery would only make the majority madder and they would think it was a reflection on their good sense for any one to assume they could be so wheedled into throwing good money after bad, and they would find somebody else to run the enterprise whose explanations might not be so constantly persuasive but whose performance would be a little closer to his promises.

**Nearly 3,000 miniature trees grace the new $10,000 model of the Golden Gate International Exposition, showing Treasure Island as it will appear eleven months from now on opening day, February 18. It is on display in Los Angeles.**

## "COUNTY AGENT AT LARGE

A staff writer of the American Cotton Grower (June) says: "Uncle Tom' Marks, who saw the Agricultural Extension Service of the U. S. Department of Agriculture born and who helped to bring it up, is putting his three decades of rich experience at the service of the younger county farm agents of Oklahoma, as 'county agent at large.' Uncle Tom—Thomas Meriwether Marks—has been county agent at Hollis since 1923. From his new headquarters at the Oklahoma A. and M. College, Uncle Tom visits county farm and home demonstration agents, particularly the younger ones who have entered the service. Having Uncle Tom work with them for a few days enables these agents to learn from him some of the philosophy of service to farm people. From Uncle Tom they get a lot of practical helps. Born in Arkansas, in the last year of the Civil War, Tom Marks took an A. B. degree at Weatherford College in 1884. He was farmer, editor, school teacher, railroad construction engineer, and in 1904 started a country newspaper, the Jacksboro, Texas, News. The country editor's interest in agricultural development led Uncle Tom into contact with the cooperative farm demonstration work then being established by Dr. Seaman A. Knapp, founder of the Extension Service, and W. D. Bentley, then in charge of the work in Texas, who later, as first director of extension in Oklahoma, became known as 'Daddy' Bentley, father of extension work in Oklahoma."

## HEAT AND EGG LAYING

Tests by Dr. E. C. Warren, of Kansas State College's poultry department, show that where birds do not encounter maximum temperatures higher than 70 degrees, the maximum egg size is reached in July and August. Those birds subjected to big summer temperatures never reach the potential maximum egg size during the pullet year, except when they keep on laying very late in fall when temperatures drop. These Kansas results point to the need of protecting hens as far as possible from high summer temperatures. Not only do hens lay smaller eggs during heat waves, but the number of eggs goes down, too. Doesn't this emphasize the need for insulation of houses for summer layers? (Farm Journal, May.)

## RURAL POWER AIDS INDUSTRY

John J. Carmody, rural electrification administrator, told farmers at the energizing of a new "yardstick" electrification system at Brownstown, Indiana, recently, benefits of such projects were not confined to rural districts. "Rural-line building means vast new markets for industry and increased opportunity for labor," he said, declaring farmers usually matched every REA dollar in electrical equipment purchases. The system is the first of three United States experiments in cheap farm lighting. Instead of paying a private contractor to build lines, the Jackson County Rural Electric Membership Corporation hired labor, got its own materials and bought poles off nearby farms. Government engineers oversaw the work. Seventy-three miles of line were energized. Eventually there will be 300 miles serving 1,300 consumers in three counties. (Washington Post, June 27).

# PYTHIAN RIVALRY IN UNITED STATES COMES TO AN END

## 50-Year Old Schism Of Knights Brought To Close At Lynn, Massachusetts

Lynn, Mass., July—(ANP)—Ending a schism in Knights of Pythias ranks that dates back 50 years, Pythians of the Eastern and Western Hemispheres last week merged with the Pythians of North America, and both organizations ratified the unification as did Supreme Chancellor S. A. T. Watkins of Chicago, who was in Lynn in connection with Grand Lodge visitations.

Outstanding feature of the long-awaited merger was the presence at the conference of Lewis Williams and Jessie Hayes of Boston, who, 50 years ago, advocated that the Order remain as Knights of Pythias of North America, etc., and C. W. Gustus, Hartford, Conn., who withdrew from the parent body and helped form the Eastern and Western Hemisphere division. All three of the aged Pythians were given a rousing ovation as the hatchet was buried and unification effected.

### Depression Hits Fraternal Bodies

It has long been known that Negro fraternal bodies have been hard hit since the 1929 depression decimated the membership in all lodges, Pythians included, and many members present at the merger freely predicted immediate increases in Pythian membership as a result of the consolidation.

The unification, it was explained, included all male and female branches and departments of the Eastern and Western branch was branch and the K. of P., of North America, South America, Europe, Asia, Africa and Australia. K. of P. grand chancellor of North America is Theophilus N. Nunes and the vice grand chancellor is Frederick W. Riggs. Further adjustment of officers will be made in the near future.

In the Courts of Calanthe, Mrs. Josephine Hayes is grand worthy counsellor and Mrs. Alfreda Whitley is vice grand worthy inspectrix. The full corps of officers will be announced when completed. The Easteern and Western branch was formerly headed by Ashbie Hawkins of Baltimore.

### To Take Inventory of Order's Assets

Assets of the combined order will not be known until a complete inventory has been made. The next place of meeting will be Hartford, Conn. The Courts of Calanthe were represented by Alfreda K. Whitley, Bessie Simmons, Sarah Stratman, Winefred Williams, Cora Alden, Catherine Manning, supreme protector.

The joint committee effecting the merger was composed of Grand Chancellor Nunes; George W. Williams, grand keeper of records and seals and supreme out gourd; Dr. Walter O. Taylor, supreme representative; Johnson W. Will. John B. Scott, Freeman A. Perkins, brigadier general; J. S. Bourne, Dr. Luke M. Holmes, grand medical register; James G. Wolf and Roy F. Teixreia of Massachusetts of North America, South America, Europe, Asia, Africa and Australia and Fred W. Riggs, Elmer J. Puello of Massachusetts; C. W. Custus of Connecticut; Sir Carty and Thomas H. Brown of Rhode Island of the Eastern and Western Hemisphere.

## COOPERATIVE EDUCATION

"Trucks loaded with home-canned food and an occasional milk cow, sharing space with prospective students, have been rolling to Texas A. and M. College at the opening of each session of the past six years," says John Caulfield in the American Cotton Grower (June). "Each year, more boys have brought their own food, until there were 700 of them last year living on as little actual cash as $1.86 a month. College trustees this year voted $100,000 to build 14 houses in which 1,000 such 'feed yourself' students can make their homes during the session. Dan Russell was the man who started it in 1931. Dr. Russell is head of the college's department of rural sociology—By 1935, 40 houses were filled with 540 boys, and in the fall of 1936, 700 boys brought their cans, cows and chickens and occupied 50 houses——The Rotary Club of Brenham, a community made up largely of Germans, financed construction of a house for 'fed yourself' students from their county ——Even at home on the farm, and with the most efficient procedure, a farm family seldom lives entirely on what their farm produces. They spend some cash. The cooperative groups at Texas A. and M. were unable to bring everything that they would require for the nine months term. But they have worked out a system of cooperative buying at wholesale that helps fit this expense to their small means—Dr. Russell estimates that his boys are living for about $17 per month less than their room and board would cost in dormitories."

## LONG-TIME MILK RECORD

What is believed to be the greatest long-time milk production record in the history of American dairy farming was established by the Holstein cow, Steilacoom Prilly Ormsby Blossom, at the Western State hospital, Washington. The cow died in June, two and one-half months under 17 years of age. During her 14 lactation periods, including only 32 days of the fourteenth, she produced according to testing association records, 258,209.5 pounds of milk containing 9557.48 pounds of butterfat. This was enough butterfat to have produced 11,946 pounds of 80 percent butter, and an average of nearly 10 tons of milk per year. During practically all her life as a producer this cow's production has been under the supervision of the Pierce County Dairy Herd Improvement Association. The first three lactation records were Advanced Registry records. (Washington Farmer, July 7.)

## TABLE TOPS WILL BE MADE FROM SOYBEANS

Soybeans will be made into a new type of table top for use in a number of the state institutions of Illinois, according to news item in the Prairie Farmer.

The table tops will be manufactured from a plastic made of soybean meal. A great many molded articles from this plastic are now on the market.

Tests of the table tops have been made by a large restaurant chain, with satisfactory results, it is said. The material stands hard usage, does not show scratches, and is not damaged by hot dishes, according to the test report.

**THE MODERN FARMER**

Leon R. Harris - - Editor

Published monthly by the Modern Farmer at Nashville, Tennessee.

Office, 447 4th Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of Mareh 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn eireulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

# EDITORIALS

From the Bible:—

"Who shall separate us from the love of Christ? shall tribulation, or distress, or persecution, or famine, or nakedness, or peril, or sword?'—Romans 8:35.

"The foolish fears of what might happen,
I cast them all away,
Among the clover-scented grass,
Among the new-mown hay,
Among the husking of the corn,
Where drowsy poppies nod
Where ill thoughts die and good are born—
Out in the fields with God."

—Louise Imogen Guiney.

## JOHN BROWN'S SOUL

An American writer, Stephen Vincent Benet, wrote a long, grand poem and named it "John Brown's Body.' It is about the North and the South, about states rights, about slaves and plantations and the time when cotton was king sure enough. It was written by a man who knows and loves the South, who has southern blood in his veins,—and those who read "John Brown's Body" love it. It is a poem worth loving.

Another John Brown died the other day. He was an aged Negro farmer. Six sons carried the body from the muddy road to the burying ground and left it there beside many of his relatives, friends and neighbors. The nation, and the world at large had never heard of John Brown. He was just an ordinary farmer. Even his relatives, friends and neighbors will soon forget that his old worn-out body is lying there in the weedy burying-ground.

An ordinary Negro farmer! A young man with his child-wife, he started sharecropping in the late 70's. He had little education and had always known poverty. He was happy—Then the children began to come to his humble home. He discovered that he had to work a little harder. Somehow or other, he began to think about the future and the future of his children. He was a stern father, as his own father had been before him. He took his children to church and Sunday School and made them attend the three months' rural school. And the children began to thirst for knowledge—more knowledge.

And John Brown began to want more than he was used to having. In course of time he purchased a few acres and erected a cabin thereon. It was his own home. Then he purchased a few more acres. By the time his seventh child was grown, he was the owner of a good plantation and was called the best hog raiser in his county.

The children,—well, they were just ordinary too. One is a doctor, two are preachers, two are teachers, some of them are farmers or the wives of farmers. The grandchildren, just ordinary too,—but most of them have finished high school or college.

John Brown's body was buried the other day. The good minster said his soul was with the angels. We doubt it. Yes, he was a very good man. But John Brown set a good example. His descendants are contributing much to the prorgess of our Race. And perhaps his good soul is walking around somewhere telling the discouraged young farmer to hold up his head,—telling the toil-worn teacher that she is instructing some future Booker T. Washington or George W. Carver,—somewhere telling the Negro father to work harder and think harder for the welfare of his amily,—somewhere telling the persecuted to be patient and smile,—somewhere telling the poverty stricken there is still in this nation, Opportunity.

We wish Mr. Benet would write a long poem about John Brown's soul.

## PIG OR PUP

A New York boy is telling other boys that if they really want a college education they may earn it by taking up "summer truck gardening.' Five thousand strawberry plants and a plot of English peas have paid the major share of this boy's college expenses at the University of Michigan during the past five years. He says that the average college boy nowadays can find little to do in industrial fields during the summer but that he can find plenty to do in a truck garden, and earn a better wage than most of his friends earn who have jobs in factories.

We are inclined to believe that the New York boy is giving some pretty good advice. Too many young men have stopped rooting for an education and a living and have begun whining for these. The "Gimme" habit is a bad habit, and especially so when you begin to beg the government for everything you need and want. It is better to be a pig and do a little rooting for yourself, then to be a puppy, constantly whining.

## 8,000 WASHINGTON BROILERS SOLD; RECORD SALE.

Rogers, Ark.—The largest sale of broilers in the history of Northwest Arkansas was believed consummated when H. W. Greathouse, Washington county poultryman, sold 8,200 broilers for approximately $5,000. The broilers, weighing an average of 1 1-2 pounds, brought 22 cents a pound.

Greathouse recently sold 6,000 broilers. Three large trailer trucks will be required to transport the shipment to the Springdale buyer. Greathouse, who began raising chickens on a small scale 10 years ago, now has a plant which includes 17 houses, one with a 400-chicken capacity. The houses, arranged side by side, extend a quarter-mile.

Benton county will produce about 6,000,000 broilers this year. More than 4,000,000 were raised last year.

## PRESIDENT'S COMMITTEE ON EDUCATION CALLS FOR JUST SPENDING OF DIVIDED MONEY

Washington—(ANP)—In all states maintaining separate schools for Negroes, federal grants should be conditioned on an equitable distribution of the funds between white and colored schools, without reducing the proportion of state and local funds spent on Negro schools, the President's Advisory Committee on Education recommended in its report which has just been sent by Roosevelt to congress.

Leading white and colored educators took part in a year's survey of the national school system which resulted in this and other recommendations, particularly for the South where a just distribution of funds between the races has long been a sore spot. Congress is expected to take definite action on the report, which has just been released to the press.

Many of these suggestions incorporated in the committee's report were the result of suggestions by Negro leaders who led the fight for amendments to the Harrison-Fletcher bills last spring. Definite statutory guarantees for a fair distribution of funds are asked, with provisions for withholding money from states that do not meet the provisions.

Federal grants of $70,000,000 for 1939-40, to be increased to $199,000,000 for 1944-45, are asked. In addition to vocational grants, which should be expanded for added types of vocational work, the committee recommends new aid for public elementary and secondary schools, a fund for preparation of teachers and other educational personnel, construction of school buildings, improved administration of state departments of education, adult education and rural library service. It was also suggested that congress provide a special fund for educational research, planning and demonstrations. After six years, the program might be revised.

Discussing how the money should be divided within each state, the report says it "is of the opinion that the distribution of federal aid funds within a state is not a matter that should be left exclusively to state officials." State and federal officials should be required to make the allottments to local districts on an objective basis, in the manner that will "most effectively lessen inequalities of opportunity" for schooling.

Although joint planning is necessary in connection with such problems as the allocation of funds, the committee points out, cooperative planning should be carefully restricted by law to matters of direct federal concern.

Special attention should be given to rural schools of both races, since "the least satisfactory schools in the United States are to be found for the most part in rural areas." Urban schools spend almost twice as much per capita as did rural institutions which, according to the committee, means that country areas should receive the largest amount of federal aid.

The committee was assisted by a large temporary staff of specialists in education, public administration and economics. Included among them were Doxey A. Wilkerson, of the Department of Education at Howard university, and Dr. Robert C. Weaver, Adviser on Negro Affairs to the Administration of the U. S. Housing Authority.

## BOY SAVES 500 SHEEP

Presence of mind on the part of 16-year-old Victor Lazarey saved 500 sheep when a snow storm swept down the Crimean steppe. Moscow reports say the sheep became frightened and refused to move to the Budyonny collective farm, where they belonged, and the shepherds had to spend the night with the flock. A crowd of farmers summoned by the boy were unable to budge the animals, until the young shepherd thought of walking in front of them and ringing a bell. The sheep promptly followed the boy and the bell.

Bake and serve spoon or corn bread in well buttered, individual baking dishes, custard cups or casseroles. This keeps the bread hotter, requires less baking time and makes it easier to serve.

Andy—"Amos, ah bet you wuz relieved when you found out there wuz no spook followin' you."

Amos—"Say, ah wuz so relieved ah done slowed right down to a gallop."

## COFFIN WEIGHS SIXTY TONS

Cairo, Egypt—The biggest coffin ever made by man was dragged through the street of Cairo Sunday. It is made of hard limestone and is 12 feet six inches long, seven feet six inches wide, and four feet deep. It weighs 60 tons.

The outsize in coffins was found in a Cairo tomb this year, but inside was a mummy of only the normal size. The coffin was taken to the museum early in the morning before there was any traffic about.

## PREACHES FROM HIS PORCH IN HOT WEATHER SERVICE

Hopking, Mo.,—The Rev. Paul Barton, Methodist minister, has inaugurated a hot weather type Sunday evening service. He preaches from the front porch of his parsonage, the congregation sits in their cars. A eold drink and wafers are served afterward.

## PEARS ON HALF OF TREE AND BLOSSOMS ON OTHER

Belvidere, Ill.,—Half of a pear tree at the home of Herman Drovsen is loaded with pears about the size of a walnut while the other half has just begun to bloom.

## CHEST FACTORY WHEY FOUND GOOD FOR HOGS

Whey from cheese factories is much used for hog feed in the dairy regions of the North, says the Live Stock Reporter, quoting a Wisconsin dairyman, as follows:

"We sell our milk to the factories and bring back a load of whey for the hogs. This product of the cheese industry is not an extremely valuable hog feed, but when fed along with corn or other grains, it is an exeellent conditioner and it provides a good supply of protein.

"By following this system, we consider that hog raising goes hand in hand with dairying, so most of the farmers in his area have a herd of hogs."

### Air-Cooled Potatoes

The weather was so hot when potatoes were dug on the farm of T. O. Rye, and Sons, Worth County, Ia., that the tubers came out of the ground warm, and it was feared they would not keep. But, says Capper's Farmer, the problem was solved by blowing air through the storage house with a silage blower, in the cooler hours of the early morning.

## HOPKINS ANNOUNCES WPA PURCHASE OF $10,000,000 WORTH OF CLOTHING FOR RELIEF DISTRIBUTION

### ASK FOR CLOTHES

Harry L. Hopkins, Works Progress Administrator, announced today the purchase of $10,000,000 worth of men's women's and children's clothing, for distribution to people otherwise unable to buy such clothing.

The clothing will be bought from manufacturers in all parts of the country, on the basis of immediate delivery. The distribution will be handled by State Departments of Public Welfare

Mr. Hopkins stated that this would make possible immediate resumption of employment in clothing-making industries through the absorption of existing inventories.

The purchase by WPA of surplus clothing stocks was proposed to Administrator Hopkins recently by Sidney Hillman, president of the Amalgamated Clothing Workers of America. He estimated that about 160,000 employees in the industry would be directly or indirectly benefited by the plan.

Once the present surplus has been eliminated, he informed Mr. Hopkins, manufacturers would gain confidence, aequire new stocks and put people to work. He estimated that an outlay of from $8,000,000 to $10,000,000 would dispose of the present surplus.

## FARM PHILOSOPHY

A stranger said to the farmer's boy across the fence: "Young man, your corn looks kind of yellow."

"Yes, that's the kind we planted."

"Don't look as if you'd get more than half a crop."

"Don't expect to. The landlord gets the other half."

"Boy," said the stranger, after a pause, "there isn't much difference between you and a fool."

"No," replied the boy, "only the fence."

**Governor R. L. Cochran of Nebraska has named twenty prominent Nebraskans on his state's World's Fair Commission, to plan the state display at the 1939 Golden Gate International Exposition on Treasure Island in San Francisco Bay.**

## PURCHASE OF SURPLUS VEGETABLES AUTHORIZED

The Agricultural Adjustment Administration announced today that the Federal Surplus Commodities Corporation has been authorized to buy surplus fresh vegetables during periods of market gluts to aid growers in 12 northeastern and middle Atlantic States. Purchases when made would be in markets where vegetable growers are engaged in organized efforts to improve marketing conditions for their products. All surplus vegetables bought are to be turned over to State agencies for distribution to people on relief.

Under the program the area in which purchases of price-depressing surplus vegetables would be possible, includes: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Delaware, and Virginia.

Purchases would be made from growers or through associations of growers. The program was developed at the request of the Northeastern Vegetable and Potato Council to safeguard the interests of both producers and consummers against the effects which glutted market conditions have on supplies and prices.

## POVERTY HELD A DISEASE—BREEDER

**Permanent Disabling Sickness Among Two-Fifths of People Results from Lack of Care, Says Dr. Parran.**

The administration this week brought up new ammunition for use in its fight to obtain adequate medical care for the under-privileged.

Dr. Thomas Parran, surgeon general of the Public Health Service, released a preliminary report of a nation-wide survey showing that the burden of chronic diseases rests largely on the two-fifths of the population in the lower-income groups.

The reason for this shocking condition, it was explained, is that lack of medical treatment frequently converts what may have been a simple disorder into a permanent disease.

The investigation also disclosed that, in addition to the human waste, there is also an appalling economic loss. It was found that workers in non-relief families with $1,000 or less incomes lost twice as much time from sickness as those in the group earning $3,000 or more.

Persons in families on relief, the report said, lose three times as much time as members of families more fortunately situated.

Among the relief population, investigators learned, chronic illness occurs 87 per cent more often than in the upper income groups. In the lower in come groups the percentage of excess is 42.

"The amount of medical care received by the sick in the various economic groups differs widely throughout the country," said Dr. Parran. "For example, between 25 and 35 per cent of the cases of sickness among relief groups in large cities were given hospital care, while only 10 per cent enjoyed this advantage in smaller cities.

"As a matter of fact, 37 per cent of disabling illness among the relief and low-income groups in small cities failed to receive any medical attention."

## MARRIAGES GAIN AS RESULT OF CHINA INCIDENT, SURVEY SHOWS

TOKYO—Sudden and very determined animation on Tokyo's matrimonial front was a result caused at home by the outbreak of hostilities in China, a glance at city statistics released here show. Details are lacking unfortunately to reveal whether the rush was a rush for brides, a husband-rush, or just a mutual rush to get married.

Marriages last year in the Tokyo area totaled 48,785, an average of roughly 134 a day, and "because of the China incident," the Asahi says, 43,014 of the weddings were registered in the latter half of the year. The total marriages represents an increase of 9,072 unions compared with 1937.

Divorces totaled 3,633, or an average of 10 a day, representing an increase of 165 over the previous 12 months.

There were 132,652 births (67,585 boys and 65,067 girls) at a daily average of 363 babies, which increased the city's population by 49,600. The birth raate, which averaged above the 130,000 mark each year between 1928-33, dropped to 120,000 in 1934, went over 140,000 in 1935 and has dropped to 130,000 since 1936.

A total of 83,052 deaths were registered, showing an average of 13.24 deaths to 1,000 population. The largest proportion of deaths occurred in December and the fewest in October.

## BUSINESS UPTURN IN AUTUMN SEEN BY W. S. KNUDSEN

**Motor Maker Points to Farm Crop Prospects**

A sharp upturn in business conditions by early fall was predicted yesterday by William S. Knudsen, president of General Motors corporation. He stopped briefly in Chicago on his way from Valley, Neb., to his home in Detroit, Mich.

"I sincerely believe that there will be a very definite improvement in all types of industry, business, and professions," said Knudsen, whose company and companion automotive industries have been among those hit the hardest by the present recession. Automobile production is 75 per cent lower than a year ago.

**Expects Good Harvests**

Knudsen said in a recent statement that improved conditions would result from good harvests and increased purchasing power among the farmers.

"The farming and crop situation looks particularly bright," he said yesterday. He made no comment, however, on the government's pump-priming program, labor conditions, and taxes on business, and declined to amplify further his reasons for sighting a business upturn.

**Sees Better Distribution**

He commented only, when asked if any completely new industry or invention were in sight which might contribute to industrial expansion: "America has everything necessary for prosperity and better distribution will soon help."

J. Hormel, president of the Hormel Packing Company, is chairman of the Minnesota World's Fair Commission named by Governor Elmer Benson to take charge of the state's exhibit at the 1939 Golden Gate International Exposition. The Commission is made up of 31 business and civic leaders.

# About That Farm Dollar

Editor Plain Dealer—Sir: A recent issue of the Plain Dealer carries a complaint from O. E. Cooperrider, Newark, O., about the farmer's dollar.

It appears that very few of those living on the land understand the position they are in. They complain about they know not what. What do they expect the cities to do—send out a committee to look over their accounts, if they have any, and find out their cost to produce and decide what the profit should be? And set the market price?

Everyone ought to know that the farmer does not set the price on his product. Outside agencies do that for him. Not till excessive planting or weather has determined the supply as compared with what the consuming public can buy, or estimates they will buy, is the price arrived at. It makes no difference whether fertilizer for the next crop can be bought or not.

Theoretically every pound, gallon or bushel of food stuff the farmer produces is not worth one dime until he goes to some market and humbly asks:

"What'll you give me for it?"

When he goes to buy something he asks:

"How much is it?' He does not say to the seller of an electric refrigerator, an automobile or a corn planter:

"The market is so and so today and you will receive so and so." If he takes the article he pays the price asked.

If farmers really do know what their stuff is worth why do they take less? Don't they know that today their operations are so closely tied up with industry and merchandising that they themselves need to follow the industrial pace in management and merchandising?

When the farmer himself does something about it perhaps Mr. Cooperrider can buy fertilizer for our next year's food supply and pay cash for it. The other alternative is to let the idea of fertilizing go hang. When yield falls off prices will rise. Then he may be able to buy a little fertilizer to start over again.

Does the general public know that at least twenty food products, raw and processed, have been admitted to trading in "futures?" Soy beans and cheese are among the last to join the list. Why speculate with the family's dinner table? The farmer evidently does not know. At any rate, as a group, he seems to have no plan of management in his own interest. He may some day get to understand the law of supply and demand and the merchandising system that is geared with it.

Akron, O. SIDE LINES.
From Cleveland Plaindealer.

## NEGATIVE REQUEST!

Mr. Jones called the cook and said:

"Mary, my mother-in-law is coming to stay with us for a month. Here is a list of the dishes she loves—and the first time you serve one of them you're fired."

## AMERICAN PLANT LIFE RADIO PROGRAM

Washington, D. C. — The variety of products of gardens, fields and orchards of America—flowers, fruits and vegetables—will pass in review Sunday afternoon, May 22, when another "World Is Yours," Smithsonian Institution radio series is broadcast. The program, "American Plants," will be presented over 57 stations of the National Broadcasting Company. (Red) at 3:30 (EST) 2:30 (CST) 1:30 (MT) and 12:30 (PT).

While a family eats a dinner consisting of a menu from "soup to nuts" grown in gardens, fields and orchards, the lives of two American horticulturists will be dramatized. One of them, Luther Burbank, was the "wizard of plant life," who bred spineless cactus for fodder and provided many new foods for America —and foreign tables.

### Tuskegee Contribution

The contribution of George Washington Carver, of Tuskegee Institute, will also be dramatized. Dr. Carver gave distinction to the peanut, proving not only a benefactor to his own race but to mankind. Thousands of small farmers throughout the south now grow peanuts for the markets, as the result of Carver's experiments.

Dr. Carver developed the peanut until it could be raised for commerce on a large scale. There are now more than 300 uses of the peanut, once chiefly used to fatten pigs and later prominnt for association with circuses and fairs. The little tuber may have a lot to do today with milady's new kitchen linoleum. It may be a part of the axle grease used in the family "flivver," it may be part of the dressing on your lettuce, or it may be the basis for shaving lotion.

American pants provide a host of things for the menus of the world. Many of these plants were unknown to Europeans before they came here, although in use for centuries by earlier American civilizations, such as the Aztecs and the Mayans. Incidentally, modern men have been able to invent but few uses for corn unknown to the Aztecs and Mayans. Earliest Americans did not know about corn starch. Nor, did they know about corn flakes, the product of the laboratory and modern machinery.

### Tomatoes Once Ornamental

When the Europeans came to America they were skeptical of some plant products now common to American tables. They didn't take to tomatoes, for instance. They thought them poisonous, whereas today tomatoes are looked upon by dietitians with favor for growing children and adults because of high vitamin content. They were once grown in gardens for their ornamental value.

"The World Is Yours," educational radio series is presented weekly by the United States Department of the Interior, Office of Education, in cooperation with the National Broadcasting Company, and with the assistance of the Works Progress Administration. The program is edited by Smithsonian Institute. The purpose of "The World Is Yours" programs is two-fold. First, the programs disseminate scientific knowledge for which Smithsonian is a famous world-center. "World Is Yours" also serves as a means of demonstration and experimentation in the field of education by radio.

## TENANTS BUY FARMS

More than 55,000 farm tenants farm laborers and other operators have bought farms in the last 3 years by making moderate down payments and qualifying for harm Credit Administration financing, it was announced this week by the FCA. To finance these purchases, the 12 Federal land banks and the Land Bank Commissioner have written on their books more than $130,000,000 of long term loans and purchase money mortgages.

## SKIM MILK FOR BEES

"Dr. M. H. Haydak of the University of Minnesota has done much experimental work on the feeding of bees," says Wisconsin Agriculturist (July 2), "and has found that many feed concentrates containing protein may be used with more or less success as a substitute for pollen. Mixtures of soybean flour or cottonseed meal with dry skim milk have given consistently good results. Dr. Haydak has recommended that 20 percent of powdered skim milk be used in such mixtures to get best results. Bees can develop their bodies normally when fed powdered skim milk, 20 percent by weight, mixed with soybean flour, soybean meal, peanut meal, linseed meal, or mixed with a combination of soybean, linseed and cottenseed meal, says Dr. Haydak. Young bees were produced only by those colonies which had pollen, or had skim milk powder mixed with soybean flour, soybean meal or cottonseed meal."

## FEED FLAVORS POULTRY

"A series of poultry experiments at the Texas Experiment Station indicate that in the future it may be possible to produce flavors to order, not only in poultry meat, but in beef, mutton and pork," says Capper's Farmer (June). "R. M. Sherwood, in charge of the experiments, found that the flavor of broilers was determined largely by the protein supplement used. A scientific method of determining flavor worked out, showed that broilers which got sardine meal as protein produced meat with a flavor that differed widely from that produced by soybean meal. However, one flavor may be favored by one group of consumers while the other would better please another group. A combination of three of the proteins tested gave a neutral flavor unlike those obtained from a single one. Sherwood believes the best combination is 6 pounds each of sardine meal, soybean meal and cottonseed meal, added to 30 pounds of wheat gray shorts, 3 pounds dehydrated alfalfa leaf meal, 1 pound oyster shell and 48 pounds ground corn. This ration was satisfactory except for mineral level, and he is conducting experiments to correct that factor."

## LYE, A NEW EGG CLEANER

Stating that the poultry industry loses several million dollars a year from marketing soiled or improperly cleaned eggs, H. L. Kampster, professor of poultry husbandry, University of Missouri, says in Country Gentleman (June): "The Missouri Experiment Station in its attempt to solve this problem has recently discovered that dirty eggs as taken from the packing plant and washed in a solution of 1-2 to 1 percent concentrated lye—97 percent sodium hydroxide—kept as well in cold storage as did naturally clean eggs of similar quality. When sold they commanded a price equal to that received for the naturally clean, unwashed eggs. Furthermore, experienced dealers in eggs could not detect the eggs which had been washed; and cooking tests after eight and ten months storage showed that the dirty eggs which had been washed in lye water were of equal quality to the clean eggs stored at the same time. Because of the caustic properties of the lye solution, rubber gloves should be used when washing the eggs, but the fact that the soiled eggs can be treated in such a way as to reduce to a minimum losses due to their becoming dirty, suggests a possible solution to this vexing problem of how to handle the dirty eggs."

## COTTON CLASSING

Cotton classing and market news services for growers organized to promote the improvement of cotton will be inaugurated with the 1938 crop, C. W. Kitchen, Acting Chief of the Bureau of Agricultural Economics, announces. A total of $225,000 will enable the Bureau to offer free classing to improvement groups during the marketing months for this year's crop, and to extend its cotton market news service. "Various cotton price studies made by the bureau," Kitchen said, "have shown that prices received by growers are largely based on the average quality of the cotton sold in the local market, and thereby fail to fully reflect central market premiums and discounts. The new classing service offers a basis for paying growers according to the quality of individual bales and, therefore, should be a great stimulus for quality improvement of American cotton." Cotton ginned for members of one variety and other improvement groups will be classed without charge, provided the groups comply with the amended Grade and Staple Estimates Act and the regulations of the Act, which provide that a sample of lint from each bale of improved cotton ginned for a member of a qualified improvement group be classed for grade and staple length, and that the grower be notified of the classification of his sample.

## COTTON FOR MEAT WRAPS

A new use for cotton developed by the meat packing industry's laboratories last year consumed 6,000 bales and will consume at least 15,000 bales yearly hereafter, according to officials of the meat packing industry at Memphis, Tenn. The industry's researchers developed an air-tight muslin cloth made from cotton for wrapping veal after the animal is slaughtered and the hide removed. The carcass is tightly wrapped with the muslin covering for shipmen, the covering providing hygienic protection to the meat. Last year 7,500,000 yards of muslin, or 6,000 bales of cotton were used for the covering. More than 20,000,000 yards or 15,000 bales will be used hereafter, he said. Veal formerly was shipped with the hide on, specially processed to be air-tight. The hides could not be removed expertly, however, which damaged the meat and resulted in an economic loss.

## TURKEY EGGS FOR FOOD

Since there is no established market for turkey eggs after the hatching season, the poultry department of the Kentucky College of Agriculture suggests that farmers use them on their home tables and sell the chicken eggs. Turkey eggs are as good as any other kind of eggs, but there are not enough produced to make a place for them on the market. Hence, the suggestion that they be consumed at home, and the chicken eggs that would have been used sent to market. By continuing much feed to turkey hens, they will lay throughout the summer. Their eggs will help pay their board bill. (Turkey World, July.)

### FERTILIZERS FOR ORCHARDS

In "Orchards Differ in Fertilizer Needs," in Better Crops With Plant Food (June-July) the author, F. N. Fagan, Pennsylvania State College, says: "During the past 35 years, many published reports on archard fertilization have originated from orchard fertilizer tests conducted by the Agricultural Experiment Stations of the United States and Canada. One outstanding fact coming from studies of orcharding is that an orchard can not be successful unless some type of soil fertility method is used. For many years nitrogen fertilization has been the method receiving the greatest amount of thought, and justly so, for this element by its very nature is the one that is lost from the soil most rapidly, the one most lacking as orchards become older. But as years rolled on, nitrogen fertilization did not solve the problem completely in all the orchard districts. It is interesting and of value to see the determined efforts being made now in the studies of plant nutrition deficiencies in relation to orchard tree growth and production. These studies extend from zinc deficiencies in citrus culture through to calcium, magnesium, phosphorus, potassium, and even boron deficiencies of our many other tree fruits.

## BOXER DIES OF INJURIES AFTER LOSING CONTEST

Columbus, Ga.—(ANP) — Five days after he was badly beaten and knocked out in a heavyweight fight with Obie Walker of Atlanta, Oscar Jenkins who fought under the name of "King Kong" died Monday night at the station in Fort Benning.

Jenkins, widely known through the South, was kayoed in the 10th round during an all-Negro card. Shortly after the fight ended Jenkins was rushed to the hospital when he failed to regain consciousness and lingered in a coma until his death. Walker said immediately after the match that Jenkins was "plenty tough."

## GENERAL CONFERENCE OF AME ZION MAY MEET AT BOSTON

Boston, Mass., (ANP)— From action taken here today, it seems that Boston will be assured of the General Conference of May, 1940 of the A. M. E. Zion Church. The General Conference committee of New England met in final sessions to hear reports from the sub-committee and ratify plans for the formal invitation to the denominational General Conference committee. The meeting was presided over by Dr. H. R. Jackson, the presiding elder of the district.

Dr. W. D. Battle, pastor of the Columbus Avenue A. M. E. Zion church, was enthusiastic about the General Conference coming to Boston inasmuch as the New England Conference is the second oldest one in the connection and has never entertained a session of the General Conference. Neither Drs. Jackson nor Battle would make further comment regarding the plans until the formal presentation at the Cincinnati meeting. It is rumored that the Governor of Massachusetts and several other influential citizens are backing the committee.

The following ministers were present and participated enthusiastically in the discussion: Drs. H. R. Jackson, presiding elder; W. D. Battle, pastor of Boston; J. W. Watson, Bridgeport, Conn.; R. B. Hurt, Worcester, Mass.; J. A. Clement, Cambridge, Mass.; Jacob W. Powell, Malden, Mass.; J. A. B. Johnson, Providence, R. I.; E. R. Michael, Attlesboro, Mass., and Rev. C. H. Foggie, Providence, R. I.

## Cafe Manager Of Boston Fined For Color Prejudice

Boston—Racial prejudice in Massachuestts was dealth a decisive blow last week when Judge Gershon Hall in First District Court of Barnstable, found Charles R. Plummer, white manager of Dutchland Farms, Inc., eating place in Hyannis, a suburb, guilty of discrimination for refusing to serve a patron because he was a Negro.

L. Lincoln Hinds, Boston resident, represented by Atty. Julian D. Rainey, told the court Manager Plummer had informed him, "We do not cater to colored people in our dining room." His testimony was supported by Chief of Polcie W. B. Fleming, who, on Hinds' complaint, had issued the warrant for the manager. Judge Hall then declared Plummer guilty and assessed the fine.

## BEAUTICIANS OF NATION TO HOLD ANNUAL MEETING

Chicago, July—(ANP)— Members of the National Beauty Culturists League, headed by Marjorie Stewart Joyner, president, will hold their annual convention here September 6-9 inclusive, the session to be held at the Savoy ballroom. Morning meetings will include demonstrations of all phases of beauty culture by experts, and by a forum of discussion in which ideas, criticisms, suggestions and experience will be shared. Evening sessions will contain features of special interest to the general public. Chicago business and community organizations are cooperating to make the convention a success, declared President Joyner.

### MECHANICAL COTTON PICKER

The greatest difficulty to be overcome in the development of a satisfactory mechanical cotton picker is the failure to harvest existing varieties of high quality seed cotton without serions damage to the lint, says Charles A. Bennett, Bureau of Agricultural Engineering. Spinning tests of cotton harvested with the newest type of mechanical picker show that "even with the use of full batteries of gin cleaners and extractors the machine-picked cotton was of appreciably lower grade and yielded much more manufacturing waste than hand-picked cotton from the same field." Machine-picked cotton, he said, is matted, carries much green leaf and occasionally has green stains on the fiber; it contains fragments of bark, stems and long grasses.

## Workers' Official Honored By Peace League

Los Angeles, July—(ANP)—Appointment of John H. Owens, vice president International Workers' order, Southern California district, to the executive board, Los Angeles branch American League for Peace and Democracy, was announced this week. The league is headed by Dr. Harry E. Ward, president Council of White Churches Amerira.

### SWISS STEAK, CHILI

Two pounds round steak, one-half cup flour, salt and pepper, one-half cup chili sauce, two cups chopped celery, one cup boiling water. Pound flour and seasonings into steak. Cut into convenient serving pieces and brown well on both sides in fat. Add remaining ingredients. Cover and cook slowly until tender, or about one hour.

## SOFT BALL GAME BREAKS UP WHEN JOE LOUIS COMES

Detroit. (ANP)—Ten thousand people almost mobbed Worlds Heavyweight Champion, Joe Louis when he stopped a baseball game here Tuesday afternoon. The champ really broke up the game—not in the same manner, however, in which he breaks up pugilistic hopes and ribs of his opponents, but merely with his presence.

The Joe Louis' Brown Bombers, soft ball team, was playing the Black Hawks, representatives of a local beer tavern, at Atkinson field, where 10,000 fans waited for an hour before game time because it had been announced that the champ would play first base for a few innings. Joe sat among his players wearing dark sun glasses and a big leg horn hat turned down, and the multitude failed to recognize him. They crowded on the field so close that the outfielders had to play almost on the edge of the diamond and the police failed in their attempts to move the crowd back.

In the fifth inning, when Joe arose, took off his glasses and hat in preparation to play, some one yelled, "There he is!" and the surging mob started running. Some thought he was coming in and rushed to the gate to meet him, while the rest swamped the popular idol and literally rushed him off his feet and swept him on towards the gate instead of on the field. Little children, men and women, white and black, tugged at his coat, tried to shake his hand and the poor helpless champion looked bewildered. Police came to the rescue and escorted the fighter to his car and the game was over. The Boombers won the abbreviated game 5 to 0.

### COTTON ACREAGE

The Department of Agriculture announces that 26,904,000 acres of cotton were in cultivation July 1. This was 78 percent of the acreage a year ago, from which the record crop of 18,945,022 bales was ginned. It was the smallest total since 1900. It was the first report on this year's cotton crop. A law forbids issuance of government reports on condition and probable total production before August each year. That information will be announced Aug. 8.

### COTTON INCOME

The Bureau of Agricultural Economics estimated Saturday that despite production of the largest cotton crop on record, the growers' income in the 1937 calender year amounted to only $363,970,000 or $41,000,000 less than in the previous year. Of the 1937 income, cotton fiber paid $734,194,000 to the growers and cotton seed, $129,776,000, according to the bureau's summary.

### USE OLD SACKS

Empty sugar and flour sacks come in handy for many household odds and ends. After thorough washing and boiling to remove all traces of lint and printed matter, they can be used as cleaning cloths, or tied over a broom for sweeping down walls and ceilings.

Clean bathroom or kitchen tiles, linoleum, porcelain tubs or sinks with kerosene applied on a soft cloth. It will give the surface added luster.

GOD
And The
NEGRO
Is a new book just off the press

## WIDE INTEREST SHOWN

(Continued from Page 1)

is well headed over the entire field.

The crop will be harvested by a combine, similar to the harvesting of wheat, oats or barley, and the seed from the pods will be placed in bags ready for shipment to the mills at Fredonia, Kan.

The entire yield will be sold to the mills of the Archer-Daniels-Midland Company at Fredonia, the largest mill of the kind in the world, formed by a merger of three large linseed oil manufacturers. Linseed cake for feeds as well as linseed oil, is made at the mills.

The crop at current Minneapolis, quotations will bring $1.83 a bushel at Fredonia, Kan., the price being higher than for other grains, because of an import duty of 65 cents a bushel. Meyer said. Freight rates on the flax from Van Buren to Fredonia make the delivery cost 22 cents a hundred pounds, or about 13.2 cents a bushel.

None of the yield of the flax is wasted as the stalk of the plant makes roughage for cattle and horses.

No effort to produce fiber flax for linen has been made by the Whiteside farms, and only the seed variety will be grown.

Flax is grown commercially in the Dakotas, Minnesota and in Canada, as well as in Kansas and California, with yields considerably lower than the anticipated yield here. Thin lands, which produce small yields in other crops usually are used for flax production, because of the low cost of producing the crop, according to Meyer.

## ONE HUNDRED FIFTY MILLION DOLLARS

(Continued from Page 1)

1937 did not plant cotton in 1938 because they were unable to get the land. Provision is made for such tenants to receive the 1937 payments to which they are entitled.

Additional information with regard to the payments is available at the office of the County Agent or may be obtained by writing to the Agricultural Adjustment Administration, Washington, D. C.

### TO PLANT U. S. TOBACCO

Tokyo—The Japanese Government, finding that Japenese are showing preference for American cigarettes, has imported Virginia seed for extensive tobacco growing in Japan.

### SQUIRREL WITH WHITE TAIL PLAYS WITH RED FELLOWS

Belvidere, Ill.—Peter Brooks, who daily enjoys the antics of some squirrels that frolic about a tree in which they live in front of his home, today reported that a newcomer had appeared among them with a pure white tail. Brooks says it is the first time he ever saw or heard of a red squirrel equipped with other than the regulation tail of the same hue.

### SILK MADE OF SHELLS

Osaka—A profitable method of manufacturing silk out of human hair, crab shells and claws has been discovered by Daisaburo Omori, engineer of the Osaka Industrial Laboratory.

### AMERICA'S TURKEY SUPPLY

There were 16,794,485 turkeys raised on farms in the United States in 1929, latest year for which a tabulation is available. The federal bureau of agricultural economics reported that Texas was by far the leading state in this field, raising 3,782,912 of the turkeys. North Dakota was next, with a production of 1,457,930; Minnesota third with 1,306,058, and California fourth with 1,246,993.

Turkeys are raised in virtually every part of the country, but it is only in states where weather and feed conditions are favorable to range production that extensive flocks are found. The bureau reports, however, that adoption of modern production methods is causing an increase in turkey raising on an extensive scale in areas suitable for general farming.

### HELPFUL HINTS

Carefully separate the whites and yolks of four eggs, and be sure to keep the yolks whole. Beat the whites, adding a little salt, then fill buttered baking dishes or custard cups two-thirds full of the beaten whites. Carefully drop a yolk on top of each cupful, sprinkle with salt and pepper, dot with butter and then bake until the yolks are set (about seven minutes). Sprinkle with grated cheese, chili sauce or catsup and serve in the baking dish.

An electric refrigerator may be defrosted in half the time if the ice pans are filled with boiling water instead of cold water.

When grapefruit or orange are to be used in fruit salad, stand them in boiling water for ten minutes and they can be peeled much more easily.

Add a little salt to the last rinsing water on wash days and clothes will not freeze when hung out to dry in cold weather.

Always store leftover vegetables in separate dishes in the refrigerator. Even though they are to be combined later, the flavors will be better.

To reheat leftover rolls or biscuits, dip them quickly into hot water and then bake them four minutes in a hot oven. Serve immediately.

### FINDS FORMULA FOR SILK YARN FROM SOY BEAN

Tokyo—A Japanese scientist, Rhohei Inoue, has discovered a formula with which he can make silk from the soy bean.

Mr. Inoue has been a pioneer in the adaptation of the soy bean cake to the manufacturer of silk yarn. His discovery has made such an impression in scientific circles that the Fuji Prize has been awarded him by the Japan Physical and Chemical Research Society.

This new bean-silk is said to possess several advantages over staple fiber.

### GOOD WILL MISSION

A good will mission to Japan has been organized under the joint auspices of the three Mongol autonomous governments.

### GERMINATION OF OLD SEEDS.

**15 Centuries Old, Stand 8 Cm. High**

Tokyo—Cryptomeria seeds, dating back more than 15 centuries, which were unearthed by the Mita historical society in an old tomb on the Kaseyama mound, Hiyoshi, Kawaski city near Yokohama, in June last year, have yielded sprouts under the care of botany in Keio University. Today the young trees have grown to the height of eight centimers.

As the result of this, the theory that cryptomeria seeds lose germinating capacity after one year, has thus been blasted. These seeds were found buried more than 10 feet below the surface of the ground, together with old swords and mirrors.

The society, upon unearthing the seeds, submitted them to the Keio University botanical classroom, where Dr. Okamura identified them as dating back 15 centuries, and took upon himself the task of cultivating them. In July last year shortly after their discovery was reported, a British horticultural firm catering to the Royal Botanical Garden at Southampton, requested the society to send some of the seeds for experimental purposes.

### THIEVING CROW STEALS AN EGG FROM A DUCK

Jacob, the Lincoln Park Zoo's pet crow, was in trouble again today—and in disgrace.

Ever since he came to the zoo, he has been playfully carrying off fountain pens, pencils and other small objects belonging to workmen. But today, Director Floyd Young of the zoo thought Jacob had gone a little too far.

"It was all right for Jacob to make a little nest of stolen articles,' said Mr. Young. "We just laughed and said, "Crows will be crows." Even when he flew off with a pair of gold rimmed spectacles, we smiled.

"But this is too much. Today Jacob decided he needed an egg for his stolen goods nest. He was caught stealing one from a zoo duck."

Jacob being such a bad actor, Mr. Young just up and threw the egg at him.

### STONEPICKER FOR FIELDS

A stonepicker for removing loose stones from fields is being tested by Pennsylvania State College and is expected to be ready for use shortly. In its tests, it picked stones from the size of your thumb to sizes larger than a man's head at the rate of 12 tons per hour. It cleans a swath three feet wide and three inches deep and can be drawn easily by the average two-plow tractor at its regular speed. The stones are picked up by rapidly revolving teeth and are thrown into an A-shaped hopper which will hold about two tons and which can be emptied from either side simply by pulling a lever. It is expected to be especially valuable in potato fields and also to prevent machinery breakage. (Ohio Farmer, June 18)

### HAYSTACK COVERS

A new method of preserving hay is the haystack bonnet which is made of tough waterproof sisal fibre reinforced paper. It will serve for a full season and will increase the value of the stack by eliminating spoilage and loss of weight. Paper goes on the stack in strips with 12 inches of lap. Over the paper go strips of woven wire fence, with half concrete block fastened to the wire fence to hold the paper in place. Cost of covering a stack this way is only a few dollars. Sometimes the loss in uncovered stacks runs 25 percent. Figure out for yourself—in dollars and cents—the loss on a 20 ton uncovered stack, as compared to your savings resulting from a covered stack. (Utah Farmer, June 10.)

### N. Y. COTTON PRICES UP

For the seventh successive session, prices on the New York Cotton Exchange advanced into new high ground to end the day with a net gain. Yesterday's rise carried the July price to 8.63 cents a pound or 96 points above the low figures reached at the end of May and the list closed with gains of 8 to 10 points. Reports of weevil infestation and inability to cultivate fields properly, owing to persistent moisture, coupled with another strong stock market and the largest volume of sales of cotton goods in several months, served to broaden outside buying and a large amount of cotton changed hands. (New York Times.)

## LOOKING FORWARD

Whenever anyone dares to suggest that the Social Security Act is somewhat less than perfect he immediately is assailed by the New Deal propagandists as a reactionary, a Tory, a fiend, an enemy of mankind, or worse. Even though the criticism is constructive and is designed to improve the administration of the act for the benefit of wage-earners, the critic's voice is drowned out by shouts that he is seeking its repeal. Indecent motives are attributed to everyone who disagrees even in the slightest with the President and his New Dealers.

Republican criticism of the Social Security Act has not been directed at the objective of the act, "to provide a greater measure of security for American wage-earners and thereby to enhance the welfare of the Nation as a whole." The point of Republican criticism has been that as drafted the Social Security Act does not and will not promote greater security for wage-earners. Republicans in Congress have warned that the heavy taxes on pay rolls and pay envelopes levied under the act would have harmful effects, with inconsequential benefits.

**Contributed to Depression**

Truth in time will establish itself. We have heard Marriner S. Eccles, chairman of the Board of Governors of the Federal Reserve System and an ardent New Dealer, say that the withdrawal of consuming power through social security taxes is one of the major contributory causes of the Roosevelt depression.

Now we have the testimony of the American Association for Social Security, published in its current bulletin. This organiaztion for years has fought for "the promotion of social security and social insurance in the United States." Its executive secretary is Abraham Epstein, frequently called the "father of Social Security" in this country. Its president is Bishop Francis J. McConnell of the Methodist Episcopal Church. Among its directors are Monsignor Francis J. Haas, dean of the School of Social Service, Catholic University, Rabbi Stephen S. Wise, Mrs. Mary K. Simkhovitch, the well-known social worker, and many other socially-minded persons. These people are neither partisans nor reactionaries.

Do they believe with President Roosevelt that "the successful operation of the (Social Security) Act is the best proof that it was soundly conceived?" They do not. Indeed, the American Association for Social Security finds that the Act is neither "soundly conceived" nor that its operation has been successful.

**Created Greater Insecurity**

Instead of increasing purchasing power, the Association finds the Act has diminished it. Instead of giving workers security, the Association finds the Act has created greater insecurity for them. Instead of helping industrial workers, the Association finds that the Act's chief result has been to create a new bureaucracy and government jobs for tens of thousands of clerks.

Referring to New Deal claims of the "success" achieved in the old age insurance system, the Association asserts that "search as we might, however, the success in this stupendous national undertaking seems confined to the issuance of about 38,000,000 social security numbers"—an activity characterized by the Association as "unprecedented, costly, irrelevant and unnecessary."

The average lump sum old age payment up to April, the Association found was $29.80, although a New York executive who worked (and still does) for seven corporations was reported to have received $1,001.67. More significant, the Association found, was "the deepening insecurity stimulated by this system," adding that while the United States Treasury paid $2,935,829 to old age beneficiaries it collected in taxes from workers and employers for old age insurance a total of $577,450,100.

"Since the employer contributions are generally included in the price of goods," the Association Bulletin added, "it means that for every dollar spent in old age insurance payments to increase the purchasing power of workers, $197 of sorely needed purchasing power were withdrawn from them and spent for other purposes."

**$197 in Taxes for Each $1 Spent**

In other words, Social Security taxes took $197 away from workers for every $1 given to them. That is the New Deal's idea of the more abundant life for workers!

Space is lacking to give other conclusions reached by the Association, except for a word about unemployment insurance. Pointing out that the average benefit paid to the unemployed totaled only $15.46 per month, irrespective of whether the unemployed person was single or had a family with many dependents, the Association made this observation:

"The evidence is sufficient to indicate that not only has the operation of the unemployment insurance laws so far not proved that these laws have been soundly conceived, but on the contrary, it definitely points to the fact that these laws are not succeeding in providing even as little protection as the totally inadequate home relief."

Let the President and his New Deal satellites cease their ballyhoo and answer the non-partisan findings of the American Association for Social Security.

### "IRISH BREAD" DISCOVERED AS ALCOHOL SOURCE

**Japanese Scientist Announces Valuable Laboratory Find**

TOKYO—Alcohol from potato—that's the latest thing in the scientific world in Japan, according to its discoverer, Dr. Kanroko Kurono, staff member of the department of finance.

Dr. Kurono, who made a trip recently to Hokkaido among the Ainu tribes, an aborigines people, witnessed the peculiar manner in which they ate their potatoes. The Ainu custom was first to freeze the potato, and then dry it out thoroughly in the sun during the summer months. During the winter the vegetable, which has been stored for the rainy day, is eaten. Close investigation revealed the high alcoholic content.

Japanese scientists have been able to discover a process whereby the alcohol can be gotten in large quantities from the potato. It was stated that Dr. Kurono will exhibit the process at a scientific meeting in London.

## 75,000 CROP INSURANCE APPLICATIONS

### Federal Department at Washington Swamped

Washington, D. C.—With more than 75,000 applications for crop insurance policies received in county offices, largely in the winter wheat belt, the Federal Crop Insurance Corporation will begin an intensive campaign for applications in the spring wheat areas on August 18, it was announced today by Leroy K. Smith, acting manager of the Corporation.

The work of taking applications of farmers for insurance policies on their 1939 winter wheat crop started several weeks ago, following a series of State and county educational meetings throughout the winter wheat region. Preliminary reports of State crop insurance supervisors, up to August 11, indicate that 75,758 applications have been received by county offices in 21 States. Leading in the number received is Ohio, with 17,000, followed by Missouri with 12,000; Illinois, 10,639; Nebraska, 8,025; Kansas, 7,000; and Montana 6,950.

"The bulk of the applications received to date are reported in the winter wheat area," Mr. Smith said. "The signing of applications started in the winter wheat belt the latter part of July, and will soon reach a peak that probably will be sustained until the cut-off date." Applications for insurance on winter wheat may be received in the county offices up to August 31, except in California and Arizona, where the deadline is November 30.

Mr. Smith estimates that approximately 150,000 applications will be received in county offices when the work of taking applications in other States reaches the same stage as it has in Ohio, Missouri, and other States leading in numbers received.

The campaign for applications from spring wheat growers will be

## QUARTER OF FARMS SOLD OUT IN EIGHT YEARS

More than 1,700,000 farms were sold under the hammer during the eight-year period, 1930-37, according to Farm Research. Figured on the basis of 6,800,000 farms in the U. S., the total number of forced sales amounts to one-fourth of all farms.

The number of farms changing hands at forced sales amounted to 153,000 in 1937 as compared with 178,000 in 1936. The present volume of forced sales is less than half that prevailing in 1933 when 357,000 farms were sold out.

For the first time since the crash of 1929, the volume of voluntary sales exceeded forced sales. Out of every 1,000 farms in the country, 31.5 were sold voluntarily in 1937 as compared with 22.4 forced sales.

Farm bankruptcies numbered 2,479 in 1937 as compared with 3,642 in 1936.

## CALLING ALL DELEGATES AND VISITORS TO THE ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF COLORED FARMERS INC., IN OCTOBER

The National Convention of the National Federation of Colored Farmers, Inc., will meet in Forsyth, Georgia, at the State Teachers and Agricultural College, October 26-29. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our Federation are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of state and federal agricultural departments who plan to attend the Convention should communicate with us not later than September 1st. Suitable arrangements will be made to entertain all delegates and visitors and all farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.

Arrange to attend the greatest Convention of organized Negro farmers in America.

Sincerely,

LEON R. HARRIS, President.
Box 285, Moline, Illinois.

S. B. WILSON, Sec.-Treas.
447 4th Ave., N., Nashville, Tenn.

## THE NEGROES' NEW TECHNIQUE

(St. Louis Post Dispatch)

The Negroes have discovered the power of mass economic pressure and are using it in various skilful ways to obtain what they feel is due them. The story was told recently by Stanley High in the Saturday Evening Post.

In St. Louis, 45 Black Belt blocks have been organized by the Urban League into units, each unit containing 50 to 100 per cent of the residents of the block. When a chain store doing business with Negroes refused to employ Negro help the block units went into action with a boycott which accomplished their purpose. When a milk company refused to employ Negro drivers to serve Black Belt routes, the Urban League went to a competitor and got six Negro drivers employed. The competitor's sales soared 40 per cent. The original company capitulated.

Similar pressure techniques prevented the discharge of Negro coal truck drivers, brought about employment of Negro salesmen for bakeries, Negro girls in 5-and-10 cent stores, Negro motion picture operators.

Even more ingenious is the campaign to be started in Harlem against the public utilities. Unless

(Continued on page 2)

## DEMAND FOR FARM PRODUCTS

Moderate improvement in consumer buying power and demand for farm products is in prospect for the fall and winter months, the bureau of agricultural economics said today in its current analysis of the demand and price situation for farm commodities.

The bureau analysts point out that definite improvement in industrial activity and further depletion of inventories occurred during July. Though these factors indicate further increases in the output of consumers' goods and services, no large amount of forward buying is in prospect for the near future. This should help to sustain the improvement in future months, it was stated but also implies a less sharp initial upswing than has occurred in many

(Continued on Page 2)

## FARM GROSS INCOME DOUBLED SINCE 1932

For the first time in eight years, the farmers' gross income in 1937 exceeded $10,000,000,000, the Department of Agriculture disclosed this week.

Last year's income of $10,300,000,000 compares with $9,317,000,000 in 1936 and with the low point of $5,284,000,000 during the last crop year of the Hoover administration.

## VICE PRESIDENT BYRD HONORED

Springfield, Ill—Major R. A. Byrd, vice president of the National Federation of Colored Farmers, was recently appointed by Mayor John W. Kapp, of Springfield, Ill., a member of the Board that will supervise better housing in that city. In commenting on Major Byrd's appointment the Illinois Conservator says:

"Mayor John W. Kapp, in appointing Major R. A. Byrd as a member of the Board that will supervise the project of better housing, gives honor to our group and recognizes a worthy man—for over 35 years Major Byrd has been active along all lines for progress, civic, educational, religious, political and military. Men who give their better years to the upbuilding of their community deserve to be thus recognized, and Mayor Kapp is to be congratulated for never losing an opportunity to give credit and honor where deserved."

---

Fellow officers and members of the N. F. C. F. congratulate Major Byrd and know he will give to his new position the conscientious service he gives to every good cause with which he is connected.

## COTTON FARMERS ASSISTED

### About One Hundred Twenty-seven Millions Of Dollars Expected

Washington, D. C.—Cotton price adjustment payments averaging about 2.89 cents a pound will begin next month, the Agricultural Adjustment administration announced today. The money, totaling about $127,000,000, goes to farmers who planted within their 1938 acreage allotments. About 1,400,000 applications covering 14,648,000 bales will be handled. Administration expenses are estimated at $3,000,000.

Cotton price adjustment payments, under the law, are applicable to the base production of all farms on which cotton was grown in 1937. It is provided, however, that no payments are to be made in case the producer or producers knowingly overplanted their 1938 cotton acreage allotments.

**Base Production Calculated.**

The maximum amount of 1937 cotton on which a farmer may receive payment is 60 per cent of the base production. In case the amount produced in 1937 was less than 60 per cent for the farm's base production, payment will not be made on more than the amount actually produced except where failure to produce 60 per cent was due to crop failures from specified causes.

The 1937 base production of a farm was the adjusted normal production of its base acreage. The base acreage represents the normal devoted to cotton. This was adjusted to bring the base acreage of all farms within state and county allotments.

**Maximum 3 Cents**

Under the legislation as originally passed, the rate of payment on eligible cotton was established as the amount by which the average price of 7-8 inch middling cotton on the ten designated spot markets was below 12 cents per pound on the date of the sale of the cotton by the

(Continued on Page 2)

## LOSES JOB, BABY BORN, ALL COMES OUT IN THE WASH

Milwaukee, Wis.—Clyde Zibell, 25 years old, found himself jobless; his wife in the hospital where their second child was just born.

Did he apply for county relief or a place on the WPA rolls? Not Clyde Zibell.

Instead he rigged up his wife's washing machine and for two weeks has kept abreast of expenses by taking in the neighborhood washing. Now he has undertaken to do the ironing for any customer who wants the added service.

Zibell was employed in a Milwaukee shop as a machinist until recently. He said he learned to wash and iron when he was a boy on the farm. The Zibells have a daughter, 4 years old, who is at home with papa, and the newborn is in the hosptal with mama.

## COTTON FARMERS ASSISTED

(Continued from Page 1)

producer. The rate was not to exceed 3 cents per pound in any case.

An amendment later provided that the maximum rate of 3 cents a pound would apply to eligible cotton produced in 1937 and not sold by the producer prior to Sept. 10, 1937. It was on that date that the spot market average fell below 9 cents during the 1937-1938 marketing season.

This amendment makes it possible for producers who are holding their cotton or who put their cotton under government loans to receive price adjustment payments without transferring title.

**Pay for Crop Failures**

The payment rate for those who sold 1937 cotton before last Sept. 10 will be the amount by which the spot market average was below 12 cents on the date of sale, and not to exceed 3 cents.

In case of crop failures due to hail, drouth, flood, boll weevil, or other insect or fungus infestation, the producer will receive payment on the normal production of his 1937 cotton acreage, but not in excess of 60 per cent of the 1937 base cotton production established for the farm.

Where any part of the producer's 1937 cotton crop was destroyed by fire or other unavoidable natural cause after it was harvested but before it was sold, the eligible part of such cotton will receive the maximum payment of 3 cents per pound.

## $75,000 CROP INSURANCE APPLICATIONS

(Continued from Page 1)

launched August 18, at Moorehead, Miss., where the first wheat crop insurance policies to be issued in the spring wheat area will be presented to a Minnesota farmer and a North Dakota farmer. The presentation of these first policies will take place before a meeting of State and county crop insurance supervisors from Minnesota, North Dakota, and South Dakota, at which final plans will be drawn up for the crop insurance program for the spring wheat region.

Applications received in county offices of the 21 States reporting are as follows: Ohio, 17,000; Missouri, 12,000; Illinois, 10,639; Nebraska, 8,025; Kansas, 7,000; Montana, 6,950; Michigan, 3,811; Oklahoma, 2,302; Minnesota, 1,796; Iowa, 1,762; South Dakota, 1,000; Texas, 1,000; North Dakota, 592; Indiana, 551; Oregon, 200; Colorado, 721; Idaho, 253; New Mexico, 188; Washington, 124; Wyoming, 116; Utah, 78.

After applications for wheat crop insurance are checked in county offices, they are sent to branch offices of the Corporation at Minneapolis, Minn., and Kansas Ciyt, Mo., where premiums are calculated, and the policies are written. Up to August 11, a total of 8,358 applications had been received at the branch offices, premium notices had been mailed to 5,792 of the applicants. and 421 policies had been issued.

## THE NEGROES' NEW TECHNIQUE

(Continued from Page 1)

they agree to give Negroes their share of jobs, the utilities will have to deal with the Co-ordinating Committee of Employed, backed by 178 Negro organizations. In the case of the telephone company, it is planned, as a last resort, to refuse to use the dial method of phoning, but to dial the operator instead, meaning that Harlem's operators will suddenly have to cope with a 70 per cent increase in work. In the case of the electric company, Negroes will demand simultaneous inspection of meters, refusing to pay bills until it is done. Another plan, in case of recalcitrance, is to arrange for simultaneous payment—the same hour, same day—of all gas and electric bills, with consequent clerical confusion. Another project is to have a lightless day each week, using candles instead of electricity.

Here is an important and significant movement, almost certain to spread and almost certain to bring results. So far, the movement has been distinguished by its fairness and intelligence. The Negroes have asked only for what they think their expenditures entitle them to in the way of employment, and they have gone about getting it quietly and without violence. If they continue to observe this restraint, they will undoubtedly make tremendous strides for economic justice between the races.

## DEMAND FOR FARM PRODUCTS

(Continued from Page 1)

recovery periods.

**Upturn Factors.**

The bureau lists some of the uncertain factors "which could seriously interrupt" the upward trend on business activity, but cites several favorable conditions "pointing to a continuation of the initial recovery movement." The latter include (1) the gradual increase in government expenditures as new construction projects get under way; (2) increased needs for durable consumers' and producers' goods; (3) a favorable residential building situation; (4) the relatively small amount of financial deflation, which occurred during the recession as compared with other similar periods.

The bureau further pointed out that increased demand for most farm products must await actual improvement in consumer incomes. "And recognizing that consumer incomes lag behind and change less erratically than industrial activity, it appears that moderate improvement in consumer buying power and the domestic demand for farm products will be experienced during the fall and winter."

**Prices and Income.**

To date the prospective improvement in consumer purchasing power and demand in this country has been reflected only in small measure in the prices of farm products.

## MARRIAGE CERTIFICATE BLOWN 37 MILES AWAY IN TORNADO

Bloomington, Ill.—When the tornado which whipped across central Illinois March 30 struck the Dent Bell farm near Deer Creek, it carried away everything—house, barn, cornerib, and furnishings. Listed among the missing articles was the marriage certificate of Mr. and Mrs. Bell. It had been kept in a bookcase in the home. Today they learned that Harold Younge, who lives near Benson, has found the certificate on a field thirty-seven miles away.

# SUCCESSFUL SUMMER QUARTER CLOSES AT A. I. STATE COLLEGE

### Students from 17 States Included in Enrollment Of 1,000 for Period

A. & I. State college concluded one of the most successful summer sessions in its history Aug. 20 Approximately one thousand students were in attendance representing the state of Alabama, Arkansas, California, Georgia, Mississippi, Louisiana, Kentucky, Indiana, Illinois, Ohio, Michigan, Missouri, Oklahoma, Nebraska, South Carolina, Texas and Tennessee. All parts of Tennessee were represented.

Instruction was given by the regular teaching staff, augmented by Professor G. A. Phillips, principal of the Stowe High School, Cincinnati and Miss Alma Dunn and Dean G. W. Gore, Jr., who returned to the institution after a leave of absence to study in Columbia University. Special courses were given in Parent Teacher Education, Consumer Education, Adult Education Photography, Landscape Gardening and Dietetics. A three-weeks institute of WPA teachers of adults and nursery schools was conducted by the state director of educational projects in connection with the second term of the summer session. One hundred and fifty teachers were in attendance.

Among the special conferences held at the institution during the summer were the annual meeting of the Tennessee Better Homes Movement, the Tennessee Jeanes Supervisors, teachers of vocational agriculture, teachers of trades and vocational education, and the monument committee of the Inter-racial League. Special programs were given by the departments of music, home economics, romance languages, history and social sciences. Recitals were given by Mr. and Mrs. Forrest Strange and Mrs. Ethel Wise-Gardner. Chapel visitors included Reverend Glenn T. Settle and the soloists of "Wings Iver Jordan," Col. Roscoe Simmons, Dr. Shaw of the American Administraters Association, Mr. Leo M. Favrot of the General Education Board, Mr. Fred Mc Cuistion of the Southern Association, Dr. S. L. Smith of George Peabody College for Teachers. Mr. James A. Atkins WPA specialist in Negro Education.

Registration for the fall quarter will be held on September 29.

## Alabama Pardon Board Denies Scottsboro Plea

Montgomery, Ala., Aug 24 (ANP) —Promises by Dr. Allen Knight Chalmers of New York, chairman of the Scottsboro Defense committee, that if freed the remaining five boys would be rehabilitated without exploitation, and pleas by a prominent Alabama lawyer and a citizen failed to shake the state pardons board from its determination to keep the Scottsboro youths in prison.

The board heard pleas Tuesday by Dr. Chalmers and his committee for the freedom of the boys. In a unanimous decision handed down Wednesday, the board recommended denial of clemency to two of the defendants, Heywood Patterson and Ozie Powell, and stated that clemency pleas of the other three boys now serving sentences should not have been brought before the board at this time. They pointed out that these youths may still carry appeals to the U. S. supreme court. They are Clarence Norris, Andy Wright and Charlie Weems.

The hearing was held in the private office of Gov. Bibb Graves. Attorney General Albert A. Carmichael, chairman; Charles E. McCall, state auditor, and D. H. Turner, secretary of state, members of the pardons board were present. Speaking with Dr. Chalmers for the boys were Forney Johnston, Birmingham attorney, and Donald Comer, Alabama cotton mill owner and industrialist, both sons of former governors of the state.

Dr. Chalmers recommended pardon as a matter of public policy, and said a New York banker, in conversation with a New York manufacturer, had vetoed a proposal to establish a plant in Alabama because of the Scottsboro case. He also deplored the case getting into the hands it did at the outset.

"Perhaps," he said, "the churches and people they represent moved too slowly. Perhaps that was why groups interested in these cases turned originally to communistic sources."

He urged action to avert another Tom Mooney case and warned, "Unless we work this thing out now there is going to be a repercussion that will not be pleasant. The case will revert to original hands, who will assume their campaign of agitation.

"We shall try to avoid a repetition of what happened when the other four were released. As you know, they were taken to New York where they fell into the hands of people who exploited them. It was unfortunate, but it may work out yet, for all of them came to us at the last, and now each is being rehabilitated.

"Roy Wright is now in the hands of Bill Robinson, the tap dancer. He has assumed responsibility for Wright and is maintaining him at a place unknown to the committee. Willie Roberson is with his parents in Jackson county, Alabama. Eugene Williams is enrolled in a Baptist Theological seminary in Kansas City Olen Montgomery is studying music in New York."

Mr. Johnson declared that the Alabama Scottsboro committee, in a scrutiny of the record of the case, had discovered reasonable doubt of the prisoner's guilt.

Mr. Comer said, "I am sick and tired of hearing about this case. I would like to see the boys in the hands of a man like Dr. Chalmers. When a man like Dr. Chalmers comes to us on a racial question we like to deal with him. He's not like his senator. We have to see a man like Sen. Wagner try to use a racial question as he has done for cheap political pull."

# KIN OF LYNCHED MAN SUES "LAW" OF TIPTON COUNTY

### Sheriff Vaughn Is Defendant In Case Of Albert Gooden; $25,000 Asked

Memphis, Aug. 25—(ANP) — Charging that he made no effort to protect his prisoner from the lynchers, attorneys for Mrs. Mary Gooden Patterson, sister of Albert Gooden, who was murdered by a mob last August near Covington, Ark., filed suit last week here in federal court against Sheriff W. J. Vaughan of Tipton County, Tenn., for $25,000.

The bill says, "The defendant, W. J. Vaughan, was wholly negligent of his duty to safely take, protect and guard the prisoner. He made no effort to draw a gun in his behalf when he was stopped by the lynchers; he offered no resistance to their attack, but apparently exposed the deceased to the attack in the manner in which he (the prisoner) was brought from the Shelby county jail."

Also named co-defendants were John Winford, O. L. McClain, J. L. Richardson, John M. Walker, Sam Smith and William A. Sheaf, bondsmen for the sheriff.

Gooden was arrested on charges of slaying Chester Doyle, marshal of Mason, Tenn., during a raid upon a crap game. Brought here for safekeeping when feeling ran high, he was being returned in an open car for trial on Aug. 16, 1937, when the sheriff's car was stopped by another auto, the prisoner taken out and lynched.

The grand jury attempted to probe the matter, but got nowhere. Gov. Browning offered a reward of $5,000 for information leading to the capture and conviction of the mob members, but this brought no results.

## DENY CHANGE IN POLICIES ON FEED AND SEED LOANS

### FCA Disavows Report of More Lenient Farm Credit Terms

Denying reports that more lenient collection policies on feed and seed loans are being adopted by the Farm Credit Administration, officials of that organization stated that "not one iota of truth" could be attached to such reports. They insist that no change in collection policies has been made for any section of the country.

The Minnesota Department of Agriculture interviewed over a thousand farmers and found that "in practically every instance" if the FCA "forced collection at this time the borrower would be compelled to seek loans from other sources or abandon farming." Following mass meetings in the western part of Minnesota, the farmers were given to understand that the FCA would discontinue the practice of throwing collection cases into the courts. It may be that the FCA merely regards this action as a change in the application of policies rather than a reversal of policy.

Congress has appropriated no new funds for feed and seed loans. The Public Resolution No. 78 passed at this session of Congress empowers the FCA to continue making such loans after July 1, 1938, but they must be made out of collections or out of funds left over from last year.

Out of the 50 million dollars appropriated for the fiscal year, 1937-38 the FCA has loaned 32 million dollars. The present recession together with the falling off in farm prices indicate that the need for seed and feed loans is still present. Despite the increase in national farm income in 1937, the U. S. Department of Agriculture points out that most of the West North Central states had lower farm incomes last year than in the calamitous drouth year 1936.

Farmers insist that the policy of collecting loans out of which to make new loans is merely taking money out of the pockets of the farmers in order to lend it back. Only a new Congressional appropriation can break through this situation and provide funds for the coming fiscal year.

## COW ATTACKS TWO; DOG SERIOUSLY HURT IN RESCUE

Logansport, Ind—Mrs. Oscar Hines, 40 years old, was attacked by a cow which she was driving to pasture on a farm near here today. The cow was crushing the woman to the ground when Violet Ullery, 16 years old, went to her rescue. The cow knocked the girl to the ground and the family dog dashed in and seized the cow by the nose, enablying both women to escape. The dog was seriously hurt before he was rescued by Mr. Hines, who arrived in response to the cries of the women. Their injuries are not serious.

# Farm Living Conditions Show Improvement

Washington, D. C.—The level of living on the farms of the Nation has risen materially since 1930. A 1938 Census survey indicates substantial increases in the proportions of farm dwellings lighted by electricity, provided with bathrooms, and having radios for all sections included in this survey, according Director William L. Austin, Bureau of the Census, Department of Commerce. Farm tractors showed a phenomenal increase in numbers, motor trucks on farms increased materially, and autos showed a considerable gain. The proportion of farms provided with telephones showed no appreciable change.

The survey, including some 3,000 farms in selected counties of 40 States, was made by the Division of Crop and Livestock Estimates, Department of Agriculture, and the Bureau of the Census, Department of Commerce, cooperating. It was a part of the preliminary work being done in preparation for the coming 1940 Census of Agriculture.

The results are so pronounced that several significant conclusions appear justified, even though the survey is neither sufficiently representative nor comprehensive to give more than a general indication of the level of living on the farms in the Nation or of the trends. The farms included in the survey are probably somewhat above the average of all farms in the counties included, and those counties, in turn, above the average for the country as a whole.

**Farm Conveniences Become More General**

For the particular farms included in the survey, out of every 10 approximately 7 had autos, 6 radios, and on 4 the operator's dwelling was lighted by electricity. On 3 farms out of every 9, water was piped into the dwelling and on 2 of these into a bathroom. Telephones were on 3 out of every 8 farms, tractors on 1 out of every 3, and motor trucks on 1 out of every 4. The average dwelling contained 6 rooms and was valued at approximately $1,500. The level of living indicated by these figures is very substantially higher than that for all farms in these counties for 1930. The proportion of farm operators having electric lights, water piped into their dwellings, and water piped into a bathroom are roughly 50 percent greater. The proportion having radios is approximately double. The relative number with autos is about 10 percent, with motor trucks 50 per cent greater, and with tractors 100 percent greater.

**Many Farms Still Lack Modern Facilities**

Although judged by this summary the living conditions on farms have definitely improved, a large proportion of the farms are not yet provided with the various facilities which are commonly accepted as requisites for good living. Very striking differences are shown by the survey between various groups. The lack of facilities on the farms of the Southern States is outstanding and, in part, reflects the low level of living of Negro operators. Only 4 out of the 285 Negro and other non-white operators included in the survey and located in the Southern States reported electricity as compared with more than one-third of the white operators in the same area. The differences as regards water piped into the dwelling, bathrooms, and telephones are just as striking. A comparison of the number of rooms and the value of the dwelling also shows the decided contrast between white and Negro operators. The average dwelling of Negro and other non-white operators for all farms included in the survey contained 3.8 rooms and was valued at $311 as compared with an average of 6.2 rooms and $1,602 for white operators.

**Owner Operators Much Better Equipped Than Tenants**

The facilities reported for owner-operated farms indicated that, in general, the living conditions on such farms were better than for tenant-operated farms. This difference was not nearly so great, however, in the Northern and Western States as in the Southern States.

For all sections there was a pronounced difference in the value of the dwelling, the average for tenants being roughly only half of that for owners. Except in the Southern States, however, there was no appreciable difference as to the number of rooms. The relative numbers of tenants having electricity, water piped into the dwelling, bathrooms, telephones, radios, and autos are appreciably lower than for owner operators. Except for telephones, radios, and autos the proportion of tenants having each of the above facilities is, for the country as a whole, considerably below one-half of that for owners.

The farms of those whose farming activities are secondary to some other occupation average somewhat better as regards facilities than do those having farming as their principal occupation. As to principal occupation, the non-farmers reported a greater value on an average for their dwellings, about one-third more had electricity, and approximately one-fifth more had bathrooms. The proportions having telephones, radios, and autos were only slightly higher for the non-farmers. Relatively few of the non-farmers had tractors.

## NEGRO SHARECROPPER HAS LOWEST INCOME IN SOUTH

**Southeast Survey Finds Worst Farm Conditions in Georgia**

In its survey of family income for farm families the U. S. Bureau of Home Economics summary for the Southeast region gives comparisons between Negro and white sharecropper families in four states: Georgia, Mississippi, North Carolina, and South Carolina.

The figures indicate the close similarity of economic status between the two racial groups on the lowest rungs of the agricultural ladder. In combining the state results, Farm Research finds that the cash income of the Negro sharecropper families studied in the 13 counties covered was $294.25, while white sharecropper families in 22 counties sampled averaged $350.50 per family. Relief family incomes were not analyzed and hence are not included.

Conditions were found to be worst in Georgia. Money farm incomes averaged $171 per family in the case of white sharecroppers and $153 in the case of Negroes. An additional $32 and $22 respectively came from non-farm sources, indicating practically no opportunity to supplement farm income by other kinds of work. 67 percent of the white families and 87 percent of the Negro families received less than $750 gross income. None of the Negro families earned as much as $1,000 from all sources Families in each group averaged 5.4 persons. Of the white families 11 percent were on relief and of the Negro families 5 per cent.

**Average Cash Farm Income of Non-relief Sharecropper Families In Four States**

| | Cash Farm Income | % on Relief |
|---|---|---|
| Georgia | | |
| Negro Sharecroppers | $153 | 6.3 |
| White Sharecroppers | 171 | 5.8 |
| Mississippi | | |
| Negro Sharecroppers | 275 | 5.1 |
| White Sharecroppers | 295 | 5.2 |
| North Carolina | | |
| Negro Sharecroppers | 510 | 6.5 |
| White Sharecroppers | 619 | 5.2 |
| South Carolina | | |
| Negro Sharecroppers | 239 | 5.8 |
| White Sharecroppers | 317 | 5.1 |

The BHE cautions its readers concerning the figures in the report, saying that "in using these figures it must be remembered that the areas, chosen as adapted to a given type of farming (as wheat or cotton), often were not typical of the state as a whole, frequently being better than average."

## Wife Dies Over Shock Of Husband's Death

Philadelphia, August 24—(ANP) In the intense heat prevailing in Philadelphia last week-end, Clarence Weston, 51, a stevedo e, living at 724 South Smedley street, died while unloading a ship at pier 92, South Wharves. His wife, Mrs. Alice Weston, 50, died of shock when notified of her husband's death.

## Philadelphians Organizing To Secure Jobs

Philadelphia, Aug. 24—(ANP)—The North Philadelphia Civic League, headed by Dr. John K. Rice, is again on the warpath to obtain white collar jobs with stores and organizations which derive a large percentage of their incomes from Negroes. Conferences are being planned with heads of public utilities in which no Negroes have held positions above those of laborers. The group is heartened by the successful New York drive publicized last week in which 2,500 positions were opened to Negroes.

## Two Million Farm Youth Given Relief

Over 2,000,000 rural youth between 16 and 24 years of age received some form of relief in the five-year period beginning January 1930, according to the WPA.

Half of this number, or approximately 10 per cent of the entire rural youth of the country were receiving relief in October 1935. Nearly a third of all youth on relief were from rural areas, the CCC taking 50 per cent of its enrollees from rural areas and the NYA 21 per cent.

# Editorials

**From the Bible:**

"The glory of the Lord shall endure forever: the Lord shall rejoice in his works." Psalms 104:31.

*"I bent unto the ground*
*And I heard the quiet sound*
*Which the grasses make when they*
*Come up laughing from the clay.*

*"We are the voice of God," they said:*
*Thereupon I bent my head*
*Down again that I might see*
*If they truly spoke to me."*

*—James Stephens.*

### WHY CONTINUE WAITING?

The main reason why the Roosevelt administration has received the support of the American masses is because it has tried to do something about the many ills that have tortured us and has made that effort NOW. It has not been a "waiting administration." Probably many things have been done which should not have been done, but all will admit that the administration deserves much credit for its activities. It has been constantly trying to do the people good, to make them better and happier.

There is plenty of wisdom in the old saying, "Study long, study wrong." As a group we are prone to wait for this, that and the other,—to study about it, to think about it, talk about it,—but do nothing about it We do too much "standing still", not enough crawling, walking or running. If we get together and start going somewhere—yes, anywhere—we would have more and be more than we a e now.

Farmers of our group are poor cooperators. They can get together and run their churches and schools, but they have a hard time getting together and running their big business of farming. They are always waiting for the other fellow to do something first, or, they are waiting on the weather, on conditions, on the government, on the Lord. And the Lord made a good example of Jonah when he tried to wait, put it off, and not do what he should do. Three days in the bellies of some whales would do a lot of farmers a world of good, just as the experience helped Jonah.

Get together in your organizations, in your communities, find out what YOU should do to improve yourselves and then DO IT. Let's stop so much of this putting off and waiting business.

### THE COMING NATIONAL CONVENTION

The ninth annual convention of the National Federation of Colored Farmers will meet in Forsyth, Ga., October 26-29. Officers and members of the Federation are inviting colored farmers and farm leaders of the Nation to meet with them that all may be benefited and receive each, his share of the good that is bound to come from this meeting.

These meetings have been getting better and better each year. They have become stepping-stones on the path of progress and the modern farmer cannot afford to miss them. Fine, instructive programs are being arranged, great leaders of agriculture will be inivited to address the meetings and the faculty and students of State Teachers and Agricultural College,—and there is no finer group in all the Southland—will do everything to make all who attend comfortable and happy.

Make your plans now to attend the convention

### COLORED FARMERS IN THE NORTH

A colored farmer in northern Kansas threshed several thousand bushels of wheat recently. Another in Iowa just "laid by" 600 acres of corn. Another, in Illinois, has fifty acres of soy beans, the best crop he has ever had. These farmers are succeeding as well as their neighbor farmers of the other group and command the respect of all who know them.

There is opportunity in many northern states for good colored farmers and we would like to see more of them purchase farms in the North. There is no law against it. The good farmer can succeed anywhere. The South is over-populated, and if more young colored families would come to northern farming districts instead of to northern cities, the entire group would be benefited.

## GOVERNMENT AND TAXATION

By Paul K. Walp, Assistant Professor of Political Science, University of Tennessee

Knoxville, Tenn.—There are about 240 millions of us in these United States. We have one national government, 48 states, and over 175,000 units possessing the right to levy and spend taxes and to incur indebtedness. In the year ending June 30, 1937, these units spent almost 15 billions of dollars.

The total amount of taxes collected that year amounted to about 12 billions, or about 19 per cent of the national income, leaving the remainder to be borrowed. Of the 12 billions of dollars of taxes, five billions went to the national government and about seven billions to the states and the local government units.

The federal taxes are chiefly collected from the personal and corporate income levies, tobacco, and liquor taxes, custom duties, inheritance, payroll, and gasoline taxes The principal state levies are on gasoline, auto licenses, sales, property, liquor, tobacco, estates, and income taxes. And the local units derive mo t of their revenues from the general property tax, franchise and privileges taxes, fees, and fines.

**What Taxes Buy**

Assuming that we pay out about one dollar for every five of our income to the national, state and local governments, either directly or indirectly, what do we get for what we pay? To answer this fully and completely would require more time than patience to relate, but at the same time it would be an eye-opener to the citizen and the taxpayer who does not begin to realize the cost of providing the manifold services that the county, city, state, and nation provide.

Briefly, we mention a few of the things taxes buy—schools, roads, health protection and investigation, sanitation, drainage, courts, charitable and penal institutions, public welfare agencies and relief, national defense, veterans and old age pensions, regulation of communications, utilities, transportation, and labor conditions, inland waterways, regional planning, agricultural aids, conservation of forests and natural resources, protection of wildlife, fish hatcheries, police and fire protection, bank supervision, housing and slum clearance programs, sidewalks, parks, and playgrounds, and a multitude of services too well known to mention, but seldom recognized as being provided for out of the tax payments.

**Are Taxes High?**

There is no question, but that taxes are higher than they used to be. However, before you investigate very much you will probably find it costs more than the taxpayers pay to supply all the services they want—possibly than they really need.

It is true that in the good old days when the roads and streets were either dust or mud, that tax rates were a lot lower. They were lower when we had no automobiles. They were lower when we had no bridges and viaducts, the use of which every citizen now enjoys and seldom notices. Just try to imagine what conditions would be like if everyone started to be his own garbage, junk, and sewage disposal agent.

## THE PRESENT SITUATION IN ETHIOPIA

According to a document issued by the Ethiopian Government in which all available information is carefully summarised, large tracts of the Ethiopian Empire are still unconquered, and intermittent attacks on Italian garrisons and other bodies of troops continue. Even in Tigre, the province bordering Eritrea, most of the territory is not under control, while in the Wollega region, in the west, the Ethiopians are masters. Revolts have taken place in Shoa, and the railway to Djibuti has been often attacked. Native levies have deserted in large numbers, taking their arms with them and making common cause with the Ethiopians. In the east the Italians exercise no control whatsoever over Danakil and Aussa. Three-quarters of the ancient empire is under no military control, and even where that exists it is confined chiefly to towns and small radii around them, and Italian troops dare not venture very far or penetrate the hilly and mountainous sections.

## SPECULATORS PROFIT FROM FARM DISTRESS

That the land speculator has not disappeared but is making sizable profits by rooking drouth refugees and unemployed families in the cities is reported by the Bureau of Agricultural Economics. Real estate agents, lumber companies, railroads and colonization companies are, in the order named, most active in these land promotion schemes.

Trading on the misery caused by depression and drouth, these companies divide the land into small farm parcels of half an acre to ten acres in size. Using security and lower living costs as their "ballyhoo bait" these companies have been selling stump ranches in cut-over lands, mountainous lands in the Ozarks, and other kinds of poor land.

"Land which may be purchased at prices of $5 to $15 an acre," says the Bureau of Agricultural Economics, "is more often than not no bargain at any price and no basis for successful farming." Instead of demonstrating how the buyer can support his family, the companies stress the "beautiful surroundings."

## SOUTHERN PAPER COMPANY TO BUILD NEWSPRINT MILL

Dallas, Tex.—Construction work on the proposed Texas newsprint will start in the near future, according to Ernest L. Kurth, president of the Southland Paper Mills Inc., which will run the mill. It will cost $7,500,000 and have capacity of 50,000 tons of newsprint a year he stated. All of the output has been contracted for by about twenty southern newspapers, according to Kurth. Kraft and other papers also will be manufactured.

### CAT ADOPTS 3 SQUIRRELS; SHE HAS ONLY ONE KITTEN

Sheridan, Ill—The family tabby cat of Mr. and Mrs. James McDonald has only one kitten, but adopted three baby squirrels. They all are contented.

## Interesting News and Notes

Church services were broken up in a church in Middleton Springs, Vt., when a spotted adder snake crawled out of the pipe organ and slid across the woman organist's feet.

After a good crop Japanese farmers stand before the numerous wayside shrines in their country and give hearty thanks. Any day may be their Thanksgiving Day.

8,500 Cook county high school and college students were given federal money to help them through the school year, 1937-38. Students receiving this aid are employed part time after school hours. High school students earn about six dollars per month.

Dr. Zepp, vice-chairman of the annual convention of the American Veterinary Medical Association, reports that after a seventeen year survey it is discovered that city dogs are more healthy than country dogs. The reason is stated to be the fine care and feeding given city dogs.

A Kansas City man blew out his front teeth with a firecracker, July 4th. He had the cracker in his pocket and meant to frighten some friends with it. Entering a dark hallway, he stuck it in his mouth and lighted it, thinking it was a cigarette.

Export of corn and wheat to foreign countries has risen from a low last year of $89,000 for corn to near twenty-seven million dollars and from $169,000 for wheat to $27,406,000. Unmanufactured cotton declined twenty-five per cent.

Nearly sixteen million pounds of meat were consumed in the United States last year. The per capita consumption was 124.4 pounds. Iowa leads every state in the production of both beef and pork. New York eats more meat than any other state. More meat is eaten in October than in any other month.

Dr. C. H. Herty, of Savanah, Ga., who solved the paper problem of the South, is dead at the age of 71. His discovery of wood fat and methods of extracting it, won him world fame. He also worked out a process to use the southern pine for the manufacture of rayon.

An advertisement with a missing letter filled the Methodist church of Dublin, Ga., much to the surprise of the pastor. He looked at the ad again. Instead of reading "Seats Free," it read "Eat Free."

## ONCE BITTEN

A woman novelist was once asked by an interviewer why she had never married.

"Well, it's like this," the lady told the reporter. "I have three things in my house which represent so closely the characteristics of the average man that I don't want any more of him."

"And what are the three things?" asked the interviewer, curiously.

"A dog that growls all the morning a parrot that swears all the afternoon, and a cat that stays out all night," was the sweet response.

# What is a Game Management Area?

By Dr. Ira N. Gabrielson, Chief U. S. Bureau of Biological Survey

New York, N. Y.—In the majority of instances game management areas are cooperative undertakings and as such they are subject to definite limitations as well as possibilities. This has been adequately proven in other fields of endeavor where cooperatives have been in operation in the United States for a sufficiently long time to demonstrate what may be expected. Although most of us contend that they are far more difficult to manage, game management cooperatives are no exception to the principles involved.

I am of the opinion that we have often expected too much from such association and we should recognize the limitations of such enterprises before we initiate them. Game management areas cannot guarantee an unlimited supply of wildlife, regardless of the amount of money or effort expended. Although man by his best efforts can alleviate some of the limiting factors, he cannot guarantee immunity to wildlife of all of the inhibiting factors nature exerts upon our wildlife resources. Such units cannot be expected to supply an unlimited number of persons with unlimited quantities of wildlife. They cannot produce game without cost to someone, and they cannot guarantee your conduct or mine.

Game management areas can, however, provide better sport for a limited number of individuals who are willing to work and pay for the privilege; they can improve the relationship between the sportsmen and the farmer-producer; they can equalize to some extent the cost of production and harvesting; they can eliminate many abuses; they can frequently be of service to the community, and in some instances they can fill a very evident need.

If we continue to refer to these development tracts as game management areas, then there is one feature we must keep in mind. The term management implies the utilization of sound principles in the selection, organization, and conduct of a individual enterprise for the purpose of obtaining the greatest possible benefits in the most satisfactory manner. This requires that some individual must have sufficient training or background actually to manage the project, and he must have sufficient personality to enlist and retain the enthusiastic support of his associates and cooperators. In my experience, I have found that the most successful areas are actually one-man shows, backed by popular, local sentiment. These human dynamos are not always the most noticeable members of the association. In fact, they often hold no office or honorary position beyond the respect of their neighbor, yet in every successful game management area that I am acquainted with there is one such individual with the capacity to profit by experience, who has knowledge of the principles of management, ability to judge situations accurately, apply theories, and adapt the program to circumstances, and who has foresight, industry and perserverance.

Game management areas are therefore well organized and managed endeavors to improve conditions and to fit a need under a given set of circumstances. Anything short of these requirements means that the enterprise is little more than a promotional scheme.

## NOTES ON NEGRO AGRICULTURAL PROGRESS

Compiled From Reports of Negro Extension Workers

By Albon L. Holsey

Tuskegee Institute Ala.,

David Capshaw, Negro County Agent of Sunflower County, Mississippi reports that white landlords in his County are requesting his offiee to arrange meetings to explain the Soil Conervation and Live-at Home programs to Negro tenants and sharecroppers on their plantations.

During the Ninth Annual 4-H Club Rally recently held in the Booker Washington High School at Luther, Oklahoma, William Island from Rose Hill Community and Adel Bates of Fairview Community, won the health contest. The Arcadia and Harrison Clubs won prizes for best presentations of a model Club meeting. B. T. Robinson and Miss Evelyn Johnson are the County and Home Agents.

"Bunny says"—and, Bunny is just a little rabbit, peeping over a fence with a smile and a wink in his eye, alongside a terse message to Negro farmers. "Bunny" was created by E. C. Thomas, Negro County Agent of Dublin, Georgia as an illustration for his mimeograph letters to farmers. The Editor of the Courier Herald, the white daily paper in Dublin liked "Bunny," so now his face appears in each issue of that paper with a message from Mr. Thomas, ....who, by the way, is a Tuskegee graduate.

An editorial in the Macon (Ga.) Telegraph said of the "Ham and Egg Show" recently staged at Fort Valley:

"If Negro farmers throughout Georgia could catch the vision and purposes which, 20 years ago, inspired O. S. O'Neal, Negro farm demonstration agent of Peach County, and have been carried forward to a culmination such as the annual "ham-and-egg" show staged Friday at the Fort Valley Normal and Industrial School, thousands would be lifted from dependence to thrift and prosperity and even the white farmers of the state would find much to imitate."

## WIDOW OF T. R. CUTS CAKE OF 77TH BIRTHDAY PARTY

Oyster Bay, N. Y., Mrs. Edith Kermit Roosevelt, widow of President Theodore Roosevelt, celebrated her 77th birthday yesterday at a supper given by the Edith Kermit Roosevelt Women's Republican Club of Oyster Bay. Surrounded by members of her family and representatives of Republican organizations of Oyster Bay, Mrs. Roosevelt cut a birthday cake while the Quentine Roosevelt military band played and the guests sang.

**Probably**

City Man (to farmer)—Why are those bees flying around so frantically?

Farmer—I guess they have hives.

# Method of Protecting Legume Silage Found By U-T Research Men

Knoxville, Tenn.—Research men at the University of Tennessee's Department of Bacteriology believe they have found the solution to one of the costliest problems confronting Tennessee farmers. They have discovered a new method of ensiling legume hay which eliminates the "50-50 chance" of losing the silage through putrefaction.

Following the same principle involved in pickling, the scientists have been successful in preserving legumes by fighting putrefactive bacteria with acid-producing bacteria. Since legumes do not provide the proper food for these acid-producing bacteria, the new method calls for the addition of other farm-grown products from which microbes can manufacture acids, explained Dr. Paul W. Allen, head of the department.

"Ensiling is a kind of pickling," said Dr. Allen. "The reason why there is little difficulty in making silage out of corn cut in the dough stage is because the corn is juicy and contains enough soluble carbohydrates for the acid microbes to produce an effective percentage of acid."

The U-T bacteriologists have found they can add one of many different farm products to preserve the legumes. Successful experiments have been carried out with cull sweet potatoes, carrots, apples, molasses, sorghum, sorghum cane, and ground grain. The additional product was mixed in small proportions with the legume silage.

Heretofore much work has been done in using black strap molasses and mineral acids with the silage, but little has been done in using farm-grown products. By the new U.T method the farmer can make use of a product he grows and eliminate additional expenses, said Dr. Allen.

U-T has experimented with more than 20 different kinds of legumes so far, and the project will continue. It will be necessary to perform a large number of different tests to determine the best proportions in which legumes and non-legumes are to be fixed in making silage.

Dr. Allen invited farmers to write him for information and to try the new method on a small scale, supplementing experiments at U-T. He believes the method will greatly aid Tennessee farmers when they gain confidence in making the new kind of silage.

"Legume hay is superior to all non-leguminous forage crops for live stock because of its high protein content, but it has been difficult to make it into a good hay due to rain or lack of proper drying conditions in the field," he said. "Many farmers have discontinued ensiling legumes because of the risk taken."

## NOTES ON NEGRO AGRICULTURAL PROGRESS

By Albon L. Holsey, Field Officer U. S. Department of Agriculture

Tuskegee Institute, Ala.—The 1937 4-H Club enrollment in Georgia was 14,136 girls and 9,182 boys, a total of 23,318. Typical of the several projects completed by these boys and girls was the production of 66,409 bushels of corn by 2,610 of the enrollees. Most of the girls made the Christmas presents which they gave to relatives and friends.

* * *

A series of 11 meetings in various sections of Florida brought together groups of farmers to hear various phases of the 1938 Agricultural outlook discussed by H. A. Hunt, Special Assistant, Farm Credit Administration, Joseph H. B. Evans, Administrative Assistant, Farm Security Administration and T. H. Campbell, Field Supervisor, U. S. Extension Service. The tour was arranged by A. A. Turner, Negro District Agent, Agricultural Extension Service.

Two additional counties in Georgia have added Negro Home Demonstration Agents. Mrs. Mamie A. Byrnes was assigned to Baker County and Miss Mary Blount to Hancock County.

* * *

Nineteen farm families from 12 communities exhibited 200 pounds of cured meats in the first annual Meat Show which was held last month in Osceola, Arkansas. Mayor A. S. Rogers of Osceola welcomed the farmers and congratulated William S. Barabin, Negro County Agent, who arranged the Exhibit.

* * *

William Sanchious, Negro Vocational Agricultural teacher at Fitzgerald, Georgia, has initiated an intensive campaign for the production of string beans, tomatoes and corn in his county. His program includes the establishment of a canning plant to take care of the surplus not sold in fresh vegetable markets. Mr. Sanchious reports that 75 Negro farmers and 35 white farmers have enrolled with the project.

* * *

With unusual production of peanuts in DeSoto Parish, Louisiana. this year, Mrs. Stazzie Hudson Haynes, Negro Home Demonstration Agent, has encouraged 4-H Club girls to prepare novel and tasty lunches with various combinations of the peanut.

* * *

Mrs. Mary T. McKenzie, Home Demonstration Agent, Alachua County, Florida, reports a successful fruit-tree planting campaign among her Club women.

* * *

Eight hundred farmers and community leaders attended the Annual Negro Farmers Conference recently held at Utica Institute, Mississippi. The Live-at-Home Program and Soil Conservation were among the topics emphasized. T. M. Campbell, Negro Field Supervisor, U. S. Extension Service, was the principal speaker. William H. Holtzclaw, Utica Principal, reports that a large group of white farmers were among those in attendance.

* * *

Negro farmers of Alachua County, Florida, won first prizes for their hog, grain, forage and cured meat exhibits at the Florida State Fair held in Tampa, early this year. F. E. Finder is the Negro County Agent.

* * *

The Memphis (Tennessee) Commercial Appeal has announced that in 1938, Negro farmers may participate in their annual Plant-to-Prosper Campaign. The sum of $650 has been set aside for awards to Negro farmers who will be scored on "living at home, diversification, soil conservation and home improvement." Among those who discussed with Commercial-Appeal officials the plans for Negro participation was Dr. J. E. Walker, president, Universal Life Insurance Company of Memphis. Negro farmers in Arkansas, Mississippi, Missouri and Tennessee are being encouraged by Negro County Agents to enroll in the competition.

* * *

Texas Home Demonstration Agents report that in the 1937 Home Improvement Program 2,179 farm families improved walls, woodwork and floors in their homes and 325 homes were remodeled. Home furnishings made by the women included 688 mattresses and 667 rugs. For the yards and premises, 1492 shade trees were planted and 1533 lawns were started or improved.

## THE ACME OF KNOWLEDGE

New Employer—Are you familiar with mules?

Negro Stableman—No, sir. Ah knows 'em too well to get familiar.

# Morgan on a Farm

When some noble citizen of Rome of the time of Julius Caesar, in a moment of conscious meditation exclaimed "Labor Omnia Vincit," meaning work conquers all things, he was giving to the world within and without the great Roman Empire one of the most precious bits of practical philosophy conveyed in those short Latin words.

Honest labor, whatever may be the field of application, is dignified and fruitful. The dignity and fruitfulness of such a labor are contingent upon moral character, emotional stability and persistent determination Had the world subscribed to this old Roman adage, many of its woes might have impeded the march of civilization. Unfortunately most of us look for a short cut to success, or choose the path of least resistance or tread on ground already prepared for us, or seek some magic formula. This is strikingly true of the black man who leaves college. He most always seeks a white-collar job.

Wealth often dulls the power of prevision of the children of the rich When, as it often happens, the fortune to which they fall heir, and which was created out of hard labor, foresight and perseverance, is swept away by adversity or maladministration then moral disintegration, emotional disorganization set in and suicide usually follows.

However, not all sons of rich men are blinded by the glitter of their wealth. When John Pierpont Morgan III, grandson of the famous international banker, finished Harvard last June, he went straight to a farm. Not to rest or to hunt, but to study farming in the good old-fashioned way. Here, he begins as a farmhand, threshing, milking the cows and cleaning stables. He would have been welcome on Wall Street as a junior partner in any of the reputable brokerage firms. He could study law, medicine, banking or any of the glamorous professions. His academic, cultural and financial background would unlock any door where the House of Morgan is a password. Instead, he goes into farming, at a time when others less fortunate than he are leaving the farm for a more abundant city life and exalted occupation. Whatever may be the motive which prompted his choice, it is none the less a classic example. Out of his experience on the farm, of his closeness to the soil will emerge a stronger, sturdier, a more rugged Morgan who will not have to depend on the reputation and the wealth of his grandfather. He will create his own wealth and make his own reputation out of the soil, from the sweat of his own brow. For the farmer will always remain an indispensable unit in our economic life.

# NOTES ON NEGRO AGRICULTURAL PROGRESS

By Albon L. Holsey

Tuskegee Institute, Ala.,

Florida Extension Agents report 6920 members in Adult Clubs in rural areas. and 4412 Negro 4-H Club members.

M. E. Dean, Negro County Agent, Louisville, Mississippi, has prepared and distributed a circular describing an effective method for treating hog cholera.

Leola Berry, 4-H Club girl of Hillsboro County, Florida. won the County's highest health score. Her score was 94.

Negro farm women in 25 Texas counties have preserved for home use 49,614 containers of food. All fruits and vegetables which were canned were grown in their own gardens.

Three rural community club houses have been constructed in Hillsboro County, Florida. Funds for the erection of the buildings were raised by Adult Club members. Miss Floy Britt is the Home Demonstration Agent.

Leaders of twelve rural adult Clubs in Anderson County, Texas. report sales of tomatoes for 1938 amounted $834.15. Other club members sold 828 bushels of peaches for $1034.00.

The Longview Cotton Gin, a Negro farmers cooperative, located in Huntsville, Alabama, reports 1624 bales ginned in 1937; cash transactions amounting to $23.469.76, dividends distributed, $1024.00 and $4469 cash balance on hand.

Isaac George, Negro 4-H Club boy of Bibb County, Georgia, who won a first prize at the Macon (Georgia) fat stock show last Fall reports that a portion of his prize has been invested in a registered Poland China hog for sale this Fall.

In a letter accompanying the annual canning budget to all her adult club members, Miss E. D. Ray, Home Demonstration Agent of Union Springs, Alabama, says that balanced food for the family will change the expression "I'm just feeling tollable" to "I'm just feeling fine."

S. H. Lee, Negro County Agent, Bibb County, Georgia, reports that a method for constructing home made brooders with an oil lamp which he learned at the Tuskegee Short Course has been adopted by many of the men and boys in his county.

A permanent 4-H Club camp located seven miles from Columbia was completed in 1937. White and colored people throughout the state contributed funds for its construction. Selected Negro 4-H Club members attended the camp in two groups of 300; each group remaining four weeks. Mrs. R. R. Moton was speaker at opening session in June.

Paul O. Brooks, Negro County Agent of Logan County, Oklahoma, has organized leading farmers in his county into an Agricultural Advisory Council. Members of the Council have helped to administer various programs of the Farm Security Administation, N. Y. A., W. P. A., A. A. A. and other government agencies.

An exhibit of 104 sets of harness made by Negro farmers of Texas was on display at Prairie View College during their annual Short Course. Other leather articles included saddles, leather jackets, house shoes, halters, wallets, belts, etc. Negro County Agents aided by specialists from the A. and M. College have conducted classes in tanning leather and making the harness.

Nellie Bentley, prize winning 4-H Club girl of Lincoln County, Oklahoma, says: I made enough money canning for neighbors to buy my winter coat, all of my books for school and I still have some money in the bank." During the past six years Miss Bentley has exhibited at thd National 4-H Club contests in Chicago and has won seven first prizes, two seconds and four thirds. She is 17 years of age.

T. D. Spears, Negro County Agent, of Creek County, Oklahoma was recently selected by the Editors of the Oklahoma Farmer-Stockman as one of the judges to score gardens entered in a statewide contest. J. L. Bentley, Negro farmer of Chandler, has been twice winners of first prizes offered by the Farmer-Stockman for one of the best gardens in his state.

Hal Thompson, successful Negro farmer located near August, Georgia, says that if farmers will follow the Government's Soil Conservation Program, they will "leave something for their children to farm on besides gullies and barren waste lands." Mr. Thompson was recently awarded the Master Farmers Certificate by Tuskegee Institute.

Through the efforts of Miss Willie Mae Carroll, Home Demonstration Agent at Aberdeen, Mississippi, a free Public Library for rural club members has been established in Aberdeen. Starting four months ago with a dozen books, Miss Carroll has been successful in bringing the total number of books to nearly 300. The Rosenwald Fund, the local white Women's Club and various colored groups and individuals have added to the collection.

E. T. Purvis, Negro Extension Agent, Lincoln Parish, Louisiana, reports the organization of a Credit Union among the farmers of his Parish. S. Emanuel is President and J. H. Thomas, Secretary-Treasurer. Offices have been opened in the Christian Building in Ruston. H. A. Hunt of the Farm Credit Administration and Cornelius King, President of the Louisiana Colored Teachers Association are cooperating in organizing these unions throughout the state.

James E. Williams, Negro County Agent of Attala County, Mississippi is organizing the farmers in his County to cooperate with a WPA County Hospital project.

P. H. Stone, Negro State Extension Leader for Georgia reports that 11,349 Negro farmers in Georgia attended educational meetings prior to voting in the cotton referendum.

Forty-eight 4-H Club boys and girls of Dallas County, Texas who are raising pigs for market, recently visited the Swift and Armour Packing Plants in Fort Worth.

A. H. Fuhr, Negro County Agent at Muskogee has been reelected Chairman of the Rural Life Section of the Oklahoma Association of Teachers. Miss Rosa J. Parker, Logan County Home Agent is Secretary of the Section.

M. O. Maxwell, Negro Extension Agent in Giles County, Tennessee has issued an unique score card for recording progress in a Farm and Home improvement campaign. This score card places special emphasis on soil conservation.

4-H Club boys of Anderson County, Texas have been earning extra money making hammer-handless ax-handles, plow beams, ironing boards, and other such articles which their County Agent has taught them to make.

Miss Susie Thomas, a member of the Popular Springs 4-H Club in Jackson County, Georgia has developed such skill as a dressmaker that she keeps busy filling orders for women of both races in her County.

In a contest for beantifying their own rooms, 156 4-H Club girls of Matagorda County, Texas made dresser scarfs, candlewick pillow tops, constructed shelves for books and framed and hung pictures.

A Kitchen Improvement contest is reported among farm women of Monroe County, Mississippi. Improvement includes adjusting heights of working surfaces, painting, screening, better lighing, adding shelves, sinks, built-in-cabinets, etc., at minimum cost. Miss Willie Mae Carroll, Home Agent, reports that Mrs. Pinkie Jenkins of Walker Grove Community won first prize and Mrs Yetta Ward of Jarmon Community, the second prize.

Texas Negro farmers have recently held Maat Shows in Fort Bend, Smith, Houston, Milan, Red River, Freestone, Hopkins, Robertson, Gregg, and Caldwell Counties. In these shows more than 25,000 pounds of hams and bacon were displayed and many valuable prizes awarded.

The Leon County (Florida) Negro Farmers Council held a series of meetings in various parts of the County before planting time for the purpose of providing the farmers full information concerning the Agricultural Conservation Act of 1938. R. E. Wyer, Jr., Negro County Agent cooperated in arranging the meetings.

Farm club women of De Soto Parish, Louisiana report 380 home gardens with from five to eight vegetables ready for the table. In company with Mrs. Stazzie Hudson Haynes, the Home Demonstration Agent, Miss Bertha Lee Ferguson, Garden Specialist of Louisiana State University recently inspected gardens in this Parish.

**Nearly 3,000 miniature trees grace the new $10,000 model of the Golden Gate International Exposition, showing Treasure Island as it will appear eleven months from now on opening day, February 18. It is on display in Los Angeles.**

# THE MODERN FARMER

Vol. XI. NASHVILLE, TENN., SEPTEMBER 15, 1938 No. 8.

## SHARE CROPPERS INCOME

### Lowest Amount Received By Negroes Says Survey

In its survey of family income for farm families the U. S. Bureau of Home Economics summary for the Southeast region gives comparisons between Negro and white sharecropper families in four states: Georgia, Mississippi, North Carolina, and South Carolina.

The figures indicate the close similarity of economic status between the two racial groups on the lowest rung of the agricultural ladder. In combining the state results. Farm Research finds that the cash income of the Negro sharecropper families studied in the 13 counties covered was $294.25, while white sharecropper families in 22 counties sampled averaged $350.50 per family. Relief family incomes were not analyzed and hence are not included.

Conditions were found to be worst in Georgia. Money farm incomes average $171 per family in the case of white sharecroppers and $153 in the case of Negroes. An additional $32 and $22 respectively came from non-farm sources, indicating practically no opportunity to supplement farm income by other kinds of work. 67 percent of the white families and 87 percent of Negro families received less than $750 gross income. None of the Negro families earned as much as $1,000 from all sources. Families in each group averaged 5.4 person. Of the white families 11 percent were on relief and of the Negro families 5 per cent.

**Average Cash Farm Income of Non-relief Sharecropper Families In Four States**

| | Cash Farm Income | % on Relief |
|---|---|---|
| Georgia | | |
| Negro Sharecroppers | $153 | 6.3 |
| White Sharecroppers | 171 | 5.3 |
| Mississippi | | |
| Negro Sharecroppers | 275 | 5.1 |
| White Sharecroppers | 295 | 5.2 |
| North Carolina | | |
| Negro Sharecroppers | 510 | 6.5 |
| White Sharecroppers | 619 | 5.2 |
| South Carolina | | |
| Negro Sharecroppers | 239 | 5.8 |
| White Sharecroppers | 317 | 5.1 |

The BHE cautions its readers concerning the figures in the report saying that "in using these figures it must be remembered that the areas, chosen as adapted to a given type of farming (as wheat or cotton,) often were not typical of the state as a whole, frequently being better than average.

## WOMAN BAKES COOKIES BY THOUSANDS FOR CHARITY

Because she just loves "doing things for people," Mrs. Herbert Gibson of Pittsburgh, Pa., has worked up a hobby in which she bakes 50,000 cookies a year for charity. She has more than 2,000 recipes on file and 500 different cutters on her shelves. She makes them for the Salvation Army, the Volunteers of America, the New Future Home, and other organizations.

## PROGRESS OF LIBERIA CITED

### Ninety-first Anniversary of Republic—By Barclay

Monrovia, Liberia (ANP)— A highlight of the recent nation-wide celebration marking the 91st anniversary of the founding of the Republic of Liberia as an independent, sovereign state, was the reception tendered the Diplomatic Corps by President and Mrs. Barclay at the Executive Mansion.

As Doyen (Dean) of the Diplomatic Rops, Hon. Lester A. Walton U. S. Minister to Liberia, extended congratulations to President Barclay on "Liberia's National Fete Day." Responding, President said:

SIGNIFICANT DAY

"This day is significant to Liberians and only because it marks another year in the progress of their life as a Sovereign State, but also because broadly and profoundly it signalizes a unique fact in the history of Africa and of the people of Africa.

"On this Continent in the past, have existed states that rivaled in royal splendor and in imperial power contemporary states of Medieval Europe. There have been in Africa, States that more than once challenged successfully the military might of the 19th Century Europe. But neither in Melistine, in Songhay, Dahomey nor Ashanti did political thought evolve that conception of the State which is implicit in the principles upon which the Government of Liberia is founded.

UNUSUAL EVENT

"Never before July 26, 1847, had anyone in Africa, and least of all an African people, made so revolutionary and pregnant a declaration as that in which the early Liberians proclaimed: 'All men are born equally free and independent and have certain natural, inherent and inalienable rights, among which are the rights of enjoying and defending life and liberty, of acquiring, possessing and protecting property, and of pursuing and obtaining safety and happiness.

The ideas underlying these declarations were, of course, not original with Liberians, neither were they native to Africa, or at that time characteristic of African thought. In the fact that they were nevertheless adopted and proclaimed by an African people, lies their historical uniqueness.

"Today, Liberia rededicates herself to the ideal of international cooperation. She still values and solicits the goodwill of all peoples."

## WOMAN JUDGE KNOWN FOR YOUTH REHABILITATION

Judge Camille Kelley of the Memphis, Tenn., juvenile court, has an 85 per cent record of success in rehabilitating youthful offenders. She also is noted for her work in domestic relations.

## NEW RULING AIDS TENANTS

### Farm Security Officials Make Public Its Action

OCT 18 1938

A written agreement between tenant farmers and their landlords will be a requirement for government loans to tenants under a new policy announced by C. B. Baldwin Acting Administrator Farm Security Administration. This requirement it is said, will reduce the shifting of tenants on farm land and eventually avoid much trouble between landlord and tenant.

The Farm Security officials made public a new standard form for farm leases entered into, by tenants receiving federal rehabilitation loans. This is a type of loans granted farmers to purchase equipment and supplies.

Mr. Baldwin further stated that each year a million farm families move, largely because of unsatisfactory tenure conditions.

One of the main features of the new standard lease is a requirement that landlords compensate tenants for any permanent improvements on farms, if the leases are terminated.

Another requirement is that both landlord and tenant participate in government crop control and marketing program.

Officials also said that standard lease resulted from more than three years of experience in making these small loans to farm families in the relief class.

In lots of instances when the tenant increased his income the land lord increased his rent. As a result the government program subsidized landlords rather than low-income farmers, they said. Automatic renewals under the new lease are expected to end these complaints.

## BIG COTTON INCREASE AFTER PLANTING VETCH

L. M. Bilbrey of Lawrence county followed cotton with vetch in the middle in 1936. After turning the vetch under in 1937, he again planted cotton. The cotton following the vetch produced a bale to the acre compared to 300 pounds per acre in 1936, related Charles F. Simmons, extension crop specialist.

Though part of the increase was due to a more favorable growing season, Mr. Bilbrey feels that at least half of it can be credited to the vetch.

## INSURANCE FOR FARM HANDS

The Social Security Board is nearing completion of a three-month study of the problem of extending Federal old age insurance to 16,000,000 farm hands, hired girls and other wage-earners now excluded from the system, the Associated Press reports. A report to the board's advisory council is due Sept. 15. Board experts have been trying to work out some system of collecting old-age insurance contributions from farm laborers, domestic servants and casual workers —and their employers.

## OLD AGE INSURANCE CLAIMS

### Certified for Payment Passes Two Hundred Thousand Mark

Washington, D. C. —With its procedure for handling old-age insurance claims now fully developed, the Social Security Board announced today that it has authorized more than 200,000 single cash payments to wage earners who have reached age 65 and to the heirs of estates of those who have died. The 200,000th benefit payment was approved in the first week of September by the Bureau of Old-Age Insurance.

The number of claims certified during August was 14,823, making a total of 199,435 claims certified since the old-age insurance program went into effect on January 1, 1937. Payments authorized in August amounted to $827,088.48, bringing total payments to $7,528,081.48. The average payment for August was $55.80, the highest for any month since claims began to be paid. In 10 States, payments for August averaged more than $60.

The time required by the Bureau of Old-Age Insurance for the handling of a claim, after its receipt from a field office until it is sent to the Treasury for payment, has been reduced from an average of 25 days, in December 1937, to 10 days.

Single cash payments are the only benefits now being paid. Monthly retirement benefits to wage earners will not begin until 1942. "During the early months of this program," Mr. John J. Corson, Director of the Bureau of Old-Age Insurance, said, "many persons failed to file claims because of the very small amounts involved. From now on, it may be expected that claimants for these single cash payments will appear in increasing numbers. As these payments are equal to 3 1-2 per cent of the total wages that a man has received after 1936 and before age 60 or death, the amounts now payable are increasing in size and in most cases will be well worth collecting."

An inventor has combined a magnifying glass and mirror in a device to enable a person to remove foreign particles that lodge in his eyes.

## JAPAN PURCHASES MANY U. S. HIDES

New York City.—Japan has become an important factor in the hide market here. Purchase of from 10,000 to 12,000 light native cowhides in the Chicago packer hide market by Japanese interests in recent weeks have totaled about 40,000 hides, and traders here said that Japan has become the foremost market for American hides since the beginning of this year.

The buying here was attributed to military needs, and traders here said Japan has embarked upon a regular program of purchasing steer hides in the Argentine market and cowhides here.

## THOUSANDS OF PICKERS BUSY

### Berries Ripe in Puyauup in State of Washington

Puyallup Washington—The berry-picking season is on in the Puyallup Valley and several thousand women and girls and scores of men and boys—with arms encased in old stockings for protection and heads kitted out with sunbonnets and straw hats—are to be seen between the long rows of bushes. The presence of smaller pickers is made known by cheery calls from muffled depths of leaves.

It is a silent occupation, for berries have no hard casting that strike audibly in the boxes. Quiet reigns except for the buzz, buzz of conversation. But many pickers do not talk much.

Here are two girls from Tacoma. They are finding the sun warm, but they need pin money and will keep to the job a while longer.

**Earn for School**

In the next row are a mother and daughter from Seattle. They will earn as much as possible in the berry season to build up necessary funds for school expenses in the fall.

Here are two boys from Seattle, now "citizens of the road." It is uncertain what they intend to do with any money they may earn.

In another row is a hard-working Tacoma woman. Her husband has long been out of work. For months she has anticipated the opening of the berrying season. She is the kind the berry farmer likes to employ, for she will work steadily, can be depended upon, and will be neither noisy nor lawless.

**Valued Workers**

The Puyallup valley has many workers like this woman, and has learned to evaluate them highly. They start at the opening of the strawberry season, in June, stand loyally by in gathering all the successive crops—black raspberries, red raspberries, loganberries, blackberries and evergreen blackberries, which hang on until autumn comes.

After the day's work is done and evening tints have arrived on the vast snow fields of Mount Rainier, the berry pickers begin to gather within their temporary homes called "berry shacks." Many a sociable circle is formed. Song is heard, and laughter, and friendly talk. Warm friendships are begun in the berry fields that last often for many years.

There are also the lonely ones, for many of these boys and girls are away from home for the first time. The friendly, democratic spirit among pickers presently lightens their hearts, and in an evening or two, they gather about the cabin doors with the rest, and, forgetting their loneliness, join in the evening gatherings.

## CATERPILLAR RACING

Inspired by the famous annual frog jumping contest of the Mother Lode country, San Francisco school children have organized a new pastime of caterpillar racing contests.

## CARVER'S DISCOVERIES NOW APPRECIATED

George Washington Carver has for 40 years invested his time, his energy, his great talent, in practical research which generations to come will appraise more intelligently than is possible today. The discoveries of the scientist may have no apparent value when they are made. It is only through years of interpretation and practical application that they prove their worth.

Forty-one years ago George Washington Carver left Iowa State college, where he was graduated in 1894 and where he had served as a member of the faculty for two years, to become the first director of agriculture at Tuskegee Institute. By virtue of an act by the Alabama state legislature, he was at the same time appointed director of research and of the agricultural experiment station and began his notable scientific work.

### Boon to Agriculture

As we review the progress of that work we realize that 40 years ago he was actively developing the science of chemurgy, that new word that so aptly describes the role science is playing in putting research to work for the farmer. From the time he first entered the chemical laboratories at Iowa State college and until this very day, Dr. Carver's interest has been centered in finding new uses in our annual crops, sweet potatoes, peanuts, soy beans, wood, cotton, which with the aid of the scientist might be converted into uses just as important as the food and textiles which through generations have served the needs of men.

It may, however, be well to refer to some of the results which have come from his laboratories because of the importance they are now assuming in view of the great interest the farm chemurgic movement has created throughout the country. Out of that interest has developed within the last two years a greater appreciation than ever before of the imporance of the farmer's crops to industry. In those crops the chemist and the industrialist are now discovering new values in their starches and sugars and cellulose, and huge industries are being built for their utilization.

### Cellulose Discovery

But years before the paper makers discovered the values in the cellulose content of southern pines, Dr. Carver had found them in his laboratory.

Two years ago the federal government, cooperating with the state experiment station and the help of the Chemical Foundation established a sweet potato factory at Laurel, Miss., first as an experimental and then as a practical plant for the production of starch.

### Potato Glorified

Many years ago Dr. Carver took the sweet potato to pieces and extracted from it starch and sugars, out of which he made a great variety of commercial products. He demonstrated the practicability of producing a starch for the textile industry from southern sweet potatoes which would make it unnecessary for our manufacturers to go to Java for tapioca flour, which is now imported by the hundreds of millions of pounds and which goes into consumption in direct competition with the starch now made from corn and which tomorrow will be made from sweet potatoes.

## I AM NOT BOUND TO WIN

I am not bound to win, but I am bound to be true. I am not bound to succeed, but I am bound to live up to what light I have. I must stand by anybody that stands right, stand with him while he is right and part with him when he goes wrong.

—Abraham Lincoln.

## COUPLE WANTS TO LEAVE Farm TO U. S. GOVERNMENT

WASHINGTON (Ap)—An Illinois couple wants to give a 120-acre farm to the Government.

"It is our wish to have this farm turned over to the Government after our death for an experimental farm or for anything which the Government would appoint," A. C. Gehrke of Chicago wrote the Federal Land Office. Agriculture Department officials said they were studying the method of accepting the offer. It may take an act of Congress.

## NEW USES OF COTTON DISCOVERED UNDER AAA

Auburn, Ala.— A. W. Jones administrative officer in charge of the AAA activities in Alabama enumerates eight new uses discovered for cotton under the new cotton diversion program.

Heading the list was the use of cotton bagging as a covering for 16,000 bales of cotton.

Other uses discovered were: cotton fabric as a reinforcement for airport runways; as a covering for tobacco plant beds while the beds are being fumigated for the control of blue mold; as a covering for dried fruits to prevent insect damage during the curing process; for lining irrigation canals and terrace outlet ditches and as a covering for highway cuts and fills; as a covering to protect tree seedlings, and as a roofing and sidewall material for houses.

—The Christian Science Monitor

## PRESIDENT WATSON AND MAJOR McCORMICK TO SPEAK

**Educator and Practical Farmer to Talk at Federation in Forsyth, Ga.**

Forsyth, Ga.—(Spcial) — Advanced notice has been received here that two outstanding race men are already scheduled to address the farmers when they meet in the national convention here October 26-29 inclusive. One is the Rev. J. B. Watson, A. M., D. D., president of the Agricultural and Mechanical State College at Pine Bluff, Ark. He will bring a message to these tillers of the soil from an educational point of view. Although he himself was born and reared on a farm in Texas, he has spent most of his life doing educational work.

The next speaker is Major R. McCormick, who hails from Taft, Okla., and who is in charge of the consolidated farmers of the Negro institution there in his native state. He not only will talk to the farmers as a farmer, but will be the representative of His Excellency, the Governor of the State of Oklahoma, who appointed Major McCormick to attend the session.

President Hubbard declared that as fast as the speakers and visitors' names and addresses reach him he would release the information to the press.

Poplar Bluff, Mo.
Sept. 29, 1938

The Modern Farmer,

Dear Editor:

Harviell Colored Farm Corp.

Harviell, Mo., were organized on June 22, 1938 by representative Thomas Gillespie which was accompanied by a large congregation, was successful in getting registered member for the new Unite Hoping to obtain a complete charter by Oct. 1, 1938, leading address by (Rep.) T. M. Gillespie of Poplar Bluff, Mo., Office 485 Parthenia St. Resident 316 Poplar St. Our slogan, 100 membership drive.

Mr. Gillespie, also a realestate salesman for the Hoagland Co., of Poplar Bluff, Mo., also The Great Northernland Company were in conference with Pres L. Boler of Charleston, Mo., on April 22. Our national organizer and business done by his approval. He delivered an outstanding address to race farmers. Rev. M. J. Jones of Harviell, Mo., president of the Harviell Unit. Mr. Lonnie White Marsset Mo. Mr. J. R. Richard, Treas. Mr. B. Lassey, Sec. Thomas M. Gillespie, Supt.

## MIKADO LEADS FRUGAL LIFE

**Thrift Is Keynote In His Household.**

TOKYO—The Emperor is especially observant of thrift during the present time, leading a simple frugal daily life and avoiding waste of any kind, reports the Asahi. Learning of this, the paper says, Finance Minister Seinhi Ikeda plans to submit for the Emperor's inspection many substitute articles made in Japan, such as shoes made of shark skin and soled with whale skin, foreign-style staple fiber cloth and many others.

The Osahi describes with awe how the Emperor works and lives in hot rooms without air-cooling of any kind, not even an electric fan. His Majesty uses cheap Japan-made pencils and a fountain pen of the type used by students. Not a sheet of scratch paper is wasted, the paper says.

When attending to State affairs, the Emperor wears a military uniform. At other times, His Majesty wears a plain foreign-style suit of Japanese cloth which has been in use for several years. The Emperor's shirts and hosiery are no different from those sold everywhere, the paper says, and moreover, they are washed and worn again.

The Empress follows the same frugal pattern, says the Asahi, using mostly domestic cloth and toilet articles and applying every possible economy in daily life, thereby setting a shining example with the Emperor for the people behind the guns.

## TALC IS PROMISING

Talc pottery, of which there is said to be an unlimited supply in Manchoukuo, already has been used for spark plugs in gasoline motors, and its use in kitchen utensils is expected to materialize on a commercial basis this fall.

Dr. Makoto Shimizu, of Tokyo Engineering University is directing the search for substitutes for hide and leather. Wallets, shoes, handbags, and suitcases made from shark skin already are on the market, and the same articles are expected to be produced from whale skin in October.

## ODDITIES IN JAPAN

Tokyo—Momijiama of Nihonbashi is a modest florist establishment in the midst of Tokyo's commercial center, but few know that the master is a genius who combines the art of landscape gardening and an astonishing familiarity with nature and all her ways.

This knowledge is displayed when Momijiama arranges flowers, shrubs and trees in the lobby of the Imperial hotel. It is as though he were creating a stage-setting as a background for world travelers who form an international assemblage day by day.

The countryside in spring is brought to strangers from overseas late in March when plum and peach trees make a gay scene. Later on, the single petaled Higan cherry trees are transported from their hilltop homes, and when the flowers scatter over the heads of the guests, the Yoshino cherry trees are selected. Finally the deep-pink, double Yaezakura spreads its branches over those who speak all the languages of Tower of Babel.

### In Quest of Trees

Only one who holds communion with the various forms of nature could take long journeys into the wild places as does Momijiyama in search of the trees for his decorations. He tramps through the woods for days until he finds the right ones. Sometimes he thinks he has come upon a perfect specimen, but he does not select it until he has studied the tree from all angles, its height, the symmetry of the branches, etc. Then he must make a bargain with the owner of the land on which the tree grows.

Momijiyama superintends the cutting down of the trees before the buds of the blossoms have appeared. The prostrate trees at last begin their journey by truck to Tokyo. Having wasted their sweetness on the mountain air for years they are now to be admired by hundreds of persons from all quarters of the globe, and then give up the ghost to be numbered among forgotten things.

Like the old man of the legend who made the trees bloom in Japan, so Momijiyama causes the trees intended as decoration of the hotel lobby to burst forth in flowers. Whatever magic he employs the trees do not know that they have been severed from the roots and go on naturally as though nothing had happened. It is said that never once has Momijiyama failed to coax the trees into a wealth of flowers.

To greet the eyes of the first Italian mission, Momijiyama combined while azaleas with the dark red leaves of spring maples and white paper among the branches. Later the second Italian mission and the Mohammedan mission were welcomed with rhododendrons and white wistaria, skillfully arranged.

In the next month or so Momijiyama will show his choice chrysanthemums—100 to 200 blossoms growing in one big pot. He will place thatched roof cottages, bridges and stone lanterns beneath pines and scarlet maples. There is nothing that he cannot accomplish, and he creates so quickly that the setting is transformed overnight.

Perhaps Momijiyama's most elaborate natural setting was that which he produced as a welcome to the members of the American Woman's Garden Clubs when they came to see the gardens of Japan. In the center of the picture was an iris pond where carp swam about, and water fell into the pool through a bamboo stem. The wide-spreading branches of cherry trees met overhead, and giant bamboo from Kyushu towered upward. The elfin notes of suzumushi sounded from beneath the branches of shrubs where they moved into the provinces. At the end of a decade Kyoto lay in ruins. The Onin war was the most disastrous which Japan has experienced, for it centered in the capital where there was the most to be destroyed.

Not for eighteen years after Yoshimasa had planned his estate at the foot of the Eastern Hills was he able to continue with it. Then, as the city began to pull itself together, work once more was resumed. This was in 1482 and the following year he was able to occupy the estate. He spent the remaining seven years of his life there, dying in 1490.—Japaneses American.

## OLD THIN LAND AGAIN GROWING BIG CORN CROP

That old poor hill land can be handled in such a way that its production will be restored. and it will pay its way at the same time, is being demonstrated by Joe F. McDonald in Dallas county, according to H. K. Sager, county agent.

The land has been in cultivation for well over 100 years, Mr. McDonald told Mr. Sager. It is fairly level and has not washed away; but by 1935 the long years in clean cultivation had reduced the amount of available plant food to a point where crop yields were unsatisfactory.

In the fall of 1935 Mr. McDonald planted the field in oats. He got a poor yield, but he cut it for hay and turned the stubble under, planting the field in peas in the spring of 1936. That fall the peas were turned under and the field was again planted in oats, followed by peas, and the peas turned under.

This year the field is planted in corn interplanted with peas. The corn is in six-foot rows. the hills from 18 to 30 inches apart. It was planted March 25, and cultivation was discontinued May 20. The corn is as good as if it had been grown on fresh bottom land, the county agent related.

"Allowing for some drouth, I believe the corn will make as much as 45 bushels an acre," Mr. McDonald said. "That field has never had a crop like this on it since I have owned it.

"For a long time I had been planning to turn under a crop of peas, but it took the little extra inducement offered by the government to actually get me to do it. I have proved to myself that it pays to turn under legumes."

## PUTS WHEAT AHEAD OF CORN IN FEEDING HOGS

Hogs fed wheat will consume more feed and gain more rapidly than when fed corn, says L. A. Weaver of the Missouri College of Agriculture. Less feed will be required to produce a given pound of gain so that wheat is more valuable pound for pound than corn.

The exact relationship between these two grains will vary depending upon a number of factors, but in general a bushel of wheat is worth about 10 per cent more than a bushel of corn, Mr. Weaver estimated, adding:

"Low grade wheat is nearly as valuable as good plump wheat for feeding livestock. As a rule a given weight of low grade wheat will contain practically the same amount of digestible mutrients as wheat of higher grade.

"However the low grade products may contain more protein, thus providing a better balanced ration.

## RAINS CARRY OFF FERTILIZERS

"Excessive rainfall during summer months," says a report in the New York Times (August 24), "carried away a half million dollars worth of fertilizer from the tobacco and vegetable fields of Connecticut, according to an estimate made by Dr. M. F. Morgan of the Agricultural Experiment Station at New Haven. The more than seven inches of rain passing completely through the soil in a two-month period was equal to the amount normally percolating in six months. This estimate was made by Dr. Morgan as the result of lysimeter studies at the Tobacco Sub-station at Windsor. Analysis of the leachate drained from tobacco plots showed that all of the nitrogen supplied in the nitrate form with the fertilizer treatment has been lost. In addition, about half the nitrogen available from organic nitrogen sources was carried away from the plants. This amounts to a total of between 100 and 120 pounds per acre, a quantity sufficient to satisfy the requirements of a crop for normal growth. . . . In terms of money this means a $250,000 setback for tobacco farmers. Vegetables and other intensively ferti!zed crops grown on the lighter soil have suffered similar losses. On the other hand, the leaching of under grass cover crops has been negligible."

## MECHANICAL CORN PICKER

"Thousands of farmers who a decade ago swore allegiance to the husking pin and bangboard for husking corn from standing stalks in the field are now having their corn husked by mechanical corn pickers." says Schuyler Gaffney in the Farm Journal (September). "There is no use arguing about it. According to Department of Commerce figures released only a few weeks ago, eleven firms in 1938 made 13,586 corn pickers. Year before last, they built 4,720. . . The mechanical picker has had to wrestle with one big objection—the amount of corn left in the field. Indiana tests, in which the matter of losses was up for trial, showed that 2.76 per cent of the corn was left in the field when a mechanical picker was used and 2 per cent when the field was hand picked by the owner. With hired help, husking by hand, there was a 4 per cent loss of corn. . . . When comparing mechanical harvest of inbred and hybrid corn, tests showed that losses were twice as great with inbred varieties. . . "

## PRESIDENT LEON HARRIS TO ADDRESS RURAL HIGH SCHOOL

**National Federation of Colored Farmers' Head as Guest Speaker.**

Greensboro, N. C.—(Special)—Mr. Leon R. Harris, president of the National Federation of Colored Farmers, will be the guest speaker at the consolidated rural high school located twelve miles from this city. His address will be delivered on October 22nd. The day has been set apart as home-coming for the Guilford County High School people, because this county is known as the educational center of the state.

Mr. Harris, after having been extended the invitation, was urged to accept it, by members of both races, men and women in various occupations and stations in life. Even the president of the white college joined in with the friends of this school in pressing the invitation upon Mr. Harris, who finally accepted and who plans to be present.

## CHINA'S POULTRY TRADE

It is estimated that China annually raises 300,000,000 chickens, ducks, and geese, and that the egg production is in the neighborhood of 12,000,000,000.

# Editorials

**From the Bible:**

"The glory of the Lord shall endure forever: the Lord shall rejoice in his works." Psalms 104:31.

*"I bent unto the ground*
*And I heard the quiet sound*
*Which the grasses make when they*
*Come up laughing from the clay.*

*"We are the voice of God," they said:*
*Thereupon I bent my head*
*Down again that I might see*
*If they truly spoke to me."*

*—James Stephens.*

**AND HOW!**

The alert Shelby (Ala.) Democrat reports the case of a man who was defeated ignominiously when he ran for the office of sheriff:

He got 55 votes out of a total of 3,500, and the next day he walked down Main Street with two guns hanging from his belt.

"You were not eleeted, and you have no right to earry guns," fellow-eitizens told him.

"Listen, folks," he replied, "a man with no more friends than I've got in this eounty needs to earry guns." —American Mercury.

## THE BATTLE OF THE MARKETS

**We follow the tortuous routes fresh fruits and vegetables take through City Wholesale Markets in this Fifth Lap of a Consumer Commodity Tour.**

FRUIT and vegetable expresses get a elear track to consumer markets. Even passenger trains are hunted onto sidings when the fruit and vegetable train whistle screams. And no passenger dismounting from the crack express ever got so much attention as the fruit and vegetable passengers on the fruit express.

For New York—consumption or distributing point for one out of every 10 carloads of fresh fruits and vegetables in the country—cars from the South and West land in Jersey City yards to be nudged onto piers. Then a final push rolls them on the traeklined decks of a river float which crosses to the other band lashed to a tug boat.

Beginning at about 7 o'elock in the evening, sweating men in gangs break open the cars, let the first rush of iceladen air escape, and then brushing aside the crushed ice, they pull, tug, haul, and carry erates from the floats over planked bridges to huge display rooms on the piers. Here at one o'clock in the morning, the fruit and vegetable dealers—dressed in linen dusters that look like Mother Hubbard aprons—begin to sell their produce. They sell chiefly to jobbers, who in turn haul to secondary retail markets located all over the city.

Peddlers run in and out of groups of jobbers, looking for an over supply of some fruit or vegetable, keeping an eye out for a carload of something that might perish over night unless it is sold immediately. They take up the slack in the market and help fill the slack in the diets of many New Yorkers. They buy and sell cheap. Wholesalers are grateful to peddlers for often, if they did not buy, the stuff would spoil. Peddlers take the third rate stuff, the damaged crates, the broken lots, the strawberries that overstayed their season. These they lug to wagons and thence to pushearts which later will be parked on crowded tenement-lined streets. Altogether, 14 thousand peddlers sell 25 pereent of the perishable food stuffs sold in New York. For New York they nevertheless furnish an emergency sluice that channels the overflow of fruits and vegetables down streets and into homes that otherwise would not get as many fruits and vegetables to eat. Rows of pushearts laden with perishable foods are often unsightly additions to overcrowded thoroughfares. They complicate the health problems of slum areas. Cities do wel' to provide more orderly and sanitary arrangements for pushcart vendors when, in addition, they do not curtail the service of these little merchants, nor remove them from elose proximity to the families dependent on them, nor charge for space which city streets now provide free.

BY EIGHT O'CLOCK, the city is awake and a hundred thousand distributors of perishable foodstuffs in New York City are back at their stores, at their pushcarts, at their stands. Then more orderly, more dignified, auetion sales begin baek at the wholesale markets. Most eitrus fruits is sold at auction. The auetioned fruits themselves are not hauled in the auetion rooms where the buyers gather. Instead, samples selected at random from the shipments are displayed in the great covered piers for buyers' inspection. Then, before the bidders enter a separate auction room, a catalog of the fruits for sale that day is placed in each bidder's hand. Represented at the auction is an agent of the grower cooperative, or shipper for whom the produce is being sold. Bidding is fast, but the auctioneer knows the people who are buying and he knows the market. For that matter, so does everyone there. Selling usually goes smoothly. The day's price is soon found, and most buyers pay it. Toward noon, the market may sag some if there is a lot of fruit in, but growers' representatives then withdraw the fruits from sale; or if there are less than carlots left, the peddlers get a erack at them. Just as in the regular market, they elean up.

The Federal Trade Commission found in its 1935 study of the fruit and vegetable business that "Fourteen fruit auction companies operate in 12 terminal markets of the United States. A large shipper, ------ through subsidiaries and individuals, owns an interest in 5 of these companies, and in 3 cases its interest is large.

"Approximately 75 pereent of the oranges, 58 percent of the grapes, and 30 percent of the apples sold in terminal auetion markets in 1935 were sold through fruit auction companies. The auction method is more favorable for well-known brands of fruits having a standard pack and quality which are marketed over a long period of time----The trade generally appears to favor the auction method of selling although criticism of the auetions were expressed.

"Unless the ownership of such auction companies is sufficiently dispersed among sellers as well as buyers," the Commission observes, "the possibilities for control to the detriment of patrons is great." It then suggests that States and municipalities might well consider requiring the periodical publication of the ownership of fruit auction companies, and using the publie powers to prevent abuses resulting from the lack of impartial administration of these eompanies.

MEASURED BY THE CENTS in city consumers' fruit and vegetable dollars, these valuable foods frequently have gone only two-thirds of their journey toward consumers when they land on their piers. They may have been 6 months in the growing, and 2,000 miles in the coming. They may have only another 5 miles to go to reaeh consumers' kitchen. In eost, from pier to consumers, they still have one-third of the way to go.

A look at the eonfusion on the pier, and at New York's Washington Street Market, or Philadelphia's Dock Street, or many a similar market in other large eities, and a look at the tangle of trucks and people, the piles of boxes and the debris, explains part of the mystery of final costs. Despite the confusion and noise and congestion, 200,000 carloads of fruits and vegetables passed through the markets of New York in 1936. For all the jostling and elamor in Washington Street, a thousand carloads of fruits and vegetables pass the way in the night.

But it is expensive. Crates of lettuce are piled upon the piers in New York. A jobber whose stand is in Washington Market—3 bloeks away—buys 20 erates of the lettuce from a carlot reeeiver. The jobber has his own truck, and it is waiting off the pier. To get the lettuce on his truck, however, it must be hauled off the pier in a truck belonging to a member of the Truckers' Association. Some yards distant, the crates are unloaded, and then loaded again on the jobber's truck, to be hauled 3 more blocks to the side walk beside the market. In the next few hours the lettuce will be sold to retailers who haul it away to their grocery stores. In its last 5-mile journey, from pier to store, the lettuce is thus loaded and unloaded 5 or 6 times. It costs 5 cents to move a box of apples off the pier; asparagus costs from 6 to 12 cents a unit; berries cost from 8 to 12 1-2 cents a crate; lettuce costs 10 cents a erate.

"Monopolistic and racketeering practices in the carting of fruits and vegetables exist in several of the larger terminal markets, particularly in New York, Philadelphia, and Chicago," the Federal Trade Commission reports. "In New York and Chicago the truekers, with the assistance of the teamsters' union have obtained a monopoly of the commercial hauling of fruits and vegetables from the prineipal terminals by excluding all trucks not members of the truekers' association or whose drivers do not belong to the local union."

Union members, jobbers and carlot receivers for the most part are as anxious to be rid of racketeers as are the consumers who must pay for them, and the farmers who lose by them, but unfortunately they are caught in a marketing situation over which they have little eontrol.

SPOTTING ONE of the causes for racketeering and the cost of getting fruits and vegetables from pier to eonsumer, the Federal Trade Commission says, "although many of the faeilities have been modernized, (in the large terminal markets) there has been marked lack of scientific planning. In a number of these markets, the market districts have remained substantially the same for many years and present generally unsatisfactory conditions, including excessive traffic congestion, prolonged hours of sale, opportunity for monopolistic control, especially in city trucking and excessive costs of distribution. Practical difficulties, such as the necessity for capital outlays, trade inertia and conflicting individual interests, have prevented or deterred the establishment of proper regulations and improvements of facilities within many cities."

Nine railroads and 40 steamship lines deliver fruits and vegetables into New York. For the railroads, there are 57 freight stations at which cars can be unloaded. For the boats there are docks and piers at which they can unload. But from 1929 to 1935 fruit and vegetable shipments by motor truck increased from 13 to 34 percent of the fruit and vegetable total for New York City. Shipments by boat and rail declined from 87 percent to 66 percent. Sixty-five thousand carloads of fruit and vegetables were delivered into New York in 1935 by motor truek. And a good part of them went to Washington Street, a narrow congested one-way street, originally a street of brownstone residences, but transformed by its proximity to the docks into America's largest and most congested market.

Philadelphia has 2 large terminals whieh duplicate eaeh other without quite meeting every marketing problem. Fruits and vegetables arriving by boat, for example, must be loaded into railroad ears and hauled to the rail terminals where they are auctioned off. On the other hand, produce is frequently hauled from the terminals to another market at a cost of $30 per car.

Chicago recently completed a modern produce market with a splendid truck terminal, but no freight terminal. Since most of Chicago's fruits and vegetables get there by train, fruits and vegetables must be loaded on trucks at the freight terminals and hauled to the South Water Market and again unloaded for sale. Hauling back and forth helps the trucking business and needlessly inflates prices to consumers.

Competition between railroads sometimes confuses the marketing problem, as in Philadelphia, Buffalo, Detroit, and Los Angeles, where competing railroads have built 2 terminals. One would have been enough, and the duplication is a headache for buyers who must trek back and forth and use twice as much time for marketing as they would use were there only one terminal. In Cleveland, the railroads cooperated in building a huge new union terminal, but for some reason the tracks fall 100 feet short of the market. Produce must be trucked this distance at an additional eventual cost to consumers.

With 9 railroads eaeh operating their own terminals in New York, a condition has come about such that no one railroad uses its facilities to the best advantage. For example, one has rented 3 piers covering 9 1-2 aeres, with a capacity of 700 carloads a day. It actually handles an average of only 95 carloads a day. These 95 carloads of fruits and vegetables then carry the cost burden of a terminal designed for 700 carloads.

NO ONE CAN DIVE into the confusion of wholesale produce markets and come up with anywhere near a close estimate of how much more present marketing facilities and so-called system cost the consumer than they should. But one study indicates that if two New York terminals were combined the saving in rent alone would amount to $3.00 a car. Reductions on handling eosts would bring this saving to $5.00 a car. When the Commissioner of Markets in New York City followed 6 vegetables in small packages around the city, he learned that handling them cost from 17 to 27 cents in terminal transportation charges alone. He estimated that savings of 2 to 12 cents were possible without any drastie ehanges at all, simply by eliminating some of the unnecessary hauling.

Pressure from farmers and consumers for more efficient handling of these essential foods leads in two directions. The first envisious the establishment of huge regional markets like the recently developed Capitol City Regional Market in the vicinity of Albany, New York. This market covers 25 acres. It serves an area in which 650,000 people live. It has faeilities for farmers, for trucks, for rail, and for water. Here it is hoped wholesalers, farmers, and retailers may meet in one market.

The other approaeh toward marketing problems is sketched by the Federal Trade Commission, an approach by law, by regulation, and by publicity. The Federal Government, it says, should, "through the Department of Agriculture be authorized and direeted to cooperate with munieipalities in studying eaeh of the principal terminal markets, in formulating laws and administrative rules and regulations to whieh the operations of such markets should

conform, and, where necessary, in planning for the establishment of such additional facilities and such methods of terminal market operation as may be needed." And further, it recommends, the Department of Agriculture should publish reports of unsatisfactory terminal market conditions or facilities in any locality.

Picking up the challenge where the Federal Trade Commission dropped it, the Department of Agriculture's Bureau of Agricultural Economics has already begun to publicize unsatisfactory terminal market conditions. The challenge of securing efficient fruit and vegetable marketing is now in consumers' laps.

## STATE GROWING MUCH NITROGEN

Arkansas farmers grow over $1,000,000 worth of nitrogen fertilizer by plowing under about 185,000 acres of winter legumes this year, said Charles F. Simmons, extension crop specialist.

These winter legumes, which included vetch, bur clover, Austrian peas, and crimson clover, store up about 45 pounds of atmospheric nitrogen per acre before they are turned under, Mr. Simmons explained. This is equivalent to the nitrogen in 300 pounds of nitrate of soda, he added.

Thus, the nitrogen turned under on the 185,000 acres planted to winter legumes is equivalent to 27,500 tons of nitrate of soda, which at $40 a ton, would be worth $1,100,000.

The rapid expansion in the acreage of winter legumes in Arkansas is shown by the fact that only 3,750 acres were planted in 1929. Although the increase to 185,000 acres represents a great increase over the 1929 acreage, it is still less than 10 per cent of what should be planted in the state, the agronomist declared.

The goal for winter legumes is at least one acre for each acre of corn, Mr. Simmons said. Such an acreage would mean the growth of over $10,000,000 worth of nitrogen fertilizer.

Since most of these legumes will be planted on land that has been receiving little or no commercial nitrogen, the nitrogen added by the legumes will represent an actual increase in soil fertility, and not merely a replacement of commercial fertilizers.

## TIGHT BOX OF SCRAP LUMBER COOLS MILK

Mrs. J. L. Dunn, Pickles Gap Home Demonstration Club member, Faulkner county, used scrap lumber to build a box for a milk cooler on her screened porch, reports Mrs. Dora S. Stubblefield, home demonstration agent.

The box is lined with sheet iron, and an outlet pipe carries the water to a watering trough in the barn lot. The cooler is mounted on a frame by the well, which is also on the porch.

Fresh water is kept in the cooler all during the day, the drain pipe carrying off the overflow. The pipe and lining cost $3.

## HYBRID CORN RESEARCH

The leading article in the August 13 Prairie Farmer is "Hybrid Corn —Marvel of Farm Research." It says in part: "Sons of two great farm families, in particular, Henry A. Wallace of the Iowa Wallaces and E. D. Funk of the Illinois Funks, attacked the problem, seeking to produce 'double-cross' seed which they could place upon the market with assurance that it would be better than their established common strains. Henry A. Wallace cooperated with the Iowa Experiment Station. E. D. Funk advised and provided facilities for the work of Dr. James R. Holbert. Practically every experiment station geneticist turned the full facilities of his fields and laboratories upon the problem. Some devoted themselves and their associates to particular phases of the problem. For example, A. M. Marston, Michigan, with the European cornborer threatening, while others burned stalks, established quarantines, plowed under fields, devoted several years to developing a cornborer-resistant strain. In Illinois, with chinch bugs manacing and ruining, Dr. W. P. Flint, working with U.S.D.A. Holbert and Geneticist C. M. Woodworth, studied chinch-bug and grasshopper-resistant varieties. . . . From it all, commercial production of 'double-cross' hybrids has emerged. . . With hybrid corn emerging from the laboratories and experimental fields, into big business enterprises, the leading companies did just what other big industrial concerns in all lines have done. They established their own private research departments, and with a few notable exceptions, went to the fountain heads of research, the U.S.D.A. and state experiment stations and hired the best geneticists and plant breeders that could be pried loose. . . "

## TYLERTOWN, MISS., ORGANIZES UNIT

Tylertown, Miss. — (Special)— There has been reported another Unit of farmers in this State to become a part of the National Federation of Colored Farmers, which is a revival of a former organization that had not functioned recently. The organization was perfected in this city and their action reported to the National Federation president in Moline, Illinois, and to the national secretary-treasurer at Nashville, Tenn. They will be issued a charter and given a number, as well as bear the name of the Tylertown Unit.

The officers and members as reported are: C. L. Bates, president; J. W. Simmons, vice president; J. E. Magee, secretary; Robert Bryant, treasurer; J. W. Marks, J. B. Rafford, Peter Bishop, Gain Rimes, Julius Rafford, Needom Jones, Seymore Cansley, Harrison Ball, Edd Jacob, William Elzie, Rev. T. M. Davis, Garfield Magee, A. J. Price, Will Lewis, I. C. Weary, Marshall Dexter.

## WISCONSIN PROBLEM: HEAVY CROP OF PEAS

Madison, Wis.—Alleviation of economic distress which, it is claimed, threatens Wisconsin farmers and pea canners because of an excessively heavy pea crop will be the problem of the newly-established Wisconsin Agricultural Authority.

Full power has been placed in the hands of the directors of the Authority to push an educational campaign, stressing the use of peas, in co-operation with farm co-operatives, marketing agencies, and other organizations dealing with agricultural problems.

Agents will be sent into large cities of the State and other sections of the United States where there exists a good potential market for peas, Wilbur G. Carlson, General Manager of the Authority, has said.

## GEORGIA TOBACCO RECORD

A Douglas, Ga., report to Florida Times-Union (Aug. 21) says: "J. B. Hutson, Assistant Agricultural Adjustment Administrator from Washington, estimated today Georgia growers would receive $19,050,000 for tobacco grown in 1938, an all time record or income from this crop. Hutson said his estimates showed Georgians marketed 93,000,000 pounds of bright leaf this season. Tobacco farmers must decide whether they 'want a moderate acreage and a reasonable income or a large production and a low income,' Hutson said. The State's total marketing quota will be raised between 5,000,000 and 7,000,000 pounds, Hutson said, explaining readjustments being made by granting increases to individuals would be added to the preliminary State allotment. Georgia growers have taken the quota question to court, along with tobacco growers in Florida."

## ELECTROCUTING FARM FLIES

G. H. Dacy, in Electricity on the Farm (August) reports that in Florida "electric fly traps have proved remarkably successful in the abatement of the fly evil. Thomas and Reasoner, successful Dade County dairymen, who milk as many as 300 grade Guernseys and Jerseys, report that the latest fly-electrocution devices are highly efficient, much superior to the pioneer types of fly catchers which were objectionable because they shorted out too easily. This is the eighth year that these milk producers have yoked electricity or fly-killing. Despite that molases is a constituent both of the dairy feed and beet pulp which they use, their milking stables and pastures are outstandingly free of horn flies and similar pests. One of the fly traps is located in the spacious feed room which accommodates several carloads of dairy feed. The flies which penetrate to that storehouse are attracted to the insect-killer by an electric bulb which is illuminted during the feeding and milking periods. The pesky flies settle on the wires of the trap, lured there by the light, or are electrocuted by venturing too close. The odor of frying flies attracts more of the trespassers which meet similar fate. Dead flies on occasion have been removed by the quart from the vicinity of this efficient and economical fly trap. Outside the milking stables two other electric fly traps are mounted at strategic points where flies tend to congregate. . . . The dairymen also carry the campaign back to the source of origin of many of the flies such as manure accumulations and other refuse. This debris and fertilizer are cleaned up regularly and thoroughly in order to reduce and control the breeding grounds of the flies."

## ORIGIN OF CORN

"Corn has long been one of the greatest botanical riddles," writes Dr. Frank Thone in a Science Service feature released this week. "Now come two Texas scientists, Dr. P. C. Mangelsdorf and Prof. R. G. Reeves, with strong evidence that the ancestors of corn is corn—a primitive type of grain known as pod corn, in which each grain is covered with a tiny individual husk of its own. . . . One suggestion that has in the past had the support of some botanists, namely that teosinte is the ancestor of corn, they dispose of very neatly by adducing good genetical evidence that corn is one ancestor of teosinte, the other being the related grass Tripsacum. They hold that teosinte originated as a natural hybrid, probably when the migrating Mayas, about A. D. 600, carried corn into the natural range of Tripsacum in Mexico. One difficulty about the wild pod corn hypothesis is that the Peruvian Indians, who without much question originated corn culture, are the only ones who do not grow pod corn at all. . . . So they leafed through old manuscripts, examined effigy pottery from the very earliest known Peruvian culture levels. Fnally, at the Peabody Museum of Yale University, they found a faithful replica of a prehistoric ear of pod corn. They do not feel that the wild form of corn is necessarily extinct. It may still exist, they think, in the little-explored unforested lowlands of southwestern Brazil, Bolivia, or Paraguay."

## BUTTERFLY SCENT

When next you are in a garden on a summer's day, see if you can get close enough to a butterfly to detect its delightful perfume. That sounds strange, doesn't it, but many butterflies are just as delicious to smell as flowers. Others, however, have no scent at all. It is said that the orange and black regal fritillary has a sweet spicy odor that reminds one of the scent of sandalwood.

There are many beautifully scented American butterflies, particularly the American blue butterfly, which smells exactly like crushed violet stems. The Cloudless Clover Butterfly also smells of violets and of musk; the Orange Clover of heliotrope, and the Cabbage Butterfly of mignonette.

In tropical countries the scents of the butterflies are much stronger, many of them being almost overpowering in their heavy perfume.

# CALLING ALL DELEGATES AND VISITORS TO THE ANNUAL CONVENTION OF THE NATIONAL FEDERATION OF COLORED FARMERS INC., IN OCTOBER

The National Convention of the National Federation of Colored Farmers, Inc., will meet in Forsyth, Georgia, at the State Teachers and Agricultural College, October 26-29. All Units of the Federation are requested to elect delegates at the earliest opportunity. All state and regional farm groups affiliated with our Federation are requested to appoint their representatives and send the names of those who will attend to our office. Visitors and officials of state and federal agricultural departments who plan to attend the Convention should communicate with us at once. Suitable arrangements will be made to entertain all delegates and visitors and all farmers of our group and all interested in the welfare and progress of colored farmers are cordially invited.

Arrange to attend the greatest Convention of organized Negro farmers in America.

Sincerely,

LEON R. HARRIS, President.
Box 285, Moline, Illinois.

S. B. WILSON, Sec.-Treas.
447 4th Ave., N., Nashville, Tenn.

## BROODER HOUSE BUILT FOR $5.55 CASH COST

"We wouldn't have had it if we hadn't built it from native materials," Mrs. M. M. Twilley, member of the Pine Grove Home Demonstration Club, Izard county, told Iva Harness, home demonstration agent, regarding the brooder house the Twilleys built at a cost of $5.55 for nails, hinges, glass cloth, wire and cement for the concrete floor.

The eight by 12-foot brooder house is shed-type, with a south opening. Lumber and shingles were cut from farm timber, sawed on shares. Mr. Twilley built the house in three days during the slack season, and plans to build two other poultry houses from native material this fall.

## HOG INCOME REPORT

Hog producers last year realized a cash income of $906,525,000 from sales of hogs, pork and lard, according to the third of a series of commodity income estimates by the Bureau of Agricultural Economics, dating back to 1909. The 1937 income dropped somewhat from the $964,682,000 received in the preceding calendar year, but was more than double that of 1932 and about a third larger than the pre-war average of $678,000,000. Income from hogs has varied greatly during the 1909 to 1937 period covered by the estimates. It trebled from 1909 to 1919 when war demand and price inflation raised the income to a high of $1,911,000,000. It dropped to less than one-fourth of this amount at the bottom of the depression in 1932. The most important factor in determining income changes, the Bureau said, has been changes in price, which have reflected changes in supply and changes in domestic and export demands. Prices of hogs reached their low point in 1932 when they dropper 80 per cent below prices received in the peak year 1919 and were 65 per cent lower than in 1937. Changes in consumer purchasing power are an important factor affecting hog prices and the farm income from hogs, according to the Bureau. Since 1920, the changes in farm income from hogs have followed fairly closely the changes in industrial payrolls. The foreign demand for hog products also was a factor of some importance. In these years more than 10 per cent of hog products was exported. The Bureau's estimates of cash income do not include government payments.

## CLEAN GROUND PROTECTS PIGS

**Ideal Farrowing Place Is Woods Pasture, Says Expert.**

An ideal place for sows to farrow in the fall is in a woods pasture or near a clump of trees out on clean ground, advises H. D. Elijah of the Missouri College of Agriculture. It should be ground that hogs have not run on for more than a year, he said, adding:

"If sows farrow in the open the young pigs should be carefully watched during the cold fall rains. If farrowing is in individual houses, the sows should be watched to see that they do not become too hot. Small houses with metal or tar paper roofs become very hot during sunny days unless pulled under a shade tree.

"If the house can be raised the sow will be more comfortable. A guard rail in farrowing houses usually saves many pigs. A 2x4 placed eight inches from the floor, and eight or ten inches from the wall, gives the pigs a place to run under when the sow lies down.

"The feed and care of the sow before and after farrowing is very important. About seven days previous to farrowing a sow should be removed from the herd and fed a more laxative and a reduced ration.

"If it is possible to separate each sow from the rest of the herd, a group of sows expected to farrow near the same time may be run and fed together."

The penned-in sow needs less feed and her recovery from farrowing will be more prompt if she is on a mildly laxative ration, Mr. Elijah continued. Wheat bran or linseed oil meal is very good fed in a thin slop with some grain. A safe rule to follow is to cut the sow's grain ration in half.

"A quart or one and one-half pounds of a mixture of one-half ground wheat and one-half bran just before farrowing is sufficient," the specialist said. "Another ration would be one-half ground wheat and one-half ground oats with a handful of linseed oil meal added.

"After the sow is on full feed, a good cheap ration may be made of 70 per cent corn, 20 per cent shorts, and 10 per cent tankage.

In addition to the grains, good pasture is valuable, Mr. Elijah recommended.

## THE SHEPHERD'S COLLIE

There is nothing more marvelous in glorious green Scotland than the collie sheep dog. One shepherd said he would "gi' me a somple o' sheep-dog intelligence wi'out worruds." He stood at the edge of an open field and whispered sharply two long, shrill notes. From a cottage in a near-by grove, a black collie came bounding across the turf. Twenty yards from his master, the dog stopped and stood at attention, his eyes questioning the shepherd.

On the slope of the hill grazed a flock of sheep, scattered in pairs, trios and larger groups, covering perhaps fifty acres. I was requested to select, anywhere within a radius of five hundred yards, three sheep that were grazing together. I choose three that were browsing among some gray granite rocks; at a casual glance they might easily have been mistaken for part of the landscape.

Without speaking a word, the shepherd, resorting to gestures, sent the collie up the hill through a dozen other groups of sheep, and had him work the three sheep down the meadow within twenty feet of where we stood. Not another sheep on the hillside was in the least disturbed. Then the shepherd sent the dog with the sheep back to the exact spot where he had collected them. As a further test, he had him cut out a single sheep—of my selection—which he drove down to the cottage. There the collie opened the gate of the small corral, worked the sheep in, and closed the gate after it.

A well-trained dog can interpret the signs of his master at a distance of three miles. It is not unusual for a shepherd to send his dog out to bring in sheep that are picked out with a field glass.—From "Bob Davis Abroad," by Robert H. Davis. (New York: Appleton-Century.)

## BRIGHTER DAY SEEN IN TURN FROM COTTON

**Real Prosperity in New Program, Says Lawrence Baker**

Walnut Ridge, Ark.—Jay Myers, president of the First National bank of Lawrence county, says this section is now making its first steps toward what he considers a permanent prosperity.

In the past 25 years, the banker explained, the people have depended almost solely on cotton, and their hopes of doing well were often disappointed.

For cotton is an expensive crop, he added, costing a considerable outlay for hoeing, picking and ginning, and to keep a cotton farmer ahead of his bills, a high price for cotton is necessary.

Further, the banker pointed out, the higher the price for cotton, the higher usually, are the prices of necessities and what few luxuries the average cotton farmer can buy.

So, Mr. Myers said, it was an endless chain—in the spring the cotton planter started his crop, hoping for a high price, which would return him a few dollars above his expenses in making the crop and supporting his family. But as a rule, when fall arrived, and the cotton was picked, ginned and marketed, the grower had no money left. If there was any left, it wasn't enough to live on through the winter and make another crop.

**Mortgage to Mortgage**

Thus, according to Mr. Myers, it was just a jump from one mortgage to another for the farmer.

With that system many farmers fell behind occasionally, and were unable to pay their loans. At its best, the system resulted in constant worry for the average cotton farmer. His crop, his livestock, his farming tools, often his household furnishings, were heavily mortgaged.

But now Mr. Myers sees a new day for the farmers of this section—a day when pasture will be dotted with livestock, when purebred cattle and hogs and mares will graze on fields rebuilt from the wear of cultivation in cotton year after year.

The landlord's former attitude of planting over half the farm in cotton is changing, and many landlords in this county, the banker said, are encouraging their tenants to save a few acres for pasture land and are inducing tenants to produce livestock.

**Change on Plantation.**

James Sloan, large landholder of Black Rock, has told many of his tenants that next year he wants them to arrange for herds of cattle and hogs, and to pasture them on lands impoverished by the raising of cotton, Mr. Myers related.

He also said that more tenant farm wives have flocks of chickens, ducks, geese and a few turkeys than ever before in the history of this section.

More tenant farmers, he added, raise potatoes, peanuts and popcorn, and more farm wives can vegetables than ever in the recent history of this county.

The chief lagging of the landlord and farm tenant is in not providing a home orchard on the farm, Mr. Myers said. He declared there are very few farms in this section that have home orchards.

The new day of crop diversifying and of livestock production, he pointed out, is fast dawning, and with its coming, there will be more carpets on the floors of tenant farm homes, more comfortable chairs, and more radios and better clothing for the family and while its coming appears slow as yet, he said, "I believe it is definitely on the way."

Newspaper men and women from all parts of the world will be entertained in the Press Building at the Golden Gate International Exposition in 1939.
